PRINCETON, Sept. 27, 1875.

EDITOR FOREST AND STREAM:—

The Trenton nine was defeated by the University nine on Saturday, Sept. 25, by the following score:—

	1st.	2d.	3d.	4th.	5th.	6th.	7th.	8th.	9th.
Trenton.....	0	0	0	1	0	0	0	0	1
Princeton.....	5	4	0	1	4	2	0	1	22

Base hits—Princeton, 14; Trenton, 3.

Mr. Mann's pitching proves as effective as ever, and the playing of the rest of the nine was in no wise depreciated. Mr. Kaufman, of '77, played second base in place of Mr. Moffat, of '75, who has graduated.

LOUNGER.

ROMAN WRESTLING.—The style of wrestling practiced by the ancient gladiators of Rome is to be reproduced in this city through the medium of a match which has just been made between two famous wrestlers, Prof. Wm. Miller of Australia, and Mr. Andre Chistol, the champion of France and Spain. Miller has done some remarkable wrestling in California with the celebrated Bauer, and Chistol is the famous masked man who was a wonder of the Paris Hippodrome in 1867-8. The match will probably come off at Tammany Hall the first week in October. As the rules governing this mode of wrestling are peculiar, we print a portion of the articles of agreement:

1. No hold shall be allowed lower than the waist.
2. The wrestling to be with open hands.
3. No striking, scratching, or gouging shall be allowed.
4. Clasp hands shall not be allowed. (Clasp hands means that the wrestlers shall not clasp one of their own within the other, nor interlace their fingers, but they are allowed to grasp their own wrist to tighten their hold around their opponent.)
5. The wrestlers must have their finger-nails cut close, and they must wrestle either in soft shoes or socks.
6. A fall shall be declared when either man has been fairly put upon his back, with two shoulders on the ground the same time.
7. In the event of the wrestlers rolling over each other, the one whose shoulders shall touch the ground first, as under rule 6, shall be deemed to have lost one fall.
8. Fifteen minutes' rest shall be allowed between the bouts, and either man failing to appear when time is called shall be considered to have lost the match.
9. This match shall be decided by either party to this agreement winning three fair falls out of five.

—The prizes offered for the swimming match of the members of the Schuylkill Navy, on Saturday, brought out but six entries, six more than should be expected when the water was below 55°, and the judges had to don overcoats. The starters were John R. Baker, Jr., Ed. Twinning, A. P. Douglass, Undine Club; Chas. M. Lea, Philadelphia Club, Eugene Townsend, College Club; Geo. Miliken, Crescent Club. Baker and Townsend showed ahead when they came from under the wet, and soon were well ahead, but the water was so cold that the "tug" had to begin picking up the frozen. Milliken was taken from the water at the half mile, so much chilled that flannel and the furnace were called into requisition. The others having given up some time sooner, the race was left to Lea and Baker, the former winning by a few feet, he and Baker being the only ones who stood out to the mile. Both men were very cold, and when another match is tried it will be in a season when men can live a half hour in the water.

REMARKABLE BILLIARDS.—Monsieur Izar is an expert who plays better with his fingers than most players with a cue. He has been giving exhibitions in this city in connection with Albert Garnier and conquered the professional Dion with ease, using only his fingers against the practiced cue of his opponent. His exhibition shots are simply wonderful, the most difficult caroms, draw shots and twists being executed with marvelous precision. Arranging fifteen balls in a line parallel with the cushion, he spun his ball from the top of the table, and striking the first ball, rebounded to the cushion, thence to the second ball, and again to the cushion, until it had completed the circuit. Nothing like it has ever been seen before.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

TEAL, Salem, Mass.—Can you tell me the price of Hart's shells? Ans. Twenty cents each.

Will Dr. E. J. Thompson, author of the sketch "Down the Allegash" favor us with his Post Office address.

BALDY, Yonkers.—Can the Hart pattern shell be used in the Remington rifle? Ans. Hart makes no rifle shells.

H. N. C., Waterville.—Where can the Kay shot concentrating cart-

ridge be obtained, and what is the price of them? Ans. We understand they will be put on the market next week.

H. J. S., Brooklyn.—Is there any law on Long Island for rabbits, and when does robin shooting commence. Ans. Rabbits are protected until October 1, and robins until the same date on Long Island, although in the rest of the State they may be killed August 1.

D. M., Greenpoint.—Please answer the following questions: How much powder and shot, and what size, for wild pigeon shooting, with a 10 bore Parker breech loader, 9 pounds? How much powder and shot, and what size, for partridge shooting in the same gun? Ans. $3\frac{1}{4}$ to 4 drachms powder, and $1\frac{1}{4}$ to $1\frac{1}{2}$ ounces No. 8 shot.

STRANGER, New York.—Will you please inform me whether there is any shooting to be had in the vicinity of New Brunswick, N. J., and what kind of game is to be had there, and if there are any hotels at New Brunswick; also the price of board for a couple of days? Ans. Snipe on the meadows and some quail. Go to the George Street House; board about \$2 per day.

CONSTANT READER, Syracuse.—Can you freeze fish and spawn and bring it to life again? How long does it take to hatch spawn after it is in the bed? Ans. Instances of resuscitation of frozen fish, particularly smelts, are not uncommon. A number of cases were reported in this paper last Winter. Fish spawn would not hatch if frozen. The time required for hatching varies with the spawn of different fish.

B. C. H., Dangerfield, Texas.—I have just completed a pond for fish; it is 150 feet long, 100 feet wide, and five feet deep. It is supplied with water from springs. Please inform me which will be the best fish to stock it with, and if it will do to have more than one variety. Ans. The white perch of the Delaware and Potomac Rivers and the German carp. The first afford excellent sport, and both are of fine flavor and adapted to warm water.

A. D. B., New Haven.—I have a Winchester rifle, a good shooter, and with it a set of reloading tools. The bullet moulds and swedge make a bullet without grooves. I would like to inquire if it will injure the rifle by leading it or otherwise to shoot such balls through it, providing, of course, the bullets were greased well after being loaded in the shells? Also, does the Remington rifle bullet moulds sent with the gun make groove bullets. Ans. No. The bullets are intended to be cast in that manner.

RALLUS VIRGINIANUS.—I am very fond of rail shooting among the reeds of the Delaware. Very often I drop a number of the birds in plain view, but before I can recover them several disappear mysteriously. A friend tells me that the eels take them off. Can you inform me if this is the case? Ans. Most assuredly; eels will not only drag small birds under water, but ducks even. Hence one should lose no time in retrieving his game. The operation has repeatedly been witnessed by sportsmen who were willing to test the question at the expense of their bags.

W. S. C., Ashley, Luzerne county, Pa.—Can you tell me if metal shells are made for pin fire guns, and if so, where they can be procured? I have a 12 bore gun, and prefer the pin to central fire, but don't like the paper shells as well as metal. Also want a copy of "Camp Life in Florida" when ready. How do you send it, by express C. O. D. or by mail, cash sent direct? Please let me know. Ans. You can have them made; go to Hart's, No. 216 Market street, Newark. "Camp Life" can be sent by mail when issued.

W. A. E., Irvington on Hudson, N. Y.—In shooting pigeon match, Long Island rules, four shooting five birds each, 21 yards rise, 80 yards boundary, both barrels allowed, a bird rises from the trap, is shot at with both barrels and missed; bird alights in sapling within boundary, when a shooter bends the sapling and catches the bird within the time allowed. Should it be claimed 1 on his score, or a miss, no shot being found on the bird? Ans. It is a lost bird.

G. A. T., Harlem.—I would very much like to know where Lake Homer in Sullivan county is located; also the best route to the lake in going there. I have examined several maps and made many inquiries, but without success. Ans. There is no Lake Homer. Thomas Lake is the lake referred to. It is at the headwaters of the Beaverkill, and was sold by Mr. Van Cleef, of Poughkeepsie, to Rev. James Beecher. You can go via Moristown, on the Midland Railroad, and thence up the Beaverkill, or by Rondout and Oswego Railroad to Margaretville, thence over the mountain to Malmesley, on the Beaverkill. Whichever way you go you will wish you had taken the other.

WAGNER, Troy.—I propose a visit to New Smyrna and Indian River in Florida, this Fall. Can you recommend a good hotel and good guide? Also what is the best time to go? Ans. Go to Major Alden's house, or Mr. Lord's. One of the best guides is Morrison Lewis. His terms are \$3 per day, and \$1 for the use of a horse, which will be found necessary in hunting the great swamp that extends from New Smyrna to the head of Indian River. The best time for hunting is from 15th December to 1st February. In February the does are with fawn, and only the bucks are fit to kill. Wild turkeys should not be killed after February. The fishing is best after February. Bears are very abundant near New Smyrna, causing much destruction to hogs.

DUCK HUNTER, Norwich, Ct.—1st. When is the best time during October or November for ducks and other birds on east end of Long Island? 2d. What is the best point to go to, and how can I get there from Sag Harbor, and whom can I address at place you recommend for particulars and to engage guide and traps other than gun and ammunition? 3d. What amount of powder and shot, and what size of each are best for ducks used in a Parker breech loader 12 bore? Ans. 1st. From middle of October to last of November. 2d. Go to Wm. Lane's, Good Ground, on Shinnecock Bay; take Long Island Railroad. You will find everything there. 3d. $3\frac{1}{4}$ drachm powder, Dapont's No. 2, Hazard's No. 4 or 5, or Laflin & Rand's No. 6, $1\frac{1}{4}$ ounces shot, No. 6. But the charges and size of shot adapted to one gun might not suit another.

B. S., Newark.—1. Do you think the gyro pigeon of much importance to the beginner, and what is the price of it? 2. I have an imported breech loading shot gun of Coeswell & Harrison's make, No. 10 bore, Ely's No. 10 cartridge just fit, but the American cartridge is too large; is it the fault of the cartridge or gun, and if the fault lies in the gun, could it be remedied? Ans. Yes; of great assistance. The price of Bussey's gyro is \$25, but we believe Mr. Jacob Glahn, of Meriden, Conn., is about introducing a cheaper one. 2. We have heard this complaint before, that the American cartridge is a shade larger than Ely's, though possibly yours may be damp. We have sometimes peeled off the outer layer of paper.

BILLY BREECH, Inwood, N. Y.—A few weeks ago I bought a Remington (\$45) breech loading shot gun. I find it will discharge by pulling the trigger when at half cock. Are all Remingtons made this way? Are foreign guns made the same? Can it be remedied? Do you consider it dangerous? 2. Please inform where (within five or seven hours' ride of New York) I can find good pigeon shooting. Can you give me the address of some farmer where I can get good board at about \$6 to \$7 per week? Would like to be near the railroad so I can send home the birds every day. Ans. 1. Your gun certainly should not go off at half cock; the nearest gunsmith can remedy the trouble. It would be decidedly dangerous in its present state. 2. Sullivan county, on line of Erie Railway. Do not know any farmers; go to Monticello and inquire.

J. E. S., Sussex Corner.—Would you inform me whether there is a special set of rules for hammer throwing or not, and where I could obtain them? Ans. The following is the only rule of which we are aware applicable to hammer throwing, and is that in force at all Scotch games in this country: Weight of heavy hammer, 16 pounds, exclusive of handle; weight of light hammer, 12 pounds, exclusive of handle; length of handle, 3 feet 6 inches outside hammer socket. Handle to be stiff and made of hickory wood. The competitor must stand at the "scratch" and deliver the hammer without swinging the body around. When the head and handle strike the ground at the same time, the head mark is the measuring mark. Should the handle strike first a length of the handle will be added, measuring from the point of striking in the direction of the head. Three trials. Your former communication not received.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[Post Office Box 2832.]
127 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, SEPTEMBER 30, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, September 30th.—Racing at Dallas, Texas. Trotting at Great Falls, N. H., Salem, N. J., Lexington, Ky., Titusville, Pa. Rifle—N. R. Association at Creedmoor; Empire State Club at Syracuse. Fall regatta N. Y. Yacht Club. Fair, Queen's County Agricultural Society at Mineola, L. I. Base ball—Keystone vs. Pacific at Philadelphia.

FRIDAY, October 1st.—Racing at Dallas, Texas. Trotting at Lexington, Ky., Titusville, Pa., Elmira, N. Y. Empire State Rifle Club at Syracuse, N. Y.; N. R. Association at Creedmoor. Central New York State Fair, at Utica. Base ball—Athletic vs. Mutual at Philadelphia; Alaska vs. Resolute at Elizabeth, N. J.

SATURDAY, October 2d.—Racing at Jerome Park. Trotting at Lexington, Ky. N. R. Association, Creedmoor. Fall regatta Brooklyn Yacht Club. Central New York Fair, Utica. Cricket—12 English vs. Americans at St. George's Club Grounds, Hoboken. Base ball—Athletic vs. Mutual at Philadelphia; Flyaways vs. Staten Island at Staten Island.

MONDAY, October 4th.—Racing at Nashville, Tenn. Trotting at St. Louis, Mo. Prospect Park, L. I. New York Athletic Club meeting, Mott Haven.

TUESDAY, October 5th.—Racing at Jerome Park, Nashville, Tenn. Trotting at Prospect Park, Cincinnati, Ohio, Owego, N. Y., Manchester, N. H., Mount Holly, N. J.

WEDNESDAY, October 6th.—Racing at Nashville, Tenn. Trotting at Prospect Park, Fitchburg, Mass., Monroe, Mich., Cincinnati, Ohio.

AROUND THE WORLD IN EIGHTY-EIGHT DAYS.—George Francis Train used to boast either that he had been, or could go, around the world in ninety days, and Mr. Jules Verne has found it comparatively easy in one of his remarkable books to make his hero beat this time by ten days, to say nothing of rescuing Indian princesses, fighting savages, and bursting boilers on the way; but it has been left for a simple letter to accomplish the feat in the remarkable time of eighty-eight days. A gentleman, says the *United States Mail*, addressed a letter to the U. S. Postal Agent at Yokohama, Japan, and forwarded it *via* Brindisi by the steamer leaving New York for Southampton on the 13th of May last. Within the cover was another letter addressed to himself, which he requested the Postal Agent to forward to New York *via* San Francisco by the first opportunity. The letter reached Yokohama July 11th, San Francisco, July 31st, and New York August 9th, being eighty-eight days on the journey. Of course, however, it was only the close connection at Yokohama that saved it.

The late attempt to ship peaches to Europe having proved unsuccessful, it is now proposed to coat them with melted paraffine which, when dry, would effectually resist both air and water. Peach growers are very much disappointed with the result of the season's business, many of them finding themselves in debt for advances, besides the expenses of cultivation, picking, crates, etc. It is even proposed to cut down a large number of the trees, to prevent the recurrence of like misfortune through the medium of unmarketable surplus.

GAME PROTECTION.

THE INTERNATIONAL.

We publish herewith a call to the Executive Committee of the above association which we trust will be fully responded to. The objects of the organization have been too often expressed in these columns to require repetition now. Scarcely a day passes that we do not receive communications from various portions of the country, the substance of which is to call for more strenuous and united action on the part of those interested to obtain the reforms advocated.

INTERNATIONAL ASSOCIATION FOR PROTECTING GAME AND FISH,
SECRETARY'S OFFICE, 17 CHATHAM STREET,
NEW YORK, September, 1875.

DEAR SIR: A meeting of the Executive Committee of the International Association for Protecting Game and Fish is called to meet at the Secretary's office, 17 Chatham street, at 11 o'clock A. M., Oct. 22.

This Executive Committee comprises seventy members, representing all parts of Canada and the United States. Upon it devolves the appointment of Standing Committees on Legislation, Nomenclature, Distribution of Species, etc. While it will be desirable to have a full meeting, in order to secure intelligent appointments, a quorum of seven is all that is required by the constitution. To those who reside at long distances this notification must be a mere formality. Those who can be present should make an effort to be.

Appointees will be duly notified by the Secretary. Their duties will commence upon the receipt of such notification, and will be indicated by the Chairmen of the committees respectively. The results of their labors will be engrossed for use at the regular annual meeting to be called as soon as the completion of their work will permit, which should be during the legislative sessions of the coming Winter.

Respectfully, ROBT. B. ROOSEVELT, President.
CHAS. HALLOCK, Corresponding Secretary.

It needs but a glance at the game laws of States lying adjacent to each other to show the absurdity of the discrepancies between them. Nor is there greater temptation to violation of the laws than this difference of close seasons, which by opening markets stimulates the cupidity of lawless pot hunters, or affords a cover for illicit practice to the reckless and indifferent owner of a dog and gun. The question of nomenclature alone is a standing disgrace to the country, and the following letter very correctly instances the confusion of terms now prevailing:—

SHREWSBURY, N. J., September 27th, 1875.

EDITOR FOREST AND STREAM:—

I much doubt if any occupation receiving half the amount of time devoted to it can show so little real knowledge upon the subject as does sporting matters. Sportsmen shoot game and catch fish, and write reports of the same for sporting papers, the readers of which cannot understand what kind of bird, beast or fish is intended to be described. To illustrate I will quote from "Game Bag and Gun," in FOREST AND STREAM of September 16th: "Grass birds, dough birds, black breasters, summers, green heads, muddy breasts, bull head, bull bats, jack snipe, and chickens." It is with no view to discourage brother sportsmen from writing reports of their experience and knowledge of game that I have made the above remarks; but it is to illustrate and again call the attention of editors of sporting papers to the great need felt by us sportsmen of information upon the subject of American game and fish. I for one should hail with pleasure a portion of each number of FOREST AND STREAM devoted to this subject.

CHECK CORD.

THE CANADIAN RIFLE TEAM.

THOSE of our readers who may remember Creedmoor in its infancy—that is, in 1873, for it has only taken two years for us to develop in a most remarkable manner rifle practice in the United States—may call to mind the advent of certain noted Canadian riflemen in our midst. Their coming was talked about almost in bated breath, and with awe and reverence. As far back as October, 1873, in the tenth No. of the FOREST AND STREAM may be found the names of certain gentlemen from the Provinces who carried off prizes at long ranges. If the element of awe has, at least for the present, passed away, and we can now hold our own with the Canadian riflemen, our respect for them has been even enhanced. It should be forever recollected that whatever progress we have made in scientific rifle shooting, in the construction of ranges, and in the rules governing matches, is very much due to Canadian riflemen. If the school of modern rifle practice originated in England, it was in Canada, near to us, that it flourished. Thanks to the courtesy of the very riflemen who met our team at Creedmoor on Saturday last, we were enabled some three years ago, to examine in detail their ranges. But the dry, theoretical details, their drawings and plans, might have been of but little avail to our National Rifle Association, if it had not been that the Canadian riflemen came among us, and sparing no pains taught us practically our first rifle lessons. From the very initial movement of our rifle ranges in the United States until to-day, their courtesy has known no limit. Those interested in such matters may have noticed in the FOREST AND STREAM how many able contributions have graced our columns emanating from Canadian correspondents, and how they have always been ready to share with us all the secrets they had acquired by long toil and study in rifle shooting. Our team system, the method of coaching, is essentially the Canadian one, and the victory gained by our men at Dollymount was due to their teaching. Canada was our foster mother, and we, as her children in the rifle school, owe her a lasting debt of gratitude. The welcome then extended to the team of the Ontario Rifle Association was a hearty one, and the fact that the Canadians were made members of our National Rifle Association might be considered simply as a formality, since they had long ago been considered as an integral part of ourselves.

—In the town of Fort Myers, in Southern Florida, there are more than five hundred fruit-bearing orange trees, many cocoanut trees, and guava orchards in great profusion.

CHOKE BORES.

A CORRESPONDENT writes to us asking for information regarding choke bored guns, the mode adopted to produce the results claimed for them and the date of invention. With regard to the latter portion of his query we can say that almost as many claims to priority are made as there are manufacturers of guns. Previous to the late Field Gun Trial, we note that by the English sporting press it was generally conceded to be an American invention, but since that event each gunmaker who participated in the trial claims a method of his own, and much acrimonious letter writing has been the result. As for the antiquity of the practice, we printed some time since a letter, wherein the writer stated that he had in his possession an old brass fowling piece, bearing the Tower stamp, and the date 1776, which was choke bored. We have also been informed that the late W. W. Greener, father of the present celebrated maker, many years ago bored guns on this or a similar principle, which, after a time, were found to be unequal to the wear and tear, and the practice was abandoned. This, however, we relate merely as a bit of gossip and do not vouch for its accuracy. Certain it is, however, that the practice of choke boring guns has been known to and frequently adopted by makers in this country for very many years. That the result of the last Field trial was to bring forth guns showing remarkable pattern, is beyond a doubt; the utility of such close shooting is still an open question, upon which hinge others involving the matter of leading and wear and tear. We have watched closely for printed results of guns avowedly choke bores, and have concluded that for general field purposes, guns bored on the old plan are the best. In confirmation of this opinion, which has repeatedly been expressed, we find the following note in such good authority as the *London Sporting Gazette*; but before quoting it, we would say that we think a distinction should be drawn between close shooting and choke bore guns:—

"Admirers of the 'choke bore' seem to have considerably modified their enthusiasm since they have had an opportunity of trying the practical effect of the new gun upon game. The grouse have fortunately, in most cases, been wild this year, and for long range shooting there can be no question that the choke bore has its advantages over the old system. But at short ranges the birds have been ripped to ribbons, and we have heard of sad complaints from the game dealers on this score. Bad shots complain that birds are much harder to hit, but with that complaint we need hardly say we have no sympathy; the complainants must learn to shoot straighter, that's all. A more serious complaint, however, is that the number of cripples is greater than ever, for so strong is the sportsman's faith in the extraordinary killing powers of the new gun, that he blazes away at impossible distances, and more birds than ever get wounded just sufficiently to ensure their subsequent death in some hole or corner from exhaustion and sickness. For our own part we fail to see that much advantage is gained by the new system, and we note that it is already becoming modified. Sportsmen are now trying the experiment of having one barrel choke bored and the other bored on the old system. We have tried such a gun, and were not much enamored with the result. It saves the horrible mauling of the birds with the right barrel, but neither barrel shoots as well as when both are constructed on the same system. We should think choke bores would be quite useless for partridge shooting, and, if used, not one bird out of ten will be fit for the table. We are still of opinion that nothing beats a good gun of the old sort for ordinary shooting."

The accompanying letter relates a different experience, but we should like to hear from our correspondent after he has tried his gun on quail and grouse, where the conditions are quite different from those pertaining to bay birds or wild fowl.

NORFOLK, Va., Sept. 25, 1875.

EDITOR FOREST AND STREAM:—

I have read with much care the articles appearing in your issues, as well as in other papers which have come under my observation, as I am interested in the subject, having recently purchased one of Messrs. Scott & Sons' fine guns similar to the one made by them for Capt. Bogardus, except that it is 1½ inches shorter than his, and weighs one pound two ounces less. It was with much hesitancy that I bought this gun, fearing I was not a sufficiently good shot for such "close" work, but so far as I have used it have found that my fears were groundless, and now would not give it for all the guns I ever saw for my use. I used it on marsh birds in August at Cape Charles with fine results, making some of the longest shots I ever saw, one of which was at a marlin; killed clean at eighty-five steps with No. 8 shot, flying by, and knocked over a curlew at 110 steps with No. 6 shot, which recovered and flew off. Last week I had a few shots at wood duck, killing each bird easily, which was inside of fifty yards, and some much further. One which was about seventy-five yards was penetrated with four pellets, No. 5 shot, and killed clean. Of the fifty or sixty birds shot thus far with this gun I don't think but very few have been killed inside of thirty yards, and of these none were badly torn or injured in the least for the table, hence I think we have nothing to fear on this score, while we have almost the absolute certainty of killing our birds at forty to fifty yards, which I have found hard to do heretofore with the best guns bored on the old plan.

Our principal shooting here is at quail and snipe. On these I have not had a chance to try the choke bore, but have no apprehensions as to the result except in thick cover. Some have advanced the idea that this method of boring will increase the recoil. I do not find it so; for instance, at ducks I used 4½ drachms powder and 1½ ounces shot, with Ely's felt wads, without any perceptible recoil, and shall increase the charge of powder to 4½ drachms, Hazard's No. 5 ducking. The gun weighs 8 pounds 14 ounces. I have been induced to write this thinking it might be of service to some of your numerous readers, who may be considering the subject as I was, of which you must be the judge. ALFRED.

A NEW CARTRIDGE BELT.—Mr. N. S. Goss, of Neosho Falls, Kansas, has invented a revolving cartridge belt, which seems to fill the bill in this direction. It is supported from the shoulders, as well as the waist, and as it revolves easily, the weight can at all times be equally distributed on the body. A specimen can be seen at this office.

—Uncle John Krider, the veteran angler and sportsman, of Philadelphia, dropped in on us on Monday, on his way to the "Hub."

THE NEW SPORTING FIELD.

READERS of the earlier numbers of our paper will recall a series of letters written from Northampton county, Va., describing the plover and snipe shooting at Mockhorn and Hog Islands, a short distance below Chincoteague Bay. Although admitted to be one of the best points for bay birds, as well as upland shooting along our whole coast, the difficulty of reaching it was so great as to prove an almost insuperable obstacle to such sportsmen as have not an unlimited command of time. It was necessary to go first to Norfolk, then take a small steamer back to Cherry Stone, and from there hire a fishing smack, or other chance conveyance, to the beach. Now, however, by the opening of three new railroads the last of which will be in operation next month, all this is changed, and these fine shooting grounds become most easy of access. These railroads are the Junction and Breakwater, the Breakwater and Frankford, and the Worcester Railroad. The sportsman leaves New York by the steamers of the Old Dominion Steamship Company, which, in Summer, sail daily, and in Fall and Winter every Monday, Wednesday and Friday, from pier 37, North River, at 4 P. M.; Lewes, Del., is reached at 5 P. M. the next morning; at 9 o'clock a train starts for Berlin, Snow Hill, and Chincoteague Bay, reaching Snow Hill early in the afternoon and the Bay by 3 or 4 o'clock. Return trains run daily, connecting with the steamer at Lewes on Tuesdays, Thursdays and Saturdays at 4 P. M., reaching New York at 5 A. M. on the following morning. Mr. N. L. McCready, President of the Old Dominion Steamship Company, is also President of the Railroad Company.

The formation of the country around Chincoteague and Worcester county generally, and also the adjoining counties of Accomack and Northampton, in Virginia, is like that of the Long Island and New Jersey shores, and the varieties of game very similar, the more southern localities having a fortnight advantage in the Spring and being the same period later in the Fall. Every variety of bay bird, so called, from the little sand-piper to the great jack curlew, are found on the beach, together with an occasional flock of black plover, while in the Fall and Winter the various points afford excellent duck shooting, without the enormous expense attendant upon the sport at the "club" grounds. The main land of the above mentioned counties has long been noted for the excellence of the quail and rabbit shooting, and ruffed grouse are also abundant in some localities. The neighborhood of Lewes possesses some fine English snipe ground, and there are doubtless many meadows further south equally as good. Altogether sportsmen may congratulate themselves upon the opening up of this new country, where fair sport can be almost certainly relied on, at a reasonable distance from the city, easy and pleasant of access, and above all, inexpensive. We have said nothing about the oysters, those of Accomack possessing a world-wide reputation, or of the fishing, which must be equal to that of Barnegat.

EQUATORIAL AFRICA AND THE ARCTIC CIRCLE.—It is but a few days since reports were circulated concerning the supposed death of Cameron and Stanley, the African explorers. We are still without news from Cameron, but Stanley has been heard from. It will be remembered that Stanley, who became famous as an explorer through finding the long-lost Livingston, organized an expedition under the auspices of the London *Telegraph* and New York *Herald*, and started from Zanzibar for the interior on the 15th of November, 1874. Letters have now been received announcing his arrival at the town of Kagehyi, in the country of the Usukuma, on the shores of the Lake Victoria N'yanza, and that he was making a survey of its shores. Further information from the intrepid traveler will be anxiously awaited, although months must elapse before it can be received.

Turning from where Stanley and his men are sweltering under an equatorial sun, we have tidings of another expedition, which by this time is undergoing the opposite extreme of temperature. The British Arctic Expedition has been heard from at Disco, in Greenland, from whence they were to sail for Upernavik, and thence strike into the ice of Melville Bay. Hall's grave at Polaris Bay was to be visited, after which the ships would go into Winter quarters, pursuing their explorations by means of sledge journeys, and making every effort to reach the North Pole. No Arctic expedition ever started under more favorable circumstances, or better fitted for the work in hand, and the results, it is hoped, will set at rest many vexed questions in Arctic navigation.

The call for the annual meeting of the Missouri State Game Law Association has been issued by ex-Gov. Silas Woodson, the President of the Association. It will take place at St. Louis on the 6th of October, at eight o'clock P. M., in the Director's room of Mercantile Library. As this date comes just in the middle of "Fair week," when thousands of visitors from all parts of the State are in St. Louis, it is natural to expect a large attendance of sportsmen. Every club in the State will send its delegates, and no doubt many clubs will form between now and the time of meeting, at points where there is now no organization for enforcing the laws. A State like Missouri, containing an abundance of every variety of game, should be the banner State in the number and efficiency of its game law associations. The game laws are good; they only need enforcing; and this can best be done by the union of all interested parties. We hope to hear of good results following the October meeting in St. Louis.

The Rifle.

—The National Rifle Association have published for gratuitous distribution a brief description of their rules and regulations.

—On Thursday several detachments of the Eleventh Brigade shot at Creedmoor. In the Twenty third Regiment Lieut. H. K. Smith made the highest score, 21 at 300 yards, and 18 at 400 yards; total, 39. Of the Thirty-second Regiment Corporal Schmidt scored 13 at 300 yards, 23 at 400 yards; total, 26. In the contest of the Forty-seventh, Private Miller led the score, making 18 at 300, and 16 at 400 yards; total, 34.

—The Autumn meeting of the National Rifle Association opened on Tuesday with every prospect of being brought to a successful termination. Three matches were shot, of which our space and the hour of going to press will only permit us to give an outline. A detailed report of the meeting will appear in our next issue. The first shot was the Judd match, for which there were 188 entries, distance 200 yards with any rifle. The principal prize was won by Capt. Joseph Mason, of the Canadian team, with a score of 30 points out of a possible 35. Messrs. W. Robertson and E. S. Browe made similar scores, but their shots were not similarly placed. There were in all twenty prize winners in this match.

The Short Range Match, at the same distance, had 257 entries, seven shots each. Sergeant T. R. Murphy, of the Eighth Regiment, scored 32 out of a possible 35, and took first prize, Messrs. Starr & Marcus' diamond badge. There were also twenty prize winners in this match. The last shot was the Cavalry Match, open to teams of five from any troop of the N. G. S. N. Y., distance 200 yards, weapon Remington breech loading carbine, seven rounds. Three teams contended, the Yates Dragoons, Sixth Division, tying the Separate Troop, Twenty-fourth Brigade, on 112 points, the latter winning. The Washington Grays scored 109 points. The best individual scores were:—

H. Freer, Third Regiment.....27 H. B. Kelsey, W. G. T.....24
M. B. Nicholson, Yates Dragoons.....26 W. Wagner, Twenty-fourth Brig.....34
G. Sheldon, Twenty-fourth Brig.....26 D. Lackeman, Fifth Brigade.....24
A. T. Decker, W. G. T.....25

The day was fine and favorable for good shooting.

MATCH WITH THE CANADIANS.—This most interesting contest, which dates back as far as April of this year, originated in a challenge sent by C. K. Murray, Esq., President of the Victoria Rifle Club, to Col. Wingate, which was accepted by the Amateur Rifle Club. At that time the Amateur Club were fully engrossed with the arrangements necessary for the Dollymount match, and though this contest was always fully in their minds, perhaps as careful preparation for it as was necessary was not made. Some excuse may be plead, that the original Dollymount team, fatigued by their heavy exertions, could not be assembled, and that as the match was to be shot just prior to the Autumn meeting, the time was an inconvenient one. Now that a new American team has won the victory, the least said about the preparation would be the better, but if we had been worsted, doubtless recriminations among the losers would have been constant. It can readily be understood that our original team cannot be required to shoot on every occasion. There must be some limit to the tax put on these gentlemen. Rifle shooting is a very good thing, but it sometimes must give place to business. The team that shot at Dollymount may be said to have been fully five months at their work, and what with the serious task of training and shooting, and the illimitable amount of junketing, they must have been fagged to death. But there is no reason why a second team, a double of the first, should not always be kept up for handy work. If the seniors have the honors, let the juniors have the labor, and some day two of our own teams might be so closely approximate as to skill, that there might be but the difference of a few points between them. In this way, in case of accident, or illness, the National Rifle Association would never be without her champions. The want then in the Amateur Rifle Club, or in any other club, is more teams, not one or two additional replacing members, but a full eight of accurate and steady men. Certainly a fine beginning has been made, which only wants training and encouragement to perfect. The day of the match, Saturday last, the 26th of September, was a fine one. Above the heavens were clear, with just occasionally a fleecy speck in the sky. The sun gave no unusual glare, and objects were clearly and sharply defined; the mirage and quivering of the air were but slight, and the heat never unpleasant. But the wind! It was a dreadful wind. It cannot be said to have been more than brisk, and yet it was of the most capricious character. It was what is termed a fish-tail wind. Ichthyological readers know the peculiar flare of a fish's caudal appendage, and how it streams out. Now the wind would blow from the back to the targets—right along the range, while the streamer on both sides of the grounds would point inwards; that is, in rifle lingo, it blew IV, VIII, and IV, all at the same time. It is said in philology that he who acquires, of the commonly used languages, Russian, can manage all other living tongues; so he who is "canny" of the Creedmoor zephyrs, has at his fingers ends any other tantalizing breezes, effecting winds on ranges. And so it proved. There is undoubtedly some slight element of luck attending Creedmoor, and the elements have been propitious. In the International match at Creedmoor last year, the hot sun melted down the gallant Irishmen; on Saturday last, the fickle wind blew the Canadian bullets off their track. The Americans were at home with the wind, the Canadians were at sea.

Punctually at 11 o'clock, there being a goodly number of

people on the grounds, the match opened, the final results being as follows:—

CREEDMOOR, L. I., Sept. 25, 1875.—Match between teams of eight from the Victoria Rifle Club, of Hamilton, Ontario, Canada, and the Amateur Rifle Club, of New York City; distances, 300, 900 and 1,000 yards; fifteen shots each distance per man; any rifle within the rules; any position; day bright and clear; wind 6, 4 to 8 o'clock; highest possible individual score, 225; highest team total, 1,800; new Wimbledon targets.

One thing noticeable in the shooting of the Canadians, was that they shot laying down on their stomachs, while the Americans, with the exception of Mr. Geiger, shot laying on their backs. Mr. Geiger is a left handed shooter. We think the back position at long ranges is the better, and we fancy that in time, those who shoot *a la* Bodine, will be the exceptions. Some day later we may enter into the details of the back positions, as it has already several modifications. There are a half dozen different ways of shooting in this manner.

It may be seen that at 800 and 900 yards the American team led, while at 1,000 yards the pluck and steadiness of the gallant Canadians told, they making six points more than our men. Every one knows that the peculiarity of Creedmoor is that at sundown the wind quiets. It may be noticed how the Canadians improved just as soon as the conflicting and puzzling elements of the wind were withdrawn, their averages being better at 1,000 yards than the American team. Mr. Farwell was the high man on the American side, with a total of 193, and Mr. Murison took the same place on the Canadian eight. Some duck's eggs are visible in the scores, in one or two cases due to firing on the wrong target, but the majority were clear misses on both sides. Mr. Geiger's low score was said to be due to the loss of his front sight, and having to substitute for it another. As Mr. Geiger is a very steady man, no doubt his poor score can be accounted for in this way. The match was conducted in the most admirable way, and not a single dispute took place. The exceeding courtesy rendered to our men when in Canada last, was we believe fully returned. Questions of what are called "nippers," balls striking just on the edge of the defined limits of the targets, were always accepted without a murmur. The marking was highly creditable, being prompt and accurate. A handsome collation was offered to the guests, and all the riflemen and members of the press, and by five o'clock the match was concluded, with uproarious cheers for both sides. Gen. Dakin and Col. Gildersleeve made happy speeches, which brought forth an admirable reply from Mr. Murray. What he said was noteworthy, and from his excellent speech, we only have room to cull the following, that "he acknowledged the superiority of American arms, and that he believed they were beaten not by the men, but by the guns."

It was with great pleasure that the representative of the FOREST AND STREAM welcomed such old friends as Messrs.

Murison, Mason and Adam, to whom Creedmoor owes so much. Great credit is due to Gen. Dakin, who arranged the match, and saw it through to its fortunate conclusion. Among the distinguished guests present was Gen. ("Fighting Joe") Hooker, who sat admiringly through the whole contest, never doubting the result. Said he, "There is the Government giving great prominence to artillery practice. Every week they go out and burn no end of powder. Why don't they do more to improve our regimental rifle practice? It looks as if artillery at 1,000 yards would stand a mighty poor chance if opposed to such shooting as I see here. I haven't, you know, the credit of being easy skered, and can stomach some fighting, but on my word, I should like to be under cover, at least when these boys were popping at me." Some of the Canadian riflemen will remain over for the Autumn meeting, when we trust to see each one of them carry off a handsome prize. We are sure there is not an American rifleman who would begrudge them a crate full of cups, medals or badges.

A circular letter has been issued by General Shaler addressed to the various military officers of the United States Militia in reference to the coming Inter-State match. It is expected that a large number of States and Territories will be represented. Copies of the programmes have been forwarded to all the Adjutant Generals.

In regard to some points of controversy between the Sumner Guards, of San Francisco, and Company D, of the Twelfth Regiment, respecting a late rifle contest, the one shooting in California, the other in New York, we must give the victory in every way to the Californians, and accord it with good grace. But what we hope to see is California represented here. Let some of the gentlemen come on in person, and a return match will be certain. Californians, from the fact that riflemen can use their arms all the year round, must make in time splendid marksmen. Those who know best, think that the first drubbing New York will receive will come from the other side of the Rocky Mountains.

The last of the series of practice matches by the Sumner Guards, of San Francisco, for positions in the team to shoot next October has been concluded. The names of the team and the reserve, with the percentage made by them in five matches, are as follows: 1, J. Steed, 83.1-7; 2, D. Watson, 81.5-7; 3, C. Nash, 80.6-7; 4, Capt. Burns, 79.5-7; 5, G. H. Strong, 77.1-7; 6, T. Murphy, 76. Reserve W. Murphy, 73.3-7; A. S. Folger, 72.4-7.

MARVELLOUS SHOOTING.—The following score was made at the rifle range, at Valley Falls, Rhode Island, by Mr. Ra-both, of Pawtucket, at 500 yards, under the rules of the N. R. A.; no sighting shots; Remington rifle. In the morning, out of a possible 100, he made 95. In the afternoon, out of a possible 50, he made 50. At the first trial he made fourteen bullseyes in succession:

First trial.....3 4 5 4 5 4 5 5 5 5 5 5 5 5 5—95
Second trial.....5 5 5 5 5 5 5 5 5 5 5—50

Orange Judge, of the *Agriculturist*, has been trying his hand at target shooting. He used a Remington rifle, Creedmoor target, 1,000 yards, and at the first trial, in 18 shots made the following handsome score: 5, 3, 3, 2, 3, 4, 3, 3, 4, 5, 5, 3, 3, 4, 2, 4, 2, 3—61. The wind was variable, and the main shooting was done with the wind gauge moved four points.

ROCHESTER AMATEUR CLUB.—A meeting took place at Rochester, N. Y., last week for the organization of an Amateur Rifle Club. The following officers were elected: President, Dr. C. E. Riders; Secretary and Treasurer, E. S. Combs. The meeting was addressed by Major Fulton. Under such fortunate auspices, no doubt the Rochester Amateur Club will take a leading position.

A rifle club was formed at Detroit, Mich., on the 17th inst., with the following officers: President, Alfred Howard; Vice President, Charles Barnes; Secretary, George B. Mather; Treasurer, F. H. Ellis; Executive Committee, G. H. Thomas, Louis Sutter and Geo. Ludwig. The rules of the Amateur Association of New York was adopted, with a few alterations.

A NEAT COMPLIMENT.—That most excellent journal, the *Volunteer Service Gazette*, makes the following happy allusion on the occasion of the return of the American team:—

"As is natural and fitting, the famous American Rifle Team has been received with much rejoicing and much well earned applause in New York. An account of the proceedings will be found in another column together with a reprint of a very graceful and appropriate leading article on the subject which appeared in the *Times* a few days ago. The members of the team were, of course, loud in their praises of the greeting they received in Ireland, and we are glad to find that they understood fully the difficulty that stood in the way of their shooting with the eights at Wimbledon. The New York *FOREST AND STREAM* says:—'As to the team not being allowed to shoot for the Elcho Shield, they knew from the first they would not, and the impression which got abroad in America that the team was snubbed in this matter was quite erroneous. The Canadians had never been allowed to shoot for it, or in a match side by side with the three teams, therefore the Americans did not expect to be admitted. Nothing but the most warm and cordial friendship existed between the Americans and English during the meeting at Wimbledon.' We can only once more assure our American friends that there have never been more welcome guests at Wimbledon than the genial and pleasant gentlemen who represented their country there last July, and that when they come again, they will be made at least as welcome, and may, we are sure, depend upon finding a match arranged which will test even their skill satisfactorily."

NEW HAVEN, Conn., September, 1875.

EDITOR *FOREST AND STREAM*:—

On the 21st inst. the rifle team of the Second Connecticut Regiment competition in the *Army and Navy Journal* match had a practice shoot on the Whitney Rifle Range, near New Haven, with Sharps rifles, 44 calibre; powder, 90 grains, bullet, 500 yards. The shooting was excellent, considering the unfavorable wind, which blew in gusts. Col. Bario, Lieut. Col. Bacon, and many other prominent military men were present. The following is the score, seven shots each:—

Sergeant Munson.....24 Capt. Byxby.....15
Corporal Crampton.....26 Sergeant Lane.....19
Corporal Bacon.....25 Lieut. Ross.....27
Private Jorry.....23 Sergeant Mix.....25
Sergeant Wilson.....22 Private Jones.....22
Sergeant Elliott.....13

RESERVE.

Lieut. Wood.....16 Private Folsom.....28
Corporal Barnes.....21 Private Wapler.....23
While the shooting was going on a neat and durably constructed military rifle was exhibited on the grounds, manufactured by the Whitney Arms Company. It was pronounced by military experts to be a very safe and superior weapon. By request of several military men it was shot by Sergeant Munson, of Company K. The following is the score—distance, 500 yards, two sighting shots:—

3 4 5 2 3 5 3—25

At the wind up G. W. Yale, of the American Rifle Team, showed the boys how to make bullseyes, which he did successively with a Sharps military rifle. GL—N.

Game Bag and Gun.

GAME IN SEASON IN OCTOBER.

Moose, *Alces malchis*. Red Deer, *Caricex Virginianus*.
Elk or Wapiti, *Cervus Canadensis*. Squirrels, red, black and grey.
Hares, brown and grey. Quail, *Optyx Virginia*.
Wild Turkey, *Melagris gallapavo*. Pinnated Grouse, *Tetrao cupida*.
Woodcock, *Scolopax rusticola*. Curlew, *Numenius arquaria*.
Ruffed Grouse, *Tetrao umbellus*. Sandpipers, *Tytingane*.
Plover, *Charadrius*. Willets.
Godwit, *Limosine*. Reed or Rice Birds, *Dolichonyx oriz-
vum*.
Rails, *Rallus Virginianus*. Wild Duck.
Snipe and Bay Birds.
Caribou, *Tarandus rangifer*.

GAME IN MARKET.—Our quotations remain unchanged since last week. The weather is still too warm to permit of Western game being sent to this market in quantities, nor is the demand excessive. Prairie chickens are worth \$1.25 per pair; ruffed grouse, \$1.50. Woodcock are being received in fair quantities, New Jersey and Connecticut being the principal points of shipment, price \$1.50 per pair. Reed birds are coming from all along the coast from New Jersey to Savannah, and are lower in price, say 80 cents to \$1. per dozen; mallard \$1.50 per pair; teal 75 cents. Wild pigeons, from Sullivan and Fulton counties, \$1.75 per dozen.

MAINE.—*Hallowell, Sept. 19.*—The following is my bag for the week: Monday, 4 woodcock, 1 partridge (ruffed grouse); Tuesday, 12 woodcock; Wednesday, 5 partridges, 6 woodcock; Thursday, rain; Friday, rain; Saturday, 4 woodcock, 6 partridges.

MASSACHUSETTS.—*Cohasset, Sept. 20.*—During the last few days. Coots and loons have been coming along lively. The cold weather has started them up. I killed on the 18th a pair of sea or eider ducks, which is rather strange for so early in the season. Sunday, it being very rough so that boats could not do much, three men killed 100 coots on one of our ledges where they could make a lee. This is the best day's gunning that has been done here for some years. Smelts are now plenty, 20 or 30 dozen to a man being about the average. S. K., Jr.

Salem, Sept. 20.—Have just returned from Parker River, Rowley, and brought some birds, such as dough birds, black breasted, grass birds, yellow legs, &c. The best gunning was had last week. The first black duck this season was shot in Phillip's Beach slough a day or two ago. I shot a loon this morning, sculling for him in my float. This is the first web-footed bird I have shot this season. Parties returned lately from Chatham; two of them report their best day last Thursday, getting 35 big birds; 6 geese went along last week; brant have been seen, and a few English snipe have been shot. Coot are catching it off "Tinker's Isle" and the "Pigs." TEAL.

PENNSYLVANIA.—*Philadelphia, Sept. 26.*—Rail and reed birds do not seem to be very abundant. *FOREST AND STREAM* Club have their semi-annual shoot on the 4th of October.

NORTH CAROLINA.—*New Berne, Sept. 23.*—Deer extraordinarily plenty this Fall. Venison weighing 29 pounds per quarter hawked about the streets for 5 and 6 cents per pound. Large number of Summer ducks (wood ducks) on the Neuse and Trent Rivers. No snipe as yet.

I. E. W.

A pigeon match is on the tapis which, if brought to a conclusion will prove the most interesting event of the kind ever shot in this country. The stakes are \$10,000, and the contestants Mr. James Gordon Bennett and Capt. A. H. Bogardus on one side, and Mr. Carroll Livingston and Mr. Ira A. Paine on the other. The conditions are for each to shoot at fifty-eight birds from five traps placed five yards apart, thirty yards rise, eighty yards boundary. The match is to take place on the 6th of October at Newport, R. I. Messrs. Bennett and Livingston are well known as amateur pigeon shots of more than usual excellence, while the fame of the professionals who are to shoot as their partners is too well known to require remark.

LONG ISLAND SHOOTING CLUB.—A large number of the members of this club competed at Dexter's on Thursday last for their challenge cup, the conditions being that the cup should be shot for at twenty five yards rise, H. & T. traps, the winner to hold it until the next monthly shoot for it, when, if he has to surrender it, he receives in lieu \$25 from the club. The following shows the result of the last shot:—

Waters (B.).....9 Broadway (B.).....4
Reddon (M.).....7 Waters (B.).....4
Gildersleeve (B.).....7 Eddy (B.).....3
Elmendorf (M.).....6 Blakely (B.).....3
Wynn (M.).....6 Baxter (M.).....3
Austen (B.).....5 Baylis (B.).....3
Fendick (B.).....5 Birdseye (M.).....3
Remsen (M.).....5 Posten (M.).....3
Charman (M.).....5 Robinson (M.).....3
Wingate (B.).....4 Madison (B.).....3
Walters (B.).....4 Hartshorne (B.).....2

Some of the members, it will be seen still adhere to their muzzle loaders. Mr. Parks acted as referee.

A pigeon match which has attracted much interest was concluded on Monday on the grounds of Ira A. Paine at Babylon, Long Island. The following is a summary, including ties:—

Handicap sweepstakes, \$60 each, half forfeit, to shoot at twenty-five single birds, from five traps, with 14 ounces of shot, both barrels, 80 yards boundary; London Gun Club rules; closed with 29 entries, of which 21 went to the score; value of the stakes, \$1,450, of which the second received \$100, the third saved his stake.

B. De Forest for W. Knapp (B.) 28 yards—11111, 11111, 11111, 00111, 11111, 11111—27 killed, 2 missed.

N. Earle (B.) 27 yards—11111, 11110, 11111, 11111, 01111, 11110—26 killed, 3 missed.

S. Saxon for C. Banks (M.) 27 yards—01011, 11111, 11111, 01111, 11111, 11111—27 killed, 3 missed.

B. De Forest (B.) 28 yards—11111, 01111, 10111, 10111, 11111, 11110—26 killed, 4 missed.

J. Snedcor (M.) 24 yards—11111, 11111, 11111, 01111, 01011, 0—21 killed, 4 missed.

P. Belmont (B.) 28 yards—01101, 01111, 11111, 10111, 11111, 1—21 killed, 4 missed.

C. Lampson (B.) 28 yards—11110, 10111, 01111, 10111, 11111, 10—20 killed, 5 missed.

J. G. Heckscher, for H. Draper (B.) 26 yards—11111, 11111, 11110, 11111, 00000—20 killed, 5 missed.

J. G. Heckscher (B.) 26 yards—11111, 11101, 01111, 01110, 11110—20 killed, 5 missed.

C. Snyder (B.) 26 yards—00111, 11001, 11111, 11111, 10611—19 killed, 6 missed.

C. Floyd Jones (B.) 25 yards—11011, 10111, 11111, 11011, 11010—19 killed, 6 missed.

H. S. Bloodgood (B.) 28 yards—11100, 01111, 01011, 11110, 01111—18 killed, 7 missed.

J. P. Grund (B.) 30 yards—11110, 01110, 10001, 11111, 01111, 1—18 killed, 7 missed.

B. Purdy (B.) 28 yards—11111, 10111, 01011, 11011, 00010—17 killed, 8 missed.

T. Van Buren (B.) 30 yards—11101, 10100, 01111, 00111, 11110—17 killed, 8 missed.

C. Livingston (B.) 30 yards—10111, 11101, 10000, 10011, 11011—16 killed, 9 missed.

E. W. Davis (B.) 29 yards—11110, 01100, 11110, 01001, 00101, 1—14 killed, 11 missed.

E. Stevenson (B.) 24 yards—01101, 01001, 11010, 11100, 01100—13 killed, 12 missed.

Dr. Talbot (B.) 28 yards—11001, 10101, 11111, 01111, 12 killed, 5 missed.

M. Van Buren (B.) 29 yards—11111, 01001, 01111, 01111—12 killed, 5 missed.

H. S. Robbins (B.) 27 yards—10111, 01010—5 killed, 3 missed.

Mr. De Forest, shooting for Mr. Knapp, won first prize amounting to over \$900. Mr. Earle won second prize and Mr. Saxon third.

NARRAGANSETT GUN CLUB.—Three matches were shot on the grounds of this club at Newport on the 22d inst. The first was for \$250 a side, between J. P. Grund, of Philadelphia, and Travis Van Buren, of New York, which was won by the latter. They shot at fifty birds each, thirty yards rise, Hurlingham Club rules governing. The following is the result:—

Van Buren—10101, 11111, 11111, 01110, 10101, 11111, 11001, 01010, 11110, 00110—Killed, 35; missed, 15.

Grund—10111, 10110, 11111, 11101, 10011, 01110, 00110, 00010, 10111, 00000—Killed, 29; missed, 21.

Following this a match between M. Van Buren, brother of the victor in the above match, and Mr. Grund, the former killing five birds to his opponents' four and winning. The last match was between Mr. J. P. Grund and T. Van Buren, which was also won by Mr. Van Buren by a score of five to three.

A pigeon shoot occurred at Syracuse, Sept. 21, under the auspices of the Onondaga Club. The first shoot was a five-bird sweepstakes, thirteen entries, eighty yards boundary. George Stevens took the first prize; Frank Dennison, second, and Charles Hart, third. The second shoot, a ten-bird sweepstakes, with eighteen entries, resulted thus: J. Connors, first prize; Frank Dennison, second; Thomas Kimber, third. A third sweepstakes followed, five birds, eleven entries, with the following result: J. Connors, first prize; Dennison, second; S. Taylor, third.

The pigeon shots of Grand Rapids have shot a number of matches recently, two days of last week being devoted to the sport. One match for \$125 a side, between Glen and Burchard, the former to shoot at 21 birds to the latter's 25, resulted in a victory for Burchard by killing 22 to Glen's 21. The second match was for \$20, between Burchard and Dowding. The former won as before, killing 17 to Dowding's 14. The last match was between Burchard and Rosenfield, the latter winning. On Saturday two matches were shot, resulting as follows:—

Purse \$20—10 birds each.
Dowding.....8 Glen.....9
Hascall.....8 Burchard.....7

In shooting off the ties Glen won.
Handicap, 10 single birds. Purse \$25.
Hascall, 26 yards.....10 Burchard, 21 yards.....7
Dowding, 26 yards.....5 Rosenfield, 18 yards.....5
Glen, 26 yards.....8

PORTSMOUTH, N. H., Sept. 25, 1875.

EDITOR *FOREST AND STREAM*:—

A match was shot to-day between Mr. Stimpson and J. Carroll, of the Portsmouth Sportsman's Club, for the Eldridge Championship Medal, each shooting at 15 birds, 21 yards rise, 80 yards boundary; domestic birds, strong and lively. The following is the score:—

Carroll.....6 Stimpson.....11
This makes Stimpson the winner of the medal three successive times, twice killing 11 and once killing 14 out of 15 birds. Mr. Stimpson is a fine shot, and it will be a hard struggle for any of the members to take the medal away from him. Following the match was a sweepstakes between members of the same club at wild pigeons, each shooting at four birds, with the following result:—

Potter.....3 Loud.....2
Emmerson.....2 Bell.....2
Nelson.....2 Hartshorn.....2
Sides.....2 Stoddard.....0
Eldridge.....1

Potter killed three out of four, making him the hero of the day. Mr. Potter is one of the best shots we have at the trap, and looking at the bags of woodcock he brings in is good proof of his ability in the alders. After the shooting was over Capt. Emmerson challenged Mr. Loud to shoot a match for \$15 a side, Capt. Emmerson to shoot at 16 and Mr. Loud at 15 birds, this giving Emmerson the advantage of one bird. Mr. Loud accepted the kind offer and the stakes were put up, the match to take place within a week. Mr. Loud will have something to do, as Capt. Emmerson is a crack shot.

At a meeting of the Portsmouth Sportsman's Club, held at their hall last evening, it was decided to have the annual match within one week, each member to shoot at fifteen birds, at the Rockingham Trotting Park of this city. Hoping to give you a good report of the day, remain I yours, QUAIL.

PORTLAND, Sept. 16, 1875.

EDITOR *FOREST AND STREAM*:—

The annual tournament for the club badge and State championship was held at Little Chebeague Island Tuesday and Wednesday, the 14th and 15th of September, under the charge of the Forest City Club of this city, they being the winners of the badge last year, and under the rules to provide the shoot this year. Fifty shooters participated, representing three clubs, viz.: Androscoggin, of Lewiston, and Maine and Forest City, of Portland. Wild pigeons were used, all of them having been trapped within ten days of the shoot, and were most of them strong flyers. There

were four prizes besides the club badge, which of itself was a beautiful affair. The badge was in the shape of a shield, and of fine gold elegantly engraved, and a fine diamond set in the centre. The other prizes consisted of:—First prize, a fine breech loading Parker; second prize, a fine breech loading rifle; third prize, a fine prize, a fine fly rod; fourth prize, a fine set of sleeve buttons.

The shooting was very close throughout and very exciting. The diamond badge was won by R. G. Hall, of the Forest City Club, he killing fourteen out of fifteen birds, tying Nason, of the Androscoggin, and Noyes, of the Forest City, and winning in shooting off ties. The second prize, for the gun, was won by C. Nason, of the Androscoggin, after a most exciting contest, he having tied Martin, of the Forest City, in thirteen birds each. Seven trials were made resulting each time in ties before the final result was reached. Curtis, of the Androscoggin, won the breech loading rifle, and Billings, of the Forest City, the fly rod; Leavitt, of the Androscoggin, the sleeve buttons. Then came sweepstakes and shooting at double birds, and one member was frightened by "triplets" so badly that he could not shoot. Perhaps the "darkey" didn't show his *ivories*. "A general good time" was the verdict of all concerned, and next year if those "triplets" show themselves let them look out, for I intend to be ready at the word "pull."

SANEZ.

SOUTH AMBOY, N. J., Sept. 15, 1875.

EDITOR FOREST AND STREAM:—

To-day has been a gala day for this place, the excitement being a shooting match between Isaac V. Selover, of this place, and James Vanbrockle, of Mateawan, the conditions being to shoot at 25 single birds each, find trap and handle, the birds to be put all in one box, 1½ oz. shot, 21 yards rise and 80 yards bounds. The birds were not of the best quality, although fair, but the shooting was very remarkable for amateurs, as the appended score will show:—

Isaac V. Selover...1 1 1 1 1 1 1 1 1 0 1 1 1 0 1 1 1 1 1 1 1 1—23
James Vanbrockle...1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—25

In connection with this I would say that the same parties have tied before on twenty-one birds each for the same amount, each killing their twenty-one birds straight.

H. C. G.

MATEAWAN, Sept. 14, 1875.

EDITOR FOREST AND STREAM:—

At last the sportsmon of Monmouth county have aroused to the importance of having their game laws enforced, and for that particular purpose have passed their by-laws laws and formed themselves into a shooting club to be designated and known as the Midway Shooting Club of Mateawan, N. J. Tuesday, the 14th day of September, being their dedication day, of course there was an exceedingly grand turnout, and your correspondent was pleased to see with what harmony good discipline could be accomplished. Their badge is an exquisite piece of workmanship, as appropriate an emblem as the sportsmen could desire, beautifully engraved with the name of the club and other costly workmanship. The shooting commenced at precisely 2:15 o'clock, with twenty-five out of thirty-five members answering to the roll-call. In regard to the birds, I never saw better turned from the trap, they being swift, and seemed to have the endurance to carry away all the shot that would penetrate them. The match proceeded under the auspices and direction of the officers of the club, men who knew their avocation. The result of the match was as follows:—

James Lambertson, 24 yards.....	8	Charles Applegate, 25 yards.....	9
K. H. Wyckoff, 24 yards.....	7	A. Tenicke, 25 yards.....	7
H. Warne, 25 yards.....	8	Wm. Madden, 21 yards.....	6
Wm. A. Dunlop, 25 yards.....	8	Edwood Warne, 11 yards.....	7
Kort. H. Warne, 24 yards.....	7	Wm. J. Conover, 25 yards.....	8
George Farrington, 21 yards.....	7	Aaron Longstreet, 22 yards.....	6
Richard Worell, 21 yards.....	8	Wm. Beers, Jr, 21 yards.....	7
James Vanbrockle, 25 yards.....	6	Spaf. Walling, 21 yards.....	6
Garett Hendrickson, 22 yards.....	7	James Wilson, 21 yards.....	9
Stephen Lambertson, 23 yards.....	6	D. H. Gordon, 22 yards.....	6
Wm. McGee, 23 yards.....	7	Frank E. Hyer, 21 yards.....	8
James Terhune, 22 yards.....	8	John H. Farry, 22 yards.....	8
Henry Gordon, 23 yards.....	7		

Mr. Charles Applegate and Mr. James Wilson having tied, it became necessary to shoot off at five birds each, which they did with the following result:—

Charles Applegate, 25 yards.....4James Wilson, 21 yards.....5

Mr. Wilson being the winner the badge was presented to him in a neat and appropriate speech by the President of the club.

H. C. G.

BALTIMORE, Sept. 20, 1873.

EDITOR FOREST AND STREAM:—

Inclosed please find score of match (friendly) of Baltimore County Gun Club shot last Saturday. This is the first time we have shot at 29 yards and out of five traps. We shot 80 yards boundary, Narragansett rules, 1½ oz. shot, 21 birds. Our club is composed of gentlemen amateur shots.

Name.	Yards.	Score.	Total.

C. H. Hauptman.....	5	W. A. Emmet.....	3

Judges, J. B. Fulton and F. Hagen. Referee, T. H. Mann.

E.

SPORTING NOTES FROM NEW JERSEY.

RED BANK, N. J., September, 1875.

EDITOR FOREST AND STREAM:—

We are forty miles from your editorial rooms. We have several ways of reaching this place, one all water route, one all rail route, and the last and least, half rail and half water. Red Bank is situated at the head of the Shrewsbury River, or at the head of steamboat navigation, county of Monmouth, Shrewsbury township. It has a population of about 3,000. The farmers in the vicinity are well to do, and are perfectly indifferent as to the ravages of the potato bug (Colorado beetle.) The Shrewsbury River, from the headwaters to Sandy Hook beach, is about eight miles in length, and from half a mile to one mile in width, both sides of the river affording beautiful building sites, and in consequence of its picturesque and healthful location has been appropriated by parties from New York and elsewhere for Summer resorts. The hotels on the Shrewsbury River are Thompson's Pavilion, at the Highlands; Jenkinson's, at the same place; the Fowler House, at Oceanic, and the Pontine, at Fair Haven. The hotel of Red Bank is the Globe, kept for many years by Mr. Ex-Sheriff Hendrickson, but last Spring changed hands, and is now kept by

Lewis Merrigold. It is a quiet and well-appointed house, with plenty to eat. We have splendid drives on the finest of clayed turnpike and cross-roads. Little Silver, Pleasure Bay, Seabright, Long Branch, and all the lesser watering places can be reached by short drives. We are but six miles from Monmouth Park, so you see we can take our dinner at the usual country hour, 12 o'clock, attend the races, and be home in time for an early supper. The products of the Shrewsbury River—oysters, far-famed for their fine flavor, migratory fish, such as bluefish, weakfish, kingfish, occasional sheephead, clams, both hard and soft shells, and soft crabs in abundance generally. Snipe we have in fair numbers. I believe everybody has snipe shooting in the vicinity of their homes if they will only drive far enough for them. We have no snipe in the Fall; I account for it in this way—we shoot all in the Spring. Some fair bags were made last Spring, birds one mile apart by actual measurement, (finger boards.) Woodcock shooting is only fair to middling, the lands being trimmed up, drained, and put under cultivation. Quail we have this season in fair numbers, providing the last severe rains have not drowned out the young broods that have been seen. I don't want to picture Monmouth county—that is, this portion of it—as sportsman's paradise, but I have killed 208 quail in nine days. This was done in the Fall of 1872, and I think I can do this same thing this Fall. Of course they don't fly in your door yard; you have got to work for them, and work hard at that. We have no sportsman's club here as yet, but we have some whole-souled fellows who live up to the laws to a letter. Pigeon shooting is carried on here very extensively. We shoot for the Shrewsbury Cup No. 2 every month. The present holder is challenged to shoot this month. I call this cup No. 2 ag, No. 1 was presented by me, and shot for at my Summer residence in 1872. This cup was won by my old friend Wm. Dunlap, of Mateawan, N. J. His score was 19 out of 20; the last four out of five were killed at thirty-one yards rise.

I want the "Squire" down with me soon. I think we can warm the boys at the trap. We have no imported dogs among us, but we have got some of the finest domestic goods you ever saw—I refer to the ones bred and owned by that prince of sportsmen, Forman Taylor, of Colt's Neck, N. J. Your kennel editor had the pleasure of looking over some of Mr. Taylor's stock. I think his Sancho and Shorb's Jocko would make the finest team of setters in the country. Shorb's Jocko is no snipe dog, but is great on woodcock, quail, and partridge. You will go many miles to see one that will beat him; and furthermore, I am ready to purchase *any dog*—pink, blue, snuff, or any other color—that will beat Jocko on any or all three of the last mentioned kinds of game. I can safely say that Jocko has had 10,000 head of game killed over him, and that's what's the matter. Mr. Editor, you will pardon me for giving my friends' dogs these puffs, but as they can't be bought for love or money, you will pass it over. I first shot over Jocko when he was eight months old and found him simply perfection, and on my return offered Mr. Shorb \$250 for him, but I was politely informed that was just one-half of what he was valued at.

Well, Mr. Editor, I think I have span this article out rather long, but you know what you must expect when shooters get to talking. I have matched the Squire to talk against Forman Taylor for a basket. The match will take place in the city of New York some evening this Winter, when the nights are as long as we can get them. I can picture the result. Time, 5 A. M.; Taylor flat on his back, hands thrown up, eyes closed, and the Squire whispering in his ear. Will notify you all in time so that you may enjoy the fun. Fraternally yours,

G. H. WILD.

UPPER MARLBORO, Prince George County, Md., Sept. 25, 1875.

EDITOR FOREST AND STREAM:—

Since the commencement of September the swamp and marshes adjacent to the Patuxent River and its tributaries have been alive with sportsmen from the neighboring cities of Baltimore and Washington, and even from your great metropolis, who have been busily engaged in paying their respects to the thousands of ortolans and reed birds which abound. The shooting this season commenced rather earlier than usual, owing to the fine condition of the birds. Feed upon the marshes has been unusually good and plentiful, and a large number of gentlemen are encamped along the river in order to enjoy the full benefit of the shooting season, which will close with the advent of the first frost. In this connection sportsmen generally are glad to see the lively interest which the FOREST AND STREAM is now manifesting in the passage of laws for the protection of game in the different States. In our county such a law is especially needed during the ortolan and partridge season, as owing to the proximity to markets the country is annually overrun by pot-hunters, who usually go in parties of six or ten and daily ship large quantities of game to market. The farmers throughout the county have at last awakened to the necessity for action, and have called for a public meeting to be held next week. The partridge season opened on the 15th inst., and promises to be unusually good. The birds are well grown and fat, and sportsmen report an unusual number of them. Among the gentlemen who annually come from New York to enjoy the partridge shooting we have already had the pleasure of welcoming our old friend, Mr. Constable, who is accompanied by several of his friends. These gentlemen have visited this section for several years past during the partridge season, and they report the sport as far superior to that in Virginia.

The crops generally throughout this section of Maryland are very good. The tobacco crop, which is nearly secured, promises to be large, and the agricultural interests seem brighter than they have been for years. I will keep you posted from time to time concerning sporting matters throughout this region. Yours,

M.

SHOT PISTOLS.—As burglaries increase the necessity for proper defensive arms becomes more impressive. A Philadelphia correspondent writes:—

"I was glad to notice in your paper of the 8th inst. that the Editor of the Massachusetts *Mirror* and *Farmer* had called the attention of manufacturers of fire arms to shot pistols for use against burglars and tramps. We want a weapon that will bring down the game when pointed in the direction of it, so that if called upon suddenly to use it, it shall be effective without requiring an extra marksman. It should be a five or six shooter, for there is no time for loading when engaged with a burglar. It cannot be doubted that, for protection, a shot pistol would be superior to all others. Mosher and Douglass would have undoubtedly escaped had it not been for shot guns. They were armed with pistols loaded with ball, and although brought in close contact with their assailants, and firing at them several times, they failed to hit them.

By all means let us have the new shot pistols as soon as possible. No family should be without one."

SOME SPORTS IN EGYPT.

EDITOR FOREST AND STREAM:—

Through the medium of your valuable journal I would like to give some of my experience, and a few hints about the pleasures of sport in the land of Egypt.

I, like most other tourists, arrived with only guide book knowledge of the country. At Cairo guns and accoutrements can be obtained on hire. The reedy borders of the Nile and its numerous canals furnish excellent retreat and food for the snipe, several species of duck and other water fowl. Following along the levee, roads leading in the direction of the Pyramids of Gizeh offer the best chance of success, and by taking a carriage or donkey, the fatigue is lessened. To hunt just here it were better to so arrange as to be on the desert near the Pyramids about dawn, to have opportunity to get a gazelle, or a pop at a hyena. The gazelle, after browsing and taking water in the valley, under the safeguard of night, returns for greater security into the desert for the day. The surface is undulating, offering cover, and as the sun rises they can be seen—a beautiful sight indeed—standing out in bold relief upon the crests of the sand hills, in herds from six to fifteen, leisurely browsing on the scant, acrid growth, and wending their way deeper into the solitudes of this sea of sand. Be careful now to get between them and the

sun; it blinds them. Then you can rapidly approach quite near enough, but your time is short, and these few minutes, just as the sun is rising above and is tangent to the horizon, are precious. Aim low; their position and the light give them an artificial height. To bring one down is a good test of accuracy in judging distance. Now move along the foot of the hills in search of snipe, beccassen and duck and a possible quail. *En passant*, it would be rendering a service to the Fellah to knock over every fox (they are not game here and are plenty) or ichneumon that crosses the path.

Directly, after a few miles tramp, we get into the large palm groves about Sakara, where we find droves of doves and wood pigeons, *Corbean*, (not the common crow) and paroquets do not go amiss with the natives. By dusk a good bag ought to be the reward; it always so proved with me. October, November and December are the months for this sport, and are decidedly the most pleasant of the year; and then, too, you will have gotten the cream of it in time to go on further up the Nile and continue the same, with the addition of wild geese, that arrive in January in vast numbers, *en route* to the upper country. Should it be convenient, by all means run down on the cars to Damreidt, situated near the eastern mouth of the Nile, and on the great lake Menzaleh, for snipe, duck and fish. The numbers are a surprise. The large overflows, the reedy canal and sedgy swamps on either side of the river give them a good home. They are not hunted much—only by a few Greeks and Italians of the town, just for their own tables, using old-fashioned muzzle loaders, with bad powder, good being difficult to get and expensive. This causes the birds to be somewhat tame, and they can be brought within easy reach of our fine modern gun.

By getting a letter to our Consular Agent, Mr. John Sarn, who would consider it a compliment, you will get more facilities for lodging and hunting. A few days thus spent will give more real pleasure, reveal more of the beauties and resources of the country than months of hanging around the hotels. I am not more than half through with the list of game to be sought and how to do it, but think I have said enough for the present.

DELTA.

—With regard to guns rusting from exposure to salt air, our correspondent, "Maryland," writes:—

"I think I have at last found out the best way to keep gun barrels from rusting while at the seashore. For several seasons I have been greatly troubled; but this year I have had no trouble. I procured some of Riggs' Belmont-style Oil, and find that if I carry a rug saturated with this oil and rub my barrels with it, that they keep perfectly free from rust. I think I have fully tested this, as one day it rained very nearly all day, but my barrels did not rust at all. The barrels also keep free from rust when not used; so that I consider the oil a perfect success, and write this letter so that brother sportsmen can derive benefit from my experience.

WHEN SHOOTING ON THE WING ORIGINATED.—In endeavoring to fix a date from facts, for the period of perfection in the use of firearms for sporting purposes, the curious will be greatly assisted by a small Italian work, entitled "Eccellenza della Caocia de Cesare Solatio Romana," printed at Rome, in 1669, who states, that at the time he wrote, the art of shooting on the wing had been known in Rome about eighty years, so that it may be taken for granted that in Italy sportsmen began to shoot on the wing about 1589. It is therefore natural to suppose that about the same period that practice became tolerably general on the continent of Europe.

—The first annual games of the New York Centennial Athletic Association will be held on the second Tuesday in October on the Capitoline Grounds, Brooklyn. The programme includes a one mile walking match for amateurs; one mile running race for the championship of America, open to all; four mile walking match, open to all; 100 yard running race, heats, three in five; 440-yard race; 880 yard race, and a jumping contest. Two prizes will be given in each contest.

N. Y. ATHLETIC CLUB.—As announced in our last, the Fall tournament of this club will be held at Mott Haven, on October 4th. The programme includes nine events, as follows: One hundred yard running race, quarter of mile running race, half-mile running race, one mile running race, and one 120-yard hurdle race, one mile walking match, three mile walking match for the amateur championship of America, and running high and wide jumps. These contests are for gold and silver medals, valued from \$20 to \$100, which will be awarded to the first and second in each contest. The races are open to all *bona fide* amateurs.

INTERNATIONAL PEDESTRIAN MATCH.—A walking match for the championship of the world and a stake of £100 a side is about being arranged between William Perkins, the champion of England, and W. E. Harding, of this city, arising out of a challenge of the former "ped" in *Bell's Life* offering to walk any man in the United States 50 miles here for that amount. The backer of Harding proposes two matches, one to be walked in this country and one in England.

MAGAZINES.

The American Swine and Poultry Journal is published at Cedar Rapids, Iowa, and is one of the best magazines devoted to the interests of the farm and barn yard which reaches us from the West.

The Aquatic Monthly, under the editorship of Mr. Chas. A. Peverely, continues to issue an interesting resume of aquatic events. In the current number Mr. Stuart M. Taylor, well known in the yachting world, contributes a letter on the Cape May regatta and other topics, in which "Devoted Yachtsman," of the *Spirit*, is handled very severely. The other correspondence is from well known aquatic writers. This magazine is published by Mr. August Bretano, of No. 39 Union Square.

Scribner's for October presents its usual attractive table of contents, although we miss the able articles from Mr. Waring's pen. Dr. Holland's "Story of Sevenoaks" will be concluded in the December number. Next month we are promised the first installment of a new serial by Bret Harte entitled "Gabriel Conroy," the whole of which is in the publishers' hands, and which is to run through twelve numbers. In the current issue we have two chapters more of Jules Verne's "Mysterious Island," another of Major Powell's illustrated articles descriptive of the Grand Canon of the Colorado, and other entertaining sketches.

St. Nicholas for October opens with an account of the naval battle between the Essex, of our navy, under the gallant Porter, and British ship Poesbe and consort off Valparaiso during the war of 1812. Miss Olcott's story of "Eight Cousins" is concluded, and so is Mr. Trowbridge's excellent tale, "The Young Surveyor." A large number of illustrations enliven the number and furnish a fund of amusement for the juvenile reader.

Our Home Journal, published weekly at New Orleans, by James H. Hummel, presents a valuable record of the agricultural progress of the Southwest. Its contents are varied and practical. Terms \$2.50 per annum.

HURST'S
Stereoscopic Studies
—OF—
Natural History
For Object Teaching in Schools
—AND—
PARLOR ENTERTAINMENT.

We are prepared to furnish the first sixty numbers of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign specimens, and various Animals and Birds in grotesque attitudes, never however violating their natural instincts.

We offer these views not as pictures only, but as studies from nature. One of the great moving elements in our modern system of education is object teaching. The unerring fidelity of the stereoscope transfers the animals and birds from their natural habitat to the rooms of the student and the fireside of our homes, where they cannot fail to leave a lasting impression of the form, color, habits, and locality of each specimen.

An experience of more than twenty-five years as Taxidermist of the New York State Cabinet of Natural History, and in gathering his large collection of native and foreign specimens, enables Mr. Hurst to combine in every view the locality of the specimen with its appropriate rocks, woods or water, and coloring from the originals.

Dittmar Powder Manufacturing Co.,
MANUFACTURERS OF

CARL DITTMAR'S
Patent Sporting Powder

BLASTING POWDERS, &c.,
NEPONSET, MASS.

I have succeeded in overcoming all objections that may have been raised to the kind of Sporting Powder previously manufactured by me. By an entirely new process, and with the assistance of new machinery, I am now able to make the grains as hard as those of Black Powder, thus avoiding the great compressibility of the kind first introduced, and allowing an even loading every time. In addition to the greater density of the new powder, I have also obviated the great rapidity of ignition. There is now no fear of overloading. No necessity for any special directions for use, simply use it like Black Powder, and use the same quantity in bulk.

The powder can now be used from an ordinary powder flask. The same kind of powder can be used for both Shot Guns and Rifles. The sizes and numbers for the grain are the same as those for black powder. The Medium size is best adapted for general purposes, the largest size for small bores, and the finest size for large bores.

Every package of the new powder bears my signature. None genuine without it.

I manufacture none of the old kind, and all connection with my former agency, the so-called Dittmar Powder Co. is at an end. Please address all orders to me. Any letters unanswered or orders not filled since September 1st will be immediately attended to if parties will please re-write to me. I will exchange, when requested, any of my powder bought before that date for the new kind.

My best thanks to the friends of my New Powder, who have by their kind suggestions helped me to make it perfect, so that I now have no doubt of its complete success.

CARL DITTMAR.

Miscellaneous.

THE HAZARD POWDER CO.,
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFFG, FFG, and "Sea Shooting" FG, in kegs of 25 lbs., and 6 1/2 lbs. and cans of 5 lbs. FFGG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFGG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER.

GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office,
88 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6 1/2 lbs. each, and in canisters of 1 and 5 lbs.

AUDUBON POWDER,

Very quick. For woodcock and quail Nos. 1 to 4. Packed in metal kegs of 12 1/2 lbs. and 6 1/2 lbs., and in pound canisters.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.g, FF.g, FFF.g, the last being the finest and most used. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 pound.

All of the above give high velocities and less residuum than any other brands made.

LAFLIN & RAND POWDER Co.,

21 Park Row, N. Y.

* * * This is a book that has long been needed by winter tourists to Florida and persons seeking settlement there. It gives a full classification of the game and fish of the Southern Peninsula, routes of interior and coastwise travel, the agricultural resources of the country, and sites for settlement, hints for camping out, resorts for game, hotels, and such other information as will be of great benefit to visitors seeking Florida for health, pleasure, exploration, or permanent settlement.

SCOVILL'S

Blood and Liver Syrup

All cutaneous eruptions on the face or body indicate an impure condition of the blood, and this may or may not be SCROFULA; but in either case is nothing more than an insidious poison, that

BURNS LIKE A TERRIBLE FIRE

as it courses through the veins, sowing seeds of death with every pulsation. In this condition of things something is needed AT ONCE TO CLEANSE THE BLOOD; and

Scovill's Blood and Liver Syrup

will positively effect this desideratum, expelling every trace of disease from the blood and system and leaving the skin

SOFT, FAIR AND BEAUTIFUL.

Hundreds of certificates attest its value. Price \$1 a bottle.

FOR SALE BY ALL DRUGGISTS.

Dr. Rogers's
VEGETABLE WORM SYRUP

A brave man may suffer pain, when inflicted upon himself, heroically; but he

Cannot see his Child Suffer.

There is no other malady incident to childhood that is accompanied with more indescribable wretchedness to the little sufferers than that

Produced by Worms;

and when the parent fully comprehends the situation he will not delay a moment in securing the most prompt and efficient remedies to insure the expulsion of the intruders. The remedy may be found in

Dr. Roger's Vegetable Worm Syrup.

Please bear in mind that ROGERS' WORM SYRUP is the reliable preparation.

ROGERS' WORM SYRUP is a palatable preparation.

ROGERS' WORM SYRUP is liked by children. ROGERS' WORM SYRUP positively destroys worms.

ROGERS' WORM SYRUP leaves no bad effects. ROGERS' WORM SYRUP is highly recommended by physicians, and is unquestionably the best WORM MEDICINE IN THE WORLD.

Price 25 cents. For sale by all druggists.

HENRY'S
Carbolic Salve.

FOR SALE BY ALL DRUGGISTS.

The wonderful celerity with which this combination of Carbolic Acid with other soothing and Curative Emollients acts, is something akin to the marvelous.

It is with pride that the proprietors call attention to the gratifying fact that

Physicians give it the highest meed of praise,

and use it and prescribe it in their practice.

New York, Dec. 22, 1869.

JOHN F. HENRY, Esq.:

Your CARBOLIC SALVE proves an excellent article, and I thank you for it. This is another evidence of the great value of the discovery of Carbolic Acid. Yours truly,

GEO. B. LINCOLN,

Pres't Board of Health.

Price 25 cents per box.

REV. R. B. LOCKWOOD'S

Catarrh Cure!

The Best Remedy Known, and Endorsed by all the Principal Physicians of the Country.

Rev. R. B. Lockwood's Nasal Douche will be found valuable in obstinate chronic cases.

Rev. R. B. Lockwood's Liver and Stomach Pills, 25 cents each, receive the endorsement of thousands.

JOHN F. HENRY, CURRAN & CO., Proprietors, 8 and 9 College Place, New York.

HENRY'S
SEWING MACHINE OIL

A PURE OIL that does not gum up and has the endorsement of the principal Sewing Machine Companies.

Price 25 Cents per Bottle.

MOTT'S LIVER PILLS

It is easy enough to make a pill, but to make a good pill, ah! that's the difficulty. There are cheap, harsh, drastic pills, that are of even less benefit than a dose of salts. But a good medicine, like Dr. Mott's Liver Pills, which penetrates to the seat of disease, is a desideratum indeed. Will positively cure all diseases of the Liver. Sold everywhere. Price 25 cents per box.

Green's Oxygenated Bitters.

At certain periods of life a tonic is a necessity; but there is danger in using stimulants that injure the organs of digestion while giving temporary relief. To obviate this and present to the public a tonic free from Alcoholic Poison, Dr. Green prepared the Oxygenated Bitters, a sure cure for dyspepsia and all kindred complaints. Sold everywhere. Price \$1 per bottle.

Packer's All-Healing Tar Soap.

It cures all kinds of Skin Diseases with a most wonderful certainty; it promotes cleanliness, personal purity and general health; it is a preventive of many kinds of disease, and it is an absolute necessity in the nursery. Price 25 cents.

Miscellaneous.

Breech Loaders.
W. & C. SCOTT & SONS.

Winners of the "Turf, Field and Farm" Gun Trials.

(See issue October 3d, 1873.)

In which competition the committees have awarded our guns, First and Second for POINTS OF MERIT OF ACTION, MATERIALS, PROPORTION, AND SHOOTING QUALITIES combined, in all the four classes.

THE PREMIER GUN.

W. & C. SCOTT & SON call attention to their very FINEST weapon, combining all their recent improvements, marked on the rib between their name and London address the brand—"THE PREMIER QUALITY."

Medium and fine guns bear full name and address, and plain guns full name and "London" only.

Each gun is numbered and the actions are stamped with name and trade mark.

W. & C. SCOTT & SON, Sole makers of the Patent Top Lever, solid, Double Locking Bolt Breech Loader, bearing the full name of the firm. W. & C. SCOTT & SON caution sportsmen against imitations of their patent and name. Guns bearing the name abbreviated, or with different initials, are not genuine.

TRIAL OF SCOTT & GREENER'S NEW SYSTEM OF BORING, BY THE EDITOR OF "THE FIELD," LONDON.

(See *The Field*, January 30th, 1875.)

"From a comparison of the two tables it will be seen that with Walker's shot, Messrs. Scott's guns showed a marked superiority over Mr. Greener's, both in average and in the highest score made. Indeed, with the left barrel, in his third shot, Mr. Scott got a selected group pattern of 239 and a penetration of 37, equalling the highest pattern made by Mr. Greener, and exceeding the penetration of that particular shot by eight sheets."

H. C. Squires, No. 1, Courtlandt st. New York.

THE GREAT
London Gun Trial,
1875.

W. W. GREENER begs to inform his numerous clients in the United States that he has been very successful in the above trial, having secured the first prize, a silver cup, value 40 guineas—class 2 for 12 bores; also winner in class 1 for 8 and 10 bores, and class 4 for 20 bores. He has won in all the classes for improved boring, which is upon a different plan to any other maker, and is far superior in the three most essential points, viz., PATTERN, PENETRATION, and REGULARITY OF SHOOTING.

Mr. HENRY C. SQUIRES, of No. 1 Courtlandt St., New York, is now importing my DOUBLE CLOSE-SHOOTING GUNS to order, an invoice of which will be shipped to him on the 1st July, and can be examined about the 15th. All special orders given to Mr. Squires will be carefully filled. A full report of the GREAT TRIAL, showing the marked superiority of my guns over guns made by Dougal, Pape, Tolley, and others, will shortly be published, and can be had on application at No. 1 Courtlandt St.

W. W. GREENER,
Champion Gun Maker,
St. Mary's Works, Birmingham, England.

HENRY C. SQUIRES, of No. 1 Courtlandt street, has just received an invoice of these close-shooting guns, and from him any information in reference to the results of the Great Trial can be obtained on application.

WILLIAMS & POWELL,
Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENGTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supercede all the complicated and manifold grips now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.

Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.

NO. 25 SOUTH CASTLE STREET,
LIVERPOOL.
Established 1780.

aug26-tf

J. D. DOUGALL'S

EXPRESS SHOT GUNS.

(Title registered.)

SHOWN by trials at Wimbledon by Editor of the *Field* to possess the GREATEST PENETRATION and therefore LONGEST RANGE—thus: Circle, 30 inches: 300 pellets; average, 191; penetration, 37. The Editor's trial of Greener guns with 340 pellets of same shot and same charge of powder, gave 180, and penetration 30, although there were 40 more pellets in each charge. Should any controversy arise as to the durability of these new systems, we herewith warn all beforehand that our system is our own invention (though founded on the American idea) and is DURABLE, a fact remarked on by the *Field*, that the guns tried had been in use during last season, and references permitted to the owners. Send for illustrated Circulars to

59 St. James's Street London.

Attractive Route

To the Trout and Grayling Fisheries of
Northern Michigan,
VIA GRAND RAPIDS AND INDIANA RAIL-
ROAD, MACKINAW GRAND RAPIDS
AND CINCINNATI SHORT LINE.

The attention of SPORTSMEN and TOURISTS is invited to the many attractions offered by this line, now completed from Richmond, Ind., to Traverse City, on Grand Traverse Bay, and to Petoskey, on Little Traverse Bay. The waters of the Grand Traverse region and the North Woods of Michigan are unsurpassed, if equalled, in the abundance and great variety of the finny tribe. BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING, now attracting the attention of Sportsmen everywhere, is found only in these waters. BLACK BASS, PIKE, PICKEREL, and MASCALONGE are also found in great numbers in the many lakes and lakelets of this territory.

LUXURIOUS SLEEPING AND CHAIR CARS run through from Cincinnati to Traverse City; also PULLMAN PALACE SLEEPERS from Detroit over Michigan Central and Grand Rapids and Indiana road, via Grand Rapids, to Petoskey, with SPLENDID STEAMER making DAILY CONNECTION at latter point for the Island of Mackinaw.

For Tourists' Guide, containing complete and accurate maps, with full information as to Fishing Grounds, transportation facilities, and in short all that could be desired by Sportsmen or Tourists, send to Forest and Stream office, or to the undersigned. Low Round Trip EXCURSION TICKETS good until SEPTEMBER 30th.

Gen'l Passenger and Ticket Agent,
Grand Rapids, Mich.

Tourists' and Sportsmen's Route.

THE ERIE RAILWAY.

THE ROUTE OF THE ERIE RAILWAY is peculiarly rich in the variety and extent of its scenery, and while the tourist has alternating glimpses of the beauty of rivers, gaps and mountains, the sportsman has within easy reach many localities that afford him every facility for the enjoyment of the sports of the field and stream. We enumerate a few of the pleasure resorts which crowd the line of the road.

Rutherford Park.—9½ miles from New York. Fine hotels and boating pastimes on the Passaic.
Clifton.—13½ miles from the city, overlooking the picturesque Lake Dundee.

Lake Mohonk.—A beautiful body of water 1,200 feet above the Hudson—splendid hotel accommodations.
Orange Lake.—Six miles West of Newburgh, and noted for its fishing attractions.

Milford, Pa.—About eight miles from Port Jervis. Is noted for its trout fishing, woodcock shooting and superior hotels.

Avon Springs.—Celebrated for 20 years as a resort for invalids, the waters possessing many valuable healing qualities.

Watkins Glen.—This beautiful gorge is distant 294 miles from New York, via Erie Road to Elmira. Its wild and picturesque attractions are second only in reputation to those of Niagara.

Chautauqua Lake.—18 miles long, 3 miles wide; said to be the highest navigable water on the American continent, being 730 feet above Lake Erie and 1,290 feet higher than the Atlantic Ocean.
Niagara Falls.—This great cataract is reached by the direct line of the Erie Railway.

There are along the line of the road no less than **Ten Large Lakes, Abounding with Fish,** and affording most delightful sport for black bass and pickerel. Their names are—Lakes Greenwood, Orange, Mohonk, White, Otsego, Cayuga, Seneca, Kenka, Silver and Chautauqua.

The following schedule will afford a partial guide to the numerous fishing localities reached by this road:

Trout Fishing:

At or near Southfields,	42 miles from New York.
" " Oxford,	52 " " " "
" " Middletown,	67 " " " "
" " Otisville,	76 " " " "
" " Port Jervis,	88 " " " "
" " Monticello,	112 " " " "
" " Milford,	96 " " " "

Black Bass and Pickerel.

At or near Sloatsburg, 36 miles from New York, including Lakes Truxedo, Potague and Cedar Pond.
At or near Monroe, 50 miles from New York, including Round, Long, Mombasha and Cromwell's Ponds.

At or near Florida, 64 miles from New York. The famed Mirror Lake, is distant 1 mile.

At or near Otisville,	76 miles from New York.
" " Gaynard,	80 " " " "
" " Port Jervis,	88 " " " "
" " Monticello,	112 " " " "
" " Cen. Valley,	48 " " " "
" " Seneca Lake,	294 " " " "

Tickets for sale at the General Offices of the Erie Railway Company, 124 Washington street Boston; 241, 401, 529, or 957 Broadway, New York; and 732 Chestnut street, Philadelphia. Express trains leave New York from depot foot of Chambers street at 9 A. M., 10:45 A. M., and 7 P. M.

JNO N. ABBOTT,

Aug 12-Oct 1

FOR NEW HAVEN, HARTFORD.

Springfield, White Mountains, Montreal and intermediate points. The new and elegant steamer C. H. Northam leaves Pier No. 25, East River, daily (Sundays excepted) at 3, and Twenty-third street, East River, at 3:15 P. M. A passenger train will be in waiting on the wharf at New Haven and leave for Springfield and way stations on arrival of the boat.

NIGHT LINE.—Steamer Elm City leaves New York at 11 P. M., arriving in New Haven in time for the early morning trains. Tickets sold and baggage checked at 944 Broadway, New York, and 4 Court street, Brooklyn. Apply at General Office on the pier, or to RICHARD PECK, General Agent. 1f

STEAMERS TO
Eastern Maine, New Brunswick,
Nova Scotia, Prince Edward Island, &c.THE
International Steamship
Company's Steamers

New York and City of Portland.

will, until October 3d, leave Boston at 8 A. M., and Portland at 6 P. M. every Monday, Wednesday and Friday, for Eastport, Maine, and St. John, N. B., forwarding passengers by connecting lines to Calais, Me., St. Andrews, Fredericton, and Shediac, N. B., Amherst, Truro, Pictou, Digby, Annapolis, Kentville, Windsor, and Halifax, N. S., Summerside and Charlottetown, P. E. I., and Hawksbury, C. B. This is

A Most Desirable Route for Sportsmen,

presenting a convenient and pleasant mode of access to the famous hunting and fishing grounds of the Eastern regions, at very moderate rates of fare. For circular, with map and description of the route, apply to
W. W. KILBY, Agent,
Jul 15 to Oct 1 Commercial Wharf, Boston.

Chicago, Milwaukee and
St. Paul Railway

Traverses a finer country, affords views of grander scenery, and passes through more business centres and pleasure resorts than any other Northwestern line. Its forests, prairies, lakes and streams, abounding with game, present unequalled attractions to the votaries of Nimrod and Walton. It is the only railway route along the valley of the Upper Mississippi. It is also the shortest as well as best route between the great metropolitan centres of the Northwest—Chicago, Milwaukee, St. Paul, and Minneapolis. Track and equipment unequalled, and its trains of palace-coaches and sleeping cars run through without change.

New York Office, 319 Broadway.
Chicago Depot, cor. Canal & W. Madison.
City Offices, 61 and 63 Clark St. Apr 29-6m

For Florida.

PHILADELPHIA AND SOUTHERN

Mail Steamship Company's line to Savannah, Ga., sailing every Saturday, from Pier 22, below Pine street, Delaware River, at 10 o'clock A. M., making close connections through to all points South.

The line is composed of the steamships Juniata and Wyoming. The Wyoming does not carry passengers. The Juniata is a favorite ship with the traveling public, having passenger accommodations of the most superb character. She has recently been refitted and elegantly furnished with everything requisite to the comfort and convenience of passengers.

Families en route for FLORIDA, Georgia, Alabama, and even as far as New Orleans, will find the Savannah route the most desirable for comfort, as well as the most economical. Through trains of the Central Railroad of Georgia, and Atlantic and Gulf Railroad, Florida, leave Savannah every morning and evening. The Florida steamers leave Savannah three days in the week for all points on the coast.

For through passenger tickets and bills of lading to all points in Florida, Georgia, Alabama and Tennessee, apply to WM. L. JAMES, General Agent, 416 South Delaware avenue, Philadelphia.

Magic Lantern and 100 Slides for \$100.

E. & H. ANTHONY & CO., 591 Broadway, N. Y., opposite Metropolitan Hotel, Chromos and Frames, Stereoscopes and Views, Graphoscopes, Megalithoscopes, Albums and Photographs of celebrities. Photo-Lantern Slides a special ty. Manufacturers of Photographic materials. Awarded First Premium at Vienna Exposition. Aug 5-1y

SMOKE VANITY FAIR.

It is shaved from the best Natural Leaf, for Meershaum and Cigarettes. Does not make the tongue sore. Liberal sample on receipt of money. Highest award, Vienna, 1873. Send for circular. WM. S. KIMBALL & CO., PEPPERLESS TOBACCO WORKS, Rochester, N. Y.

From W. H. HOLABIRD, Valparaiso, Ind.
No tobacco like Vanity Fair has been burned in my pipe: it is the very best, and all the boys beg it when opportunity offers.

There is no future without its straggling clouds. It soothes and tranquilizes the feelings, and helps the expansion of all benevolent and kindly sentiments.

From GEO. E. POND, Lieut. 8th Cavalry, Fort Garland, Col.
Permit me to say that I am highly pleased with Vanity Fair. It answers all recommendations.

From PHILIP C. ROGERS, Merwinsville, Conn.
Much obliged to you for sending me such tobacco; nothing like it has ever been smoked in this part of the country within the memory of the oldest inhabitant—Uncle Peter Gaylord, aged 92.

That first taste of the new smoke and of the fragrant leaf is very grateful. It has a bloom about it that you wish might last.

But what is paper, and what are words? Vain things!
"The next time Juno ruffles thee,
O, Jupiter, TRY THE WEED."

The Sportsmen's Depot.
JOHN KRIDER,

Ramblings in Oregon.

For Forest and Stream.

PART I.

THE State of Oregon, which is now said to absorb the greater portion of the emigration from the States and territories bordering the Rocky Mountains, is undoubtedly less known than any portion of the United States, owing to its isolated position and the difficulty of reaching it from the East; and yet no section is so eagerly inquired for at present, not only by our own migratory class, but also by a large number of the natives of Great Britain, who have heard that it possesses a climate similar to that of England, while it produces all kinds of grain, fruit and vegetables in the most lavish profusion. The information heretofore given about the country is extremely meagre in extent and poor in quality, as the writers were not acquainted with its character, and judge it from a superficial examination; hence, a false impression has been given of it in many respects. Its scenic charms have also been misrepresented or overlooked, when, in reality, it will compare with any region on this continent in all forms of beauty from the picturesqueness of sylvan vales to the sublime grandeur of towering mountain peaks clad in shrouds of eternal snow. One may behold there at a *coup d'oeil* tranquility and energy, action and repose, picturesqueness and ruggedness, bleak desolation and tropical luxuriance. Grandeur and expansiveness are, however, the most marked characteristics of the country, for Nature seems to have made everything there with a lavish hand. It is also one of the finest hunting and fishing regions of the world, for almost all species of game birds and fish found west of the Rocky Mountains are very numerous there; and in Summer its valleys display their floral wealth, for they seem one vast flower bed in which the gaudy hues are most prominent. It is a splendid field for the naturalist and geologist; hence I may safely assert that it possesses an interest for all classes of people, from the farmer to the tourist and scientist that cannot be surpassed by any portion of the country. Those who seek new fields for their enterprise and energy, or desire to behold scenery entirely *sui generis*, will find that distant commonwealth well worthy of consideration. To reach it from the East one has a choice of three routes. The first is to leave the cars at Keltou, Utah, and take the stage through the artemisid plains of Idaho, and the bunch-grass plateaus of Washington Territory; the next is to go by rail to San Francisco, thence take the steamer north; and the third is to pass through California overland by stage and rail, and enter Oregon from the south. The former is the most tedious; the next the most comfortable, and the third the most interesting, as one has an opportunity of enjoying grand old woods, towering snowy pinnacles, and wild, primeval Nature in all her most erratic moods. On my first visit to the country I chose the latter route, and on the fifth day after leaving San Francisco crossed the Siskiyou Mountains, which divide Oregon and California. On reaching the northern side of the range a magnificent panorama, formed of rugged mountains crowned by many-shaped peaks of snow, immense forests of dark green firs which stretched away to the horizon in every direction, and a rolling valley clad with coppices of foliaceous trees of warm hues, and smiling beneath the soft, yellow rays of the morning sun was spread out before me like a map, and to give animation to the scene, flocks of white, restless sheep and large herds of horses and horned cattle roamed over the plain, and numerous mining camps and cosy farm houses embowered in leafy arbors dotted the landscape in various directions. It was such a tableau as that region only can show, with many forms of beauty. I gazed long and earnestly at it and drank in its charms with an enthusiastic delight I have seldom experienced. At my suggestion the stage driver stopped a short time to let me enjoy the scenic feast of which I could not weary. The horses dashed merrily down the mountain side and in three hours I reached my first halting place, Jacksonville, a city of about seven hundred inhabitants, and famous as being the first place

outside of California in which gold was discovered. It is situated in the midst of a large mining and agricultural region, and is the *entrepot* for all goods passing through Southern Oregon. It has also acquired notoriety from having been the headquarters of the troops operating against the Modocs, and the first place to declare Captain Jack an outlaw. The country surrounding it is one of the most beautiful on earth, and can scarcely be excelled in fertility. The mines were formerly the principal wealth of the place, but they are now mainly confined to placer diggings, which are in the hands of Chinamen, and some quartz ledges which would pay well were the transportation of ores not so costly. This region is a perfect paradise for immigrants, provided they can bear comparative isolation for a few years, and take pleasure in the chase, natural beauty and the acquirement of competence, if not wealth, instead of the company of their fellowman. The entire area of the Rogue River Valley, which embraces several hundred thousand acres, is composed of rolling vales and oak-clad hills, which make excellent pasturage, as they are covered at all seasons with an abundance of graminaceous verdure. The rich alluvial soil of the plains produces all crops in profusion. Wheat yields from twenty to sixty bushels to the acre, according to mode of cultivation; oats, barley and rye from forty to ninety bushels; vegetables and tuberous roots grow in equal luxuriance, and fruits raised there will equal in flavor and size those of any portion of the continent. Many species of fruit are indigenous, such as the wild plumb, the cherry, crab apple, grapes, strawberry, salmonberry and kindred fruits. The foothills produce the grape in lavish profusion, as the subsoil is of granite formation, and is both well watered and well drained. The fruit is also free from blight or the attack of worms, so that it can attain the fullest perfection. The experiments made have proved that these hills are equal to those of California as vineyards, and that the bouquet of the wines produced compares favorably with the best vintage of Hungary. As a locality for those desiring to engage in stock raising, farming or vine culture I know of no section of the country that offers equal facilities, for the reason that land is cheap and fertile, and that the Winters are very mild, snow being a rare visitor, while the Summers are genial and moderate, owing to the cool and bracing breezes which constantly sweep over the plain from the snowy mountains which environ it. Its most serious disadvantages are the lack of a ready market and facility of transportation. Whenever the latter is supplied the Rogue River Valley will prove one of the arcadian spots of the Pacific coast. One important advantage that it possesses for the immigrant is the liberal support given to the public schools by State and people, and considering the small number of inhabitants occupying the region, it will be found that its institutions of learning will compare quite favorably with those of much older and more pretentious localities. The residents are largely composed of natives of the once border States, and, although many of them are imbued with rather primitive ideas of life, and are somewhat deficient in education, yet they manifest a keen interest in all pertaining to intellectual advancement. I did not encounter one man who did not have a fair general knowledge of his own country, and none that did not seem to have devoted nearly all his years to the study of politics, if I should judge from the glibness and positiveness with which all argued on political issues. I learned subsequently that this species of knowledge is readily obtained, for there is not a town of five hundred inhabitants in the State that does not boast of two weekly journals, and these are nothing if not controversial. The fact that the press is so well supported is, of itself, an indication of the interest of the people in useful information. I found the citizens of Jacksonville obliging and hospitable and willing to do all in their power to make one acquainted with the fertility and beauty of the land of their adoption. They seemed to be anxious to give every information about it; and their statements I found on investigation to be true. One thing attracted my attention, even among the rural population, where the study of æsthetics is popularly supposed to be overlooked, and that is the keen interest they

manifested in any striking scenery. This attribute they receive from the beauties surrounding them, for intellect must be dull indeed that would not be impressed with the charms which Nature displays so generously in southern Oregon. I heard much from all classes of a lake said to exist in the Cascade Mountains, which was so deep that a bullet fired from a rifle could not be seen to strike the water, and the walls around it so steep that it was impossible to reach the base. This I resolved to visit, so, accompanied by four friends, I started out early one morning, and reached the foot of the mountains, distant about seventy miles, late in the evening. We provided our own larder, tents and camp equipage, as we did not expect to meet many houses on the route, and these we strapped on the back of a mule that would not permit a rider to occupy that exalted position. Our course led over the broad rolling valley until we came to the foot hills of the Cascade range, and there we encamped for the night. During our journey I noticed the almost tropical luxuriance of the flowers, and their general gaudy hue. All seemed to delight in the most striking colors, fox yellow, crimson, white and orange were the prevalent shades. The liliaceous plants are very numerous in the region; in fact, Oregon can produce a more generous display of this family than any country known to civilization, and many of them are unknown to science. A German botanist sent there by the Duke of Baden said that if his master owned such a magnificent floral bed, he would spend more money upon it than the Government of the United States did for exploring all the territories. It is certainly not very pleasant to consider that the rich scientific stores of the country do not receive more attention from government or people.

At an early hour next morning we were astir, clambering up the mountains, and having a good bridle path we found little difficulty in reaching the summit. We had to camp there that night, and despite a roaring fire we suffered much from the bitter cold, for the snow laid in heavy masses on the ground. After breakfast we went in quest of the lake and soon discovered a clue that we knew indicated its presence, in the soft pumice and scoria freely scattered about; and following a pathway of these rocks we soon found ourselves standing on the brink of a cavernous basin, whose gloomy waters made it look deeper even than it was. Gazing downwards for a few minutes causes a dizziness that the strongest nerves cannot withstand. One has to jump away rapidly to escape this dizziness, for any toying with the nerves is only increasing the danger; that is, provided one stands on the extreme edge. After observing its depth from above, we discovered a trail leading down the bluffs, which is used by deer, bears, elks and other large animals in reaching the water, and being profusely clad with scrubby pines and tough shrubs, we were enabled, by their aid to descend to the base, after much stumbling, checking and slipping. Once below and we had an opportunity of experiencing to the fullest extent the rude wildness and desolate grandeur of the scene. The walls, which are formed of the Plutonian, augitic basalt, hug the water so close that not a vestige of shore is seen. They average two thousand five hundred feet in altitude, and are as smooth, apparently, as if they had been planed by glaciers. The lake itself, which resembles a huge, round chaldron; has a circumference of about thirty-six miles, and a depth of nearly six hundred feet in the middle. No living object, however, is sustained in its inky waters, for not a fish, or even a fly, disturbs its droning solitude. A large island, having a diameter at the base of several hundred yards, and a height of three hundred feet, towers upward in the centre, and this has a crater at the summit which is one hundred feet deep, and about twenty feet in width. The island, like the walls, is of igneous formation, and from this circumstance it is supposed that it was once an active volcanic peak which sunk when the burning matter in the interior was rejected. This is a very plausible theory, as scoria, pumice and other igneous rocks, apparently as fresh as if they were thrown out only yesterday, are very abundant in the vicinity. Whatever its origin may have been, the lake must remain an object of interest to tourists and geologists, as its scenery is entirely alone in

its rugged grandeur. It is a Mecca to many families of Jacksonville in Summer, as they enjoy the wildness for which it is so famed, as well as the refreshing snow-cooled breezes which sigh the picean forests at all hours. Several pretty mountain tarns, which fairly swarm with delicious trout, are convenient, and amid their charms dreamy anglers can hook pleasure and fish all day long, while the Nimrod finds an abundance of deer, black bears, rabbits and kindred game about them, so that he can satiate himself with sport and delicate pabulum in a short time. The best period for visiting the lake is July or August, as the snow is then melted, the tall, green grass carpets the forests and furnishes a succulent dinner to the horses, and the many varieties of berries that grow at such an altitude are fully ripe. A person can extract as much health and pure pleasure from Crater Lake and its vicinity as he can from any portion of the continent, provided he loves manly sports and grand scenery. Our party remained there only one day, as we had thoroughly explored the place in that time, and were anxious to exchange the rare, chilling air of the mountains for the soft breezes of the valley. We stopped at the Rogue River Falls for an hour or two on our return, and enjoyed their picturesqueness. They leap down a height of nearly two hundred feet, and send masses of spray, tinged with the prismatic colors, soaring upward in tapering showers. We returned to Jacksonville in the evening, and there I bade adieu to my pleasant guides and took the stage for the north. I occupied a seat with the driver in order to learn the names of the most prominent scenes, for I have found, as a general rule, that those Western Jehus are not only thoroughly acquainted with every landmark on their route, but are also full of pleasant anecdotes.*

This one I found to be an exception to the rule, for my utmost endeavors could illicit only monosyllabic responses, so that I was compelled to depend on my own observation for any facts I might glean.

*This is called Lake Majesty, Volcano Lake, and other names, so I gave it this name thinking it the most appropriate.

JOHN MORTIMER MURPHY.

VIRGINIA BARBECUES.

BY THADDEUS NORRIS.

YOUR article entitled "Clam bakes and Barbecues" in your issue of September 9th, has awakened memories of many happy occurrences in the Old Dominion in "days of Auld Lang Syne," and why now in the decline of life

"Should auld acquaintance be forgot
And never brought to mind."

So let me refresh my recollection of old incidents and old scenes and describe as well as I can the different kinds of barbecues in which I have participated, and firstly—

The little squirrel barbecue.—This was an occasion on which there was less hilarity, or I might say, less noisy mirth than on any other, but one in which true sportsmanship was involved, and with the addition of a dinner that could not be surpassed. Two or four might engage in a barbecue of this kind. If four, there was a trysting place; generally a cool spring in the forest or by its margin, where we would meet at noon. If two, any spring so located that we might come upon it at that hour.

June, July or August were the proper months; for the new litter of squirrels were then young, when their flesh had that crispy tenderness and flavor that can scarcely be equalled by any other game. The pair that hunted in company were generally equipped, one with a squirrel rifle and the other with a shot gun. For when the dogs "treed" the game would frequently seek the topmost bough of leaves, where the least wind would sometimes prevent the of the rifle from drawing a steady bead, and the shot would, of necessity be conceded to the "scatter gun." We started always early, sometimes before sun rise, and as a uniform rule were mounted on sure footed horses, that would "stand fire."

Squirrels do not stir much, at least in the Southern forests, after ten o'clock, when a trail soon becomes cold, and the sport slackens, or temporarily ends by noon. This is the time of rest for men, horses, and dogs. So we halt at the spring, loosen our bunches of squirrels from the crups, take off saddles, hitch or hobble our nags, and prepare to cook dinner.

We draw from capacious saddlebags, first the flask and lay it in the spring, then our roll of buttered bread or biscuit, and cold ham thinly sliced, our pepper and salt and raw middling—in polite parlance, now called "breakfast-bacon"—the use to which the latter it applied will be described anon. The first and all important thing in the programme is building the fire. The best place is between two large logs laying, say two feet apart, in the absence of which, forked sticks as large as one can manage to cut with his pocket knife are sharpened, and stuck rectangularly into the ground where the fire is to be made, the forks of these corner sticks being in the same plane and eighteen inches or so above the surface of the ground. By the time a good bed of coals has accumulated, the squirrels have been dressed, and it is a little interesting to a novice to witness the dexterity of an old woodsman, who with a slit in the belly and a notch in the skin across the back, and then inserting the thumb and fingers of each hand, with a vigorous pull denudes and disembowels the little rodent. After washing and seasoning them properly they are "spitted." This is done by sharpening, and then hardening under the ashes, the ends of stout switches of sufficient length to reach across the fire. A switch is thrust through the flank, belly and shoulder on one side, and another switch on the opposite side of the squirrel; the sides having been spread out and distended. Two poles are now placed longitudinally on each side of the bed of coals, the ends resting securely in the forks of the stakes at each corner. The squirrels are then placed side by side over the fire; the ends of the switches on which they are spitted resting on the poles. As soon as they are heated through and through, the basting begins. This is done by laying a slice of middling in the belly of each squirrel if the bellies are uppermost, or over their backs when they are turned, (four or five turnings are necessary) or the middling may be "bunched" on the end of a long stick and used in that way. The squirrels should be cooked slowly, and for this reason it is sometimes necessary to spread the ashes or a sprinkling of earth over the coals, the same being removed to give them a final browning. They should be buttered as soon as they are taken off, and gashed a lit-

tle with the point of a pocket knife that the juices may flow and combining with the butter make the meat more succulent. Young squirrels thus cooked with a slice of ham as a condiment, and the cold buttered beaten biscuits, is a dinner fit for a King; aye—"betther still sir"—fit for an honest hungry hunter.

Three or four hours are thus wiled away, and it may be a nap indulged in, until the squirrels are again out of their holes and nests, and running on the ground, leave fresh trails for the dogs. The old squirrels, which are easily distinguished, especially if they are males—are taken home to make soup of next day, and they make good soup, or to give away to one's neighbors.

Frequently through the Summer there were squirrel barbecues, where a goodly number would meet at some well known and more accessible spring, and there was a more elaborate cuisine and more jollity.

There were also barbecues, as described by "Captain," with a "fish fry" as an adjunct, where neighboring farmers and country store keepers would contribute and attend. Where long rough tables and benches were extemporized and crockery borrowed for the occasion. Where longpits were dug and much wood burnt in them to produce coals over which fat spitted muttons, shoats, and chickens, and squirrels were roasted, and hams and squirrel soup were boiled; the latter well seasoned with onions and smoked middling. Where there was sometimes a little speech making, always card playing, and not unfrequently quarter races; for what was a young Virginian in those days without his horse? I fear that one of the sequences of "the late on-pleasantness" is that such meetings are not so frequent as of yore.

*The most delectable of such gatherings, however, was the "Ladies Barbecue"—the "Dancing Barbecue," where matrons and maidens who danced were invited to attend, and at which no one could accuse Virginians of being aristocratic. This "institution" descended to newer States, of which the Old Dominion may be called the mother; to Kentucky, to Tennessee, and other States where an "institution" of another sort has been wiped out. This kind of a barbecue was the most enjoyable of all. Ladies came in fine carriages, and in all sorts of two and four wheeled vehicles, and on horseback. There was the level, well beaten earthen floor beneath the wide spreading arbor of green boughs, with benches and chairs around the sides; there were dinner managers with red ribbons, and floor managers with blue ribbons in their button holes; there were negro fiddlers, and negro cooks, and negro waiters, in all their "pride, pomp and circumstance;" there were reels, and cotillions, and jigs; and most glorious of all, the pretty graceful girls. Can I ever forget them? Are such gatherings still extant? I pray that they have not entirely gone out with the "institution." Why should they?

For Forest and Stream.

NEWFOUNDLAND NOTES.

OFF Cape Freels, a long, low cape, with a ridge of hills to the back. Yonder are the Perfume Islands, and there is the Charge Rock; I believe that is near where we were before. But it is not now as we were, but as we are, and as we are overhauling the Wadham Islands fast, I don't want to bother the general reader with sailing directions, etc., matters nevertheless which are so essential to safety at sea or running along a rugged coast. These islands are called, I believe, after a Col. Wadham, but how long ago it is since he was here we know not. The largest island is called Peckford, one and a half miles long. Copper Island is the nearest to the main land; it is high and bold, too, just like the copper formation. The other islands are composed more or less of a slaty rock, and are low and tame in outline. The upper Wadham is furthest seaward. It is a long, low island, with a pretty high, long hummock at one end. Here is situated the light house. These islands extend in a long, somewhat curved chain, and are as the advanced guard of the north, being six in number. The chart will show that there is a great deal of bad ground for sailors about here, but so there is ashore in far more civilized places than the Wadhams. We call the mainland from Cape Freels to Gander Bay Head the straight shore. But what a shore. Hear the roar of the great sea billows as we have in the dead of night, or see the white foam glistening in the sunshine. The pretty green verdure clad Penguin Islands are off this shore. Here lived the monstrous monopoly and rapacity of untrue humanity and the want of stringent game laws. So were the mackerel driven from us; why people actually used them as manure for the land, so I am informed, as they now use the caplin. What a piece of nonsense and daring misuse of God's mercies. However, the neglect of the laws of nature brings the punishment. We approach the entrance of Stack Harbor Tickle. Evening shades come, darkness comes, but we beat through under our pilot. I cannot say in scenic truth that the view by day is pretty, but it is romantic, and fires one's attention. There is no seasickness here. The water is too smooth, and oftentimes there is a quiet rest; a glassy sea lashes the storm outside, still we are safe here, and the wavelets play musically on the sides of our little boat, or if at night, lull us to sleep if we care not for the deck with the sailors chatting and enjoying a pipe. This tickle is formed by the island of Togo on the east side, and by the mainland of Notre Dame Bay and the islands on the other. In fact, casting our eyes away to the west we see nothing but a host of islands and the mainland; and yonder is the intricate Dildo Run, which should in no case be attempted without a pilot; neither should the Stack Harbor Tickle, Seldom Come By, or vernacularly, Selly Come Bayer, a fine harbor in the Swend of Fogo. It is a great shelter for Labrador vessels in the Fall of the year when bound home. This Stack Harbor Tickle is called the Inside Run, in contradistinction to that outside Fogo by the barracks, Little Fogo Islands, etc. North Bacalliew is in sight. This name is a perversion for another, signifying cod fish, which by the laws of this country are legally recognized as fish, for which we as Newfoundlanders have the highest respect. That little island yonder is Gull Island, a mere rock, but it marks the entrance to Twillingate. There are a great many gull islands on our coasts, among others that one of sad memory, Gull Island of Cape John. The squalls come quick and strong off the highland of Barnt Island in beating into Twillingate. But then they make people quick. They are great teachers. It is fine to see the noble boat give way and rise again. However, stand by; let go the anchor, and there is Twillingate, the capital of the North. Harbor Grace, July 6th, 1875. C.

Fish Culture.

FISH CULTURE IN VIRGINIA.—We noticed in a recent issue the fact that fish culture was hereafter to be carried on in Virginia in connection with the State colleges. We have since learned that Mr. Fred. Mather, of the United States Fish Commission, has been detached for duty in Virginia for the season of California salmon to superintend the State hatching house. We can congratulate the Virginians upon this appointment, as Mr. Mather, besides being a genial and popular gentleman, stands in the foremost rank of fish culturists. His contributions to this paper have been noted for their sensible matter-of-fact spirit. We note that the Fish Commissioners have already met at Blacksburg and procured a site for a hatching house, which is to be immediately constructed and employed in hatching several hundred thousand eggs of California salmon presented by Prof. Baird. By the middle of the month the Virginia Military Institute will be similarly provided. The Richmond *Whig* alludes to this subject as follows:—

"The hatching house, near Blacksburg, will be under the direct supervision of Prof. Ellzey, of the Agricultural and Mechanical College, and that at Lexington in charge of Col. McDonald, one of the Professors at the Institute. At both institutions the art of fish culture will be introduced into the regular course of studies, and the zeal and science of Profs. Ellzey and McDonald guarantee success.

We hear it is the purpose of the Commissioners to erect similar establishments next year at the University and at the Hampton Academy, so that all four of the State institutions may be employed in disseminating a practical knowledge of this useful art, and, by sending forth annually a corps of experts, diffuse the knowledge to every corner of the Commonwealth. Nothing could better tend to impress the whole population with the importance, not only of propagating, but also of protecting fish.

We are glad to see that the FOREST AND STREAM, the foremost fish and game paper in the Union, appreciates fully the programme initiated by the Fish Commissioners of this State in combining fish culture with the State Colleges. That movement by our Commissioners insures fish culture as a permanent fixture in the State, and with comparatively little cost, after the construction of the hatching houses. The two hatching houses at the Agricultural College at Blacksburg and at the Military Institute, already in rapid process of erection, will be run at very small additional expense, and will every year send forth a corps of experts, who, when supplemented by the University and Academy, will disseminate the art in every neighborhood in the Commonwealth."

HATCHING APPARATUS AND THE HATCHING HOUSE.

BY ICHTHYOS.—NUMBER ONE.

FROM well authenticated accounts Pinchon and Jacobi, in giving the world the novel and unnatural process of artificial fecundation, were but reviving a lost art. There seems to be no doubt but that the ancients propagated fish artificially, and during the dark ages, the transition period from ancient to modern civilization, the art and all knowledge connected therewith was lost. It is satisfactorily known through reliable Chinese historians that they have continued to propagate fish artificially for nearly four thousand years, and that a large percentage of the people of that densely populated empire derive their subsistence from food obtained from an immense water area. In ancient Egypt, if fish were not artificially produced, particular attention was given to their natural increase, supervised by officials appointed by the reigning potentate. Lake Moeris, which stretches in its longest direction from north to south, is supposed to have been excavated for an immense reservoir, and is three hundred feet deep. The water is introduced from the Nile by a canal. The current sets for six months into the lake from the river, and for the next six months into the river from the lake. While it runs out to the lake it returns a talent of silver daily to the royal treasury from fishes taken; but when the current sets riverward, the returns sink to one-third of a silver talent, an annual revenue equal to \$500,000. If the Romans did not produce fish artificially, Lucullus had immense fish ponds at Tusculum which were made to communicate with the sea by means of canals, and also were fed by streams of fresh water. Oysters were cultivated successfully by Sergius Orata in the Locrine Sea. We know further that in Lake Tuscaro, Italy, oyster culture has been carried on since its occupation by the Romans. It is a matter of surprise, when we consider the value of aquaculture, that so much tardiness is manifested by many States of the Union in giving this great industry the proper aid its importance demands. Artificial fecundation, if rightly applied and taken advantage of, as it may be with but slight expense, is the greatest of all modern benisons to the human family. As a food resource the modest beginning made by the discoverers of this art, and improved upon by one and another of the eminent pisciculturalists of Europe and America, we can plainly see foreshadowed an industry that is destined quite soon to become one of vast proportions on this continent. It appears from an approximation of the total value of the maritime and inland fisheries of the world, that in the aggregate they amount to nearly \$150,000,000. When we consider that fish culture on this continent is only ten years old, how vastly may these figures be swelled in ten years more, when the impoverished and exhausted inland waters of our country are made to teem again as in olden times, when the red man held sway. In connection with the discovery of artificial fecundation Pinchon and Jacobi invented the first hatching apparatus of which we have any authentic knowledge. The trough was a rude one, like the plain troughs in use at the present day. We are told that it was placed by a stream, nearly filled with coarse sand or gravel, upon which the spawn was spread; the ends were

guarded by wire screens, and over it was placed a cover, secured by lock and key. A small stream of water was caused to flow over the gravel and ova, and this trough, rude as it was, performed in a very creditable manner the office of incubation, much after the manner that fresh eggs are hatched in a state of nature, hence its quite general adoption by pisciculturists as a cheap hatching apparatus. The discovery of Pinchon and Jacobi languished for a long time for lack of individual or national appreciation, and like all great benefactions has been tardily received by all nations. Indeed, it was not fully recognized till the re-discovery of Remy and Gehin, unlettered, but subsequently famous French fish culturists of the Vosges mountains of Alsace. These men by occupation were fishermen, and deplored the unfruitfulness of the mountain streams which once teemed with salmon and trout, and in closely studying the cause of such barrenness re-discovered the long abeyant art. In their experiments, and when afterwards they were employed to restock the streams of their country, they employed hatching boxes made of zinc a foot in diameter with a lid or cover pierced with holes, care being taken to smooth the ragged edges lest the ova be ruptured by them as they were moved about by the current of the stream. These boxes were partly filled with sand or gravel, and the spawn having been spread thereon, were placed partially buried in the gravelly bottoms of running streams, where they were examined from time to time, until incubation was completed.

If we judge of the great works accomplished by these men in restoring the streams of Eastern France, these inexpensive boxes of zinc were a success, for these fish culturists soon made their unfruitful waters to teem again as of yore with the finny tribes whose scarcity had been deplored by these peasant fishermen, but who now had not only given France a great boon, but the whole world a great food resource that in coming time was destined to drive want and hunger from the poor man's cot, and to supply rich and poor alike with health-giving sustenance. Besides these boxes willow hurdles were arranged in wooden boxes upon which were placed the eggs, as they are now placed upon grilles made of glass tubes, where a constant stream of water flows upon them. Champaigne boxes have also been made to do duty as hatching trays, which hatched a large per cent. of the ova. The earliest form of box used, upon the introduction of fish culture into our own country was the long wooden trough similar to those originated by Pinchon and Jacobi. This simple trough has undergone many modifications, among which may be noted that of barring the ends and sides, so as to prevent the slime which generates by exposure of wood in water, and which is said to deteriorate the eggs, as well as to cause the fly to become unhealthy. A form much used by many pisciculturists, and a favorite box with the late Dr. J. H. Slack, is the Caron or Coste box, which was invented by M. Caron, and used by M. Coste, Professor of Embryology, in the College of France, in connection with his well known experiments in embryology. This box or tray is undoubtedly very durable as well as convenient one, for it is easily managed, and affords every facility for examining, handling and keeping the spawn free from parasites, silt and other extraneous substances which are so deleterious to the incubation of the ova; and last, not least, there is no patent in this country which interferes with its general use, a thing uncommon in the annals of fish culture.

The Coste box is constructed of galvanized iron, known among tanners as No. 29 gauge. The box is twenty inches in length, six inches in width, and three in depth, and one and a half inches from the top a triangular piece of galvanized iron is soldered, upon which the grille or frame rests at the corners, and a tube for drawing off the contents of the box when necessary is attached to the end. The tube, when the tray is in use, is closed by a well-fitting cork.

A SECTION OF THE COSTE TRAY.

This cut represents a section of the metallic box or tray.

A, the spout, B, B, B, B, the triangular corner pieces upon which the grille rests, and C, the drainage tube. Plate No. 2, which represents a grille being raised from a tray, is composed of glass tubes 3-16 to 5-16 of an inch in diameter, inclosed in a frame of black walnut, measuring inside 18½ by 4½ inches. This arbitrary length is recommended, as it will contain, on an average, one hundred eggs, and thus the amount taken may be easily estimated. The width is advised for economical reasons, in order that no waste shall occur in the cutting of the material, a fact of pecuniary importance, when large numbers are to be manufactured. The tubes of glass constituting the grilles are lightly but firmly bound together by copper wire, which admits of slight lateral motion, if required, and binding them together in this manner divides the force of a shock, causing it to be distributed among all the grilles constituting the set, therefore the force of a blow which would fracture a single tube is divided among them all, and thus they escape unharmed. The ends of the frame holding the glass tubes are fastened with screws, and should any of the tubes be broken they may easily be removed by unscrewing the end piece of the frame and others replaced. These trays used singly, or a pair of them, are convenient for experimenting in hatching, and the water may be easily supplied from a bath room; these trays, moreover, have also as an adjunct to the aquarium, met with great favor from persons interested in physiology, natural history, or embryology. It would be an amusing as well as an interesting pastime for an amateur to watch the progress of the development of the fish in the egg as it goes through the embryonic stages ere it bursts the shell and enters upon fish life. The use of these trays by farmers who have cool running streams upon their farms would be a cheap method of hatching trout eggs to supply those streams, or artificial ponds, or preserves, where they might grow and increase, and furnish their tables with cheap and wholesome food with but a small outlay, while the study of incubation would be not only interesting but highly instructive. The shell of the egg of the fish being transparent, the formative process of the finny being at all periods of development can be plainly seen.

SINGLE FLIGHT OF THE COSTE TRAYS.

Plate 4 represents a single flight of the Coste hatching trays fed by a small jet of water and resting upon a stand which can be moved anywhere in the hatching house where the water supply is most convenient. As these boxes have an average capacity of fifteen hundred spawn, the entire flight is capable of containing and hatching about seven thousand eggs. It must be apparent to every fish culturist, of large or small experience, that in elevating hatching boxes nearly breast-high, when the fall of water will admit, the labor of attending daily to the eggs is vastly abridged over the old method of arranging the trays upon a plane of the hatching house floor, where the stooping posture is constantly necessitated in the care of the hatching ova. The Coste tray is also inexpensive, when its durability is taken into the account, and hence is strikingly well adapted to the small fish farmer who is desirous of producing only a small stock. The trays are economical in reference to water, for they require but a gentle trickle, which enters the highest and flows down step after step until all have been supplied, and when the last box has been served the water glides away into an appropriate waste gutter beneath the series of flights, which are usually placed along either wall of the hatching house by twos, and thus leaving a passageway in which assistants can stand to examine and remove those eggs which fail to present indications of vitality, or have become affected with parasites which make their way into the trays in spite of eternal vigilance, which fish culturists have come to understand, applies with full force to this industry, and is the key to success and the price of fish.

Natural History.

THE SHARP-TAILED GROUSE—(*Pediocetes phasianellus*—Elliot.)

THE habitat of this bird is principally in British America from Hudson's Bay territory south to northern shore of Lake Superior, and west to Alaska and British Columbia. They are also found within the limits of the United States, as our Field Editor, whose letter we publish in another column, is now shooting them in Eau Claire county, Wisconsin. In fact, they abound in all the northern counties of that State, as well as in Michigan. The rather curious fact is mentioned in the letter before alluded to, of the writer having killed in three consecutive shots specimens of the sharp-tailed, pinnated, and ruffed grouse. In addition to its table qualities, which are unsurpassed, this bird is hardy and a good breeder, and we have advocated its introduction into localities from whence the pinnated grouse has been exterminated. The barrens and scrub oaks of Long Island, if the outrageous poaching which prevails there could be stopped, would be admirably adapted to the propagation of this bird; so also would certain portions of New Jersey and Pennsylvania. The low-

est limit of its habitat is at present set down as latitude 41°. The time is coming when we shall have to breed our game as they do pheasants in England, or conserve it as closely as are the grouse of the British moors. The present indiscriminate netting and slaughter will soon finish the pinnated grouse, but the sharp-tails have as yet escaped the pot-hunter, and it is to be hoped that before war is declared upon them that sufficient numbers can be obtained for breeding in localities where they can be protected.

The prevailing colors of the sharp-tailed grouse are a clear dusky black above and pure white beneath; no buff about the head; upper parts variegated, with transverse, rather zigzag spots of yellowish brown; wing coverts with large rounded, and outer webs of primaries with smaller and more quadrate, spots of pure white; breast thickly covered with broad V shaped, and the sides with less numerous, sagittate marks of uniform clear slaty or dusky; legs densely feathered; throat thickly spotted with dusky; the two middle feathers of the tail one inch longer than the others. (Baird, Brewer and Ridgway.) The Arctic form of this grouse is found throughout the Arctic region, from Alaska southward and eastward to an extent not fully ascertained. We find the following in the excellent work just referred to: "It is found in abundance on the outskirts of the Saskatchewan plains and throughout the wooded districts of the fur countries, frequenting the open glades or low thickets on the borders of lakes, especially where the forests have been partially cleared; perching on trees in the Winter, but keeping to the ground in Summer, and at all seasons met with in small flocks of from ten to sixteen. They are said, early in Spring, to select some lone place, where a covey meets every morning and runs around in a circle of about twenty feet in diameter, so that the ground is worn quite bare. If any one approaches this circle the birds squat close to the ground, but if not alarmed by a too near approach they soon stretch out their necks to survey the intruder, and resume their circular course, some running to the right and others to the left, meeting and crossing each other. These 'partridge dances' are said to last a month or more, or until the female begins to incubate. They are said to lay about thirteen eggs early in June, the nest being on the ground, formed of grasses and lined with feathers.

—A queer bird has been shot in Lebanon county, Pa. It resembles a chicken hawk, with a white head, blue and white spotted back. The wings are black outside and white inside; its tail is shaped like that of a swallow. It measures two feet from head to tail, and four feet from tip to tip of the wings.

SINGULAR FREAK OF A COOT.

BOSTON, MASS., 1875.

EDITOR FOREST AND STREAM:—

The following curious incident, which is vouched for on good authority, happened on the east of Nantucket some time during the past Summer: A well-known fisherman was returning alone from his labors, towards shore, in a rowboat, when he was suddenly struck down senseless, and remained in that condition for perhaps a minute. On recovering his senses he could not, for the moment, account for the unwelcome salute, but saw a loon rise from the water in front of him. Then he felt something fall from his shoulders down into the boat. Turning, he found a black coot lying dead there, and the back of his own head was covered with feathers. The story was thus soon explained: The coot, on rising from the water, must have flown blindly against the fisherman and caused its own death in the heavy blow it had given him. An after examination of the bird showed that it was literally crushed to pieces, and many of the bones were protruding from the skin. It was also blind in one eye, which accounts for its wild flight. The bird was allowed to remain where it had fallen in the boat until the shore was reached, that it might be seen by others as the fisherman had first seen it. Several examined the bird, but it was missing when asked for to preserve. R.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, }
NEW YORK, Oct. 4th, 1875.

Animals received at Central Park Menagerie for the week ending Oct. 3d, 1875:—

- One Arabian Baboon, *Cynocephalus hamadryas*.
- One Chacma Baboon, *Cynocephalus percarus*.
- Three Lions, *Felis leo*, fourteen months old.
- One Leopard, *Felis leopardus*.
- One Bald Eagle, *Haliaeetus leucocephalus*.

W. A. CONKLIN.

The following are recent arrivals at the Philadelphia Zoological Garden:—

- GARDEN OF THE ZOOLOGICAL SOCIETY, }
FAIRMOUNT PARK, PHILADELPHIA, Oct. 4th, 1875. }
- Two Prong horn Antelopes, *Antilocapra americana*. Purchased.
- One English Magpie, *Pica candida*. Presented by L. Simpson, Philadelphia.
- Two Cardinal Grosbeaks, *Cardinalis virginianus*. Presented by Miss Haffelfinger, Philadelphia.
- Two Sandhill Cranes, *Grus canadensis*. Presented by E. F. Cabada, Philadelphia.
- Two Wood Ducks, *Anas sponsa*. Presented by E. F. Cabada, Philadelphia.
- One Troupial, *Quis calus lugubris*. Presented by Miss E. P. Smith.
- Two Caribous, *Taurandus rangifer*. Purchased.

PURCHASED.

- One Rhesus Monkey, *Macacus erythraeus*. Two brown Capuchins, *Cebus fatuellus*. One weeper Capuchin, *Cebus capucius*. One common Ocelot, *Leopardus pardalis*. One grey Ocelot, *Leopardus griseus*. One Capybara, *Hydrochoerus campyba*. One white-lipped Peccary, *Dicotyles labriatus*. Four Aconchys, *Dasyprocta aconchy*. Six crested Curassows, *Crax alector*. Two silver-fronted Amazons, *Chrysotes ochrocephala*. One blue-fronted Amazon, *Chrysotes amazonica*. One little Tinamou, *Tinamus pileatus*. Six Grey's Guans, *Penelope greysi*. One common Trumpeter, *Troglodytes crepitans*. Four white-faced Ducks, *Deudrocynna vidua*.

A KNOWING BIRD.—The Boston Post is responsible for the following, and our readers can believe as much of it as they like:—

"A family near Boston is happy in the possession of a parrot of more than ordinary intelligence, and one

whose talking powers are the wonder of the neighborhood. In an evil day, however, the bird was taught by some naughty boys to swear like a trooper, and with a perversity wonderfully human, and, withal, strangely savoring of original sin, the feathered biped found pleasure in nothing so much as a sounding oath. Mild correctionary measures proved unavailing, the offender was at last regularly soured in a pail of cold water after each burst of profanity, and then placed on the stove hearth before the fire to dry. During a recent rain storm, some small chickens belonging to the same family got very wet and thoroughly chilled, and several of them were placed on a perch before the fire to be warmed into full activity again. It so happened that the parrot had just been treated to an involuntary bath himself, and he at once knowingly cocked his head on one side and surveyed the new comers for a moment in silence. Then, as if all was plain to him, he hitched a little away from his dripping companions and exclaimed in an oracular tone, "Little d—d fools, been swearing!"

Woodland, Farm and Garden.

FRUIT IN MARKET—DOMESTIC.—California pears are being received at the rate of two or three car loads per week. The prices received for Fall fruit are by no means remunerative however. In the Winter months grower's may be more fortunate. We quote: White Doyenne, \$3 to \$3 50 per box; Dutchess, \$4; Buerre Dill, \$2 50 to \$4; Beau D'Anjou, \$4 50 per box. A box contains on an average about 140 pears. Bartlett's now nearly gone, are worth \$16. to \$17. per barrel; Sickles, \$8. Apples are worth \$3. to \$3 50 for good pippins. Grapes are now in abundant supply, Concord from the North River counties, bring 5 to 7 cents per pound; Delawares, 9 to 11 cents; Catawbas, 9 to 11 cents; Isabellas, 5 to 7 cents; Dianas, very slow of sale at 6 to 7 cents; these are box quotations. Most of the grapes in market come from Western New York. **FOREIGN.**—With the exception of a small quantity of Jamaica oranges held at \$10. per barrel there is but little foreign fruit in market. A cargo is daily expected from Cuba.

THE ATTEMPT TO EXPORT PEACHES.

MR. R. T. LOCKWOOD, who recently went to Europe on the steamer Ohio in charge of 200 crates of peaches, has furnished the *Wilmington Commercial* with an account of the trip and the causes which led to the disastrous results of the venture. He says that when the steamer sailed on the 26th of August there were but fifteen tons of ice in the refrigerator. The lowest temperature gained on the voyage was 48°, which was on the second day out. On opening the refrigerator on the 31st, and when the ship was off the Newfoundland Banks, it was found that the ice had entirely melted, although the fruit was still in fine condition. Ten tons of ice was then furnished from the ship's stores, but this must have been soon consumed, as the mercury continued to rise until on the 6th of September it stood at 74°. On the following day the ship anchored in the Mersey, and the temperature in the refrigerator found to be 90°, while that of the outer air was but 65°.

At 9 A. M. on the 7th the hatches were removed and the refrigerator opened. A terrible sight and smell greeted the eyes and nostrils. The peaches had all spoiled, save an occasional sound one which was found in the centre of the crates, and were soft, mushy, and sour. They had settled down in the crates about two and a half inches, being pressed into each other. Fermentation had gone on for a couple of days at least, and the gases and vapors from the decaying fruit filled the compartment with an atmosphere which set the brain to reeling upon entering it. One stevedore, a strong, burly Irishman, was overcome by it and had to be removed. The peaches were in good condition for distillation, and Mr. Lockwood undertook to sell them for this purpose, but could find no purchasers. He finally was compelled to give them away, with the crates, to procure removal from the wharves where they had to be landed, it being unlawful to throw them into the river. What finally became of the fruit is not known.

One crate of Reeve's Favorite, stored in the ship's ice room, was found to show signs of decay when opened on the voyage, and the best of the fruit was then wrapped in paper, turning out in perfect order. It seems, then, as though the experiment would succeed if this plan were adopted, or that mentioned in our last issue, of dipping them in paraffine. The result financially, however, might not be satisfactory, as Liverpool dealers said that they would not have brought more than \$2.80 per crate, which would hardly have paid.

AMERICAN GIRL.—This celebrated trotting mare, the property of Wm. Lovell, of this city, dropped dead while trotting a race at Elmira on the 2d inst. An examination proved her lungs to be much congested, the result of a light attack of the prevailing epizootic. American Girl was valued at \$25,000, and had a record of 2:17.

AUTUMN.—The curfew tolls the knell of parting day, the lowing clam sails slowly o'er the sea, the hard crab seaward takes his backward way, and leaves the town to oysters and to me. The day of the succulent crustacean is over, and the death rattle is heard in the throat of the laxative watermelon. Peaches—oh! peaches—are in the sere and yellow leaf, and the first of the reed birds and blue wings are being sacrificed upon sweetly buttered toast. The weekly record of the defunct no longer shows the same demand for small coffins, and the florists are making up their white flowers after a different fashion. The oysters are surprisingly good for the season, and on the half shell are firm enough to chew if they come from York River. What with canvas backs, red heads, terrapin and such vegetables and drinkables as the miserable climate produces, we suppose we shall manage to worry through the Winter somehow.—*Baltimore Bulletin.*

The Kennel.

AMERICAN KENNELS—No. 3.

MR. GEORGE DELANO'S.

WHEN the "pleasures of a retired life" are summed up, a good kennel of dogs should be reckoned among them. For a sportsman who can live in the country no one thing can afford more pleasure and recreation. It has been my good fortune to see lately an instance of this kind in the kennel of George Delano, Esq., a retired merchant of New Bedford. Mr. Delano has lately purchased a fine large estate near his native town, Marion, Mass., embracing a wide and charming variety of field, forest, rocks, and water, a pretty cottage, and an excellent dog kennel. This latter is located about a quarter of a mile from his house on the edge of a pretty oak grove where the proper degree of shade and sunshine are capitally adjusted. The kennel itself is built on the most approved plan, a large, well ventilated house with cemented floor and a roomy trough or trundle bed, filled with straw, to bed the dogs upon. The large yards, divided by strong palings, are paved with a brick floor and inclined toward the centre, where a sewer drains the whole so easily that a few buckets of water or a smart shower cleanses the yards completely. Inside, the whole is kept freshly whitewashed, with a carbolic acid admixed, which keeps away all vermin. In this place, with judicious feeding, his dogs have been perfectly healthy, scarcely a case of sickness having occurred among them. The kennel faces a broad expanse of field and pasture leading down to the bay, affording the finest place to exercise and train the dogs that could be desired. As to the occupants of Mr. Delano's kennel, quality rather than quantity may be said to be its leading feature. First among them should be mentioned the beautiful Field Trial bitch Doll, imported from Mr. Purcell Llewellyn's kennel last Spring, now three and a half years old. Doll is a black, white and tan, and boasts of as high a pedigree as any animal in the country. On one side she is from Moll and Dash, and from Barclay Field's Duke on the other. Doll took a prize at the Springfield show, but is now in far better condition and appearance than at that time, having then just weaned a litter. Of the ten whelps which arrived with her—she whelped on the voyage over—Mr. Delano now retains only four, two dogs and two bitches—Laelaps, Adonis, Diana, and Blanche. These are by Leicester, a noted prize dog, since purchased and imported by Mr. Smith, of Canada. They are all healthy, handsome pups, now eight months old. Next to these should be mentioned a Pride and Fairy pup, liver and white, eight months old. He is heavy and lumbering in appearance just now, but promises to be a large, strong dog. In point of beauty and style he does not approach the black, white and tan stock of Mr. Delano's kennel. It remains to be seen which has the most endurance in the field. Lastly, but not the least noticeable member of this kennel is a black and tan Gordon bitch, Maud, eighteen months old, out of Hope, imported by John W. Boyden, of Worcester. She is a beautiful animal, and already exhibits the best qualities of that stock.

Mr. Delano maintains his kennel for his own amusement and recreation. He is an ardent friend of the dog, and takes pride in breeding pure animals for their own sake. Through the efforts of such men the blood and qualities of sporting dogs in this country will be greatly improved.

DRUID.

QUI MA.

THE late lamented Lieut. Derby, otherwise known as John Phenix, when asked the meaning of his *nom de plume* of "Squibob," replied that it was a Hebrew word, signifying "there you go with your eye out." My dog's name was derived from a still more ancient source, as in the vernacular Chinese, Qui Ma means literally, the curious one—and never had dog a more appropriate name. Poor old P— used to say that Qui Ma didn't handsome much, but that he "curio'd" awfully. The origin of Qui Ma I could never make out. He was probably a waif, picked up in the London docks and given a free passage in a tea ship to Shanghai, from whence he journeyed to Hankow, and found a final home in the far interior of China. Qui Ma had all the characteristics of the rough, long-coated English terrier, and developed an intelligence that was almost marvelous. The most remarkable instance of this is the one I am about to relate.

It may or may not be known to the reader that throughout China, at whatever port foreigners are engaged in business, their servants, the tea brokers, and most of the natives with whom they have dealings, are Cantonese; in fact, nearly all of the middle men, or go-betweens, are natives of the southern provinces. Now, to the barbarian eye, the difference between a Hankow man and a Canton man was as nil; but to Qui Ma there was all the difference between an authorized visitor and an obnoxious intruder. In front of my residence was a broad stone jetty the width of the premises, with stone steps leading to the water's edge. During the Summer the water was at the top of these steps, but in Winter, when the river fell—for the Yang Tze varies in height some thirty feet between the seasons—there was left a narrow strip of bank, to which access could be had from the adjacent streets, and which formed a short cut for boatmen and others to the neighboring houses. Qui Ma became the self-appointed guardian of this debatable ground, and the itinerant barber or ven-

der of tea who attempted to cross, did so at the risk of his garments. But strange to say, it was only the Hankow man who was attacked. If a Canton man appeared, no matter whether he was a swell *compradore* or a fireman from a steamer, he was merely greeted with a sniff at his legs and allowed to pass. To us who often watched him, it seemed most extraordinary that he could thus detect the difference, where to us none appeared to exist. Poor Qui Ma, he captured one trowser-leg too many, and was made way with by some indignant Celestial, much to the regret of every one, foreign and native, in the establishment.

T.

—Mr. Arnold Burges has had the misfortune to lose his fine red Irish setter bitches Kathleen and Belle 2d. Kathleen was out of Jarvis' Kitty by Knowing. Belle 2d was sent to Mr. Burges in whelp, from the kennel Mr. Skidmore, of England; was six weeks on the passage and lost her whelps, from the effects of which she died.

—The beautiful red setter bitch lately imported by "Ajax" is looking remarkably well and handsome, and promises great speed in addition to her other good points. She is bred as follows: Lill, by Shamrock, by Brennan's Rap out of Jephson's Belle. Lill's dam is Kathleen, by Barton's Larry, out of the celebrated Lill 2d; she by Cooper's Ranger, out of Jephson's Belle; she from the Corbett strain of setters. Cooper's Ranger, one of the very best red setters in England, was by the renowned Col. Hutchinson's Bob. Lill 2d has taken very many first prizes. Shamrock was called the handsomest red dog in England. He was lately sold for a large sum to the King of Italy.

PLUNKETT'S PEDIGREE.

THE "RETRAIT," BELLE FONTE,
Nottoway county, October 2d, 1875.

EDITOR FOREST AND STREAM:—

I have just received a letter from G. de Landre Macdona, wherein he states: "I have seen in FOREST AND STREAM a notice that Mr. Cumming Macdona's Plunkett was by Jim. Mr. Goldsmith makes a mistake. He (Plunkett) was by the Hon. David Plunkett's Beauty out of Grouse, and I strongly urge owners of sporting hogs to breed as much as possible from this grand old dog. I have sent a fine specimen of the Gordon setter, direct from Gordon Castle, Scotland, to Texas, and two red Irish to other parts of the United States; also two others to Hong Kong and India, so that the real pure breed will soon spread over the sporting globe. I have some pups of Ranger 2d by Lord's champion Lucy. They are beautiful silk white, strong and healthy." JNO. M. TAYLOR.

KENNEL PRODUCE.—At Fox Farm, Morris Plains, N. J., on Sunday the 3d inst. Fannie, the property of the Kennel Editor of this paper, six fine whelps by the imported Laverack Pride of the Border. All six are doing finely, and all are of the male persuasion.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

Black Bass, *micropterus salmoides*, *micropterus nigricans*.
Striped Bass *Roccus lineatus*. Bluefish, *temnodon solitator*.

[Under the head of "Game and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

FISH IN MARKET.—Fish are in fair supply, with an active demand for the choice kinds for family use. We quote: Striped bass from Rhode Island are worth 20 to 25 cents per pound; green smelts, from Maine, 25 cents; bluefish from Massachusetts and Long Island, 10 to 12 cents; frozen salmon, 50 cents; mackerel from 6 to 20 cents; weakfish, principally from Long Island, 12 cents; white perch, 12 cents; Spanish mackerel, frozen, 50 cents; green turtle, 20 cents; terrapin, \$12 per dozen; halibut 18 cents per pound; haddock, 8 cents; kingfish, 25 cents; codfish, 8 cents; sea bass, 18 cents; eels, 18 cents; sturgeon, 10 cents; lobsters from Boston, 8 cents; sheephead from the Chesapeake, 25 cents; scollops, \$1 50 per gallon; salmon trout from the lakes, 20 cents; hard shell crabs, 40 cents per dozen; soft do. \$1.50 per dozen; frog's legs, 50 cents per pound; pompano, \$1 per pound. BARR.—Shedder crabs, \$1 50 per dozen; shrimp, \$1 per quart; soft clams, 40 to 60 cents per 100.

CASTS OF FISH.—There are at present on exhibition at Mr. Blackford's in Fulton Market—a portion of that gentleman's office having been given up for the purpose—a number of casts of fish intended for exhibition at the Centennial in connection with the department of the United States Fish Commission. Mr. A. Wyderveldt, an artist of great promise, has colored some of these specimens in close resemblance of Nature, and with remarkable correctness. Mr. Wyderveldt is making a specialty of fish painting, and with the facilities afforded him by Mr. Blackford exhibits a progress which promises to carry him to the top of the ladder.

—The largest weakfish captured in the bay this season was caught off Bergen Point on Wednesday of last week by Mr. Frank Lang. The fish weighed thirteen pounds four ounces.

—Fish of all descriptions, bass, weakfish, tautog and mackerel, are again plenty in Buzzard's Bay, particularly in the neighborhood of New Bedford and the Elizabeth Islands.

HELL GATE, OCT. 4.—Striped bass are now being caught in the Gate. I caught one last week weighing ten pounds, and my companion, Mr. Dorrity, of the Morgan Iron Works, caught one weighing 12½ pounds. Several others caught them weighing from three to eight pounds.

THE CANADIAN FISHERIES.—A dispatch from Ottawa, Ontario, announces that while Sir Alexander Galt was in that city he held a conference with the Minister of Marine and Fisheries and Mr. Whitcher, Fishing Commissioner. Figures have been prepared for presentation before the High Commission to meet at Halifax, which are to prove Canada's almost undisputed claim to at least \$7,000,000 per annum from the American Government.

THE FISHERIES.—There have been 103 arrivals of the Gloucester fleet the past week, as follows: 64 from off-shore mackereling, 8 from the Bank fishing, 1 from the Bay, and 30 from Georges. The receipts of Georges cod is 347,603 pounds; Bank cod, 410,000 pounds; Georges halibut, 13,700 pounds; Bank halibut, 185,000 pounds; shore mackerel, 4,000 barrels; Bay mackerel, 100 barrels. There is a little better prospect for the shore fleet than heretofore, which is somewhat encouraging.—*Cape Ann Advertiser*, Oct. 1.

DELAWARE RIVER.—Large numbers of black bass are being taken from the Delaware with hook and line. Mr. Rutledge Scarborough, of New Hope, has been fishing at "Eagle Island" for the past few days, and at last accounts had taken over one hundred pounds, the bass ranging from one to four and a half pounds. On Tuesday last, Isaac Scarborough, while fishing at Washington's Crossing, caught with hook and line thirty black bass, which weighed thirty-four pounds.—*Exchange*.

CANADIAN FISHERMEN on the shores of Lake Huron and Superior declare that they are forced from home to fish on the American grounds because of the disadvantages to them resulting from the Canadian fishery regulations. While the Canadians are not allowed to fish with less than a five-inch mesh, the Americans can use nets with a four or four and a half inch mesh, and the fish that escape from Canadian nets only do so to fall into those of Americans, as the shoals are continually on the move from one side to the other. Thus, while the present regulation of the size of the mesh lasts on one side only, the Canadian grounds are made nurseries of fish for the Americans. It is also alleged that the close seasons are not suitable to these western lakes, as fish come in from two to three weeks later in Lake Huron than in the lower lakes, and from one to two weeks later in Lake Superior than in the upper part of Lake Huron, and the close seasons at present fixed prevent any catch of white fish or trout in these waters during the Fall. Thus, the close season for white fish being from November 10 to December 1, and for trout from October 15 to December 1, includes the period during which there is any chance of a successful catch, and as the fish cannot be made to understand the Canadian regulations for their protection, they are just as liable to be caught on the American side as to remain safe under the shield of Canadian law. These are the reasons given why Canadian fishermen take their boats, nets and labors to the American shores.—*Toronto Globe*.

LEESBURG, Va., Sept. 21, 1875.

EDITOR FOREST AND STREAM:—

Bass fishing is "on the mend." W. B. C. took forty-two Saturday, and parties near him were quite successful. I started for Goose Creek, but learning that it was muddy, turned off to the river. I caught two fish, one bass and one fall fish; had promised my better half I would not wade. I heard afterward that the creek was not too muddy, a friend taking eight with the fly. They seem very fierce in Goose Creek for the fly, and I think hereafter the fishing will be in that stream in preference to the Potomac, at least for fly fishing. The largest taken have been captured with toads. Two anglers near me Saturday took eight or nine fish, largest 2½ pounds. A friend writes from Norfolk of the formation of a Protective Game Association, and wants the co-operation of sportsmen in different parts of the State to get suitable laws passed and carried out. Fly-fishing here is becoming more fashionable, and accessions from the hand liners are increasing in number.

T. W.

[There is no State more in want of such an association—that is, one whose field will be general and not confined to any one locality, than Virginia. Her game laws now are very imperfect, and their operations confined to certain counties only.—Ed.]

CALIFORNIA ANGLING.

SAN FRANCISCO, Sept., 1875.

EDITOR FOREST AND STREAM:—

The love of angling is very much on the increase on this coast. In my occasional visits to Liddle & Kaeding's gun and fishing store, I often find it full of applicants for rods and tackle. They go to all points of the compass from here to fish on this slope. Some take to the bay for smelts, rock cod, tom cod, perch, etc.; others go to the northern rivers for salmon, generally trolling with a spoon for them, although they can sometimes be taken with a fly, and many dip, bait fish, or throw the fly for the smaller brook trout in the mountain streams, such as the Lagunitas, in Maria county, the Purissima and Pescadero Creeks, in San Mateo county, with numerous others farther south as well as north. Some of the rivers communicate with the ocean, from which salmon are continually running to and fro. My nephew, P. F. Hooper, generally goes every Saturday to Lagunitas, some distance up among what are called the red woods, in very wild and romantic scenery of brush, vegetation, rocks and boulders, where, with his companion, but sometimes alone, he camps out at night, and he has been occasionally disturbed by the rather heavy tread of some large animal in the thickets around him, which he has thought to be a bear, and which supposition was rather confirmed by the keeper of a tavern near the station where he alights from the cars informing him that the place of his encampment was near the cave or lair of a cinnamon bear, which had been sometimes seen in that neighborhood, near which there is a small swamp where he is in the habit of wallowing. The campers out always keep up a good fire, which renders them fearless of any attack from bruin, and besides these animals, whether grizzlies, brown bears, or cinnamon, seldom attack any one unless they are crowded upon too closely in some narrow place from which they cannot escape without some sort of an encounter. While these gentlemen were camping on this spot they told me that one of them, during the night, threw out a piece of beef into one of the adjoining bushes, when it was not long before two wild cats were heard, with horrible screeches, contesting for the coveted prize. The red woods abound in foxes, wild cats, skunks, bears, and some other wild animals; but tree squirrels are scarce and cotton-tail rabbits rather plentiful. The largest brook trout my nephew has taken with a fly in these waters weighed one pound and a half, with many others a good deal under that size. The fishing on this creek is very fatiguing work, owing to the many rocks, boulders and thickets with which it and its banks are covered. The facilities for piscatorial sport in the natural streams here are of course not so abundant as in former years, owing to the generally thoughtless action of metropolitan anglers, who abuse the streams, fishing out of season, as well as in season, curtailing the stock of fish and obliging the enthusiastic and discriminating disciples of Izaak Walton to seek pastime usually more than half a day's journey from the city. But the protective law is beginning to operate a little favorably for true sportsmen, and the stocking of many of our lakes and rivers with game fish is already affording excellent recreation and amusement for our anglers, and is promising for us a still brighter future. This is arousing the enthusiasm both of accomplished anglers and amateurs, and provoking contin-

ually increasing inquiries about the most likely localities for legitimate sport and pleasure in this way. Most of our mountain brooks are famed for their picturesque beauty, and abound in charming nooks and pretty cascades and clear pools. Purissima Creek, before spoken of, contains trout of rare beauty. The rich color of the fish in this stream is attributed to the fact that they never reach the salt water. The waters of this creek empty into the ocean over a precipice fifty or sixty feet in height.

E. J. HOOPER.

THE ORVIS REEL.

NEW YORK, Sept. 20th, 1875.

EDITOR FOREST AND STREAM:—

I received, some time since, from Mr. Charles F. Orvis, of Manchester, Vt., his new extra nickel plated click reel, capable of holding from forty to fifty yards of line, with a neat walnut case. The perforation of this reel is a very decided improvement on the old style, making it light and protecting it from sand, and allowing the line to dry without removing it after use—a very decided advantage, which any angler will readily appreciate. Being quite narrow, it takes up line very rapidly, and gives evenness in the reeling. This reel is strongly and beautifully constructed and convenient in size, and its strength, lightness, compactness and moderate price, must meet requirements long needed, and the approval of anglers.

F. C. F.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

Oct. 10.	7 34	4 19	3 34
Oct. 11.	8 30	5 14	4 30
Oct. 12.	9 20	6 6	5 20
Oct. 13.	10 6	6 52	6 6

MATCHES TO BE SAILED.—The week has been prolific in challenges and acceptances. Mr. Bennett has waived all allowances of time, and will sail the Dauntless against the Mohawk, an ocean race, on the 26th of October. Mr. Rufus Hatch, owner of the Resolute, has published a challenge, which Mr. Bennett also accepts, naming the 30th inst. Then comes a deluge of challenges upon Mr. Hatch's devoted head from the owners of the Estelle, Comet, Vesta and Dreadnaught, all of which he accepts, and the race with the Estelle was to have been sailed yesterday, that with the Vesta and Dreadnaught Tuesday next, and to-morrow at the remarkable hour of 4 P. M. he hopes to meet the Comet. Mr. Hatch must intend to get Mr. Lanley outside and lose him.

FALL REGATTA NEW YORK YACHT CLUB.—The regatta for the prizes offered by Commodore Kane to be sailed for by the yachts of the New York Yacht Club on Thursday resulted in a most remarkable series of *contretemps*, and practically was no regatta. It could scarcely have been expected that on the last day of September almost the entire fleet should have been becalmed inside of Sandy Hook, while the few fortunate, or it may be unfortunate, ones that succeeded in getting outside should at the same time have found a fresh breeze of wind and sea enough to carry away masts and disable some of the finest vessels of the fleet. It seemed cut out for a day of disaster, as the mishaps commenced with the signal to prepare to start. When the judges' steamer reached the club house, about 10 A. M., sixteen yachts were found lying with fore and mainsails and working topsails set, and a large fleet of yachts not entered in the race were cruising off and on, waiting to accompany the competitors. The following is a list of the starting yachts:—

Name.	Owner.	Cubic Feet.	Allowances M. S.
Mohawk.	W. T. Garner.	21,023	Allows
Alarm.	Com. Kingsland.	14,703	1 10
Palmer.	R. Stayvesant.	14,035	1 27
Resolute.	R. Hatch.	10,860	3 47

SECOND-CLASS SCHOONERS.			
Estelle.	J. Smith.	5,736	Allows.
Comet.	W. H. Langley.	4,662	5 28
Clio.	Bradhurst & Asten.	3,729	11 43
Peerless.	J. R. Maxwell.	3,498	13 31
FIRST-CLASS SLOOPS.			
Vindex.	R. Center.	3,259	Allows.
Addie.	C. Roosevelt.	2,711	05 05
Vision.	J. J. Alexander.	2,545	06 47
SECOND-CLASS SLOOPS.			
Active.	W. J. Hurst.	1,903	Allows.
Sadie.	W. Norris.	—	—
Madcap.	J. R. Busk.	1,491	05 25

The sloops Vision and Madcap were also to contend for the Bennett Challenge Cup for sloops, which has been held by the Vision for the past three years, the Vision having in this race to allow the Madcap 12m. 44s.

The course to be sailed over was the regular club course, around the Southwest Spit and light ship, returning in the same way. At 11:23 a signal from the judges' steamer warned the racers to prepare, as the start was to be a flying one, the yachts crossing a line between the judges' steamer and the club house. About this time the huge Mohawk, in getting under way, fouled the little sloop Kaiser, breaking off the end of the latter's boom, and compelling her to slip her cable. The Estelle also collided with the schooner Dreadnaught, carrying away the latter's mainboom, and nearly spoiling the pleasure of Mr. Osborne's large party of friends, but with that generous feeling with which members of the "Board" always come to each other's relief, Mr. Rufus Hatch insisted upon receiving the entire party on board the Resolute. At 11:33 the second whistle started them, and the yachts one by one drifted over the line. The crew of the Mohawk, being busily engaged in clearing from the Kaiser, had evidently misunderstood the whistle, for after she was clear she rounded the steamer and came for the line the second time, after the fifteen minutes of allotted time had expired, thus throwing her out of the race unless her original time of crossing was taken. As it turned out this was of but little consequence. The time of crossing the line was as follows:—

Name.	Time.	Name.	Time.
Estelle.	11 35 36	Palmer.	11 41 18
Addie V.	11 36 52	Atalanta.	11 41 59
Vindex.	11 37 31	Idler.	11 42 09
Madcap.	11 37 48	Clio.	11 45 27
Alarm.	11 38 58	Peerless.	11 46 22
Comet.	11 40 18	Vindex.	11 47 24
Sadie.	11 40 33	Resolute.	11 48 07
Active.	11 41 03	Mohawk.	11 49 07

Fortunately the tide had just commenced to run ebb, as the wind was so light from the southwest that had it been

the other way the yachts would have drifted toward the city. The drifting continued until the fleet had reached the lower bay, when a light breeze sprung up, which enabled the little Madcap, the leading yacht, to round the Spit at 1:34:35. Meanwhile, the Commodore's schooner Alarm had drifted ashore on the west bank, from whence she was afterward towed off by the club steamer, but was henceforth out of the race. The time of rounding the Southwest Spit was as follows:—

Name.	Time.	Name.	Time.
Madcap.	1 34 35	Clio.	1 50 18
Sadie.	1 38 00	Vindex.	1 52 05
Estelle.	1 38 45	Active.	1 52 31
Addie V.	1 40 08	Resolute.	1 54 25
Comet.	1 40 23	Idler.	1 57 14
Vision.	1 47 08	Mohawk.	1 58 09
Atalanta.	1 49 49	Palmer.	1 58 44
Peerless.	1 50 13		

After passing this point all the leading yachts favored by a strong tide managed to get outside the point of the Hook, when they found a fresh breeze blowing from the south which made them take in topsails and sent the schooners along in a way that looked like racing. The unfortunates who were still becalmed inside the Hook were the Active, Vindex, Resolute, Idler, Mohawk and Palmer. Those on board could see the rest of the fleet bowling along while they were compelled to remain inactive, with all hope of further competing in the race. Those outside, however, were not having as nice a time as appeared. The Comet had gone to the front and taken the leading position. A heavy swell from the East made it lively for the smaller yachts, and the accidents commenced. First the Addie V. had enough of it and ran home. Then the Peerless parted her bobstay and down came both masts, they, with the bowsprit breaking off close to the deck; only one of her crew was hurt, and a passing tug took the dismantled vessel in tow. Then the Vision's turn came, her jib stay parting and causing her to run back under a close reefed mainsail. Next came the Clio, who sprung both masts, and had to be towed home. The little Madcap behaved remarkably well, but the sea was too rough for her and she too took the back track. Four yachts only rounded the lightship; the Comet at 3:19:45, the Estelle at 3:20:45, and the Atalanta, Mr. Astor's schooner, not timed. At 4 o'clock the Comet passed buoy 5½ homeward bound, the becalmed yachts, with the exception of the Mohawk, having got their heads in the same direction. At 4:10 the Mohawk had got the breeze and the Resolute turned about to have a tussle with her, but the Mohawk broke both the shackles which held her bobstays to the stern rods and her racing was over for the day, except before the wind, as the crew managed to get a tackle rigged which relieved the bobstay. The finish was as follows:—

Yacht.	Start.	Finish.	Elapsed time.	Corrected time.
	H. M. S.	H. M. S.	H. M. S.	H. M. S.
Atalanta.	11 41 59	5 52 50	6 10 51	6 10 52
SECOND-CLASS SCHOONERS.				
Comet.	11 40 18	5 43 08	6 02 50	5 57 22
Estelle.	11 35 36	5 54 05	6 18 29	6 18 29
SECOND-CLASS SLOOPS.				
Sadie.	11 40 33	6 29 40	6 49 07	6 49 07

None of the first-class sloops made the course. Thus the Atalanta wins the first-class schooner prize, having no competitor; the Comet wins the second-class schooner prize, beating the Estelle 28m. 6s. on corrected time. The Sadie wins the second-class sloop prize, having no adversary, and the Vision still keeps the Bennett cup.

BROOKLYN YACHT CLUB REGATTA.—The Fall regatta of this club, which was also intended for an inauguration of the new club house, was sailed most successfully on Saturday last. In order to allow ample time for the subsequent festivities it was decided to shorten the course, omitting the run to the lightship and making the Southwest Spit the turning point, the start being from Gravesend Bay and the distance sailed over about fifteen miles. The following yachts entered:—

Name.	Owner.	Area.
Comet.	W. H. Langley.	1,529
Siren.	Dr. Morrough.	Not measured.
FIRST-CLASS SLOOPS.		
Undine.	W. M. Brasher.	957
Kate.	G. F. Randolph.	876
Sadie.	John B. Norris.	752
SECOND-CLASS SLOOPS.		
		Mean length.
Lizzie L.	J. G. Johnson.	40 00
Sophia.	C. M. Felt.	34 11
Flying Cloud.	W. P. Smull.	34 06
Hope.	John Dimon.	Not meas'd
THIRD-CLASS SLOOPS.		
Victoria.	Thomas Fly.	28 00

The Saddle was the first to cross the line, followed by the Undine, Kate, Lizzie L., Flying Cloud, Hope, Siren, Sophia, Comet and Victoria, in the order named. A good topsail breeze was blowing, and a large fleet of yachts cruising in the lower bay, the scene was very spirited and exciting. It seems, however, as though a yacht race could not be sailed in any weather without mishaps. The first of the unfortunates was Dr. Morrough's new schooner Siren, whose jibboom broke off at the cap and rendered her *hors du combat* as far as racing was concerned. And then off Cone Island Point the Sophia lost her topmast and withdrew. Before the Spit was reached the Undine had passed the Sadie and the Comet was gaining rapidly on the leader. They rounded as follows:—

Name.	Time.	Name.	Time.
Undine.	12 35 40	Lizzie L.	12 40 30
Comet.	12 36 10	Hope.	12 43 05
Sadie.	12 36 40	Flying Cloud.	12 48 00
Kate.	12 38 00	Victoria.	Not timed

The wind was fresher on the run home, but the positions were not materially altered, the Comet, of course, being the first over the line. The prizes were awarded to the Comet, Undine, Lizzie L., and the Victoria.

THE SEAWANHAKA LADIES' RACE.—It was a capital idea, that, of the members of the Seawanhaka Club, to give their lady friends one good day of yachting before the season closed, adding a race to give zest to the occasion. The course finally decided upon, in order to provide the best sailing compatible with the comfort of those for whom the event had been inaugurated, was from the Narrows to the Spit and return, going over the same course twice. The yachts crossed the line as follows:—

Name.	Owner.	H. M. S.
Idler, schooner.	S. J. Colgate.	11 38 20
Madcap, sloop.	J. B. Bush.	11 40 00
Ariel, sloop.	William Beekman.	11 41 10
Addie V.	Cornelius Roosevelt.	11 42 10
Alert, sloop.	Henry Vail.	11 43 45
Christie, sloop.	Frederick Tams.	11 44 25

There was a fair wind, and plenty of it both ways. The Idler went off at a grand pace, increasing her lead at every moment. The Ariel soon passed the Madcap, but could not overhaul Mr. Colgate's schooner. The Addie also passed the Madcap, and the four named turned the buoy in that order, followed by the Christine and Alert. On the run back to the stakeboat the Alert passed the Christine, and they rounded in the following order: Idler, 1:32:10; Addie V., 1:55:45; Madcap, 2:11:20; Alert, 2:18:55; Christine, 2:19:33. The Ariel did not turn, but continued on up the harbor. On the second round the only change was in the positions of the Christine and Alert, which had been reversed, but the Alert's allowance made her first on corrected time, the other winners being the Idler and Addie V.

AN AQUATIC NOVELTY.—A correspondent sends us the following description of a new iron steam yacht:—

"In this day of limited mail trains and fast horses it is pleasing to observe that those interested in yachting are likewise inspired by the cry, excelsior. The lovers of aquatics now claim our attention, and the last addition to the steam yacht fleet must be described, as she is remarkable in more points than one. The Continental is a new iron steam yacht, fifty feet long, built by Holmes, Shaw, Brown & Co., Bordentown, N. J., and delivered in Philadelphia last Saturday to the members of a new steam yacht club organized by certain gentlemen in that city. The Continental has performed a feat never before accomplished, for she has run when loaded with a day's fuel and a party of gentlemen on board her, the extraordinary speed for a small yacht of 16 miles in 57½ minutes, being the average of two runs as follows:—First run, eight miles against tide, 31 minutes, 15.48 miles per hour; second run, eight miles with tide, 26½ minutes, 17.94; average speed, 16.71. This record is sustained running and not a furious effort for the distance of one mile and no power to breathe at the finish. The Continental can run a mile in three minutes, being at the rate of twenty miles an hour, but this is not her boast; her novelty and renown is derived from the fact that she can run when loaded at the sustained high rate of speed of between sixteen and seventeen miles per hour. She is handsomely fitted with a hard wood cabin, and has points of excellence and elegance about her pleasing to the yachting man. One great novelty in her build, is that her propeller is at the extreme of her length, being abaft the rudder, and is lowered so that half its diameter revolves below the vessel's keel and is consequently always in solid water. The screw is protected by a deep skeleton shoe projected below it so that in case of getting in shoal water no harm can happen the propeller. The seats in the cabin arranged to form berths, so that a party of gentlemen can live in comfort while on a gunning or fishing excursion. In fact she is designed for sportsmen, and with her great speed is the craft a sporting man is proud to own, for it is claimed for her that she is the fastest yacht in the United States."

THE ARGONAUTA ROWING ASSOCIATION'S Fall regatta was held on the Kill Von Kull on Saturday afternoon. The weather was not such as would be considered first class for rowing, but the spirited oarsmen of the Argonauta were not to be balked of their fun, and four races were rowed, although the single-scutt race was, owing to the roughness of the water, necessarily abandoned. The pair-oared race was first called, and responded to by Messrs. W. T. Taylor and J. F. Ward, composing one crew, and M. A. Phillips and E. Smith, another. The course was from the Latourette House dock, three fourths of a mile and return. Taylor and Ward were ahead at the stake boat, made a close turn, and won.

The next race was for four-oared gigs, in which the following crews contended: White—L. D. Hyatt, bow; E. A. S. Man, S. B. Trask; S. S. Zabriskie, stroke; H. Meigs, Jr., coxswain. Red—A. P. Vredenburg, bow; E. R. Craft, J. A. Lodwick; R. H. Jackson, stroke; E. Smith, coxswain. After one false start, owing to Zabriskie breaking his oar, they got off even, each boat leading alternately until the stakeboat was reached, when the Red took the lead and kept it to the finish, winning by a length.

The heavy and light weights next contended in four-oared shells, the crews being composed as follows: Heavy—Frank L. Gunther, bow; E. R. Craft, M. G. Cavalli; William Gwynne, stroke. Light—James McNider, bow; F. E. Ballard, E. R. Peck; G. E. Man, stroke. The light weights proved too heavy for their opponents, and won by a steamboat's length.

The last event was the senior four-oared shell race, the following crews appearing: White—Ed. Smith, bow; J. F. Ward, N. W. Frank; Walter Man, stroke. Red—W. T. Taylor, bow; John A. Walker, B. Stephenson; M. A. Phillips, stroke. The reds had rather the best of the race to the stake boat, but the whites found better water and passed them. The matter was settled, however, by Phillips breaking his oar, allowing the other crew to win as they pleased. Man's crew offering to row the race over again, the offer was accepted, but with the same result. The regatta was very successful, and the many lady friends of the members present appeared to enjoy the racing immensely.

—The regatta of the Saugerties Rowing Club came off on the Esopus Creek on the 2d inst. The barge race between the Trinity crew, of Madalin, and the Saugerties crew, one mile with turn, resulted in the defeat of the Trinity crew after a very close and exciting contest. Time—Trinity, 8:35; Saugerties, 8:34.

The four-oared shell race, two miles with turn, between Saugerties and East Kingston crews, resulted in the victory for the former by four boat lengths. Time—Saugerties, 14:10; East Kingston, 14:25. The judges at the homestake were R. MacCarthy and Mr. Rathbone, of Trinity Institute, and at the upper stake, Mr. Moles and Charles M. Streeter, of the East Kingston Association. Jerry Day, formerly stroke of the Yale crew, and now stroke of the Catskill crew, acted as referee.

DENMARSH AND PEDGRIFT.—A single scull race between Frank Denmark, of Pittsburg, and John Pedgrift, of Chicago, for \$250 a side, three miles—a mile and a half and repeat—was rowed at Pittsburg on the 30th inst. Denmark gave Pedgrift thirty yards start and choice of water. At the word "go" both got away in good style, Denmark gaining rapidly. When they had pulled about 400 yards they fouled, but continued over the course, Denmark still in the lead, which he maintained until the close, coming in four lengths ahead. Time—19m. 38½s. Pedgrift claimed the race on a foul, but the referee decided it a draw, which caused general dissatisfaction on both sides. The betting was \$2 to \$1 on Denmark, and large sums were staked on

the result. A large crowd was present. The time is said to be the best on record.

PROFESSIONAL SINGLE SCULL RACE AT WATKINS.—A match single scull race between Ellis Ward, of Geneva, (one of the noted Ward Brothers, and formerly of Cornwall, in this State,) and Frank Kilsby, of Philadelphia, (late of England,) will come off on the Seneca Lake regatta course, at Watkins, for \$500 a side, to-day. These noted oarsmen are both hard at work on the course, well matched, and a closely contested and highly interesting and exciting race is anticipated.

—The Paris crew, of St. John, New Brunswick, recently issued a challenge offering to row any four-oared crew in the world a four-oared shell race over a three or a six mile course for \$2,500 a side, offering £100 expenses, the race to take place on the Kennebecasis River or on Bedford Basin, Halifax, Nova Scotia. In reply to this challenge Richard Blakey, of Newcastle, England, accepts the challenge and agrees to select four men and two substitutes to row the Paris crew for £500, and will give £100 expenses to row on the Tyne or take £150 expenses to row at Halifax. The English crew will probably be Boyd, Sadler, Lumsden, and Hepplewhite. The Paris crew is unchanged—Fulton, Price, Hutton, and Ross. As the backers of the English champion four have accepted the Paris crew's offer, the race will be arranged at an early day.

Rational Pastimes.

CRICKET—AMERICAN VS. ENGLISH, TWELVE A SIDE.

This match, played on the St. George's ground, Hoboken, Saturday last, for the benefit of Georges Giles and Wm. Brewster, professionals of the St. George's and Staten Island Cricket Clubs, attracted a large number of spectators, the players being selected from the several clubs of New York and vicinity. The weather and ground were all that could be desired. The Americans went first to the bat, being represented by Messrs. Soutter and Jenkins to the bowling of Brewster and Marsh. The ground was lively and the bowling good, but 19 runs were scored before Jenkins, who had been hitting freely and well for 13 runs was caught off by Giles. Satterthwaite filled the vacancy, and playing carefully would doubtless have made a better record had he not been most unfortunately run out. Soutter remained till he had contributed 30 well put together. Stevens played very well for 15 and White for 9 (not out,) and the American innings closed for 86. It is noteworthy that Jones obtained three wickets in three successive balls. After lunch the Englishmen went in, but the bowling of Messrs. Sprague and Soutter was so straight, and the fielding and catching of the Americans so faultless, that they (the English) retired in close and quick order for only 22 runs, (Giles alone being able to defend his wicket,) thus leaving the Americans victors by 64 runs. The wicket keeping of Westfeldt was also a splendid exhibition of good cricket. There being still an hour of daylight left the English had to "follow on," and obtained 37 runs with the loss of three wickets before time was called. Before time was called, however, Soutter had taken Giles' wicket with a ball that caused the professional to remark that no man could stand against that bowling. Thus ended this most interesting match in favor of the Americans. We hope to see it played every year. Appended is the score.—

BASE-BALL—THE PROFESSIONAL ARENA.

—A word of advice to professional players will not be out of place at present, considering that the majority have become so inflated with the idea that their services will be in such immense demand next season that there is no getting them to listen to offers of reasonable salaries. There are in training for next season's professional play over a hundred first class players now in the amateur fraternity—that is, not in any club belonging to the professional association. The majority of these are intelligent, educated young fellows, who may be relied on for faithful service as far as their ability admits. This material must eventually take the place of the class of professionals who, in the Winter are the frequenters of gambling houses and brothels, and whose companionship and habits of life will not bear a moment's investigation as far as a reputable record is concerned. Many professionals have been engaged by clubs this season, in the eagerness of managers to secure what they have thought to be first class material, who really are not worthy a position in any reputable club—fellows who for some seasons past have been under the ban of justly suspected participation in what is technically termed "crooked" work. Then, too, others have been engaged who, though not on the suspected list exactly, are known to associate with such characters, as to preclude their being rated as thoroughly reliable men. In addition, there

is a class of professionals who lack the one great essential of a really successful professional player—the mental ability to play the game up to the best mark of what is known as "headwork" play. Now, all these inefficient men will ultimately be weeded from the best stock company organizations, and when they are, then will come an opportunity for the honorable, educated class who are now in a measure placed in the background. Then will come the loss of fat places and high salaries, which the grasping unreliaables are now seeking with such effrontery. A thousand dollars for the season's service of seven months is a really handsome remuneration for any ordinary professional position, and double that amount should not be paid to any professional in the fraternity, unless to one of rare ability and marked intelligence and integrity of character.

The Hartford Times very properly says:—"The Western 'fancy prices' of the Chicago Club are nothing to worry will rule in the way of salaries to crack players by November next. But one thing is noteworthy, and that is that the unreliaables are being thrown aside. Certain change catchers, short stops, pitchers, second basemen, and out fielders will be thrown overboard next year who now think they have sure places secured. The record of players is being watched more carefully by managers than hitherto. Those fellows who have been so ready to sign to two or three clubs are slated for dismissal. In fact, reliable men are the stock now in demand. Managers now ask the question, 'If this fellow is so ready to leave this or that club, and break his word to them, or show an ungrateful return for kindness extended to him, why will he not do the same to us?' This is logic, and it tells. Club managers in search of so-called amateur players should examine well into character, antecedents, etc., and not take him simply because he handles a ball in splendid style in this or that position. Amateur nines are now in the field composed of the very roughs of the metropolis, fellows whom it would not be safe to leave your coat or shoes with. Their language and companionship exposes them. As a general thing they can play ball finely, but their characters—'on! no, we never mention 'em.'"

—The record of championship games up to October 5th, not counting forfeited games, or the games of clubs which cannot play their quotas, is as follows:—

CLUB.	Boston.	Athletic.	St. Louis.	Hartford.	Philadelphia.	Chicago.	Mutual.	Games Won.
Boston.....	6	6	7	5	6	10	40	
Athletic.....	2	5	1	7	6	6	37	
St. Louis.....	2	1	4	5	3	6	21	
Hartford.....	0	2	3	4	3	8	20	
Philadelphia.....	0	2	4	4	6	1	17	
Chicago.....	2	1	5	4	2	2	16	
Mutual.....	0	3	0	2	5	3	13	
Games Lost.....	6	15	23	22	28	27	33	154

—The record of championship contests and exhibition games for October, thus far, is as follows:—

Oct. 1—Chicago vs. St. Louis, at Chicago.....	12 to 9
Oct. 1—Mutual vs. Athletic, at Philadelphia.....	4 to 2
Oct. 2—Boston vs. Hartford, at Boston.....	3 to 2
Oct. 2—Athletic vs. Mutual, at Philadelphia.....	14 to 0
Oct. 2—Chicago vs. St. Louis, at Chicago.....	13 to 9
Oct. 4—Mutual vs. Boston, (exhibition) at Troy, 12 in.....	6 to 3
Oct. 4—Athletic vs. Philadelphia, at Philadelphia.....	19 to 10

—The games in September, since our last issue, were as follows:—

Sep. 27—Mutual vs. New Haven, at Brooklyn.....	4 to 2
Sep. 27—St. Louis vs. Philadelphia, at St. Louis (9 in).....	5 to 5
Sep. 28—New Haven vs. Mutual, at Brooklyn.....	8 to 6
Sep. 28—Philadelphia vs. St. Louis, at St. Louis.....	3 to 2
Sep. 29—Philadelphia vs. St. Louis, at St. Louis.....	9 to 5
Sep. 29—Boston vs. Hartford, at Boston (exhibition).....	4 to 1

THE AMATEUR ARENA.

—A fine game of base ball (amateurs) was played at Princeton on Saturday, October 2d, between the Princeton College nine and the Germantowns, of Philadelphia. Mann's pitching, for Princeton, proved to be too good for their opponents. Van Rensselaer and Sharp, of the Germantowns, fielded finely. Following is the score by innings:—

	1st	2d	3d	4th	5th	6th	7th	8th	9th
Princeton.....	1	0	3	0	1	0	0	0	0-5
Germantown.....	0	2	0	0	0	0	0	1	0-3

Umpire, Mr. Dunning, of Princeton. Time of game, one hour and three quarters.

—The Stars, of Syracuse went to Rochester on Saturday Oct. 2, and defeated the Rochester by the following score:

STARS.		ROCHESTER.	
R.	P.O.A.E.	R.	P.O.A.E.
Ferrer, 2d b.....	1 0 4 5 1	Taylor, c. f.....	1 1 0 0
McLean, s. s.....	1 0 0 1 2	Lester, l. f.....	0 0 3 0
Myers, 1st b.....	2 0 14 0	Wamsley, s. s.....	0 0 0 4
White, 3d b.....	1 1 4 0	R. Calder, 1st b.....	0 0 12 0
McGraw, c. f.....	0 0 0 0	J. Cadler, c.....	0 0 1 3
Rafferty, r. f.....	0 0 3 0	Ball, p.....	1 0 5 2
McCormick, p.....	0 1 0 3	Murray, 3d b.....	0 2 5 0
Robinson, l. f.....	0 0 2 0	Snyder, r. f.....	0 0 1 0
Hotaling, c.....	0 1 3 0	Kimball, 2d b.....	0 0 4 0
Total.....	5 3 27 13 5	Total.....	2 4 27 13 11
Stars.....	4 0 1 0 0 0 0 0 0-5		
Rochester.....	0 0 1 0 0 0 0 0 1-2		

Passed balls—J. Calder, 3; Hotaling, 0. First base by errors—Stars, 8; Rochester, 4. Left on base—Stars, 3; Rochester, 5. Time of game—1 hour and 45 minutes. Umpire—C. Naylor, of Kingston, Canada.

—A Chicago paper gives what may be regarded as the official team of the Chicago club for 1876, as follows: "All the negotiations excepting, perhaps, the signing of the papers, having been completed, the announcement is made that the following persons will compose next year's nine: James White, Boston; Alfred Spaulding, Boston; Calvin McVey, Boston; Ross Barnes, Boston; William Anson, Athletic, Philadelphia; John Peters, Chicago; John Glenn, Chicago; Robert Addy, Philadelphia; Jones, of Keokuk; Bielaski, of Chicago, and Andrus, of Jackson, Michigan. The last two named will go in as substitutes."

—We have made it a point with a view to the advancement of amateur players, to compare our record of games played to such contests as are marked by figures showing excellent fielding displays. This event is reached when ever nine runs are scored by the winning side in a match. Below will be found the record of the best played games in which amateur nines took part on one side or on both during August, in which the winning club did not exceed a score of nine runs. It will be seen that the number is large in excess of that of the same character of contests in any previous month or season in the history of amateur playing, the result proving conclusively how well the new rules

of the game have worked this year in improving the fielding:—

Aug. 11—Frontier vs. Star, at Fort Hamilton. (11 inns).....	2 to 0
Aug. 5—Olympic vs. Louisville, at Louisville, Ky.....	2 to 0
Aug. 23—T. B. of Bridgeport vs. Live Oak, at Lynn, Mass.....	2 to 0

Aug. 5—Ionian vs. Western Rock, at Oberlin, O., (11 in).....	9 to 8
Aug. 7—Rose Hill vs. Olympic, at Waterbury, Conn.....	9 to 8

Among the best games played in September may be named the following:—

Sep. 2—Flyaways vs. Cricket, at Binghamton (10 inns).....	2 to 2
Sep. 10—Ludlow vs. Red Sox, at Louisville, Ky.....	4 to 1
Sep. 16—Live Oak vs. Star, at Rome, N. Y.....	4 to 1
Sep. 2—Star vs. Ludlow, at Cincinnati (10 innings).....	4 to 3
Sep. 6—Active vs. Expert, at Reading, Pa.....	4 to 2
Sep. 15—Carbondale vs. Cricket, at Binghamton (5 inns).....	5 to 0
Sep. 13—Resolute vs. Mountain City, at Altona.....	5 to 1
Sep. 9—Chicago vs. Red Stockings, at Cincinnati.....	5 to 2
Sep. 13—Philadelphia vs. Shibe, at Philadelphia.....	5 to 3
Sep. 2—Fall River vs. Rhode Island, at Providence.....	5 to 4
Sep. 17—Olympic vs. Chelsea, at Brooklyn.....	6 to 1
Sep. 15—High Bay vs. Mountain City, at Altona, Pa.....	6 to 2
Sep. 11—Star vs. Red Stocking, at Covington, Ky.....	6 to 2
Sep. 1—Live Oak vs. Resolute, at Portland, Me.....	6 to 3
Sep. 2—Mutual vs. Resolute, at Brooklyn.....	6 to 3
Sep. 6—Coin vs. Archer, at Philadelphia.....	6 to 3
Sep. 3—Ludlow vs. Hartford, at Cincinnati.....	6 to 4
Sep. 4—Active vs. Beacon, at Boston.....	6 to 4
Sep. 9—Fall River vs. Providence, Jr., at Fall River.....	6 to 4
Sep. 15—St. Louis Red Sox vs. Blue Stockings, at Cincinnati.....	6 to 4
Sep. 17—Burlington vs. Peabody, at Burlington.....	6 to 4

SCOTTISH GAMES—DRAUGHTS.

NUMBER SIX.

IF the question should be raised whether there is any authority for treating of draughts or checkers under the title of Scottish Games, it may be disposed of on a variety of grounds. In the first place, it is a game which is played to a greater or less extent over the whole of Scotland. So universal is its practice that it may be safely said to be more generally prevalent in that country than in any other. The "dom-brod" and checkers find a hiding place in some secret nook of the farm laborers' bothy, whence they are brought when the completion of the day's darg brings the "hands" together, and they are none the less prized adjuncts of the manse. They are brought at the hour of the midday meal from a place reserved for their reception under the weaver's loom, and take up the attention of the employees in the tailor's workshop. The game is one, in short, which appears to possess a peculiar fascination for all classes of the Scottish people. If their occupation is sedentary, or their tastes lie in the direction of quiet pursuits, the game is an unfailling resource; if otherwise, they turn to it as a relaxation whose merits are enhanced by the change it presents. It is a game admirably suited to the national temperament and character. It requires thought and caution, and calls for a considerable intellectual effort to be played with credit.

The Scotch have also, in a manner, made the game their own, by the success they have won in its practice. Mr. James Wyllie, the "Herd Laddie," has gained victories enough to entitle him to the name of champion of the world. He has defeated the best players of Great Britain, and since his arrival in this country upwards of two years ago, his career has been one unbroken series of victories. After traveling over a great portion of the United States and Canada, he has not met a single "foeman worthy of his steel." He is a perfect prodigy in his way. Short in stature, without

any gracefulness in movement or address, and with a face so impervious as to be almost expressionless, he devotes his whole time, energy and thought to his favorite game. His whole life consists of a mere series of games of checkers. While at play he exhibits the stolidity of a statue, and never lifts his eyes from the board; but his admirers say that when he makes his first move, he can see his last, and certainly his play is wonderful.

Scotsmen in America display much of the fondness for the game which characterises them at home. A checker tournament for prizes and the championship for the year, is among the Winter events of the New York Caledonian Club.

For these reasons the game may be treated under the present heading, although it must be admitted that history leaves considerable room for questioning the authenticity of its Scottish origin. Mr. Augas, the author of "Savage Life and Scenes," says that draughts is played by the savage tribes in the interior of New Zealand under the name of e'mu, and that it does not seem possible they could have derived their knowledge of it from any other people. The argument works both ways. For identically the same reason it does not seem possible that they could have communicated their knowledge of it to any other people. We are therefore left in the presence of a supposition that the game was invented by the New Zealanders, and also by some one belonging to the world outside of Australasia, and if so, why not Scotland?

If it be true, which is argued by some writers, that chess is the development of draughts into a more scientific form, then the origin of the latter is removed to an antiquity beyond the pen of writers of the nineteenth century, as Sir William Jones is the authority for saying that chess is 4,000 years old. Allowing a few hundred years for the development of draughts into chess, we are brought to the conclusion that the former was played at the same time that Gallic was spoken and the bagpipe tuned in Paradise. This would clearly indicate the Scottish origin of the game.

Passing from that question, the middle of the sixteenth century is the earliest date at which, according to the best historical evidence at our command, the game became prevalent in Europe. Mallet published an elaborate treatise upon it at Paris in 1668, and about a century later Mr. Wm. Payne gave to the world his famous introduction to the game. Books multiplied thereafter. In 1767 Painter wrote his "Companion for the Draught Player," and in 1800 Joshua Sturges published his book, "The Guide to the Game of Draughts." Having thus brought the game within the light of modern times, it is unnecessary to go into the antiquarian dispute as to whether it were of Greek or Scandinavian origin. Nor do we feel called upon to enquire into its utility. It is enough that it is a game of calculation, and a national amusement of a very high order.

The game is played, according to the ordinary usage in Britain and America, by two players, with twenty-four men, twelve each, and a board containing sixty-four squares in black and white, or any two opposing colors. The men are arranged four in a row, on alternate squares, at opposite sides of the board, which is placed so as to have the double corner, or extreme corner square unoccupied, to the right hand of the players.

Each player then moves alternately, advancing their men along the diagonals in which they were first posted. Every move must be forwards, except in the case of crowned men, which are obtained by being advanced to the side of the board opposite to the player. These have the privilege of moving backwards. Men take others standing in the direction in which they move by leaping over the contiguous piece if there is a vacant square beyond. The advance is made by one square at a move, except when a series of men standing in such a way, with one square separating them each one from the next, that they can be captured by one man leaping over one after another.

The various rules and moves are too intricate for treatment within the limits of an article of this description.

Polish draughts is played with forty men on a board of 100 squares, or as in Germany and by Germans generally, on the ordinary board with twenty-four men. The men are moved forwards as in the other game, but in taking they can move either backwards or forwards. The crowned men do not require to be contiguous to the man they take, but can be advanced from one end of the diagonal on which they stand, to the other, provided the passage is not obstructed by two or more men standing in the squares adjoining each other. This game also differs from the ordinary game in another respect. In the latter, reaching the crown completes the move. In the Polish game, a man may touch a crown square in the course of a continued coup, without being entitled to be crowned, if there are other men to be taken on a backward move before the play is finished.

NEW YORK ATHLETIC CLUB.—The Fall games of this prominent club were held on their Mott Haven grounds on Monday last in the presence of a large concourse of spectators. The events and results were as follows, the crowded condition of our columns this week not allowing us to go into details:—

One Hundred Yards Run—First heat, 1st A. M. Hunter; second heat, 1st, M. E. Burris; third heat, 1st, C. Herraty; fourth heat, 1st, A. C. Reid; final heat, M. E. Burris. Time, 11 2-5 seconds.
One Mile Walk—1st, D. M. Stern, N. Y. A. C. Time, 7m. 11 1-5s.
Half Mile Run—1st, F. J. Hynes, N. Y. A. C. Time, 2m. 18s.
One Mile Run—1st, W. E. Sinclair, N. Y. A. C. Time, 5m. 8s.
Running High Jump—1st, John West, Brooklyn, N. Y., 5 ft. 1 in.
One Hundred and Twenty Yards Hurdle Race, ten flights—1st, E. B. Foote, Jr. Time, 20 1-2s.
Four Hundred and Forty Yards Run—First heat, 1st, W. L. Stow, N. Y. A. C. Time, 59 3-5s. Second heat, 1st, James Loch, Pawtucket, R. I. Time, 1m. 3 4-5s. Third heat, 1st, Frederick C. Saporas, New York. Time, 58s. Final heat, 1st, F. C. Saporas. Time, 1m.
Three-mile Walk—1st, D. M. Stern, N. Y. A. C. First mile, 8m. 15s.; second mile, 8m. 35s.; third mile, 8m. 57 3-5s.; total, 25m. 47 3-5s.
Running Broad Jump—1st, Mr. Elliott Burris, N. Y. A. C., 17 ft. 1 1-2 in.
Medley Race—Fifty yards hop, 100 yards walk, 100 yards run, and 100 yards run over ten hurdles 2 1-2 feet high, in the order named. 1st, G. H. Parker, Olympic B. B. C. Time, 1m. 4s.
Four Hundred and Forty Yards Run (handicap, members only)—1st, E. Merritt, 25 ft. Time, 55s.

The officers of the day were:—John C. Babcock, referee; F. S. Kinney, starter; C. H. Pierce and P. A. Curtiss, timekeepers. Great credit is due to the clerk of the course, Mr. John H. Stead, for the punctuality with which the various events were called.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

WAPSONONSK.—Give weight of ball and charge of powder as to ordinate of trajectory.

G. H. R., Gainesville, Tex.—Cannot get a copy of Cone's "Key to N. American Birds" for less than \$6.25.

G. A. B., Northfield.—1st. Where is the *Land and Water* published? 2d. Does Captain Bogardus sight with both eyes or with but one? Ans. 1st. London, Eng. 2d. Both.

G. Harrisburg.—Is there any way to mend Scotch wading stockings which leak in the seams of feet? Ans. Cannot tell without knowing the material of the stockings.

W. A. M., New York.—Can you inform me where I can go to find good pigeon shooting in New York or Pennsylvania? Ans. Sullivan county. Take Midland Railroad to Monticello and inquire.

W. S., Randolph, Mass.—What kind of rifle is used by Mr. William Hayes at Mr. Conlin's gallery? What kind of sight is there on the same, and what is the calibre of the rifle? Ans. Ballard, 22 calibre, globe sight at muzzle and peep sight at breech.

NIMROD, Newton, Mass.—Do you know anything regarding the reputation and workmanship of the guns made by Charles Buckley, Birmingham, Eng.? Can you tell me anything concerning the man? Ans. No such man among the gunmakers of Birmingham.

W. W. A., Gonzales, Texas.—Which is the best breech loading gun? Would a short account of our game and fish be of interest to your readers? Ans. Hardly. are about equal in quality. Shall be very glad to have your fish and game reports.

R. O. X., Syracuse.—Please let me know if there is any way of catching wild ducks alive. Ans. We have heard of their being taken by means of decoys in nets, and also by means of fish hooks baited with minnows on lines, but all such means are unsportsmanlike, and their use to be deprecated.

JACOB, N. Y.—Can you tell me if there are any gunsmiths in this city or country who choke bore fine guns, and the probable expense, and would you advise it done to a fine gun? Several sportsmen are desirous of enlightenment on this point. Ans. Our best gunmakers deprecate the altering of guns to choke bores, on account of the necessity of making the metal so thin near the muzzle. We would not advise it.

SUBSCRIBER, Lexington, Ky.—In your issue of Sept 23d, page 107, I find the statement that "fish will live twice as long if killed by a blow on the head, when caught, as when left to die gradually." What do you mean? Please give us information. Ans. We had supposed that the "slip" was too palpable to require correction. Of course what should have been said was that a fish would keep twice as long, etc.

D. M. N. Y.—Nov. 4.—I desire to find the best fishing ground for weak-fish, or, if so late, any that will afford sport. Am in doubt which will prove the most favorable, whether Newark, Princess, or New York Bay. Please inform me. Ans. It is impossible to predict where the best fishing will be at the date you name; probably in Princess Bay. Look in our paper about that date.

J. B. A., Port Orange, Fla.—Would you please inform me, first, when a boat is on the starboard tack which side of the boat is the sail on? 2d. How do you find the water line of a boat? Anf. 1st. A boat is on the starboard tack when the wind is on that side. For instance: If a boat is heading south, with the wind west, she would be on the starboard tack. 2d. The water line is the point of immersion when the boat is in light load trim.

YOUNG SUBSCRIBER.—Would you please inform me as to which place in the State of Illinois, within the distance of one hundred miles from the city of St. Louis, where I should be able to obtain good duck shooting on small rivers or sloughs, as I shall not have the convenience for taking a boat with me? Ans. We are informed that in any of the counties of Illinois S.E. of St. Louis, and within a distance of seventy-five miles, there is good duck shooting, probably better, however, on the Mississippi.

M. J. P., Syracuse.—Will you please inform me where the Spencer repeating rifle is manufactured, or where the salesroom is? Is not that rifle as good for sporting purposes as the Remington, or Sharps, or any other rifle? Ans. Not manufactured at all. The Winchester Arms Co. have bought out the patent. No comparison should be drawn between a repeating rifle and those carrying a single cartridge, although we believe that, up to a certain distance, say 350 to 500 yards, the Winchester is equal to any for sporting purposes.

G. B. R., Brooklyn.—Is there anything that will color a gun barrel so as to make it black and keep it from rusting so easily? 2d. Where can I get a good one or two barrel shot gun, and at what price? 3d. Where can I get a good second-hand Remington breech loading rifle, and at what price? Ans. 1st. Spirits wine, 1 1-2 oz.; tincture steel, 1 1-2 oz.; corrosive sublimate, 1 1-2 oz.; sweet spirits nitre, 1 1-2 oz.; blue vitriol, 1 oz.; nitric acid, 4 oz. Mix and dissolve in one quart of warm water; or, better still, take your gun to a gunsmith. 2d. Any dealer in guns. 3d. H. C. Squires has a Remington rifle 41 cal., globe and peep sights and wind gauge, price \$35.

WEBB, Binghamton, N. Y.—Would you advise the alteration of a fine double muzzle loader to a breech loader? Gun was made by Schaffer, of Boston. If desirable to so alter, who can do it well in New York city? 2d. Where in New York city can be found the best assortment of books on fishing and shooting from which to select for purchase? 3d. Where can I, during the month of October, get good duck shooting and bass fishing within say three hundred miles of New York? 4th. Would you advise a Remington \$60 gun in preference to the alteration mentioned above? Ans. 1st. We would not. It can be done, however, by George Hayden, Fulton street, this city. 2d. At this office. 3d. The combination will be difficult to find. We would mention Barnegat Bay, Niantic, Conn., or possibly some of the points on the Chesapeake. 4th. Yes.

S. C., St. John, N. B.—Which is the healthiest place to live, a Winter in Florida, or Southern California, and where is the best shooting in these places? What is the fare to each place, and what is the best route to take? What kind of a place is South Carolina? Ans. In Winter they are both healthy, but California has the advantage of being healthy all the year. In the latter State the shooting is pretty evenly distributed; route, via Union and Central Pacific Railroads from Omaha to San Francisco; steamer, or rail and stage, down the coast. We are about publishing a pamphlet entitled "Camp Life in Florida," which will give you all the information you desire as to route, fares, etc. Portions of South Carolina are much resorted to by invalids during the Winter. Your questions regarding fever and ague are too indefinite. There may be some in certain localities of each State, but we don't know of any.

ANNOUNCEMENTS.

May Agnes Fleming's books have, within two years, reached a sale of 40,000 volumes. Her latest novel, "Norine's Revenge," will be published next week by G. W. Carleton & Co.

The author of "Rutledge" has written an introduction to a bright little book for girls, "Marguerite's Journal," which G. W. Carleton, will soon have ready.

Readers who are fond of ghosts and goblins, will find their fill of the horrible in a forthcoming reprint by G. W. Carleton & Co., from the recent London publication, "History of the Supernatural," by Frederic Lee, Vicar of All Saints, Lambeth.

Emerson's line "All Mankind Love a Lover," is the inviting motto on an anonymous novel that G. W. Carleton & Co. will soon issue, entitled "Charette."

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOCTRINATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,

[Post Office Box 2832.]

127 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty percent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, OCTOBER 7, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, October 7th.—Racing at Jerome Park; Nashville, Tenn. Trotting at St. Louis, Mo.; Armenia, N. Y.; Prospect Park; Monroe, Mich. Rifle—FOREST AND STREAM Badge, Conlin's Gallery, 930 Broadway. Regatta at Owasco Lake, N. Y.; single scull race, Ellis Ward and F. Kilsby, Watkins, N. Y. Cricket—Staten Island vs. Prospect Park Club, at Staten Island; St. George's Club vs. Picked Eleven, of Orange, N. J. Base ball—Chicago vs. St. Louis, at Chicago; Philadelphia vs. Boston, at Philadelphia; Athletic vs. Quickstep, at Wilmington, Del.

FRIDAY, October 8th.—Racing at Nashville, Tenn. Trotting at Prospect Park; St. Louis, Mo.; Owego, N. Y.; Cincinnati, Ohio. Annual Fair at Monroe, Mich. Match of Resolute vs. Comet, in N. Y. Bay. Base ball—Chicago vs. St. Louis, at Chicago; Athletic vs. Hartford, at Philadelphia; Star vs. Chelsea, at Brooklyn.

SATURDAY, October 9th.—Racing at Jerome Park. Trotting at Prospect Park; St. Louis, Mo. Rifle—Crouch Badge, Creedmoor. Four-oared race, Princeton vs. Schuylkill Navy, National Course. Base ball—Athletic vs. Boston, at Philadelphia; Flyaway vs. Nameless, at Brooklyn.

MONDAY, October 11th.—Base ball—Alaska vs. Chatham, at Brooklyn.

TUESDAY, October 12th.—Racing at Jerome Park. Trotting at Parker City, Pa.; Paterson, N. J.; Rockland, Me.; Lowell, Mass. N. Y. Centennial Athletic Association, Capitoline Grounds, Brooklyn. Base ball—Hartford vs. Athletic, at Hartford; Alaska vs. Olympic, at Brooklyn; Concord vs. Chelsea, at Brooklyn; Malone vs. Active, at Reading, Pa. Match of Resolute vs. Vesta and Dreadnaught, at Sandy Hook.

WEDNESDAY, October 13th.—Trotting as on Tuesday, and at Philadelphia, Terre Haute, Ind. Base ball—Hartford vs. Athletic, at Hartford.

OBITUARY—"THE OLD SHEKARRY."—The death of a gentleman so well known as a writer on sporting subjects, and as a traveler, as was the late Major Henry A. Leveson, deserves notice and a slight tribute to his memory, even on this side of the water. There are few who take an interest in the sports of the forest and field, who have not read with delight the graphic sketches of wild eastern life and the killing of big game, from the pen of "The Old Shekarry." "The Camp Fire," "The Hunting Grounds of the Old World," and "Forest and Field," are books read wherever the English language is spoken. Major Leveson served with great distinction throughout the Crimean war and was several times severely wounded. His graphic sketches of sporting incidents will be sadly missed from the pages of periodicals to which he was a frequent contributor, and the public, as well as the large circle of friends by whom he was loved for his personal worth, will mourn his loss. Major Leveson, who died recently at Brighton, England, in his forty-eighth year, was a sportsman in the true sense of the world, not killing for the sake of slaughter, but preferring contests with the larger and more dangerous game, such as "Rogue" elephants, and man-eating tigers. He was also a valuable contributor to science. We shall all sadly miss "The Old Shekarry."

THE FALL MEETING AT CREEDMOOR.

WE devote considerable space in our rifle columns to-day to the late contest at Creedmoor, which ended on Saturday, October 2. This Autumn meeting of the National Rifle Association concludes most happily what must be considered as an exceedingly brilliant period in the history of American rifle shooting. It was not sufficient that the attendance at Creedmoor should have been large, and that all should have entered fully into the spirit of the occasion, but it was a necessity that a manifest improvement in scoring should have been made. Let any one compare the shooting last October with that of this year, and it will be found how much higher the percentage is. Shooting which in 1873 and even 1874 would have secured to individuals and teams first prizes in the various contests would this year have only been placed fourth or fifth. When one takes into consideration, too, that the newer system of targets is employed, the scoring becomes even more remarkable. The American people are fast mastering all the secrets of scientific rifle shooting, and there is no reason why next year we may not look for even higher results.

If there is some appreciable limit to man's skill in the thorough command of the instruments he employs, those secrets which he may still acquire as to the better construction of such tools have no limits. It would be absurd to say that the rifle of to-day is the very best, and that beyond it nothing can be done. If the breech loader has been amazingly improved in the last fifteen years, what may it not become in 1885? It is as certain as can be that before long we will change the character of the targets so that with better arms we may make further discriminations in marksmanship. If we hear of there having been constructed lately in England a cannon which is to send its ball a distance of eight miles, and a careful adjustment is put on the piece, and gunners are to be taught, and what is more, required, to drop their 600 pound cannon balls within an area of one-thirty second of an acre, why are we not to increase in time the range and the accuracy of rifles? Speculations of this kind are not at all visionary in their character. It may be supposed to be foolish to think how the children of the men who shot at Creedmoor last week will use their rifles, or what comments or inferences some future writer in the FOREST AND STREAM will record, but rifle making and rifle shooting will not, at least in the United States, remain at a standstill.

Returning from such speculations to the actual match, the management on the whole was fairly good, but it might have been improved. The fact is, that the National Rifle Association has grown so fast and in such an unheard-of way, that on grand occasions like the Fall meeting it becomes rather unmanageable. Though the shooting element is admirable as to order and deportment, it wants punctuality. Rules, and very positive ones, ought to be made and enacted as to the scoring of the competitors at the matches. Mr. A., if he shoots in the champion match, ought not only to have the day of the match indicated to him, but should be instructed to be present at a fixed hour to take his turn. If Mr. A. is not present then he ought to lose his entry. A good many of the matches were run one into another, causing confusion. One or two men late in a match may cause the tail men, who have been thrown by accident among the last to shoot, to point their rifles at targets which are just visible in the gloom of the evening, and chances are unequalized.

The rule of shooting in rain or sunshine should be held, and that, no matter what convulsion of nature should occur, save an earthquake, the match must be shot between certain hours, and that after a certain indicated time in the afternoon, fixed on beforehand by the officer of the range, not a single rifle should be fired. On grand occasions official scorers should be had, and paid for their services, who ought to be always in position near the shooting point. Then again, a sufficient clerical force should be assembled to work up statistics of the matches. In many cases representatives of the leading journals had just cause of complaint, finding it impossible to make up their reports in time. Then again, that disagreeable business of listening to protests and adjudging them should be delegated to a selected body of officers, who should be always on the ground ready to solve all mooted questions. Capt. Story was indefatigable in his duties in the statistical department, assisted at times by Gen. Woodward, but had there been at least four able clerks to help these gentlemen it would have not been more than sufficient to give the results.

There is a very unfortunate clause in the rules regulating the officers of the National Rifle Association which precludes any of them from being paid for their services. If a feeling of devotion to the military interests of the country, and a pride in the honorable positions of President, Vice President, or Director of the N. R. A. might prevent any of the incumbents from being salaried, some executive officer who does the every-day work should be paid, and handsomely, too. What is everybody's work is generally nobody's work, though in the N. R. A. there has been an immense amount of very hard drudgery accomplished by every officer, often at a great sacrifice of time and money. In fact, with them all it has been a labor of love. We trust those leading gentlemen who have given us our Creedmoor, and have originated systematic rifle shooting in the United States, will see that it is to their interests to have this clause about giving a salary to some executive officer inserted in their privileges, and then, if all things do not move as smoothly as they should, we may at least have somebody whom we can hold responsible. To Gen. Dakin

as executive officer the greatest praise is due for having done all in his power to bring the many matches to their conclusion.

GAME PROTECTION.

THE call for the meeting of the Executive Committee of the International Society for Protecting Game and Fish was issued last week. The appointing of Standing Committees on Legislation, Nomenclature, etc., which will be the duty of the Executive Committee, must shortly result in a more perfect system of game laws, and a more stringent application of the same when they shall have become legislative enactments. In this respect our Canadian neighbors are already taking the initiative, and are determined to have their laws enforced without regard to person or position. Under the head of "Game Protection in Canada," we find the following in the *Peterborough Times*: "On Saturday Mr. G. B. Sproule was charged before the Police Magistrate, by the County of Peterborough Fish and Game Protective Society, with hunting deer and having venison in his possession during the close season. It appeared from Mr. Sproule's evidence that some of the party had hunted on the 31st of August, but he had not taken part in the hunt. A deer was brought into camp that evening, and was divided the next morning, Mr. Sproule taking a hindquarter. He was fined \$10 and costs for having venison in his possession. On Thursday a similar charge was brought by the society against Mr. D. Denne. He was in camp while the same party were hunting, and also received ashare of the venison. He was fined \$10 and costs."

There is this difference, however, between the administration of the game laws in Canada and this country. In the former there is engrafted upon the minds of the people generally a strict deference for the laws relating to game which is an inheritance from the mother country, where the slayer of game out of season ranks with the poacher and vulpecide. With us, particularly in the case of men living on the outskirts of civilization, game laws are felt as a restraint, and are too irksome to be observed. They must be taught that a respect for them will ultimately be a necessity of their own existence. We had the pleasure a few days since of a call from Mr. Wm. Eastland, of Peterborough, and Mr. J. W. Sheridan, formerly of the same place, both gentlemen largely interested in the preservation of game. We are informed by them that the Canadian Legislature, in order to prevent as much as possible the violation of the laws induced by the prospect of a market on our side of the border, have given instructions to all their Customs agents to refuse the customary export entry for all game or fish which may be offered for transportation, and to seize the same. This is one step in the right direction. If our Government would issue similar instructions to its Customs officers, the practice of finding a market for illegally killed fish and game could be effectually prevented as between the two countries.

There are doubtless innumerable instances of game being killed through ignorance of the laws—a wretched excuse, as every facility is now offered for procuring the information, which should be the sportsman's first object on starting on an expedition, particularly if it be to a State other than his own. A case in point is now under our observation. We published recently an account of a trip to Maine written by a gentleman who probably had nothing further from intention than a violation of the game laws of that State. Yet he nevertheless killed caribou in the month of September, and boldly published it over his own signature, notwithstanding the fact that it is illegal to kill caribou before the 1st of October. The publication of the article in question has brought forth a letter from a leading citizen of Maine, noted also as being devoted to the preservation of game, and a gentleman of high scientific attainments. We do not feel at liberty to publish the letter in full, but the sentiments expressed are so admirable, and the case so well put, that we cannot refrain from printing a portion of it:—

"As men's positions in this world by education or property are influential, in the same ratio are they responsible to society for the example they set. The greatest obstacle that I have met in this State in my own personal experience to the enforcement of our game laws is, the continual cry that we want to preserve the game for the rich, etc. Guides themselves have told me that when they state to their employers that to kill this or that game is against the law, the reply is, 'O, we'll hold you blameless, and pay all expenses if it is found out.' In many cases these very men, thus inciting our guides to commit a crime, are the very men who cry out loudest for the severe punishment of poachers, and for the better protection of game. These are the men who come to our State and slaughter our trout by tons and call it sport. These are the men who boast that they made a bag or creel of 50, or 100, or 500. A good sportsman kills his brace of two or four pound fishes, or as many as his needs require, then casts all back. Your true sportsman, like your brave soldier, is never a braggart of the number killed. We must establish a good healthy public opinion in sporting matters. We must discountenance these raids over the border by outsiders, who, when at home, are beyond our jurisdiction. They are welcome to take our game upon equal terms with ourselves, but they must not corrupt our guides with their money and their example, and then seek safety from their own acts by flying over the border. Of what possible use are our State laws, excepting to place Maine sportsmen at a disadvantage, under the influence and example of such sportsmen as the party alluded to?"

Our correspondent further suggests that as a graceful act the killer of the caribou pay over to the Governor of the State the full penalty for every deer or caribou killed, the money to be devoted to charitable objects.

We have received another letter relating to a subject not less important, viz.: the probable extinction of deer in the Adirondacks, and we cordially indorse Mr. Wales' suggestion that the deer should be closely protected for a few years, until they have had opportunity to increase and multiply. There is no section of the country where a strict enforcement of the game laws is of more importance than the Adirondack region, and special officers should be appointed whose sole duty would be to prevent and prosecute

infringements of the laws. We are glad to welcome Mr. Wales to the band of game protectors:—

DEPARTMENT OF DOCKS, NEW YORK, Oct. 2, 1875.
EDITOR FOREST AND STREAM.—

I am not a sportsman, therefore I cannot make any valuable contribution to the stock of knowledge that will interest that large class of our citizens who find health-giving recreation in our woods and streams. I feel, however, a deep interest in the preservation of the fish and game, which seems to be rapidly disappearing for want, possibly, of a vigorous and intelligent enforcement of the game laws. My first visit to the Adirondacks was made this Summer. This whole region abounds in lakes and weird streams, which in the past more than now abundantly rewarded the rod and the reel. I find that a good fisherman prefers to sport for the bass, a very "gamy fish," but the yield is not large, and is evidently growing less every year. One cause for this scarcity was suggested to me, viz.: the wicked practice among the residents along the lakes and streams, of shooting for food the spawning bass as she lays on the shore, thus ruthlessly destroying millions of young, and effectually draining the lakes of this most delicious fish. There may be a law against this murderous business; if not, there surely ought to be one, with severe penalties rigorously enforced.

Another branch of this subject interests me deeply, and that is the gradual disappearance of the deer from the Adirondack forests. This ought not to be allowed to go on. I should have no pleasure myself in the killing of one of these beautiful creatures, especially after he has been forced from his woody cover to find shelter in the lake. The State, for the protection of the waters of the Hudson, wisely proposes to make of this region a great reservation. Now, why not for a time at least reserve the deer and allow them "to increase and multiply?" Will you not give emphasis to these somewhat crude suggestions, and oblige, respectfully yours,
S. H. WALES.

WARS AND RUMORS OF WARS.—From each direction, east and west of us, the black cloud of war seems to be looming upon the horizon. It would puzzle a Philadelphia lawyer to decide the questions arising out of the Herzegovina difficulties. The simplest explanation is that those provinces, envious of the greater freedom enjoyed by the semi-independent principalities, Montenegro, Roumania, and Serbia, are anxious to cast off the Turkish yoke and strike out for themselves. Turkey has so long acted as the balance pole of Europe that her upsetting would result in a general scrimmage. Not the least unpleasant feature of the affair is the fact that she has succeeded in contracting a very respectable debt, the loss of which would shake European financial circles as much as her dismemberment would the political world. Hence the anxiety of her creditors to preserve peace.

A very pretty quarrel has also arisen between China and England, the results of which, if declared, would be no less disastrous to the peace of Europe than in the case just mentioned. The struggle for dominion and Empire in the far East, west to us, is between Russia and England, while Prussia looks suspiciously upon the increase in territory of those powers. But setting aside that view of the question, although a war could but result ultimately in the success of the English, it would not be the child's play of former contests. The most inveterate enemy of foreigners, Li-Hung-Chang, is now in power. He it was who planted himself doggedly before Nanking and moved not until he had recaptured that city and trodden out the great Taeping rebellion; who used the foreign soldiers loaned him as officers and drill masters, as mechanics and experts, until they had fashioned him an army and built him fortresses and guns, and then cast them off. Our own interests centre more in the result of the China affair than they possibly can in the Turkish imbroglio.

THE "SQUIRE" ON SHORT-TAILED GROUSE.—"Squire" Horace Smith, our Field and Kennel Editor, writes us from Augusta, Eau Claire county, Wis., September 26th:—

"Our party, comprising Mr. Whitman, of Chicago; Mr. J. J. Seitzinger, of Philadelphia; Mr. J. S. Ross, of Milwaukee, are having excellent sport, yet neither the sharp-tailed or pinnated grouse are as abundant as I found them hereabout two years ago. Still there are enough to afford most capital sport, as by shooting five or six hours per day we can bag from twelve to fifteen birds to each gun, mostly sharp-tails, a magnificent member of the grouse family. Yesterday in three consecutive shots I killed, first, a sharp-tail, then a pinnated, and lastly a ruffed grouse, all full-sized, plump birds, and as they were shot clean and retrieved without rumpling a feather, how I wish I could have laid them on the office table for your inspection. One of the great drawbacks to this shooting is our inability to get the game to our distant friends, but we have the comfort of knowing that none is allowed to spoil on our hands. You would be astonished to see the consumption of sharp-tailed by my friends before alluded to. You know I am a very delicate young man, and of small dimensions, but they do say that I can get through with a two-pound grouse in less time than most older and larger men.

We have now hanging in a cool place about seventy-five birds of the three varieties of grouse, which will be sent to our friends at Milwaukee, Chicago, and other places not more distant. We start to-morrow for Lake Koshkenong, where we will shoot snipe and ducks a few days. While shooting among the bluffs yesterday, near Beef River, we encountered a bear. Bears, you know, are proverbially impolite, and that fellow was not an exception, for, instead of politely waiting until we could shoot him, he very impolitely and unceremoniously 'got up and got,' and with very little order as to his going. It was not a smooth 2:20 gait he traveled, but a most awkward three-minute 'lick.' After seeing him I was a little cautious in turning sharp corners lest I might come rather too near some of his relatives. Mr. Theo. Morford left us at Milwaukee and ran out to St. Paul with the view of shooting with Mr. Shipman over the famous setter Joe."

[A description of the sharp-tailed grouse, a bird but too little known, will be found under the head of Natural History.—Ed.]

THE COLLEGES.—The receipt of our college exchanges advises us that the college year has recommenced. The Yale Record, Harvard Advocate and Crimson, Trinity Tablet, Amherst Student, and others, are once more on our table. The pages of the first issue are largely devoted to résumés of the late inter-collegiate race at Saratoga, and Cornell is freely awarded the palm of victory. We judge from the indications thus far exhibited that boating and athletics generally will receive a large share of attention during the coming collegiate year.

The Rifle.

CREEDMOOR.

THE AUTUMN MEETING OF THE RIFLE ASSOCIATION.—On Tuesday, the 28th September the opening contest took place with the JUDD MATCH: Conditions, weapon, any military rifle; distance, 200 yards; position, standing; rounds, seven; entrance fee, \$1.00, open to all members of the Association. Twenty prizes, value \$183:—

Name.	Score.	Total.
Joseph Mason.....	4 5 4 4 4 5 4	30
W. Robertson.....	4 5 4 5 4 4 4	30
E. S. Browe.....	4 4 5 5 5 3 3	30
W. F. Edmundstone.....	4 4 4 5 4 4 4	29
J. A. Gee.....	4 4 4 5 4 4 4	29
F. H. Holton.....	4 4 4 5 4 4 4	29
John Waydell.....	4 3 5 4 4 4 5	26
J. Le Boutillier.....	4 4 4 4 4 4 4	28
J. B. Frothingham.....	4 4 4 4 4 4 4	28
C. Smith.....	3 4 4 4 4 4 5	28
W. J. Oliver.....	4 4 4 4 4 3 5	28
G. H. Pettit.....	4 4 3 4 4 5 4	28
T. J. Dolen.....	3 5 3 5 4 4 4	28
W. R. Vail.....	4 4 5 3 4 4 4	28
H. H. Meday.....	4 4 4 5 3 4 4	28
T. Duke.....	4 4 5 4 3 4 4	28
E. H. Sanford.....	3 4 4 4 4 4 4	27
A. Smith.....	3 4 4 4 4 4 4	27
Joseph Holland.....	3 4 4 4 4 4 4	27
W. T. Everett.....	4 3 4 4 4 4 4	27

In the ties on 29, Mr. Gee made the best shot, and for the 28 score Mr. Frothingham took precedence. On the tie of 27 Mr. Smith took the eighteenth place on the list of winners. Last year at the Autumn contest, owing to very adverse circumstances, the first prize in the Judd Match was won with 23. Mr. Joseph Mason's score of 30 in a possible 35, is a handsome total. We are more than pleased that Canada carries home a token of her prowess.

SHORT RANGE MATCH—Conditions, open to all-comers; weapon, any rifle; distance, 200 yards; seven rounds; position, standing; entrance fee, \$1. Twenty prizes, value \$242:—

Name.	Score.	Total.
T. R. Murphy.....	4 5 4 5 4 5 5	32

L. H. Greve.....	4 4 5 5 4 4 4	36
J. McGlensey.....	5 4 5 3 4 4 5	30
J. L. Allen.....	4 3 4 5 5 4 4	30
William Beavan.....	5 5 5 4 3 4 4	30
T. J. Fagan.....	3 5 4 5 5 3 3	30
T. W. Linton.....	5 4 4 4 4 4 4	29
E. S. Browe.....	4 3 4 4 5 4 5	29
D. C. Pinney.....	4 4 5 4 3 5 4	29
J. Bodine.....	4 4 4 4 5 3 4	29
E. H. Madison.....	5 4 4 4 4 3 4	29
J. Le Boutillier.....	5 4 4 4 4 5 3	29
M. A. Wilkes.....	5 4 5 4 4 4 3	29

CAVALRY MATCH—Open to teams of five of any troops of N. G. of the State of New York. Men to be in uniform (full dress or fatigue); distance 200 yards; position, standing; rounds, seven; weapon, Remington breech loading carbine, State model, using carbine ammunition; trigger pull not less than six pounds. Eleven prizes, value \$290:—

Name.	Score.	Total.
Sergeant Nicholson.....	4 2 4 4 3 5 4	26
Captain Auer.....	2 3 5 4 3 2 4	23
Private Decoy.....	3 4 3 4 3 3 3	23
Lieutenant Amer.....	3 2 4 3 0 4 5	21
Private Kelly.....	2 3 4 2 4 0 4	19
Total.....		112
SEPARATE TROOP, 24TH BRIGADE.		
Private Sheldon.....	4 4 5 3 2 4 4	26
Private Wagner.....	3 3 3 2 5 4 4	24
Corporal Benson.....	4 4 4 5 0 3 3	23
Sergeant Wellington.....	4 4 3 3 4 0 2	20
Private Ames.....	3 4 4 3 3 0 2	19
Total.....		112
WASHINGTON GREY TROOP.		
Lieutenant Decker.....	4 3 4 4 3 4 3	25
Sergeant Kelsey.....	4 4 3 4 3 3 3	24
Sergeant Fuller.....	4 5 3 3 0 4 5	24
Sergeant McHugh.....	3 4 2 4 4 4 2	23
Sergeant Wilson.....	0 0 2 2 3 2 4	13
Total.....		109

Last year better shooting was done, the total of the winning team having been 123 made by F. troop Third calvary:—

Name.	Score.	Total.
H. Freer, Third Regiment.....	4 4 4 4 4 3 4	27
M. B. Nicholson, Yates Dragoons.....	4 2 4 4 3 5 4	26
G. Sheldon, Twenty-fourth Brigade.....	4 4 5 3 2 4 4	26
A. T. Decker, W. G. T.....	4 3 4 4 3 4 3	25
H. B. Kelsey, W. G. T.....	4 4 3 4 3 3 3	24
W. Wagner, Twenty-fourth Brigade.....	3 3 3 2 5 4 4	24
D. Lackeman, Fifth Brigade.....	4 2 5 3 2 4 4	24

In connection with the prizes awarded to winners in the foregoing matches a prize was awarded by the Second Division staff to the troop making the highest score. This was won by the Separate Troop of the Fifth Brigade on a score of 96 out of a possible 125 points. This concluded the programme of the day—weather fine, wind quiet.

WEDNESDAY, SEPT. 29.—SECOND DIVISION NATIONAL GUARD MATCH.—Conditions, open to teams of twelve from each regiment or battalion of infantry in the First Division of the State National Guard; weapon, the regulation military rifle; distances, 200 and 500 yards, five shots at each range; position, standing at 200 yards and any at 500. There are four prizes for teams making the highest aggregate scores, and twenty-one prizes for the highest individual scores—altogether twenty-five prizes, valued at \$550. There were nine team entries:—

Name.	200 Yds.	500 Yds.	Totals.

Adjutant W. H. Murphy, 12th.....	39		

SECOND DIVISION NATIONAL GUARD MATCH.—Conditions, open to teams from each regiment or battalion of infantry in the Second Division; weapons the regulation military rifle; Distances 200 and 500 yards; five rounds at each range; position, standing at 200, and any at 500 yards; entrance fee \$1 each man. There were six teams entered. The prizes numbered twenty, valued at \$480, out of which the three first went to teams making the highest scores, and the remaining seventeen were awarded to the best individual scores in the competing regiments, according to the men's order of merit.

The first prize was won by the Twenty-third with a score of 414, the second by the Forty-seventh with 405, the third prize by the Thirty-second with 338. The following table will give in a comprehensive form the totals of the team scores of the 1st and 2d Divisions with the individual prizes:—

Regiment.	Score.	Regiment.	Score.
Seventh Regiment.....	447	Sixty-ninth Regiment.....	372
Twelfth Regiment.....	428	Seventy-first Regiment.....	370
Twenty-second Regiment.....	438	Eighty-fourth.....	306
Seventy-ninth Regiment.....	415	Ninth Regiment.....	303
Eighth Regiment.....	379		
SECOND DIVISION TEAM TOTALS.			
Twenty-third Regiment.....	414	Fourteenth Regiment.....	332
Forty-seventh Regiment.....	405	Fifteenth Regiment.....	283

Lieutenant Waydell, 22d.....	41	Sergeant Oliver, 23d.....	40
De Forest, 23d.....	41	Lieut. Edmundstone, 79th.....	40

ARMY AND NAVY JOURNAL MATCH.—Conditions, open to one team from each State and Territory of the United States, consisting of twelve men chosen in such manner as shall be prescribed by the military authorities of such State or Territory from any one or more of the regularly organized regiments, battalions or companies of uniformed militia; distance, 200, 400 and 600 yards; position, at 200 yards, standing; 400 yards, kneeling; and 600 yards, any; weapon, the authorized military rifle in use by the National Guard of the State or Territory which the team represents. In cases where the State has adopted no particular model, (which must be certified by the Adjutant-General), the team will be allowed to use the rifle in use by the regular army of the United States, or by the uniformed militia of any other State. Rounds, ten each distance. There were fifteen entries for this interesting match, a team of United States Infantry and one from the engineers competing with the militia, but the regulars were very badly beaten, taking a very low position as marksmen, not perhaps from any fault in their arms, but because they were not as familiar with the use of the weapon in shooting as our citizen soldiers. The first prize was won by the second Connecticut with a score of 306, the second

prize by the Twenty-third of Brooklyn with 304, and the third by the Forty-eighth with 302. Last year the Seventh Regiment with 247 carried off the *Army and Navy Journal* prize. Though an improvement over last year, this important match ought to bring out a bigger total. The Connecticut second deserves the highest compliments for having secured the prize. Gentlemen of the National Guard hailing from New York will have to look to their laurels:—

INDIVIDUAL PRIZES.			
Name.	Score.	Name.	Score.
Captain Curtis, 48th regiment.	33	Adjutant Murphy, 12th.	30
Corporal Allen, 23d.	32	Captain Smith, 12th.	30
Corp. La Barnes, 2d Conn.	33	Barlow, 23d.	30
Sergt. Barrett, 1st Conn.	33	Clark, 8th.	30
Private Robertson, 79th N. Y.	33	Sergeant Beauman, 9th.	30
Sergeant Burton, 48th.	31	Bullum, 1st Conn.	30
Jones, 2d Conn.	31	Sergt. Jacobs, 23d N. Y.	30
Laycraft, 71st N. Y.	31	Drum Major Beavan, 23d.	29
Sergt. Smith, N. Y. Eng.	31		

LAFLIN AND RAND MATCH.—Conditions, open to members of the Army and Navy and of the National Guard from any State in the Union, and members of the National Rifle Association and of the Amateur Rifle Club, excepting only members of the team that shot in the international match last year or the team that shot this year in Ireland; breech loading military rifles only, excluding the special model. No ammunition to exceed 75 grains of powder, nor more than 480 grains lead; distances, 200 and 500 yards; ten shots at each range; position, standing at 200, and any at 500. The prizes, first, a gold medal, a silver, and third, a bronze medal. The following are the winners out of 180 contestants:—W. S. Oliver, Twenty-third regiment, Brooklyn, 86; W. A. French, Seventh regiment, New York, 84; Captain W. C. Clarke, Seventy-ninth regiment, New York, 82.

INTER-STATE MATCH.—Only two teams, New York and Connecticut entered, which fact is to be regretted. Next year we hope to see every State represented, when the Centennial match takes place. Col. Wingate as Captain of the team had picked the following men as representing the best military shots in the State: Capt. Briggs, 22d Reg.; Gardner, 7th Reg.; Davis, 84th; Sanford, 7th; Frothingham, 23d; Pyle, 79th; Beavan, 9th; Cowperthwaite, 23d; Reddy, 12th; Waydell, 22d; Jacobs, 23d; Robertson, 79th; and as reserves, Messrs. O'Kelly, 69th; Bradley, 47th; Ferris, 22d, and De Forest, 23d. Conditions, open to teams of twelve from any State or Territory in the Union; distances, 200, 400 and 600 yards; position, standing at 200, kneeling at 400, and any at 600; ten rounds at each range; weapon, the authorized military arm used by the State which the team represents.

It was pretty much of a walk over, the Connecticut team giving in after the contest at the shorter range, New York having made 823, their adversaries 638. Of course the Connecticut men took the second prize, which they deserved for having formed the only representative team.

FRIDAY OCT. 1ST.—This, the fourth day of the Autumn contest, was a disagreeable one. The wind was blustering and a heavy shower fell, which considerably disturbed the shooting. The competition first in order was

THE MID RANGE MATCH.—Conditions: weapon, any rifle, distance 500 and 600 yards; seven shots at each range; position, any, without artificial rest. Competitors using rifles other than military, to allow those using this class of weapons of .50 calibre, seven points, and all military rifles of less calibre, three points. Those using military rifles of less than .50 calibre to allow those using rifles of that bore five points. Twenty-one prizes, valued at \$490. There were 137 entries. Consequent to the handicapping, the results of this match were not published on the day of the shooting. We are enabled, however, to give the following as the correct list:—

THE PRIZE LIST.			
Name.	Yards.	Name.	Yards.
A. Anderson.	31	J. S. Conlin.	32
W. Clark.	30	L. Geiger.	33
H. S. Jewell.	34	E. S. Swan.	34
L. C. Bruce.	34	T. J. Rabbath.	30
R. Rathbone.	34	C. W. Coleman.	30
J. T. B. Collins.	31	H. Fulton.	31
M. Fisher.	31	E. H. Sanford.	31
W. B. Farwell.	30	H. Raymond.	33
A. J. Roux.	32	F. Hyde.	30
G. W. Yale.	31	O. Otto Schneelock.	30
R. C. Coleman.	34		

THE GATLIN MATCH was shot for, or concluded from the day before. Conditions: to be shot for by any team of twelve in the National Guard of the State of New York; weapon, any military rifle; distance, 500 yards; position, any; seven rounds; first prize to the regiment whose team makes the highest score, Gatlin gun, presented by the Gatlin Gun Company, valued at \$2,000. To be won twice (not necessarily consecutively) before becoming the winner's property. The gun to be held for the year by the winning corps. It is now held by the Twelfth Regiment, N. G. S. N. Y., which won it last year. There are twenty-one prizes in all—the first three team prizes, the seventeen others money prizes:—

THE PRIZE LIST.			
Regiment.	Totals.	Regiment.	Totals.
Twenty-second Regt.	317	3 miss Twelfth Regt.	309
Seventy-ninth Regt.	317	5 miss Seventh Regt.	309

INDIVIDUAL PRIZES.			
Name.	Score.	Name.	Score.
H. B. Smith, 12th regiment.	33	J. L. Price, 7th regiment.	31
Private G. Williams, 71st.	32	W. Boorman, 22d.	31
D. W. Greve, 22d.	32	Sergeant W. A. French, 7th.	30
Sergt. J. S. Burton, 48th.	32	C. A. Barton, 48th.	30
Captain E. A. Perry, 47th.	31	Lieut. Edmundstone, 79th.	30
Private W. Robertson, 70th.	31	Corp. E. H. Sanford, 7th.	30
A. Pyle, 79th.	31	Private E. Purple, 48th.	30
W. Stevenson, 79th.	31	Private J. Muninger.	30
F. H. Holton, 25th.	31		

Last year the best scores made for this match were, by the 79th, 206, 22d, 196, and by the 12th, 194, and a score of 25 took the first individual prize.

PRESS MATCH.—This most interesting match where gentlemen attached to newspapers contest for the mastery,

had the misfortune of bringing out no end of protests, though as a counterbalance to this, the marksmanship was excellent. It was won by Mr. Bruce, of the *Turf, Field and Farm*, in a most creditable way. Such is the advance of civilization to-day that journalists sometimes are representative marksmen, Mr. Bruce having been one of the American team. Conditions: open only to bona fide representative employees of any newspaper or periodical; weapon, any rifle; distance, 500 yards; position, any; rounds, seven. There were ten prizes altogether. The following is the score:—

Winners.			
Name.	Score.	Name.	Score.
1st prize—L. C. Bruce, <i>Turf, Field and Farm</i> .	34	9th prize—D. F. Acker.	30
2d prize—A. V. Canfield, Jr.	33	7th prize—W. H. Murphy, <i>Evening Mail</i> .	30
3d prize—D. Cameron.	31	8th prize—J. E. Whitley, <i>World</i> .	29
4th prize—W. Robertson.	31	9th prize—J. I. C. Clark, <i>Herald</i> .	29
5th prize—Thomas Lloyd, <i>Harp</i> .	30	10th prize—W. H. Clark, <i>Sun</i> .	29

OCTOBER 2.—THE CHAMPION MATCH.—The day was a fine one, with a rather strong but steady wind blowing from VIII to IX. The champion match attracted a great deal of attention. Conditions: weapon, any rifle or rifles; distance, 200, 600 and 1,000 yards; ten rounds at each range; position, standing at 200 yards, and any, without artificial rest, at the other two ranges; entrance fee, \$2; ten prizes. The first three were the grand gold, silver and bronze medals of the National Rifle Association, and the remaining seven were made up of various sums of money, amounting in the aggregate to \$85. There were thirty-nine entries:—

THE PRIZE LIST.			
Names.	200 Yds.	600 Yds.	1000 Yds.
H. Fulton.	42	42	47
Joseph Mason.	37	46	43
R. C. Coleman.	45	47	41
L. C. Bruce.	38	44	40
F. J. Rabbath.	41	48	31
F. Hyde.	42	44	33
A. Anderson.	37	43	38
H. S. Jewell.	36	45	35
W. B. Farwell.	42	43	32
W. S. Mandeville.	42	42	33

Major Fulton's score, 131, is a fine one, the 47 at 1,000 yards showing this accomplished marksman's powers. The scoring of all the men might have been higher, had it not been for the late hour when the match was concluded, which made the butts obscure.

LONG RANGE MATCH.—Conditions: weapon, any rifle; distances, 800 and 1,000 yards; ten shots at each distance; any position:—

Yards.			
Name.	800	1000	Total.
R. C. Coleman.	41	43	84
Wm. Robertson.	47	39	86
F. Hyde.	43	42	85
Henry Fulton.	46	36	82
A. Anderson.	45	39	84
L. Weber.	43	39	82
George Cronch.	42	39	81
A. V. Canfield, Jr.	45	36	81
E. H. Sanford.	44	36	80

CONSOLATION MATCH.—Conditions: the match was open to all members of the National Rifle Association and competitors in the foregoing matches, but excluding all winners therein; distance, 500 yards; weapon, any military rifle; position, any; number of rounds, seven; entrance fee, \$1; competitors using military rifles of less than .50 to allow those using rifles of that calibre three points. Fifteen prizes:—

THE PRIZE LIST.			
Name.	Score.	Name.	Score.
A. Wood.	28	W. J. A. McGrath.	25
J. Buckley.	27	B. A. Collins.	25
J. Bettenhansen.	27	W. S. Smith.	25
J. Cavanagh.	26	W. Ferchlemburg.	24
W. E. Droge.	26	J. B. Holland.	24
W. Lindsay.	26	F. E. Scrymser.	24
F. F. Millen.	26	B. Burton.	24
T. M. Henderson.	26		

On the evening of Saturday, the State Arsenal was crowded by the riflemen who were in attendance to receive their prizes. Major-General Shaler presided, and the Hon. W. D. Judd and Col. Wingate addressed the assemblage. The numerous trophies were tastefully displayed, and were distributed to the skillful ones, and so ended the Autumn Creedmoor contest of 1875.

If any modifications occur, as to prizes, which is not impossible, they will be reported in our next issue.

—The Crouch Bullseye Match will be shot at Creedmoor on Saturday next.

—A number of the members of the American Off-hand Rifle Club were at Union Hill target grounds on Friday. Among those present were Mr. MacDonald, President of the club; Mr. Rathyen, Mr. Hellwig, Capt. Klein, the winner of the \$1,000 prize at Baltimore last year, and Mr. Noone. These are all accomplished marksmen, who have made splendid scores. Although the day was stormy the shooting was far above the average, and great skill was shown in handling the heavy rifles. The scores were as follows:—Mr. Rathyen, off-hand, 200 yards, made 210 out of a possible 250 points; Mr. Hellwig, 198; Capt. Klein, 197; Mr. MacDonald, 173; Mr. Noone, 171. Mr. Rathyen has made 225 out of 250, which is very remarkable. His ten shots would make a string of but twenty-four inches, which would give an average of 2.4-10 inches for each shot. There are other members of the American Off-hand Team who have fully equaled this shooting.

THE EMPIRE STATE RIFLE ASSOCIATION TOURNAMENT.—The first semi-annual tournament of the Empire State Rifle Association was held at Syracuse on Tuesday, Wednesday, and Thursday of last week. The weather was, for the most part, quite favorable, though the wind was considerably too strong for fine shooting. The tournament was to have opened with a match between J. W. Fowler, of Croton Falls, and H. V. Perry, of Jamestown, but the latter gentleman declined to shoot and paid his forfeit, \$200. A general sweepstakes was held instead of the proposed match, with twenty entries, forty rods distance, no restriction as to sight or rest, odds being allowed in proportion to the

weight of the gun. Mr. John A. Nichols, of Syracuse, made the shortest string, 9½ inches, and was awarded the first prize; Mr. Charles Frazier, of Syracuse, won the second prize; Mr. H. V. Perry, of Jamestown, the third, and Mr. W. S. Barnum, of Syracuse, the fourth. On Wednesday, the second day, occurred the shoot for the Secretary's gold medal, same distance and same restrictions as on Tuesday. The following were the best strings made by the contestants:—

Name.	Inches.	Name.	Inches.
W. S. Barnum, Syracuse.	27	G. W. Fowler, Croton Falls.	31 1/4
J. A. Nichols, Syracuse.	25 5/16	John Shont, Syracuse.	34 6/16
C. Frazier, Syracuse.	29 3/16	A. Hibbard, Cambridgept, Mass.	34 9/16
M. Wilbur, New York.	30 10/16	M. Hatch, Syracuse.	35 4/16
H. D. Warner, Ridgway, Pa.	31 1/16	H. V. Perry, Jamestown.	37 1/16
J. Williamson, New York.	33 4/16		

Mr. L. J. Peck acted as judge.

On Thursday, the third and last day, the shoot for the silver challenge cup was to have come off, but owing to the high wind it was deferred until the Spring meeting of the association. A contest for one of Malcomb's celebrated rifle telescopes took place, however, and several shooters participated. Mr. M. Wilbur won the telescope, and the following gentlemen won money prizes in the sweepstakes which followed:—

A. Hibbard, Cambridgept, Mass.	37 7/16	A. Warner, Ridgway, Pa.	34 4/16
J. A. Nichols, Syracuse.	34 1/16	W. S. Barnum, Syracuse.	35 1/16

The next semi-annual tournament will be held next Spring. The attendance at the first tournament was not very large, but otherwise it was a decided success.

—On Saturday, Oct. 2, seventeen members of the Holyoke Rifle Club competed for the badge. The following are the scores, seven shots, 200 yards, standing, off-hand:—

Name.	Score.	Name.	Score.
A. Knight.	31	Sidney Chapman.	24
W. J. Bishop.	29	D. H. Smith.	23
J. L. Mercier.	28	E. A. Whiting.	23
E. C. Smith.	27	R. Rodas.	21
A. Munger.	27	H. E. Nash.	19
Henry White.	27	G. Parker.	17
J. Snover.	25	R. Goodall.	15
R. McDonald.	25	C. W. Brown.	15
H. A. Smith.	24		

The same members competed for the B. and B. Cup on the same day, fifteen shots each, at 200 and 400 yards, Creedmoor regulations. This cup, which is valued at \$50, was won by W. J. Bishop on a total of 131 out of a possible 150—63 at 200 yards, and 68 at 400 yards. The day was very windy, which bothered the boys considerable.

THE FOREST AND STREAM BADGES.—The first competition for the new badge presented by this paper will be shot at Conlin's gallery, 930 Broadway this evening. The conditions have been somewhat altered since the last badge was shot for. There will now be but ten shots each at a Wimble-

don target reduced to scale to correspond with the 200 yards range. The distance is 110 feet, and the scoring will not be by measurement as heretofore, but by the Wimbledon code. The best score will secure principal badge, the best score of centres the second, and the best score of inners the third. The competitions are open to every one. Further particulars can be obtained at the gallery. We give herewith a cut of the principal badge.

A MERITED COMPLIMENT.—F. P. Fairbanks, Esq., the former efficient Secretary of the Amateur Club, has been presented with a handsome French clock, with appropriate inscription, by the Amateur Club, as a token of their appreciation of his valuable services.

RESIGNATION.—Major Fulton, so well known as the leading American rifleman, has resigned his position as Secretary of the N. R. A. Very certainly the duties of this gentleman as the working officer of the association were onerous to a degree, entailing a labor which was endless and without remuneration. Practically and theoretically all riflemen in the United States are largely indebted to Major Fulton. We are pleased to state that he will take a leading position in the well-known house of Messrs. Remington & Sons.

RIFLE SHOOTING AT EASTON, PA.—The Greys, of Easton, had their match last week. Distance, 200 yards; three shots; targets, old Creedmoor style. F. A. Stitzer won with 9.

BELGIAN RIFLE SHOOTING.—While we were making the field at Creedmoor ring with our rifles, Belgian riflemen were doing the same thing at Brussels on the occasion of the Belgium Tir National. Their trigger pull is nine pounds. Distances generally not over 225 metres, about 245 yards; target, elliptical. We hope to see some of the liege men here at the Centennial.

—The Amateur Rifle Club have not yet replied to the challenge of the Off-hand Club for a 200-yards match. The reason of the delay is doubtless owing to the fact of the recent Creedmoor meeting having occupied so much of their attention. We shall doubtless soon hear of the preliminaries of this match.

—General Dakin has recently made an interesting experiment testing the effect of transportation upon rifle shells. Previous to his departure for Ireland with the American team he prepared some cartridges and carried them over the entire route, some 8,000 miles. A few days since he used some of these same cartridges in a match at Creedmoor, making the following scores:—

Score at 200 yards, standing.....4 4 4 4 4 4 5 5 4—42
500 yards.....5 5 5 5 5 5 5 5 5—50
Aggregate.....92

This test is very important, as showing that if cartridges are properly and carefully made they will stand long journeys and variations of climate. It would be an interesting experiment for some of our riflemen to load a number of cartridges and test them occasionally through a series of years until it was ascertained how long they would retain their properties. Above is General Dakin's target made on the occasion referred to, with a Remington rifle.

Game Bag and Gun.

GAME IN SEASON IN OCTOBER.

Moose, *Alces americanus*. Elk or Wapiti, *Cervus canadensis*. Hares, brown and grey. Wild Turkey, *Meleagris gallopavo*. Woodcock, *Scolopax rusticola*. Ruffed Grouse, *Tetrao umbellus*. Plover, *Charadrius*. Godwit, *Limosa*. Rails, *Rallus virginianus*. Snipe and Bay Birds. Caribou, *Tarandus rangifer*. Red Deer, *Cervus virginianus*. Squirrels, red, black and grey. Quail, *Quail virginica*. Pinnated Grouse, *Tetrao cupida*. Curlew, *Nanantius arquaria*. Sandpipers, *Tytanus*. Willets. Reed or Rice Birds, *Dolichonyx orizivon*. Wild Duck.

GAME IN MARKET.—As our close time for quail in this State expired on the 1st instant, these birds are now to be found in market. They are not in first rate condition, although they sell for \$4 50 per dozen. Reed birds from Savannah bring \$1 25 per dozen. Bay birds of all varieties are coming from Long Island, and sell from 25c. per dozen for ox-eyes to \$3 for large yellow legs. English snipe, shot in New Jersey and on Long Island, are coming in in fair quantities, and sell for \$2 to \$2 50 per dozen. Prairie chickens are worth \$1 25 per pair. Ruffed grouse are more abundant and cheaper, selling for \$1 per pair. Mallard are worth \$1 50 per pair; teal, 75c.; widgeon, 75c. Wild pigeons, from Fulton county, \$1 75 per dozen.

—By an advertisement in this issue it will be seen that the duck shooting season has commenced in the Peconic Bay. The locality known as Nyaack—about four miles west of Sag Harbor—is a quiet spot, but little visited, and in the adjoining woods there is good sport. The ducks fly over Jessup's Neck in the morning by hundreds, and the bays are full of them from October 10 to the first week in December.

—The sportsmen of Bangor, Maine, have formed a shooting club. We have forwarded them the by-laws of a similar association for their guidance.

MASSACHUSETTS.—Newport, Sept. 27.—Have just returned from a camping trip in Southeastern Massachusetts, and have the unwelcome report to make that partridges (ruffed grouse) are very scarce, in consequence of so much snaring being done. In fact, we were tramping over last year's hedges in nearly every hundred yards. I took pleasure in removing strings from at least a dozen newly set. This silent but powerful enemy of our noblest game bird should be prohibited by law.

[It is true that the game laws of Massachusetts permit any person to take ruffed grouse, and only ruffed grouse, on his own premises, by means of snares, for his own use and not for sale, but this provision extends only from the 1st of October to the 1st of January, so that if during another season our correspondent will acquaint the Rod and Gun Club of Springfield of any infraction of the law they will attend to the case *con mucho gusto*.—Ed.]

Salem, Oct. 4.—Shooting news rather meagre, the chief sport being "cooting," one gun securing twenty-eight on one day last week. Swampscott gunners are also at them off the Ledge. A few teal of both kinds have been taken. Notwithstanding the frosts, I have to report eighteen rail being shot on Parker River last week, between slack, full and half ebb tide. Partridges are around, with an occasional woodcock; snipe and quail are also about, though not yet in season. These with a few bay birds make up the list.

Cohasset, Oct. 4.—Gunning now on our shore is in its prime, as the coots, loons, and ducks are coming along very plentifully. We expect a flight of old squaws, or southerly ducks soon. Bags of twenty and thirty to a boat are now being made by good gunners. Would like to hear from Cape Ann.

New Bedford, Oct. 1.—Shore birds and ducks are scarce and very shy, they having run the gauntlet of all the gunners along the whole coast. Partridges, woodcock, and land birds are plenty and numerous; covies of quail give promise of good Fall shooting.

NEW YORK.—Syracuse, Oct. 4.—Ducks begin to appear in this vicinity in small flocks. Two gentlemen from this

city went out on Onondaga Lake last week and brought home eight teal duck and sixteen golden plover, which is considered fair shooting for this region.

WISCONSIN.—Montello, Sept. 29.—Duck shooting is now fine at the Lakes of Buffalo and Puckaway, though as yet the mallards are not very abundant. Wood ducks and teal are plenty, and the sportsmen are migrating to their favorite grounds, or waters, to enjoy that pleasurable occupation—autumn wild fowl shooting. The Puckaway Club will enter their cosy quarters, at the head of Puckaway Lake, on the first of "hearty brown October," and then we may look for large scores. Snipe shooting is not good as usual at this season of the year, and grouse shooting has been superseded by water fowl shooting. The season is not far enough advanced to furnish the *par excellence* of the sport when the wild geese add their clamor to that of their smaller kin, and the noble canvasback stops on his way southward to feed on the favorite valisneris and be shot for the enjoyment of the sporting fraternity. October will bring about this "consummation," etc.

MINNEAPOLIS TRAP AND FIELD CLUB.—The members of this club have been doing some good shooting of late. On the 18th ult. they participated in the State Fair Shooting Match against teams from the Stillwater and St. Paul Clubs, and although they were third in the match, one of their members, Mr. Reickman, made the best score of the day, killing all of his twelve birds. The following are the scores:—

Name.	Score.	Name.	Score.
C. J. Bustlee.....	9	George Watson.....	7
Samuel Judd.....	11	J. N. Castle.....	11
William Venzie.....	10	J. R. Carl.....	11
J. McCusick.....	10	H. Simmons.....	9

Total.....76

Name.	Score.	Name.	Score.

R. S. Williams.....	3	L. C. Shepley.....	7
George Furmott.....	3	W. W. McNair.....	6
E. Grimshaw.....	3	Charles Hepp.....	8
Charles Cyphers.....	6		

Messrs. Morse, Harvey and Tinsley having tied went back to 26 yards. Mr. Harvey missed his first bird, and the others each killed their five. The distance was again increased to 31 yards, and after shooting at three birds Mr. Morse was declared the winner, having killed seventeen birds straight. This club has challenged the St. Paul Club to shoot for the State badge.

St. Louis, Sept. 25th, 1875.

EDITOR FOREST AND STREAM:—

Since your able correspondent, Mr. Barker, was here, very little has been done in the way of trap shooting, owing to the scarcity of pigeons so wild ones to be had, and tame ones very scarce. The boys have made up, however, by setting to rights their shooting traps, trying new dogs, and forming parties for the Fall hunts, &c. Arrangements have been made by the gun club for the erection of a house to hold fifteen thousand pigeons. Large roosts abound in Southeast Missouri, near Springfield, and arrangements have been made by the club with netters to furnish the number, when the pigeons arrive, at very small expense. With plenty of pigeons shooting here will be lively this Winter, and some fine scores may be looked for, as St. Louis boasts of many amateurs. When our club is sufficiently aged and equipped we hope to invite brother sportsmen from abroad, and especially from Chicago, to visit us and compete for honor, if not prizes.

Captain Bogardus has been in the city several days, arranging for an exhibition of his wonderful shooting, and for a grand tournament during fair week, to be held at the Abby race track. To-day Captain Bogardus accompanied a few members of our gun club to their shooting grounds at Rinkel's Six-mile House, to witness a match between Mr. C. Jeff Clark, President of the club, and Mr. H. C. Pierce, holder of the club's champion gold medal. The match was at fifteen pairs, 18 yards rise, 80 yards boundary, from H & T plunge traps set five yards apart, tame pigeons, very strong flyers, and were aided in their attempts to get away by a strong wind blowing directly away from the score and traps. Captain Bogardus acted as referee, and pulled traps. Mr. John W. Munson kept the score. Clark used Dittmar powder, 5½ drachms S. B., 14 oz. No. 8 N. Y. shot; Pierce used American black powder. The following is the score:—

Clark.....	10	11	10	11	10	00	11	11	11	11	10	11	00	21
Pierce.....	11	11	11	11	11	11	11	11	11	11	11	11	11	30

Captain Bogardus pronounced the score of Mr. Pierce wonderful, as it was the third time he had ever shot at double birds, and in fact Pierce never saw a trap shoot until June of this year. He has participated in ten club class shoots at ten birds each, at 21 yards rise, and made a score of 96 out of the 100 birds.

After the double bird match a shoot at five single birds, 26 yards, was made up, in which Captain Bogardus joined.

Name.	Score.	Name.	Score.
Captain Bogardus.....	11	E. C. Hodgman.....	11
H. C. Pierce.....	11	Dr. Nubey.....	11
C. Jeff Clark, Jr.....	11	John W. Munson.....	10
Jeff C. Clark, Sr.....	11	Gaston Souland.....	10

A large delegation from this city will attend the Memphis Bench Show and Shooting Tournament in October, and from there branch out through Tennessee and Arkansas to enjoy the fine general shooting those States afford, Reel Foot Lake, in Tennessee, being the objective point of many. Yours truly,

PHILADELPHIA, October 1st, 1875.

EDITOR FOREST AND STREAM:—

Below is the score made by the Kensington Hunting Club, at their regular quarterly shoot for the three club medals:—

Name.	Score.	Name.	Score.
Chas. Metzger.....	11	E. C. Stees.....	11
Chas. Hebbing.....	11	Wm. Knauf.....	11
Wm. Graber.....	10	F. Widmayer.....	11
M. Heppner.....	10	F. Bechman.....	11
F. Bindewald.....	10	L. Holzschneider.....	11
F. Deissroth.....	11	Wm. Deissroth.....	11
J. Ginde.....	0	M. Brierley.....	11
Wm. Pfeiffer.....	0	H. Schriener.....	11
G. Sonneck.....	0		11

*Dead outside. In shooting off the ties Wm. Knauf won first medal, Charles Hebbing second, and P. Bindewald third medal.

Yours,

FR. DEISSROTH.

ROSSIN HOUSE, TORONTO, October 2d, 1875.

EDITOR FOREST AND STREAM:—

To-day the Junior Gun Club held their annual match at Wilson's Hotel, Dundas road, for the President's Medal (presented annually) and four other prizes, the lowest valued at \$10. There were fifteen birds (wild pigeons) each at 20 yards rise and 80 yards boundary. The weather was all that could be desired, and all the birds strong. The wind was fresh and caused many of the boys to lose their birds. The following is the score:—

Name.	Score.	Total
C. Shears.....	11	11
Crawford.....	0	0
Coen.....	11	11
Marsh.....	0	0
Killaly.....	1	1
James.....	11	11
Winstanley.....	1	1
Winfield.....	1	1
Moore.....	1	1
Callaghan.....	0	0
Mac Nabb.....	0	0

Messrs. Coen and James then shot off their ties. Coen—0 1 1 1 1—4, at 26 yards, five birds each. James—0 1 1 0 0—2, resulting for the prizes as follows: Mr. Moore, the President's Medal, value \$30, Mr. Coen, first prize, \$25; Mr. James, second prize, \$20; Mr. C. Shears, third prize, \$17; Mr. Winfield, fourth prize, \$10. Mr. George Smith, of the Toronto Gun Club, was referee.

CHOKE BORE GUNS.

EDITOR FOREST AND STREAM:—

Having recently purchased one of an invoice of Mr. W. W. Greener's finest choke bore guns from Mr. H. C. Squires, weight, 9 pounds; 10 bore; barrels 32 inches, of laminated steel; treble wedge; pistol grip stock—I think your readers will be interested in knowing what it has done, as I confess it has surpassed my most sanguine expectations. At a target of 30 inches at 30 yards, with a shell charged with 4 drachms of C & H. powder and 1½ oz. No. 8 shot, it threw 351 pellets within the circle, and so close and evenly were they distributed that the smallest game could not have escaped. A very noted make of breech loaders, same weight and bore, was pitted against this gun, but was so thoroughly defeated that the owner fully admitted the great superiority of the Greener gun. If any of the readers of the FOREST AND STREAM have a gun that can equal the above record, I should like to hear from him.

CHILLED SHOT.

SURESBURY, N. J., Sept. 27th, 1875.

EDITOR FOREST AND STREAM:—

In looking over the late gun trial published in the *Field*, I am led to ask the question if the supposed "new system" of choke boring was not dependent upon the new method of making shot, for the fine results achieved at the late trial over the trial of 1866? With the old system of boring guns, at the *Field* trial of 1866 Mr. Greener's best gun made an average pattern of 121.4, with Walker's & Parker's soft shot. At the late trial his best choke bored gun only made an average of 117.6 with the same kind of shot, against an average of 185. with the chilled shot. The above figures would go to prove the desirability of using chilled shot or abandoning the choke bores. Believing it to be a question of importance to sportsmen, I will ask through your columns if any of our American manufacturers of shot make the chilled shot similar to that used in the *Field* trial of 1875, and manufactured by Roberts, Sampson & Co., England?

I am aware that some makers advertise their shot to be chilled, and have written this article hoping to call the attention of manufacturers of shot and of sportsmen to the importance of chilled shot.

Yours truly,

CHECK CORD.

LOADING SHELLS.

CAMBRIDGEPORT, Mass., Sept. 28th, 1875.

EDITOR FOREST AND STREAM:—

Although much has been said in regard to the proper loading of shells, I have never seen the reasons given for so doing. Experience teaches that a paper shell, loaded with two wads over the powder, is much better than with only a single wad. Why is this so? Is it that the combustion of the powder is more perfect, or that the charge passes out of the gun more evenly, or is it that the powder, being more closely confined, gives greater explosive power? Why should not the effect be the same with metal shells? Captain Bogardus, in his book on "Field, Trap and Cover Shooting," makes emphatic distinction between the two, using but a single wad over the powder in metal shells, without giving any reason for so doing. Everyone who uses a breech loading gun desires to know the very best manner of so doing, and the reasons why; and oftentimes when reading reports of target practice with shot guns, the question has occurred to me whether there may not have been more difference on account of the loading of the shells than in the guns used. I doubt not this question has occurred to many, who would be equally pleased with myself to know the best method and the reasons why. Being a constant reader of your valuable paper, I take the liberty of thus addressing you. Yours very truly,

[The reason why two wads are used is that they produce greater resistance, and consequently the shot is acted upon more forcibly, and they also fill more of the case and more of the chamber of the gun. The tendency of the paper shell is to expand to a greater extent than the metal, which is perhaps the reason why Capt. Bogardus uses but one wad in the latter.—Ed.]

PARTRIDGES IN MARYLAND.

MURKIRK, Prince George's Co., Md., Sept. 30th, 1875.

EDITOR FOREST AND STREAM:—

In your paper just at hand, I notice an article by "M.," in which he says: "The partridge season opened on the 15th inst." Now this is a decided mistake, as the season for partridge (quail) does not open in this county until the 30th of October. If "M." will inform me, or any other member of the State Society for the Protection of Game, of the shooting of partridges before the 20th of October by any person, giving name and facts, they will certainly be prosecuted to the full extent of the law, as the Society mean business. Partridges are well grown in this neighborhood and plentiful. It is certainly necessary to have a uniform law for the game season, as now we have a dozen different seasons for the opening of partridge shooting in Maryland. The general law, however, is the 20th of October, and Prince George's county comes under that law. Yours truly,

CHAS. E. COFFIN.

[Mr. Coffin is right, and "M." decidedly in the wrong. Still we find the law conflicting. The act of 1858, which applied to certain counties, including Prince George's, named the 1st of October as the end of the close season, but there appears to be a general law covering the State, which gives the date as October 20th. As this law was amended in January, 1864, it is the one now in force.—Ed.]

It is sensibly suggested that agricultural societies offer premiums for the best walking horses. Walking is the gait that is of most use to farmers, and it is this pace that ought to be encouraged.

PERSONAL.—The Rev. William C. Wilson, of Boston, is spending several weeks in the Adirondack wilderness.

HURST'S
Stereoscopic Studies
—OF—
Natural History
For Object Teaching in Schools
—AND—
PARLOR ENTERTAINMENT.

We are prepared to furnish the first sixty numbers of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign specimens, and various Animals and Birds in grotesque attitudes, never however violating their natural instincts. We offer these views not as pictures only, but as studies from nature. One of the great moving elements in our modern system of education is object teaching. The unerring fidelity of the stereoscope transfers the animals and birds from their natural habitat to the rooms of the student and the fireside of our homes, where they cannot fail to leave a lasting impression of the form, color, habits, and locality of each specimen.

An experience of more than twenty-five years as Taxidermist of the New York State Cabinet of Natural History, and in gathering his large collection of native and foreign specimens, enables Mr. Hurst to combine in every view the locality of the specimen with its appropriate rocks, woods or water, and coloring from the originals.

Dittmar Powder Manufacturing Co.,
MANUFACTURERS OF

CARL DITTMAR'S
Patent Sporting Powder

BLASTING POWDERS, &c.,
NEPONSET, MASS.

I have succeeded in overcoming all objections that may have been raised to the kind of Sporting Powder previously manufactured by me. By an entirely new process, and with the assistance of new machinery, I am now able to make the grains as hard as those of Black Powder, thus avoiding the great compressibility of the kind first introduced, and allowing an even loading every time. In addition to the greater density of the new powder, I have also obviated the great rapidity of ignition. There is now no fear of overloading. No necessity for any special directions for use, simply use it like Black Powder, and use the same quantity in bulk.

The powder can now be used from an ordinary powder flask. The same kind of powder can be used for both Shot Guns and Rifles. The sizes and numbers for the grain are the same as those for black powder. The Medium size is best adapted for general purposes, the largest size for small bores, and the finest size for large bores.

Every package of the new powder bears my signature. None genuine without it.

I manufacture none of the old kind, and all connection with my former agency, the so-called Dittmar Powder Co. is at an end. Please address all orders to me. Any letters unanswered or orders not filled since September 1st will be immediately attended to if parties will please re-write to me. I will exchange, when requested, any of my powder bought before that date for the new kind.

My best thanks to the friends of my New Powder, who have by their kind suggestions helped me to make it perfect, so that I now have no doubt of its complete success.
CARL DITTMAR.

Miscellaneous.

THE HAZARD POWDER CO.,
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER. GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office,
88 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6 1/2 lbs. each, and in canisters of 1 and 5 lbs.

AUDUBON POWDER,

Very quick. For woodcock and quail Nos. 1 to 4. Packed in metal kegs of 12 1/2 lbs. and 6 1/2 lbs., and in pound canisters.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.g, FF.g, FFF.g, the last being the finest and most used. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 pound.

All of the above give high velocities and less recoil than any other brands made.

*** This is a book that has long been needed by Winter tourists to Florida and persons seeking settlement there. It gives a full classification of the game and fish of the Southern Peninsula, routes of interior and coastwise travel, the agricultural resources of the country, and sites for settlement, hints for camping out, resorts for game, hotels, and such other information as will be of great benefit to visitors seeking Florida for health, pleasure, exploration, or permanent settlement.

SCOVILL'S

Blood and Liver Syrup

All cutaneous eruptions on the face or body indicate An Impure Condition of the Blood, and this may or may not be SCROFULA; but in either case is nothing more than an insidious poison, that

BURNS LIKE A TERRIBLE FIRE

as it courses through the veins, sowing seeds of death with every pulsation.

In this condition of things something is needed AT ONCE TO CLEANSE THE BLOOD; and

Scovill's Blood and Liver Syrup

will positively effect this desideratum, expelling every trace of disease from the blood and system and leaving the skin

SOFT, FAIR AND BEAUTIFUL.

Hundreds of certificates attest its value. Price \$1 a bottle.

FOR SALE BY ALL DRUGGISTS.

Dr. Rogers's VEGETABLE WORM SYRUP

A brave man may suffer pain, when inflicted upon himself, heroically; but he

Cannot see his Child Suffer.

There is no other malady incident to childhood that is accompanied with more indescribable wretchedness to the little sufferers than that

Produced by Worms;

and when the parent fully comprehends the situation he will not delay a moment in securing the most prompt and efficient remedies to insure the expulsion of the intruders. The remedy may be found in

Dr. Roger's Vegetable Worm Syrup.

Please bear in mind that ROGERS' WORM SYRUP is the reliable preparation.

ROGERS' WORM SYRUP is a palatable preparation.

ROGERS' WORM SYRUP is liked by children.

ROGERS' WORM SYRUP positively destroys worms.

ROGERS' WORM SYRUP leaves no bad effects.

ROGERS' WORM SYRUP is highly recommended by physicians, and is unquestionably the best WORM MEDICINE IN THE WORLD.

Price 25 cents. For sale by all druggists.

HENRY'S

Carbolic Salve.

FOR SALE BY ALL DRUGGISTS.

The wonderful celerity with which this combination of Carbolic Acid with other soothing and Curative Emollients acts, is something akin to the marvelous.

It is with pride that the proprietors call attention to the gratifying fact that

Physicians give it the highest meed of praise,

and use it and prescribe it in their practice.

NEW YORK, Dec. 22, 1869.

JOHN F. HENRY, Esq.:

Your CARBOLIC SALVE proves an excellent article, and I thank you for it. This is another evidence of the great value of the discovery of Carbolic Acid. Yours truly,

GEO. B. LINCOLN,
Pres't Board of Health.

Price 25 cents per box.

REV. R. B. LOCKWOOD'S

Catarrh Cure!

The Best Remedy Known, and Endorsed by all the Principal Physicians of the Country.

Rev. R. B. Lockwood's Nasal Douche will be found valuable in obstinate chronic cases.

Rev. R. B. Lockwood's Liver and Stomach Pills dyspepsia, receive the endorsement of thousands.

Price 50 cents each.

JOHN F. HENRY, CURRAN & CO., Proprietors,
8 and 9 College Place, New York.

HENRY'S

SEWING MACHINE OIL

A PURE OIL that does not gum up and has the endorsement of the principal Sewing Machine Companies.

Price 25 Cents per Bottle.

MOTT'S LIVER PILLS

It is easy enough to make a pill, but to make a good pill, and that's the difficulty. There are cheap, harsh, drastic pills, that are of even less benefit than a dose of salts. But a good medicine, like Dr. Mott's Liver Pills, which penetrates to the seat of disease, is a desideratum indeed. Will positively cure all diseases of the Liver. Sold everywhere. Price 25 cents per box.

Green's Oxygenated Bitters.

At certain periods of life a tonic is a necessity; but there is danger in using stimulants that injure the organs of digestion while giving temporary relief. To obviate this and present to the public a tonic free from Alcoholic Poison, Dr. Green prepared the Oxygenated Bitters, a sure cure for dyspepsia and all kindred complaints. Sold everywhere. Price \$1 per bottle.

Packer's All-Healing Tar Soap.

It cures all kinds of Skin Diseases with a most wonderful certainty; it promotes cleanliness, personal purity and general health; it is a preventive of many kinds of disease, and it is an absolute necessity in the nursery. Price 25 cents.

Miscellaneous.

Breech Loaders.

W. & C. SCOTT & SONS.

Winners of the "Turf, Field and Farm" Gun Trials.

(See issue October 3d, 1873.)

In which competition the committees have awarded our guns, First and Second for POINTS OF MERIT OF ACTION, MATERIALS, PROPORTION, AND SHOOTING QUALITIES combined, in all the four classes.

THE PREMIER GUN.

W. & C. SCOTT & SON call attention to their very FINEST weapon, combining all their recent improvements, marked on the rib between their name and London address the brand—"THE PREMIER QUALITY."

Medium and fine guns bear full name and address, and plain guns full name and "London" only.

Each gun is numbered and the actions are stamped with name and trade mark.

W. & C. SCOTT & SON, Sole makers of the Patent Top Lever, solid, Double Locking Bolt Breech Loader, bearing the full name of the firm, W. & C. SCOTT & SON caution sportsmen against imitations of their patent and name. Guns bearing the name abbreviated, or with different initials, are not genuine.

TRIAL OF SCOTT & GREENER'S NEW SYSTEM OF BORING, BY THE EDITOR OF "THE FIELD," LONDON.

(See The Field, January 30th, 1875.)

"From a comparison of the two tables it will be seen that with Walker's shot, Messrs. Scott's guns showed a marked superiority over Mr. Greener's, both in average and in the highest score made. Indeed, with the left barrel, in his third shot, Mr. Scott got a selected group pattern of 239 and a penetration of 37, equalling the highest pattern made by Mr. Greener, and exceeding the penetration of that particular shot by eight sheets."

THE GREAT

London Gun Trial,
1875.

W. W. GREENER begs to inform his numerous clients in the United States that he has been very successful in the above trial, having secured the first prize, a silver cup, value 40 guineas—class 2 for 12 bores; also winner in class 1 for 8 and 10 bores, and class 4 for 20 bores. He has won in all the classes for improved boring, which is upon a different plan to any other maker, and is far superior in the three most essential points, viz., PATTERN, PENETRATION, and REGULARITY OF SHOOTING.

Mr. HENRY C. SQUIRES, of No. 1 Courtlandt St., New York, is now importing my DOUBLE CLOSE-SHOOTING GUNS to order, an invoice of which will be shipped to him on the 1st July, and can be examined about the 15th. All special orders given to Mr. Squires will be carefully filled. A full report of the GREAT TRIAL, showing the marked superiority of my guns over guns made by Dougal, Pape, Tolley, and others, will shortly be published, and can be had on application at No. 1 Courtland St.

W. W. GREENER,

Champion Gun Maker,

St. Mary's Works, Birmingham, England.

HENRY C. SQUIRES, of No. 1 Courtlandt street, has just received an invoice of these close-shooting guns, and from him any information in reference to the results of the Great Trial can be obtained on application.

J. & W. TOLLEY'S

Miscellaneous.

W. W. GREENER'S

DOUBLE CLOSE-SHOOTING GUNS. Winner of the Silver Cup, value 40 guineas, at the Great London Field Trial 1875, beating 33 competitors with 68 guns, also winning in all the other classes for the Improved System of Boring. These guns will kill from 80 to 100 yards, loaded with large shot, and will shoot well with small shot with a less powder charge than guns bored upon the old system. For report of the Gun Trial apply to Messrs. McLaren, Williams & Co., Agents, St. Louis, U. S. A. Address

W. W. GREENER,
St. Mary's Works, Birmingham, England.

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENGTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supercede all the complicated and manifold grips now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.

Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.

NO. 25 SOUTH CASTLE STREET,

LIVERPOOL.

aug26-tf

Established 1780.

J. D. DOUGALL'S
EXPRESS SHOT GUNS.

(Title registered.)

SHOWN by trials at Wimbledon by Editor of the Field to possess the GREATEST PENETRATION and therefore LONGEST RANGE—thus: Circle, 30 inches; 300 pellets; average, 191; penetration, 37. The Editor's trial of Greener's guns with 340 pellets of same shot and same charge of powder, gave 180, and penetration 30, although there were 40 more pellets in each charge. Should any controversy arise as to the durability of these new systems, we herewith warn all beforehand that our system is our own invention (though founded on the American idea) and is DURABLE, a fact remarked on by the Field, that the guns tried had been in use during last season, and references permitted to the owners. Send for Illustrated Circulars to

59 St. James's Street London.

BROWN'S
ESSENCE OF
JAMAICA GINGER

PREPARED ONLY

—BY—

FREDERICK BROWN,
PHILADELPHIA, PA

THIS RELIABLE PREPARATION, one of the oldest of American Pharmaceutical Products, still maintains its enviable reputation, and finds a steadily increasing sale without advertising, and in spite of piracy.

Its high reputation has tempted the cupidity of parties, whose only excuse for their unfair simulations, exists in the great popularity of the original, and accidental similarity of their names.

BROWN'S ESSENCE OF JAMAICA GINGER is protected by the private Proprietary Stamp of the manufacturer, which is incorporated with the steel plate label.

The attention of Druggists and the Trade generally, is called to the Price List of

ENGLISH & FRENCH
MEDICINES & PHARMACEUTICAL
PREPARATIONS,

Which will be mailed on application.

Attractive Route

To the Trout and Grayling Fisheries of Northern Michigan, VIA GRAND RAPIDS AND INDIANA RAILROAD, MACKINAW GRAND RAPIDS AND CINCINNATI SHORT LINE.

The attention of SPORTSMEN and TOURISTS is invited to the many attractions offered by this line, now completed from Richmond, Ind., to Traverse City, on Grand Traverse Bay, and to Petoskey, on Little Traverse Bay. The waters of the Grand Traverse region and the North Woods of Michigan are unsurpassed, if equalled, in the abundance and great variety of the finny tribe. BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING, now attracting the attention of Sportsmen everywhere, is found only in these waters. BLACK BASS, PIKE, PICKEREL, and MASCALONGE are also found in great numbers in the many lakes and lakelets of this territory.

LUXURIOUS SLEEPING AND CHAIR CARS run through from Cincinnati to Traverse City; also PULLMAN PALACE SLEEPERS from Detroit over Michigan Central and Grand Rapids and Indiana road, via Grand Rapids, to Petoskey, with SLENDID STEAMER making DAILY CONNECTION at latter point for the Island of Mackinaw.

For Tourists' Guide, containing complete and accurate maps, with full information as to Fishing Grounds, transportation facilities, and in short all that could be desired by Sportsmen or Tourists, send to Forest and Stream office, or to the undersigned. Low Round Trip EXCURSION TICKETS good until SEPTEMBER 30th. J. H. PAGE, Gen'l Passenger and Ticket Agent, Grand Rapids, Mich. July 1

Tourists' and Sportsmen's Route.

THE ERIE RAILWAY.

THE ROUTE OF THE ERIE RAILWAY is peculiarly rich in the variety and extent of its scenery, and while the tourist has alternating glimpses of the beauty of rivers, gaps and mountains, the sportsman has within easy reach many localities that afford him every facility for the enjoyment of the sports of the field and stream. We enumerate a few of the pleasure resorts which crowd the line of the road.

Rutherford Park.—9½ miles from New York. Fine hotels and boating pastimes on the Passaic. Clifton.—13½ miles from the city, overlooking the picturesque Lake Dundee.

Lake Mohonk.—A beautiful body of water, 1,500 feet above the Hudson—splendid hotel accommodations. Orange Lake.—Six miles West of Newburgh, and noted for its fishing attractions.

Milford, Pa.—About eight miles from Port Jervis. Is noted for its trout fishing, woodcock shooting and superior hotels.

Avon Springs.—Celebrated for 20 years as a resort for invalids, the waters possessing many valuable healing qualities.

Watkins Glen.—This beautiful gorge is distant 294 miles from New York, via Erie Road to Elmira. Its wild and picturesque attractions are second only in reputation to those of Niagara.

Chautauque Lake.—18 miles long, 3 miles wide; said to be the highest navigable water on the American continent, being 730 feet above Lake Erie and 1,290 feet higher than the Atlantic Ocean.

Niagara Falls.—This great cataract is reached by the direct line of the Erie Railway.

There are along the line of the road no less than Ten Large Lakes, Abounding with Fish, and affording most delightful sport for black bass and pickerel. Their names are—Lakes Greenwood, Orange, Mohonk, White, Otsego, Cayuga, Seneca, Kenika, Silver and Chautauque.

The following schedule will afford a partial guide to the numerous fishing localities reached by this road:

Trout Fishing:

At or near Southfields,	42 miles from New York.
" " Oxford,	52 " " " "
" " Middletown,	67 " " " "
" " Otisville,	76 " " " "
" " Port Jervis,	88 " " " "
" " Monticello,	112 " " " "
" " Milford,	96 " " " "

Black Bass and Pickerel.

At or near Sloatsburg, 36 miles from New York, including Lakes Truxedo, Potague and Cedar Pond. At or near Monroe, 50 miles from New York, including Round, Long, Mombasha and Cromwell's Ponds.

At or near Florida, 64 miles from New York. The famed Mirror Lake, is distant 1 mile.

At or near Otisville,	76 miles from New York.
" " Guyard,	80 " " " "
" " Port Jervis,	88 " " " "
" " Monticello,	112 " " " "
" " Cen. Valley,	48 " " " "
" " Seneca Lake,	291 " " " "

Tickets for sale at the General Offices of the Erie Railway Company, 124 Washington street Boston; 241, 401, 529, or 957 Broadway, New York; and 732 Chestnut street, Philadelphia. Express trains leave New York from depot foot of Chambers street at 9 A. M., 10:45 A. M., and 7 P. M.

Company's Steamers New York and City of Portland.

will, until October 3d, leave Boston at 8 A. M., and Portland at 6 P. M. every Monday, Wednesday and Friday, for Eastport, Maine, and St. John, N. B., forwarding passengers by connecting lines to Calais, Me., St. Andrews, Fredericton, and Shediac, N. B., Amherst, Truro, Pictou, Digby, Annapolis, Kentville, Windsor, and Halifax, N. S., Summerside and Charlottetown, P. E. I., and Hawksbury, C. B. This is

A Most Desirable Route for Sportsmen,

presenting a convenient and pleasant mode of access to the famous hunting and fishing grounds of the Eastern regions, at very moderate rates of fare. For circular, with map and description of the route, apply to W. W. KILBY, Agent, Commercial Wharf, Boston. July 15 to Oct 1

Chicago, Milwaukee and St. Paul Railway

Traverses a finer country, affords views of grander scenery, and passes through more business centres and pleasure resorts than any other Northwestern line. Its forests, prairies, lakes and streams, abounding with game, present unequalled attractions to the votaries of Nimrod and Walton. It is the only railway route along the valley of the Upper Mississippi. It is also the shortest as well as best route between the great metropolitan centres of the Northwest—Chicago, Milwaukee, St. Paul, and Minneapolis. Track and equipment unequalled, and its trains of palace-coaches and sleeping cars run through without change.

New York Office, 319 Broadway. Chicago Depot, cor. Canal & W. Madison. City Offices, 61 and 63 Clark St. Apr 29-6m

FOR NEW HAVEN, HARTFORD,

Springfield, White Mountains, Montreal and intermediate points. The new and elegant steamer C. H. Northam leaves Pier No. 25, East River, daily (Sundays excepted) at 3, and Twenty-third street, East River, at 3:15 P. M. A passenger train will be in waiting on the wharf at New Haven and leave for Springfield and way stations on arrival of the boat.

NIGHT LINE.—Steamer Elm City leaves New York at 11 P. M., arriving in New Haven in time for the early morning trains. Tickets sold and baggage checked at 944 Broadway, New York, and 4 Court street, Brooklyn. Apply at General Office on the pier, or to RICHARD PECK, General Agent. 1f

Magic Lantern and 100 Slides for \$100.

E. & H. ANTHONY & CO., 591 Broadway, N. Y., opposite Metropolitan Hotel, Chromos and Frames, Stereoscopes and Views, Graphoscopes, Megalithoscopes, Albums and Photographs of celebrities. Photo-Lantern Slides a specialty. Manufacturers of Photographic materials. Awarded First Premium at Vienna Exposition. Aug 5-1v

SMOKE VANITY FAIR.

It is shaved from the best Natural Leaf, for Meershaun and Cigarettes. Does not make the tongue sore. Liberal sample on receipt of money. Highest award, Vienna, 1873. Send for circular. WM. S. KIMBALL & CO., PEERLESS TOBACCO WORKS, Rochester, N. Y.

From W. H. HOLABURD, Valparaiso, Ind. No tobacco like Vanity Fair has been burned in my pipe; it is the very best, and all the boys beg it when opportunity offers.

There is no future without its straggling clouds. It soothes and tranquilizes the feelings, and helps the expansion of all benevolent and kindly sentiments.

From GEO. E. POND, Lieut. 8th Cavalry, Fort Garland, Col.

Permit me to say that I am highly pleased with Vanity Fair. It answers all recommendations.

From PHILIP C. ROGERS, Merwinsville, Conn. Much obliged to you for sending me such tobacco; nothing like it has ever been smoked in this part of the country within the memory of the oldest inhabitant—Uncle Peter Gaylord, aged 92.

That first taste of the new smoke and of the fragrant leaf is very grateful. It has a bloom about it that you wish might last.

But what is paper, and what are words? Vain things!

"The next time Juno ruffles thee, O, Jupiter, TRY THE WEED."

The Sportsmen's Depot.

For Forest and Stream.

Ramblings in Oregon.

PART II.

FROM the time of starting until moved by the drowsy god late at night, I noticed that the topography of the country was constantly changing, for we would suddenly find ourselves hemmed in by rugged hills, then traversing dense forests, plutonian in their darkness, or careering at full speed over vales level as a floor. During the early portion of the evening I had an opportunity of noting the geological formation of the country, and found that the substratum was composed entirely of metamorphic rocks. The only exceptions was an eccentric plateau of trap called Table Rock, that springs abruptly from the plain a few miles outside Jacksonville. This, from its contour, altitude, and the fact that it was the scene of a battle between Indians and whites in the war of 1855-6, makes it a marked spot, and it is therefore pointed out to the tourist. The botany of the country also changed as we progressed northward, for the coniferæ took the place of the deciduous trees. One of the finest of the latter, the Madrona laurel, is a peculiarity of the Pacific flora, and the most tropical looking tree in the country. It has broad, green glaucous leaves, and the trunk is generally crooked. It would be a very ornamental appendage to parks and the gardens of gentlemen, and is therefore well worthy of cultivation in the East. The most striking tree in the region is the silver fir (*Picea amabilis*), whose towering, heavy trunk is relieved by the graceful festoons which droop from the branches. Half a dozen species of firs grow in the southern section, but as the coast is approached they give place to gigantic forests of spruce. The smaller shrubs, which form the undergrowth, are composed of manzanita and several varieties of edible berries. Deciduous trees, principally alders, willows, cornels, and poplars, are quite numerous throughout Central and Southern Oregon, but as one proceeds north they become scarcer. The only oak of any importance encountered is the *Quercus garryana*, which is the only indigenous variety of any prominence. My route led through forests of these various trees all night, and on being aroused from my broken slumber the next morning I found myself in the Umpqua Valley, a region which is composed of rounded, wooded hills and narrow vales. This is the great sheep-raising section of Western Oregon, hence one sees the white flocks browsing on every hillcock. The valley was apparently formed by erosion, as fossiliferous shales are found in many places, and the general formation is composed of primitive and metamorphic rocks, the most characteristic being a hard talcose slate. It presents a very picturesque appearance, as it displays wooded hill and rolling plain in alternate succession. Several of the vales have most euphonious names, showing that their occupants have an idea of natural beauty, for one hears of such places as Paradise Valley, Pleasant Valley, Mirror Valley, and kindred titles. These deserve their cognomens, for they are typical of fertility. Crops average as well there as in the more southern portion, and the climate is equally good. Useful minerals are also abundant, and, were capital employed to develop them, they could be worked with profit. Placer mines are worked in a few places, and yield from three to ten dollars per diem to the man. Grazing ought, however, to be the most prominent enterprise, owing to the facilities at command. Another important industry is the production of honey. This needs but little care, as the bees find plenty of food until late in the season by following the blooming of the flowers from the valley to the higher hills. Thus, when the whortleberry is in fruit in the valley, it is only in flower on the mountain tops, and the same with other plants. This climatic and topographical change enables the busy creatures to secure all the working material they require up to November, and as they have a large number of the best shrubs to select this from, the result is that they produce honey that cannot be excelled in transparency or delicacy of flavor.

One great advantage the Umpqua Valley possesses over

the more southern portion of the State is its means of communication with the different sections. It is connected with the metropolis by a line of railroad, and with the Pacific Ocean by the Umpqua River, which is navigable for light draught boats for a short distance, and a road which is passable in Summer, but in Winter only pedestrians or horsemen can plough through its sea of mud. The bad condition of the roads in the more remote parts is the greatest discomfort attending travel in Oregon during the rainy season. In fact, the residents of Curry county, which adjoins the ocean, have no roads at all, so that all their traveling is done on foot or on horseback. It is probably the only county in any State in the Union which cannot show a wagon; but such a vehicle would be useless there, owing to the wooded and hilly character of the country. The dwellers in these Alpine retreats live principally by their flocks and herds, and the fruits of the chase. Some have cleared small farms along the course of streams, but the valleys are usually so narrow that the quantity of land fit for agricultural purposes is very limited. Along the coast there are several open valleys which produce good crops, except maize, the climate being too cool and humid to bring this cereal to perfection. Several of these forest dwellers devote their attention to agriculture and stock-raising in Summer, and in Winter engage in mining along the seashore, where a black sand is spread out in fresh layers every morning. This is popularly supposed to be washed ashore every day by the waves, and to be, therefore, unlimited in extent; but time has proved both to be fallacies, for an examination has shown that the auriferous metal which it contains has been pilfered from the bluffs along the shore by the energetic billows which constantly lash them with ponderous blows. This sand yielded fabulous sums in former times, it being no extraordinary thing for a person to cull from it in a day dust worth from fifty to one thousand dollars. It is, however, comparatively unproductive at present, as the gold-bearing shales of which it is composed are now less subject to the action of the ocean. Several of the farmer-miner class also hunt the sea otter (*Enhydra marina*), which is very common along the coast. This pursuit requires great patience, good marksmanship, and fair nautical skill to make it successful, for the animal keeps far to sea in its ramblings, and if it is not killed immediately it will sink and be lost, for it will face any danger rather than encounter its human foe. As its skin is worth from forty to one hundred dollars in the markets of China, its pursuit is quite profitable. Some men clear from five hundred to two thousand dollars in a single season. Sea lions are also abundant on the coast, and their hoarse, rough roar is heard above the din of the surges that loudly brawl in anger as they lash the dark, adamant, rocky islets that guard the shore in many places; but they are seldom hunted, except by a few hungry Indians.

The only industries of any importance in which the denizens of the coast region are employed are coal mining, lumbering and ship building, and these are increasing in importance every year, owing to the introduction of capital and the securing of good markets in Australia and the Oriental nations. The facilities for ship-building can scarcely be surpassed, as the towering Douglass spruce, several varieties of fir, the laurel, pitch pine, and other species of valuable trees grow along the coast in tropical luxuriance, and can readily be cut down on the shore where the vessels are to be built.

The gigantic redwood (*Sequoia sempervirens*) is also found in this portion of Oregon, but its habitat does not extend far into the interior. Another fine botanical production is the Oregon cypress (*Cupressus Lawsoniana*), which equals the best varieties of Italian cypress in gracefulness, and excels them in density and picturesqueness of foliage. The most marked arboreal characteristic of the region is its towering spruces, which exceed in altitude, thickness, and leafage their congeners in any other portion of the world, except those of Washington Territory, and rank next to the redwood in dimensions, while they surpass all, except the firs, in abundance. The wealth of the section in timber alone cannot be estimated, and when that com-

modity becomes scarcer, by the felling of the Eastern forests, Oregon will find her most profitable revenues in her grand old woods.

The climate of the coast region differs materially from that of the remainder of the State, it being more humid and equable. The temperature of Port Orford shows the Spring to average 52°, Summer, 60°, Autumn, 55°, and Winter 47°.5; which gives an annual mean of 53°.5; and only a difference of five degrees between Spring and Winter. This is an equability of temperature that no other portion of the Pacific coast can show; hence we find little sickness in the country, and scarcely any of that class produced by severe weather, such as pneumonia and consumption. The invigorating ocean breezes keep the heat of Summer down to 60°, so that woolen blankets are required upon the bed every night throughout the year, and warm clothing is worn, generally, both morning and evening. The most prevalent diseases are rheumatism and intermittent fever, which are produced by the heavy rains that prevail throughout the Winter and Spring, but the latter is usually of a very mild type, so that it rarely causes death.

The only means of communication between this wooded Alpine country and the interior is a single road, which is almost impassable in Winter, so I was compelled to return by the same horrible route in order to continue my journey. Were it not for the luxuriance of the forests, the many varieties of trees they contain, and the tropical profusion of the shrubbery, a trip over this route would prove the acme of painful lassitude, but these accessories relieve its monotony and interest the traveler if he has any idea of arboreal beauty.

On reaching Roseburg, the chief town in the Umpqua Valley, I took the cars and hastened northward, glad to escape from the muddy roads and jolting stages which prove such an inducement for indulging in a mild profanity, that jumps forth ere it can be checked. I left this town, or rather city—for a hamlet of two houses throughout the Northwest is usually denominated a city—at four A. M., and in an hour the train had left the mound like hills and narrow vales of the Umpqua region behind, and was dashing over the table like Willamette Valley, that lay in quiet repose beneath the protecting shelter of two mountain ranges that environ it on the east and west. This is called the "Garden of Oregon," and the name is most appropriate, as it produces cereals, vegetables, tuberous roots, and fruits, except peaches, in great abundance, while their quality cannot be excelled. It has a length of one hundred and forty miles, and a width of fifty miles, or 4,480,000 acres—an area as large as Massachusetts, and larger than the States of Connecticut and Delaware combined. It is one of the handsomest portions of the American continent in Summer, being one mass of verdure, as every spot in sight is rich in growing grain, except those used for pasture and the space occupied by coppices of deciduous and coniferous trees. Pretty towns, white and fresh-looking, nestle together every few miles, while far as the eye can discern one sees picturesque farm houses dotting the landscape. There is an air of thrift, comfort, and pastoral beauty about the entire valley that the traveler is impressed with it at once. The contrast between the freshness of the houses and their neat appearance, and the rickety, unkempt aspect of similar structures in Eastern towns, is apparent at a glance. Even the people seemed to be superior in intelligence to their rustic kindred of the East, and certainly far better clad. I saw no indications of poverty anywhere, for the reason that such a thing is unknown in the country. No man is out of employment there, provided he is willing to work, and as all receive good wages, and the necessities of life are cheap, pinching want, often the common lot of laborers in other countries, is never experienced. It is the paradise of farmers, for they are never subject to the varying fortunes of their kindred of the East. In the first place, the seasons are so regular that there is no danger that crops will be injured by storms or suffer from drought; and attacks from blight or insects are not known. The Summers are long and dry, so that crops can be left standing in the field till November, and the Winters being rainy

the soil always receives moisture enough to produce all the cereals, roots, and vegetables in lavish profusion. The fertility of the region seems marvelous to those acquainted only with the worn out fields of the Atlantic States, for it is no unusual event to gather twenty tons of cabbages or carrots from an acre of land, and from thirty to seventy bushels of wheat. Cabbages often produce two crops in a season, for as soon as one head is lopped off another soon replaces it. Other advantages that they have are ready markets in Portland, San Francisco, British Columbia, the Sandwich Islands, China, Japan, and England and Ireland; their taxes are light, and they enjoy every opportunity of giving their children a finished education, for schools and colleges are spread throughout the length and breadth of the State. There are twenty colleges and academies, besides two universities, in existence, and this number does not include the State University, now in process of erection, nor the Agricultural College, which has a large Faculty. Every town of any size boasts of its common and high schools, and very often of two or three private institutions. These facts speak well for the character of the people, and their appreciation of intellectual attainments.

I made my first tarry in Albany, a pretty city of 1,200 inhabitants, and situated in the centre of the valley. The country adjoining it is as level almost as a floor, but its monotony is relieved by a dingle, or gorse, in several places. This is the place from which Bierstadt sketched his painting of Mount Hood, the cold, white sentinel whose head soars above the heavy masses of cumulus clouds that loiter along the eastern horizon. He could scarcely have selected a better spot, as the mountain looms up in all its grandeur on a sunny day, and its towering height is well contrasted by the snowy peaks that extend in serried ranks southward from it. From an elevated ridge back of the city one can behold six white crested peaks, that vary in altitude from nine to twelve thousand feet, and they present a striking appearance as their hoary hue is placed in opposition to the bluish-green foliage of the interminable forests of coniferæ that clamber to the snow line, and extend north and south as far as the eye can discern. All the pinnacles are of volcanic origin, but they are now inactive. The last eruption from Mount Hood occurred in 1842, when it scattered hot ashes over an area of hundreds of miles. The damage to the country was very trivial, but all the fish in the streams were killed by the cinerous shower, as it poisoned the waters. The Indians have a tradition that Mounts Hood and St. Helena—the latter being the next peak to the north—were once man and wife, but that they quarrelled and threw fiery spittle at each other, and that the latter, like all women, held out the longest and defeated the other, so that it is afraid to renew the contest. This is the reason they give for its inactivity. It shows even now that all its energy has not departed, for columns of heavy black smoke may be seen issuing from it occasionally. The height of this peak is a great source of tribulation to the natives of Oregon, as they have set their heart on making it the tallest on the Continent; but the Californians dispute this, and claim the honor for their Mount Shasta. Humboldt estimated the former to have an altitude of 17,000 feet; others, by triangulation, have reduced it to 14,000, and Colonel Williamson, aided by an aneroid barometer, decreased its pretensions still more by making it only 12,000 feet. As these doctors of cosmography disagree, the Oregonians adhere to the middle term, and map their grand old pinnacle at 14,000 feet.

JOHN MORTIMER MURPHY.

For Forest and Stream.

THE NEPIGON RIVER.

THE river upon which our camp is pitched is about seven hundred miles north of Columbus, Ohio, and about fifty miles in length, flowing through a wild mountainous region covered with unbroken forests, and emptying about as much water into Lake Superior as the Ohio empties into the Mississippi. The name of the river is the Nepigon, which in the Indian tongue signifies "deep clear water." Its banks present every variety of scenery, as wild and picturesque as any to be found in America. The river sometimes broadens into a beautiful lake, dotted with spruce covered and castle like-islands, and then again narrows and crowds itself through a passage apparently no broader than fifty or sixty feet. Indeed the river is at once a succession of wild cataracts, and a chain of peaceful lakes. As you ascend the river, the scenery opens in grandeur and magnificence. Here and there you will be reminded of the Palisades on the Hudson, only here the rocks rise out of the water twice their height, and now and then a stream will leap over its crest, or a deep chasm will lead the eye through deep, dark, dreary aisles of gothic spruce, and moss covered rock.

I could exhaust my little space and your patience in the description of the banks of this river, the flora and fauna of its impenetrable woods, the novel beauties of its horizon, and the inspiring, healing, and quickening influences of its clear, crisp, cool atmosphere. But the chief attraction, and it was that which brought us to this unfrequented region, was the life and beauty hidden beneath the water, its trout of an unusual size, color, and vigor. Sometimes you can see them darting through the water or leaping to the surface, but to feast the eye, and test your nerve, and try your skill, you have only to throw "the fly" so as to touch the water or skim across the surface of a ripple, or into the stream tired in its long leap and furious rushing over some fall, just as it is going to rest behind some rock, or log, or jutting of the shore, and there you will feel a sensation tingle through every finger and joint, and after you have played your line, and patiently followed your fish and reeled him in, and perhaps played him again according to his strength and pleasure, it may be for a minute or two, it may be for an hour, you have, when landed fresh from the sparkling water, the finest, purest, most beautiful thing of God's creation—the speckled trout! Leaping now within your reach, and bound to you by a silken cord, it proudly lashes against the canoe, its delicate fins and tail tinged with the purest red and white. No artist can catch its delicate blush, no mathematician can arrange its beautiful spots, no poet can describe its grace and grandeur. The interest of the epicure, the wonder of the naturalist, are nothing to the exquisite delight of the fisherman at the first rise and plunge, and rapid flight of the captured trout. Of course when one speaks of a brook trout, a *salmo fontinalis* weighing five or six pounds, it is not to be expected that one person in ten who has ever fished in the streams of New England or of the Alleghenies, will believe the story, still there are those who may enjoy the enthusiasm of a fisherman while they may not credit his

accuracy. It may be further said that the numbers of the fish of this stream are no less a marvel than their size. So remote and so seldom visited, they have chance to multiply. Lake trout and pickerel also abound, but they are seldom molested by the fisherman.

One great charm about this region, is that it is visited comparatively seldom by tourists. It has not yet been brought into notoriety by the newspaper and magazine, and only a half dozen parties or so may be found in a season going up the river. The ascent has to be made in birch canoes, and the services of Indians employed to paddle and make the portages, which are frequent, and some of them long. It has only been within the past year or two that the country has been surveyed, and as yet no accurate description of it can be found in the maps and published atlas. Indeed it is not long since Lake Nepigon, of which the river is the outlet, was thought to be as large as Lake Erie. The late survey shows it to be a hundred by forty or fifty miles. Its northern limit passes latitude 51°.

Next to the trout of that region, the Indian has been the object of wonder, admiration, and I may say love, of our party. The Chippewa in his native state is a gentleman, and where he has known nothing of civilization, and been under the influence of the Jesuit he is a Christian too. Our experience with them may have been exceptional, but it has been deeply impressed upon us. Wherever the Indian of that country has become corrupt and lawless it has been through the instrumentality of the white man.

In honesty, in temperance, in the observance of the Lord's day, the Indians with whom we were thrown were an astonishment, and sometimes we could almost feel that they were a reproach to us. One of our guides hung his moccasins upon a tree to dry, he found them after a week's absence, untouched. A valuable rod and other fishing implements were for four days left in the path of a portage, and three parties of Indians passed them. Whether they were lost or left there they could not tell, all they knew was that they were not theirs. A small package of cartridges left in a log cabin within the reach of a party of gentlemen from Wisconsin, two of whom carried breech loading guns, was the only loss we met with—among the savages. It was told us that when white trappers first went into this region they frequently suffered from their game being stolen from their traps. That difficulty, however, was shortly remedied. A little white cross composed of two short sticks placed over the traps was sufficient protection against all Indians.

For Forest and Stream.

FLORA AND FAUNA OF CALIFORNIA.

AT this time, when travel Westward has become so general, a picture of the country in Ventura county, Cal., may be of interest to some of your readers. It is during the months of April and May that the country presents its finest appearance. The flowers are then to be found in perfection, the wide, open expanses of adobe land becoming like immense gardens filled with orange, purple, pink, and white blossoms, intermingled with a dense growth of burr clover and alfalfa. In the dry and sandy soil of the knolls, and even large hills, the green cactus plants its mighty roots, and here increases with astonishing rapidity, spreading out its spiny arms in all directions, and encircling in its growth the neighboring shrubbery and flowers.

The quail, lately found in immense flocks of four or five hundred, are by this time mating and selecting nesting places. As we look up the hillsides, faintly green where the tender blades of grass are struggling through the sandy soil, we see the male bird perched on the topmost twig of a sage bush or dry flower stalk, ready to give alarm if any one approaches, while hidden beneath some fallen bush or in the dry bunch grass the female is selecting a place for her nest. After the heavy rains have fallen small ponds or lagoons are formed in the hollows between the hills, and to these resort the ducks and sandhill cranes. Here they remain in small flocks of twenty or more during the pleasant months that succeed these few weeks of rain and sunshine, but later in the season they take flight, passing away as suddenly as they came. But there are other homes for them on the borders of the great Tule Lakes and margins of the winding rivers, where they have their young undisturbed.

This part of California is very hilly, the hills succeeding one another with so little variation that the scenery would become monotonous were it not for the woody cañons through which we have to pass in going from one point to another. In many of these cañons there are deep gulches, bordered likewise with trees. Over its sides lean live oaks, sycamores, and cottonwoods, mingling their wealth of light and dark foliage into richly-shaded canopies of green. When the rain fell in torrents upon the hill-slopes that surround us, and the thirsty earth could drink no more, brooks of different sizes were formed, and these, by uniting their waters, created a stream of such size and power as to burst through the sandy gulch beneath, laying bare the rocks and roots in its course, and thus many of the large trees, deprived of their original footing, now lean against their neighbors for support. As we stand in the bottom of this deep ravine and look above us and beyond, the picture is full of wild beauty. Some of the trees are bending over; others have fallen to the ground; many have so grown together that their gnarled branches entwine and overreach each other in their growth, forming strange and fanciful figures, while through the occasional openings steal in the golden bars of sunshine. The sides of these gulches are really the sides of the steep hills which surround them. Many of these hills, rocky in their formation, and with great cavernous places in their sides, are covered with a heavy growth of chemical, among whose dark and tangled thickets the deer hide their forms and trails. Here they remain during the heat of the day, but toward evening, when the parting sunlight is leaving the eastern hill-slopes black in shadow, they come timidly out from their dark hiding places, feed among the yellow flowers that grow on the hillsides, browse the foliage as they saunter on, passing slowly into the deep shade of the forest.

Beneath the mighty shade trees which I have already described springs find their way out of the sandy soil, and to this hidden watering place come the timid deer, birds, and animals for miles around. At this hour, too, the cañon and surrounding country undergoes a beautiful change. A sea fog has lately blown over the land, and through this the rays of the setting sun are beginning to penetrate, softened to a rich and mellow haze by its influence. The brown stone, of which the hills are largely composed, assumes,

by the imagination's aid, in this variable light, the forms of old ruins or dilapidated castles, while soaring far above them in the evening sky is a night-hawk, or perhaps a vulture, as if attempting to catch the last glimpses of the declining sun. This lovely picture is not destined to last long. Up out of the flats, in swift-flying groups of two and three together, come the turtle doves. The rosy mist that shortly veiled the hills and distant mountains has changed to a deep purple; gradually the purple turns to leaden gray, and slowly and almost imperceptibly the darkness of night creeps over all.

LEOPARD HUNTING IN CINCINNATI.

NO matter how much soever the nasal organs of our Eastern friends may be elevated over accounts of the squirrel which squelched the rattlesnake, or the asinine quadruped which vanquished the lioness, these statements are truths. After the battle last mentioned, and while the brave little jackass was in hospital under the care of a good surgeon, our poets sang his praises, and our sculptors "sculpted" him, and if he was not preserved by the taxidermist as was his leonine antagonist, it was only because the lioness had "chawed him up" too miscellaneously. But "Linden saw another sight;" what, indeed, is the use of having in our midst a Zoological Garden if it cannot furnish sensation?

On last Saturday night in some manner as yet unexplained, a leopard was allowed to escape from his cage, and all the efforts put to recapture him proved unavailing. He was at large in the woods near the garden on Sunday. On that night it was thought he had taken refuge in a sewer. On Monday evening a gentleman residing in our aristocratic Clifton, thought he saw in the twilight a stray dog of large size, and disliking canines on general principles, tried on the indistinct figure of the animal the virtues of a stone about the size of a goose egg. It was efficacious. The "dog" made a spring of some fifteen feet, and if the gentleman got away from that spot in bounds less in actual measurement, he made it up in the rapidity with which he multiplied his movements. He neared a policeman, but he, having only a revolver, recollected that he had urgent business elsewhere. The authorities seem to have given up the hope of capturing the leopard alive, and word was given to "shoot him on the spot" wherever seen. Many hunters, desirous of sharing the dangerous sport, turned out with good arms, and canvassed the woods adjacent to the "Zoo" pretty thoroughly, but without results until yesterday (Tuesday) morning, when the dog of policeman Pfeifer, brought the animal to bay in a brush pile in a ravine near the southern boundary of the garden. He was averse to firing just then, and sending word to Mr. P. McEvoy, simply held his position until that gentleman's arrival. McEvoy came, with the Scott ten bore which he used on the now famous lioness, and with little ceremony blazed away at short range with No. 6 shot at the first favorable chance. Whether this shot would have proved fatal is doubtful; anyway the leopard commenced to execute one of its famous leaps, and while in the air was given at least two more barrels, one of which was buckshot. Thus died the spotted terror of timid mamas and school children, regretted by none save the animal's keepers. He was a valuable specimen, and it is a matter of regret that both it and the lioness above referred to could not have been captured alive.

With the lioness, the taxidermist, Schaan, was very successful. In this case it is as yet doubtful as to the mounting of the leopard. It is found to have been fearfully "spotted" with shot, but it is said that Mr. C. Dury will undertake to prepare it so as to be presentable.

For Forest and Stream.

CHOCORNA.

WE have listened to tales of Mount Chocorna. Its steep and rocky sides, so difficult of ascent; its cone-like summit, topped off with boulder on boulder, out-rivaling the Tower of Babel; its wild and beautiful scenery, standing, as it does, like an outpost or picket guard on the southern border of the world-renowned White Mountain cluster; its deep caverns; its ravines, where grow in profusion the luscious blueberry, on which the black bear fares sumptuously during the month of September. Ah, the bear! He is the meat for which we hunger. We will go for Mount Chocorna and a bear.

We leave the Eastern Railroad at Madison, N. H., five miles from the mountain. Piper, the old veteran bear killer, lives at the foot, and has a camp in the mountain, and with him we were made comfortable and happy. Like all such landmarks, Chocorna has a history in connection with the early settlement of the country, and the dislodgment of the Indians. It took its name from the fact that a chief by the name of Chocorna made his home and hunting grounds here, and after committing various acts of depredation and cruelty on the settlers he was driven to the fastnesses of the mount, and pursued to the summit, where being given the alternative to leap from the precipice or face the guns of the exterminator he chose the latter. What, Chocorna turn his back to his foe and leap into ignoble and certain death? No, never! His breast was bared, his eye looked down with scorn and defiance upon the pale faces, their rifles echo the death knell, and Chocorna is ushered into the presence of the Great Spirit. As I crouched beneath some overhanging cliff or stealthily climbed from crag to crag peering over into the ravine beneath, the dim gray of the morning was slowly fading away before the rising sun, and revealed to me my companions on some distant "spur" employed like myself watching for bear. Then I could picture before me how poor Chocorna was traced to his stronghold, and watched for with deadly intent even as we were watching for old bruin. How with brute instinct and savage cunning he avoided his pursuers by hiding in ravine or behind boulder until driven to the overhanging peak above us where he paid the penalty. But here we must turn from the sublime to the provoking, for my figure of comparison no longer runs parallel. Unlike the fate of poor Chocorna, after a hot chase our bruin escaped through an unguarded and inaccessible pass, and our Chocorna is still at large—a terror to the shepherd and his flock.

Boston, September, 1875.

Fish Culture.

HATCHING APPARATUS AND THE HATCHING HOUSE.

BY ICHTHYOS.—NUMBER TWO.

WE may say that the advantages of the tray over the trough system are too plain to require an extended comparison of merits. In the experience of all pisciculturists it is plain that the trough is an unwieldy and an uncleanly apparatus for hatching; for it always becomes foul from the deposit of dirt—at a time, too, when the accumulation cannot be removed, when the fish, after being hatched, fall directly upon it. Any system, the grille or the wire tray, is preferable, which can be lifted out if need be, and the diseased eggs removed that they may not contaminate the healthy ones. The advantages of the tray over the trough are clearly set forth in Dr. Slack's experiments in the different methods of hatching. He says:—"It is impossible for any dirt to settle upon the glass and destroy the vitality of the egg. The eggs are always in full view; not only can their development be watched—a matter of great interest to every true fish culturist—but any dead or dying ones can at once be detected and removed." As a further value of the tray over the trough, the number of rods in each grille being known to contain one hundred eggs, the number of spawn on hand can be estimated, and when the eggs are to be packed for shipping the uncertain method of measuring and the tedious one of counting can be avoided. The young fishes when hatched fall through the interstices of the tubes into the water beneath, and by withdrawing the cork can be drawn into a pan of water and removed to the nursery trough. If no trough is at hand ready for use they may be retained in the pan until the trough is thoroughly cleansed and a little sand thrown into the bottom, where they may be kept until ready for the pond. If the tray is intended to be used as a nursery, which it can be without detriment to the young fish, the orifice of the spout should be covered with fine gauze to prevent their escape after the absorption of the yolk sac—an event quite likely to occur. As a further corroboration of the superiority of the tray system and the use of glass rods or grills, the Pennsylvania Commissioners of Fisheries, who have been employing the troughs with gravel bottoms, propose to abandon the old method and substitute the grille system, which is almost exclusively used in Europe on account of advantages which have been urged. It will be found, in the more extended experience of American fish culturists, that there is a point of success in the practice of the art, which may be realized sooner by the use of durable, even if more expensive, apparatus, than by the use of the cheaper, which is often attended with waste and loss—much to the detriment of the profit side of this industry. Niggardly parsimony oftener than all else conspires to defeat men in any industry; for they will attempt possibilities with impossible and cheap agencies, and as a matter of course failure is the legitimate result.

MR. N. W. CLARK'S HATCHING APPARATUS IN OPERATION.

The cut represents the hatching apparatus in working order. A is a supply trough of filtered water; BBB are trays; C, clamps for holding down the trays to prevent floating; D, trough with compartments; E, boxes within trough into which trays are set; FFFF, trays; G, H and K, troughs for small fry; LLL, trays containing eggs in process of hatching, from which diseased eggs are being removed by the ladies, who are employed as assistants in the hatching house; M, trough through which a stream of water runs, into which the trays are placed where the current of water keeps the eggs in motion, that the assistants may be the better able to observe the diseased eggs; N, discharge pipe; O, tank; R, discharge, over which is placed a wire screen to prevent the fry from passing out.

The inventor of the hatching apparatus as shown in the plate, is one of the most eminently successful pisciculturists in the Northwest, and his hatching house at Clarkston, Oakland county, Mich., is a model establishment for any man to consult who is about to engage in fish farming. In describing his hatching and trays a portion of an editorial is copied from the *Detroit Free Press*, which says:—"The hatchery of N. W. Clark, at Clarkston, is a frame building 24 by 60 feet, one story high, quite well lighted, and comfortable, by a plentiful use of sawdust packed in between the siding. Lying below the level of the little lake, a constant supply of running water is obtained, and from the hillside, at the rear, clear, cold spring water of a temperature of 40°.

The hatching apparatus, although an object of much study and several years' experimenting by Mr. Clark, is quite simple. Troughs fifty feet in length lead on an incline down the building, being a foot or more square and elevated four feet from the floor. Each trough is subdivided into thirty-three water-tight compartments. Into each of these compartments is placed a square wooden box, and in the box—resting one upon the other, as in a nest—are four trays, of wooden frames, like a picture frame,

seven by twelve inches in size, with a bottom of the finest brass, 'dairy' wire. Upon these trays is placed the spawn, thickly spread over in a single layer, as being best, although a double thickness would do no harm. It requires sixty-four whitefish eggs to cover the surface of a square inch, and, therefore, it is computed each tray holds at least 5,000 eggs, or 20,000 in a box. The box properly loaded is placed in its compartment, and the topmost tray covered with a piece of tin perforated with minute holes, which serve a double purpose, excluding the light, sifting the sediment, and admitting the water evenly over the trays below without any bubbling or commotion. The water, too, by an ingenious arrangement of barriers, has to go down through all the trays, finding its way up between the outside of the box and a division of the next compartment. The water thus pursues its devious ways through the long trough 'up the outside and down the middle' of the boxes and trays like the unending 'ns' of a schoolboy's copy."

It is proper to say, for the benefit of all whom it may concern, that the design representing the above described apparatus is taken from Prof. Baird's report "On Fresh Water Fishes," and that Mr. Clark's method of hatching is secured to him by letters patent.

PLAN OF HATCHING HOUSE 32x64 FEET.

Plate 6 represents a hatching house wherein is designated the arrangement of troughs and trays for hatching. The dimensions of a building suitable for conducting a large business should be at least 32 by 64 feet—a plain one-story edifice with posts; if built of timber, 14 feet, or if a "balloon frame" is chosen, studding 2 by 4, 14 feet. It need not be expensively constructed. The studs may be set three feet apart with cross pieces toed in, say three rows between sill and plate, upon which the boarding and battens of the outside may be nailed. The boarding should be one foot wide and planed, while the battens may be three-inch strips with beveled edges. The roof should be well shingled, the inside lined with rough or matched boards, planed, and the interspace filled with sawdust or tan-bark. The outside should be well painted with some of the many tints of mineral paint. The building should be well lighted with windows, placed high up, and provided with blinds to graduate the light in order to admit as much or little as may be desired. The floor should be constructed in such a manner as that dropping water may pass directly through. The floor may be made of 1 by 2 inch pieces laid on the edge, the upper corners rounded off, supported by posts 10 by 6. The care of a hatching house is disagreeable, and doubly so if it is both damp and cold, therefore a stove should be used in the coldest weather. Doors should be so arranged as to accommodate ingress and egress, that no more steps may be taken than are really necessary. In all well-regulated hatching houses a good office should be attached, possibly in the form of an L to the main structure. In glancing into the hatching house the reader will observe it has a skeleton-like appearance, but the chief design is answered in the perspective view of the interior, in the illustration, by showing the arrangement of the Coste trays in pairs on each side of the building, where they abut against the wall by twos that the grills may be more readily examined by assistants, while the centre is occupied by a long trough, which is calculated to be used in large hatcheries as a nursery trough for hatchlings until the yolk sack is absorbed. As the trays are all placed *in situ* within the building ready for use, we will give a detailed description of the water, how supplied, how arranged and how filtered. The water in all cases used for hatching purposes should be uniformly 40° to 45° Fahr. If from a spring or stream, it should be conducted to the hatching house filtering box through an iron pipe; for such a pipe will last one a life-time, and will not leak or decay. Lead is objectionable, for in certain cases the water will become affected. Terra cotta is unreliable, for it easily crumbles by the action of frost. The supply pipe is to the hatching house what the main artery is to the human system, for but a temporary derangement may cause the loss of much of the spawn in process of hatching. The upper or spring end of the pipe should project well into the spring in order that the supply may be the purest. A perforated tin or zinc filter, with minute holes, must be well fitted over the end. Avoid bored pump logs, for they are the worst bores ever invented for conveying water. A pipe two inches in diameter will supply sufficient water for the hatching of 200,000 spawn if trays are used. If troughs are used nearly one-third more water will be required. Internally connected with the arrangement of the water supply is the proper filtering of it for use in hatching. It has been found in the experience of all fish culturists that the utmost purity of the water is indispensable. It has been demonstrated that the purest water to the eye and taste

bears along with it in its current microscopic matter which, if not strained or filtered, becomes deleterious to the hatching spawn. Mr. Livingstone Stone, one of the most indefatigable of the United States Deputy Fish Commissioners, who has been intrusted with the collection and hatching of the ova of the *Salmo quinnat* of the rivers of the Pacific coast, and who established a hatching house on the McCloud River, a tributary of the Pit, a clear mountain stream, where, in describing his filtering apparatus, he says:

"The filtering arrangement was quite perfect. It consisted of what the miners call a sand-box, which is merely an empty box to catch the heaviest of the sediment, and of two filtering tanks proper. The water, after leaving the sand-box, passed through ten filters of sand and gravel and eight common filters of flannel.

"All this provision for cleansing the water did not, however, prevent a fine fungoid growth from coming down with the water on the eggs, which, when it was first discovered, had got such a start that its results must have been disastrous had it not been for the ingenuity of my first assistant, Mr. John G. Woodbury, of San Francisco. Mr. Woodbury, on having his attention directed to the condition of the eggs, suggested the very bold course of washing

off the fungus with sand and water. The plan adopted was to put a few hundred eggs into a pail partly filled with water, and having a handful of fine river sand at the bottom, hold the pail of eggs and sand under a stream of water, and the agitated and whirling sand was brought into contact with the whirling eggs so constantly and rapidly and yet so gently that in a few minutes the fungus was entirely cleansed from the eggs, while the eggs were not injured in the least."

The treatment of Mr. Woodbury was truly bold and heroic, but as its success was so marked it may serve as a remedy to be used by others in like cases and under like circumstances. It is quite probable that many failures

occur from the bestowal of too little care in filtering the water, which is certainly the best preventive of parasites and fungoid growths—the deadliest enemies to pisciculture. The filtering box should be located at the spring end of the building, the water entering near the centre of the box passes through strainers, the first of which should be made of hair or grass cloth, after which it should be strained through coarse and finally through fine flannel. A set of these should be placed at each end of the pipe. The best method of fastening the strainers is to bend them over the ends of the pipe in the manner that a drumhead is fastened to the shell; there they will remain until renewal is necessary. From the filtering box the water is conducted along each side of the building in elevated troughs, which are supplied with stop-cocks for each set of trays, and the water in passing down through the different series of trays, when leaving the lowest is received into a funnel, from which it passes into a pipe, as has also been noticed, that leads into a gutter under the supply troughs, from whence it goes into the race which supplies the ponds. The flow of water is regulated according to the wants of the trays by a stop-cock at the entrance of the supply pipe. Much care should be exercised with a view of maintaining an equable flow that there shall not result a disproportion between demand and supply. Some hatching houses become more disagreeably sloppy than they need be from ignoring a few simple rules in constructing and graduating properly the troughs and trays; the latter should always be leveled that the spawn may be alike submerged, and the former set with an inclination that will give an equable flow of water from the head to the foot of the trough. The troughs or trays, whichever are used, should be covered. Half-inch boards, made to fit closely, will protect the spawn from their numerous and natural enemies. Rats are persistent seekers for eggs, and if the trays are without covers they will destroy thousands. Arsenic and strychnine act promptly in the removal of these pests, and with the exercise of great care in their use there is no danger of injury to other animals. For the use of this kind of thieves art has given fish culturists effectual remedies, dead shots, that are infallible; but those thieves which are endowed with reason, and who have acquired such perfection, yea such tact and proficiency in steeling trout, that they almost elude the watchman on duty, they baffle all human instrumentalities except bloodhounds, which, if properly trained, will scent these vile creatures to their very lairs. Use them and your profit will show a margin that is the legitimate outgrowth of honest toil.

DEAD SHAD IN LAKE ONTARIO.

LITTLE FALLS, N. Y., Sept. 23th, 1875.

EDITOR FOREST AND STREAM:—

I notice in your issue of the 23d inst, an article on the probable cause of death of shad in Lake Ontario. While at Henderson Bay last June I noticed quite a number of shad about six inches in length floating on the surface, and was informed by Prince Stevens, an old lake captain and capital oarsman, that the fishermen, in hauling their nets, found large numbers of these shad among the white fish, and that they were dead when removed from the nets and thrown back into the water.

Yours truly,

W. H. H. LINTNER.

[This may account for the fish being seen dead on the surface of the water, but not for the cause of their death, unless it was from being gilled in the nets.—Ed.]

THE INGHAM FISH FARM.

PROSPECT FARM, N. J., October, 1875.

EDITOR FOREST AND STREAM:—

I wish to say to all who, like myself, have made a failure of fish culture, that if they will visit Ingham Spring Fish Farm they will find it no failure, and will get more practical information in one hour free of charge than from reading all the books ever published. I was there last week, and found there had been some money expended, but I believe it is a fortune. The spring has a flow of 3,800 gallons per minute, a stone hatching house, in which millions of eggs can be hatched at one time without the use of gravel or filtering the water, with ponds and all fixtures complete; also a lake, which covers fifteen acres, in which I saw hundreds of salmon breaking, and to convince myself they were *salmo salar* I was allowed the pleasure of taking a few with a fly—five in all—which, as they were not in season, were returned to the lake again. Mr. Thompson said one was a five year old, and it was a beauty; the others two and three. There are plenty of this year's hatching. A club has the exclusive privilege of fishing the lake, without any limits. I hope some of the members will send me an invitation, that I may enjoy some of the sport, as I think they have a privilege which cannot be equalled.

J. C. SCHENCKE.

SPRATT'S DOG BISCUIT AS FISH FOOD.

CHARLESTOWN, N. H., October 4th, 1875.

EDITOR FOREST AND STREAM:—

I send you an extract from a letter received from England a few days since from Sir William Marriott, Bart., thinking his ideas on the subject of Spratt's dog biscuit may prove valuable to some of our fish breeders in this country. He says:—

"I have had capital luck with last year's brood of *Salmo fontinalis*, except that I lost some in transport from my place to a river about ten miles off, from not carrying them in a proper sort of vessel. I feed them now on Spratt's dog biscuit pounded up, and I find they do first rate on it, and it is a very economical sort of food, compounded, I fancy, of meat juices and biscuit. I hope to fill our Dorsetshire streams, in time, with your beautiful trout, as I have every reason to believe they are much superior to any of British breed. I hope the ova will arrive in the same capital order the last did. Do you feed the very young fry on liver, or what? I fed on Thames worms—very small, thread-like, red things, supplied by Frank Backland's man, Eton—but they come very expensive, and I think this year I shall try some with liver. I think the dog biscuit a great discovery; the fish seem to like it very much, and do well on it, and it is the cheapest food possible."

Now I do not know as dog biscuit would be, in this country, the cheapest food we could use; but I should think it might possibly prove a valuable change in diet, about the time that any epidemic is liable to attack the young fry, and there is usually a season of the year at which we may expect such trouble, and which we have to use every means in our power to ward off.

FRANCIS W. WEBBER.

—Mr. J. B. Thompson, of New Hope, Pa., writes us that he will hatch, free of charge, any salmon eggs that private persons or clubs may desire for stocking suitable waters. The California salmon eggs, as we have before advised, can be had gratis on application to Prof. Baird.

Natural History.

WHERE FROGS GO TO IN WINTER.—A correspondent, writing from Milton, Mass., says: "I have noticed in your columns an inquiry as to where the frogs go to in Winter. Where should they go to except to the springs? Here we use them for bait for smelt fishing through the ice. We bail out the springs and find them under the stones close to the fountain head; they come out bright and lively, of a natural color, and the several kinds of frogs, as well as different kinds of snakes, are found in the same springs. We often find as many as one hundred in a single spring."

THE CRIMSON TANAGER.—A correspondent writes us for information as to the habitat of the above bird. We can inform him that it is found most abundantly along the Amazon, but is quite plentiful in any part of Brazil.

ALBINO FISHES.—Two interesting cases of albinism in fishes have recently fallen within my observation. The first was a specimen of common haddock, (*Melanogrammus aeglefinus*), taken off Barnegat, N. J., May 7, by the schooner White Cloud, of New London, and shown to me by my friend, Mr. Blackford, of Fulton Market, New York. This fish, which was thirty-one inches long, was normal in every particular except in color. Its general hue was pinkish-white, with a pearly lustre, instead of the usual brownish-gray. The back and top of the head were slightly darker, approximating a very light salmon color. The black stripe which usually marks the lateral line and the blackish-brown blotch, behind and above the pectorals—the traditional mark of the thumb of the disciple Peter—were entirely absent. The fins throughout were yellowish-white with a tinge of red, except the ventrals which were a shade darker. The slightest trace of the normal ashy tint of the belly might be discovered just below the origin of the pectorals. The second instance is a specimen of the common eel (*Anguilla Bostoniensis*) taken in salt water at Noank, Conn., in December, 1874, and presented to the United States National Museum, by Capt. Elihu Potter. In this the color is a dull, pale yellowish above, becoming nearly white beneath. According to M. Dareste albinism is not uncommon among European eels. It appears, however, to be very exceptional in our waters. I have never seen or heard of an instance besides the case just cited. True albinism is especially uncommon among the members of the family to which the haddock belongs. The ground color of the cod and haddock varies much with the bottom on which they are taken, but I have never known of a case in which the spots and other markings were obliterated. A familiar instance of the influence of the color of the bottom is found in the rosy "rock-cod" of the coast of Maine, which is usually taken in the neighborhood of ledges covered with the bright red algae, such as *Ptilota serrata* and *Delesseria sinuosa*. In a similar manner the "butter fish" (*Enneacetrus outalibi*) and the "grouper" *Epinephelus fasciatus* are influenced by the white coral sand bottoms about the Bermuda Islands, but though they assume a very pallid hue, the character of their markings is quite unchanged.—*American Naturalist*.

THE AIR BLADDER IN FISHES.—The *Revue Scientifique* publishes a paper read by M. Armand Moreau at a sitting of the French Association for the Advancement of Science that met last month at Nantes. It is a well-known fact that there are fishes provided with what are called air bladders, and others that have none; and this difference of structure exercises considerable influence on the creature's

power of station and locomotion. Those species that are deprived of the organ in question will, at the surface of the water, experience the pressure of the atmosphere, or, at a depth of 300 yards, be exposed to thirty times that pressure, without contracting its bulk, its tissues being as incompressible as water. The fish, on the contrary, that has an air bladder cannot pass from one pressure to another without experiencing a modification in the inflation of that organ. It will be more dilated at the surface, less so at a certain depth; and hence naturalists have been induced to suppose that by contracting its muscles the creature would, at the surface of the water, reduce its volume, and, on the contrary, increase it according to the depth attained by relaxing its muscles; so that by means of these two operations it could realize a constant normal bulk and density at the same time. This is the view adopted by Borelly, by Cuvier, Milne Edwards, and all our contemporaries. M. Armand Moreau, however, denies the correctness of this theory, and explains the matter thus: The fish when it changes its level, and consequently the pressure, stores up air in its bladder against the casualty of a diminution of bulk, but as soon as the pressure diminishes it lets out the excess of air it possessed. By direct experiment he has ascertained that at a depth of ten metres the creature had doubled the quantity of air it had before descending; now at that depth it experienced a pressure equal to double that it was exposed to at the surface. A fish not possessed of an air bladder, and exposed to the same experiments, always presented a constant bulk. The conclusion is that the muscular system has nothing to do with the faculty the fish has of adapting itself to different pressures.—*Illustrated Sporting and Dramatic News*.

Woodland, Farm and Garden.

THE CENTRAL NEW YORK FAIR.

[FROM OUR OWN CORRESPONDENT.]

THE great Exposition of the Central New York Agricultural and Mechanical Association has drawn to Utica throngs of people. The city seems crowded with every description of conveyance. Steam cars, steamboats, street railroads, carriages, carryalls of every conceivable and inconceivable form are endeavoring to transport the world to the fair grounds, which are about one mile and a quarter from the centre of the city.

The fair opened on Monday, September 27th, and continued until the 6th of October. Its managers after arranging a superior display in all branches of art and agriculture, devote the track and a portion of the grounds to trotting, racing, military pageants and drill, lady equestrians, melody band contests, boy riders, races for farmers, &c.

The exhibition is one of superior merit. In the cattle department, Whiting's famous herd of Dutch cattle, Belling's herd of Jersey's, the Oneida Community's fine display, and the famed Kerry cattle of R. Saybold, of Waterloo, attract much attention. Machinery hall is an immense building with huge engines and boilers, and cotton gins, corn huskers, and lots of whirling things tell me "to wrap my drapery" about me.

The stoves are light and shiny and warm, and the toughest lot of men rattle away all day about back-action, reverse draft, patterns "saving half your coal," and "only by my patent gas eating, mica framed, meandering draft fuel saver."

The dairy display entries counted 549, good honest cheese and wonderful butter.

The floral and vegetable shows were under two large tents. The display was admirably arranged, evergreen branches being fastened to the three poles which were surrounded by octagonal tables filled with a massed variety of exotics and rare plants.

Another large tent contained the show of poultry, rabbits, squirrels, pigeons, etc. This display is exceedingly choice, and the coops are uniform. C. H. Warner, of Verona, game fowls, Newton Adams, of Utica, Hamburg, G. T. Hollingworth, Brahmas, T. R. Proctor, Cochins and spangled, A. Leach, bantams. The frizzled and other varieties were worthy of particular notice. The pigeon display of jacobin, fantails, carrier, ring doves, etc., was large and fine.

The carriage department filled two large tents, while the centre of the half mile track was devoted to agricultural implements in every variety.

Under the grand stand is Domestic Hall, where knitting machines, type writers, rocking chairs, baby jumpers, burglar alarms, oil paintings, draining boots and striped hose, rugs, patched quilts, and suspenders form an indescribable medley.

The clock indicates 2:30, the bell in the judges' stand is struck, and four horses come on the track to compete for the \$100 prize, trotting to harness. The race was won by J. Ballou's horse Reuben in three heats, the time was 2:37½, 2:38, 2:36. Then two trial trots for time were made by Nellie Erwin and Aberdeen Colt. The Judge awarded 1st premium for lady rider to Miss Julia C. Thurston; Harriet Garlock, 2d; Sarah Thurston commended. Best boy rider: 1st premium to Dan. Butterfield; 2d Fred. Harter.

At 4 P. M. music is heard at the Grand Entrance Gate. Young's mounted cavalry and Bacon cadets enter upon the track, forming a guard of honor to Samuel J. Tilden, Governor of the State of New York. In the carriage with him is Ex-Governor Horatio Seymour, and Mr. T. Proctor, President of the Society, and in the carriage following, Senator Francis Kernan, and Hon. C. W. Hutchinson, Mayor of the city. The line moved to the front of the Grand Stand, the crowds enthusiastically cheering the cortege. As these distinguished guests of the society entered their box, the surging, compact crowd was a sight never to

be forgotten. The immense Grand Stand ordinarily seating 4,500, was filled beyond its capacity. Two thousand at least were in the free stand; the quarter stretch and track formed a mass of faces, while the field was densely crowded with carriages. Twenty thousand people, honest yeomen, were there to pay homage to the chief magistrate of the Empire State. He was formally introduced in an able address by President Proctor, and then the Governor delivered an earnest impressive speech to the audience. Then followed the eloquent remarks of Ex-Gov. Horatio Seymour and Senator Kernan. Nothing seemed lacking except the presence of Senator Conkling, who was unavoidably absent.

At the conclusion of the addresses the Governor received the grand cavalcade of military, machinery in motion, ladies on horseback, prize horses, matched teams, prize cattle etc. The whole forming a pageant once seen, never to be forgotten.

The arrangements of this great exhibition are unequalled. Every department moving apparently without labor, thus showing the genius of the management. Everybody was delighted, as was your correspondent. To-morrow we visit the State Lunatic Asylum, the woolen and cotton mills, and the next day proceed to Trenton Falls, promising to send you notes by the way. JENNIE MORTON.

SAP CIRCULATION—WHAT HAS BEEN PROVED.

THE experiments of the past two years by President Clark and his co-laborers have unfolded one of the most interesting natural laws since Harvey's time. In this article we can only give a short resumé of the more important points.

The Law: (1). The sap flows upward during the expansion of the buds and whole life of the leaves. (2). This crude sap pervades the sound wood throughout, the heart wood as well as the alburnum. (3). The leaves perfect the sap. (4). The perfected sap descends within the inner tissues of the bark. (5). All growth takes place directly from the bark toward the centre. The Proof: (1). Plant a small tree in a metallic case that will admit of sealing the roots up air-tight. After sealing up, weigh the whole. Then water with weighed quantities of water, through an aperture provided with a cork, and it will be found upon weighing after some hours that the weight diminishes. By other experiments it is proven that this loss in weight is occasioned by exhalation of water from the leaves. (2). A tube with threads cut upon it was inserted in a maple tree to the heart-wood, so that no sap could enter it but from that region. A considerable quantity of sap ran from this spile, but not so freely as from the sap wood, because the cells of old wood become filled with lignin; and when a gauge was attached to this point the pressure reached a height equal to 28.34 feet of water. (3). Many elaborate experiments, by various investigators, show that nearly ninety-five per cent. of the water of the sap is exhaled in large quantities. This carbonic acid is decomposed under the action of life, sunshine and chemical affinity, most of the oxygen is thrown off and the carbon retained. The carbon, under the same influence, is united to the water to form the starch compounds, as cellulose, gum, starch, and the sugar, which have nearly the same composition but different properties and uses. (4). When a tree is thoroughly girdled below the leaves in Winter or early Spring, the upper portion will continue its growth through the season and a new layer will be produced, but there will be none below the girdle, thus showing that perfected sap descends. That the perfected sap is all in the inner bark tissues is shown by there being no growth below the girdle; otherwise the nutrient matters would have passed around the cut, in obedience to the old theory of osmose, endosmose, diffusion, capillarity, etc., and supplied the requirements of growth. This is also proven by the following beautiful experiment: Before any organized tissue had been deposited, (May 30th,) but when the bark was easily removable, slips of tinned copper were inserted beneath the bark, extending around the stem, of several small trees; elm, willow and chestnut. The bark was then replaced, and wound with a cloth saturated with grafting wax. After the leaves had fallen in Autumn, the results were noted. "In all cases the new wood was deposited outside of the metallic band. (5). Examination under the microscope showed that a thin layer of parenchyma corresponding to the pith of the first year's wood was formed upon the metal, and outside of this the woody tissue, while the medullary rays were as numerous as in other portions of the layer of wood, and extended directly from the bark to the metal under it."

In addition to this clearly proven law, it appears that some plants have phases peculiar to themselves. The flow of sap in the maple in early Spring is entirely independent of root action. A branch of maple, frozen stiff, was cut, the lower end sealed and pitched, and taken into the plant house, (Spring weather always there). The stem was then tapped, and the sap flowed continuously for thirty-six hours, when it stopped as if the season was over. Then the tree was taken cut of doors and allowed to freeze up again, and a second time placed in the plant house, when the flow was repeated, but not quite so freely. This is similar to the phenomenon of sap flowing from maples during warm days in Winter when the roots are frozen. Again, when the gauge was attached to the severed root of the maple, no pressure was exerted, although there was a high pressure upon the trunk.

From these phenomena, it appears that the flow of sap from the maple and other species that flow only after being frozen, is not a vital but purely physical process. The sap is separated from the cellulose by the cold, and under ordinary circumstances gradually re-absorbed. But when the tree is tapped so that the liberated sap can escape, it will do so. The bleeding is, therefore, a sort of leakage from the vessels of the wood, caused by the freezing and thawing.—*Scientific Farmer*.

KANSAS CROPS.—The crops in Kansas cannot have been very full this year, if they are not better in other portions of the State than those referred to by a correspondent writing from Delphos. He says:—

"In this section we have had rather a poor season, especially for wheat, rye and oats, they averaging respectively, seven, twelve and fifteen bushels per acre, and rains have damaged even that considerably. From thirty acres of grain, I have only 200 bushels, and that worth but fifty cents per bushel, so you can well see that I must curtail expenses."

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, }
New York, Oct. 10th, 1875. }

Animals received at Central Park Menagerie for the week ending Oct. 9th, 1875:—
Two Snow Buntings, *Plectrophanes nivalis*. Presented by Mr. Wm. J. Steward.

RECEIVED IN EXCHANGE.

Four Red-crested Cardinals, *Paroaria cucullata*.
Two Troupals, *Icterus jamaicæ*.
Two Bobalinks, *Dolichonyx oryzivorus*.
Twelve Crossbills, *Loxia curvirostra*.
Four Cardinal Grosbeaks, *Cardinalis Virginianus*.
Two Red breasted Grosbeaks, *Hedymeles ludrociatus*.
Two Ring Ouzels, *Turdus torquatus*.
One Red wing Thrush, *Turdus iliacus*.
One Song Thrush, *Turdus musicus*.
One Tambourine Pigeon, *Tympanistris bicolor*.
One Barred Dove, *Geopelia striata*.
One Sora Rail, *Porzana Carolina*.
One Calcutta Monkey, *Macacus cynomolgus*.
One Squirrel Monkey, *Saimiris sciurea*.
One Hog-nosed Snake, *Herterodon platyrhinus*. Presented by Mr. Henry Reiche.
W. A. CONKLIN, Director.

Rational Pastimes.

BASE-BALL—THE PROFESSIONAL ARENA.

As a matter of reference we give below a full record of championship contests played in the arena from April 19 to October 10 inclusive, by all the clubs which entered the lists in April last, the table, of course, including the games not only of the clubs who have failed to play their quotas, but also of the three disbanded clubs. Forfeited games are not included. It will be seen that the Boston Club heads the list by fifteen games majority, the Athletics leading the Hartfords by three games only, while Hartford leads St. Louis ten games. The table is as follows:—

CLUB.	Boston.	Athletic.	Hartford.	St. Louis.	Philadelphia.	Mutual.	Chicago.	New Haven.	Red Stocking.	Washington.	Centennial.	Atlantic.	Western.	Games won.
Boston.....	2	8	7	6	10	6	4	1	5	5	6	1	65	
Athletic.....	0	3	2	5	7	6	6	7	0	5	2	7	0	49
Hartford.....	0	3	1	3	4	3	3	7	3	4	1	10	0	46
St. Louis.....	2	1	4	3	5	6	5	2	2	3	0	2	4	36
Philadelphia.....	0	2	4	4	1	3	4	4	2	3	0	2	4	34
Mutual.....	0	3	2	0	5	0	3	4	2	0	2	7	0	34
Chicago.....	2	1	4	5	3	2	3	4	2	0	2	7	1	29
New Haven.....	1	0	1	1	0	1	1	1	0	0	1	0	7	7
Red Stockings.....	0	0	0	0	0	0	0	0	0	0	0	0	0	4
Washington.....	0	0	0	0	0	0	0	0	4	0	0	0	0	4
Centennial.....	0	0	0	0	0	0	0	0	0	0	0	0	0	2
Atlantic.....	0	0	0	0	0	0	2	0	0	0	0	0	0	2
Western.....	0	0	0	0	0	0	0	0	1	0	0	0	0	1
Games lost.....	7	19	24	24	29	34	30	37	14	22	13	12	37	

—The regular record of games which will count in deciding the championship is as follows. In this it will be seen that the St. Louis stands third on the list in won games, and the Athletics may be said to have secured second position as surely as the Bostons have the first:—

CLUB.	Boston.	Athletic.	Hartford.	St. Louis.	Philadelphia.	Chicago.	Mutual.	Games Won.
Boston.....	2	8	6	7	6	10	4	43
Athletic.....	0	3	2	5	7	6	6	29
St. Louis.....	2	1	4	3	5	5	5	23
Hartford.....	0	3	1	3	4	3	3	21
Philadelphia.....	0	2	4	4	1	3	4	17
Chicago.....	2	1	4	5	3	2	3	16
Mutual.....	0	3	2	0	0	0	0	13
Games Lost.....	6	18	23	24	29	29	33	162

THE AMATEUR ARENA.

But for the evil of "revoking," which is the great abuse the Amateur Association must try to put a stop to next season, the season of 1875 would have been a very creditable one to the amateur fraternity. Despite the prevalence of the picked nine contests played under the guise of club contests, there have been a goodly number of legitimate matches, and most assuredly a higher degree of fielding skill displayed—thanks to new rules—than ever before known. Below will be found a record of the best played games for October, in which amateur nines have participated on one side or the other, or also on both:—

October 2—Star vs. Rochester, at Rochester.....	5 to 2
October 2 Princeton vs. Germantown, at Princeton.....	5 to 3
October 4—Confidence vs. Flyaway, at Brooklyn.....	5 to 3
October 7—Quickstep vs. Athletic, at Wilmington.....	6 to 4
October 2—Androscoogin vs. Bates College, at Lewiston.....	6 to 5
October 4—Alaska vs. Hoboken, at Hoboken.....	6 to 5
October 9—Harvard vs. Taunton, at Taunton.....	7 to 6
October 2—Lowell vs. Resolute, at Fall River.....	8 to 2
October 5—Downer vs. Iron City, at St. John, N. B.....	8 to 3
October 2—Produce Exchange vs. Nameless, at Brooklyn.....	8 to 4
October 5—Active vs. Archer, at Reading, Pa.....	8 to 5
October 2—Eagle vs. Olympic, at Louisville.....	8 to 5
October 2—Live Oak vs. Beacon, at Lynn.....	9 to 4
October 1—National vs. Creighton, at Washington.....	9 to 4
October 8—Chelsea vs. Star, at Brooklyn.....	9 to 6
October 9—Equitable vs. Winona, at Brooklyn.....	9 to 8

ATHLETIC GAMES.—There will be a series of walking and running matches, open to professionals, on Friday and Saturday, October 29th and 30th, on the grounds of the New York Athletic Club, Mott Haven. The first day's races will comprise a 100-yards run and a five-mile run. On the second day, a one-mile run and a three-mile walk. The prizes are \$75 in each event; \$50 to first, \$15 to second, and \$10 to third; entrance fee \$2 for each race. Entries to close at the office of the Sportsman at 4 P. M. on Monday, the 25th inst. Mr. James Watson will have the management of the meeting.

EIGHT MILES WALKED IN ONE HOUR.—Notwithstanding the many claims to the performance of the above feat advanced by ambitious "peds," the one under consideration is the first genuine performance of the distance within the time mentioned. The walk occurred on the 20th ult. at Lille Bridge, London, W. Perkins, the professional champion of England, being the performer in a walk against time. The first four miles was covered in 28m. 59s., and the eight miles in 59m. 52-5s. The walking throughout was strictly fair, and the time at both distances the fastest ever achieved by any human being.

The Kennel.

DOG POISONING.—A short time since a valuable fox hound belonging to Mr. Josiah Eaton, Jr., of New Bedford, which was bred from one of the finest importations from England, and was probably as good a dog as any in the country, was poisoned. Mr. Eaton had refused an

offer of \$300 for the animal. Shortly afterwards another dog of the same breed was poisoned. We trust Mr. Eaton may be able to discover the miscreants who perpetrated this outrage, and if there is no law for their punishment, that they can be held up to the execration of their countrymen.

THE MEMPHIS FIELD TRIALS.—We are advised that arrangements have been made with the Illinois Central Railway company to transport parties desirous of attending the bench show and field trials of the Tennessee State Sportsman's Association, which commence in Memphis October 25th, from Chicago to Memphis and return at \$24 the round trip. Tickets good to return until November 4th. Return tickets, to be valid, must be endorsed by the Secretary of the association. Dogs are carried free over this line. Quite a large party will leave Chicago October 23d at nine A. M., to arrive in Memphis at three P. M. of the 24th.

With regard to an impression which has gotten abroad, that dogs without pedigrees will be barred at the coming show, we are requested to state that such is not the case, but that pedigrees are desired when known. Mr. Bryson, President of the association, writes us that their meeting will be one of the largest ever held in the United States; enough dogs are now entered to make a large and creditable show, and more are coming in daily. The trap shooting will undoubtedly be very fine.

CURE FOR MANGE.

ATHENS, Ga., October 4th, 1875.

EDITOR FOREST AND STREAM:—

Among other communications in your valuable paper I see frequent allusions to mange in dogs and its treatment. I am surprised that a remedy which has been in use among sportsmen in the South from time immemorial, and which is as certain as it is simple, has not long before this found its way into your columns. I have used it for ten years, and seen it used by others in numberless cases—for mange is very common in warm climates—but have never known it to fail in a single instance. It will not only cure mange, but any cutaneous affection. Take two parts hog's lard, one part sulphur, and one part pine tar. Stir well together. Rub the parts affected well with the mixture, and be certain to put on enough to saturate the hair and skin. It is not a bad plan to anoint the whole dog from the end of the nose to the tip of the tail; for when a dog has mange in one spot the whole skin is usually dry and hard. After applying it, rub the skin briskly for about a minute, and then tie the dog in a clean spot. The tar produces at first a slight itching, and the dog, if allowed to run loose, will seek relief by rolling in the sand. This, however, will pass off in a couple of hours.

Two applications about four days apart will effect a cure in the worst of cases. The dog will stop scratching after the first application; the skin becomes healthy and soft, and the old coat of hair is shed and replaced by one as glossy as silk. Usually within ten days all traces of the disease disappear; but of course it takes a longer time to shed off the hair. I think Wm. Hunting, in *Land and Water*, will find that follicular mange will not require twelve weeks of this treatment.

Yours,

W. B. THOMAS.

FREAKS OF A DOG.—Some weeks ago we had occasion to chronicle a "leap for life," made by a dog owned by our fellow townsman, S. P. French, the said canine having made a successful leap over the railing of the verandah of the Sun building, a distance of some twenty feet, to the street, in order to escape the vengeance about to be bestowed upon him by the junior member of the firm. On Sunday last the said dog appeared in a new character—that of a fisherman. Some boys were engaged in throwing pieces of brick in the deep channel of the river below Jones' warehouse, when the dog would dive and bring the pieces back. At last he remained under water longer than usual, somewhat to the alarm of the boys, when finally he came to the surface with a salmon in his mouth, the fish wiggling for dear life, and the dog struggling for shore. Another dog on the bank, taking a view of the situation, hastened to his relief, and the two succeeded in bringing the fish on shore. It weighed, when dressed, eleven pounds.—*Colusa (Cal.) Sun*.

—A correspondent suggests a Bench Show in connection with the State Fair to be held at Albany next year. The grounds are ample, and the location central and accessible. If the managers would offer premiums we have no doubt that a large entry of dogs could be obtained, and a very successful show would be the result.

THE CHAMPION DACHSHUND, MANN.

The accompanying portrait is a faithful representation of Mann, one of the best dachshunds in Germany, and the property of an officer of the Guards at Potsdam. The owner, in giving his biography, says:—

"I wish to maintain that long coated terriers (dachshunds) may be excellent for pursuing and killing all sorts of game, although it is contrary to public opinion that such is the case. Mann was born in 1869 near the mountains of the Herz, and when a few months old amused himself by hunting rats and digging up and killing mice in the field. He had not completed his first year when he had his first tussel with a polecat; he dug him out and killed him after a severe fight. From this moment he was indefatigable in creeping in fox burrows, and would bark and snarl at old reynard until the workmen had succeeded in unearthing the fox. I used to take Mann out whilst deer stalking and duck hunting, and he acquired such a passion for all kinds of hunting that he learned to retrieve ducks from the water as well as the best retriever, and would follow wounded deer until he succeeded in making them stand to receive the finishing ball."

"Even wild boars he brought to bay and was very clever in avoiding the tusks of these ugly costomers. Twice he received very severe punishment, but he was as undaunted as ever after his recovery. I used to hunt snipe with him on marshy swamps that would not bear me, and even there, he was useful to me, as the little scamp would beat the ground and flush the birds, and I got many a good shot at them. And in the evening whilst lying in wait on the runways, Mann had learned to lay quiet at my feet and when the game came near, he would give a low whimper and lick his nose and shiver all over. But an admonishment made him quiet and he only kept trembling until my rifle finished the career of the animal. At home my little pet is rather lazy, but as soon as he sees me handling the rifle he is life all over. He has ugly tricks too; if he finds the wounded or dead animal before I do he will help himself to a goodly meal, and when he thinks I do not take him out often enough, he will go out alone, visit the burrows and hunt for day's after hares and deer, and I never feel sure that some of the sporting fraternity will not stop the little fellow's pastimes by a ball, should he be found outside of the limits of my hunting grounds."

Game Bag and Gun.

GAME IN SEASON IN OCTOBER.

Moose, <i>Alces malchis</i> .	Red Deer, <i>Caricæ Virginianus</i> .
Elk or Wapiti, <i>Cervus Canadensis</i> .	Squirrels, red, black and grey.
Hares, brown and grey.	Quail, <i>Oxyx Virginia</i> .
Wild Turkey, <i>Mileagris gallapavo</i> .	Pinnated Grouse, <i>Tetrao cupida</i> .
Woodcock, <i>Scolopax rusticola</i> .	Curlew, <i>Numenius arquaria</i> .
Ruffed Grouse, <i>Tetrao umbellus</i> .	Sandpipers, <i>Tyingana</i> .
Plover, <i>Charadrius</i> .	Wilets.
Gowit, <i>Limosina</i> .	Reed or Rice Birds, <i>Dolichonyx oriz von</i> .
Rails, <i>Rallus Virginianus</i> .	Wild Duck.
Snipe and Bay Birds.	
Caribou, <i>Tarandus rangifer</i> .	

GAME IN MARKET.—The supply of game, although rather more liberal than at the date of our last report, must necessarily remain limited until really cold weather has set in. Our quotations are: For pinnated grouse and ruffed grouse, each, \$1 per pair. Quail, \$4 50 per dozen, some so small that the dealers throw them out without offering them for sale—so much for changing the close season to the 1st instead of the 20th, or even the 1st November, which would have been more appropriate. Connecticut appears to furnish the bulk of the ruffed grouse, and Iowa the prairie chickens. Woodcock sell for \$1 per pair; we saw some remarkably fine ones at Messrs. Robbin's. English snipe are worth \$3 50 per dozen; reed birds, \$1 25; rail, \$1 50; plover, \$2 40; bay birds, all prices, from 25 cents per dozen for ox-eyes to \$2 40 for yellow legs; mallard ducks bring \$1 per pair; teal, 75c.; widgeon, 75c. A portion of the ducks come from Illinois, but the largest quantity, and by far the best in quality, are received from Seneca Lake. Wild pigeons are worth, for stall fed, \$2 50, for flight, \$1 75 per dozen.

"BORN IN THE WOODS TO BE SCARED BY—A HARE."—As Mr. E. M. Quimby and a friend were shooting at Morris Plains, N. J., last week over a brace of setters, both dogs came to a stand unseen by each other on opposite sides of a fence. On approaching the nearest one a little hare started from almost under her nose, and dashing through the fence, flushed a ruffed grouse from under the other setter's point. Query—can hares be trained to "tree part-ridges?"

—We have received a pamphlet containing the constitution, by-laws, and revised regulations governing pigeon matches of the Long Island Shooting Club, of which Mr. Wm. Parks is President.

—The telegraph tells us that on Saturday last Capt. Bogardus, the champion wing shot of the world, was arrested in St. Louis, at the instance of the Society for Prevention of Cruelty to Animals, for shooting a match.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

Black Bass, *micropterus salmoides*, *micropterus nigricans*.
Striped Bass *Morone lineatus*. Bluefish, *temnodon solitator*.

[Under the head of "Game and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

FISH IN MARKET.—The supply of fish during the past week has been abundant in quantity and varied in description. As most worthy of mention we note the first appearance this Fall of live cod, caught off Nantucket, price 10 cents per pound. Bluefish are caught all along the coast from Cape May to Martha's Vineyard Sound, outside, however, the large school fish showing no inclination to enter the various inlets; price 10 to 12 cents per pound. Striped bass come principally from the eastward; large fish bring 20 cents and small do 25 cents per pound. Smelts, from Maine, of the variety known as "green," 25 cents; salmon, (frozen) 50 cents; mackerel are not yet in as good condition as they will be a few weeks hence, price 6 cents each for small ones and 22 cents for large. Weakfish are worth 10 cents; white perch, 18 cents; Spanish mackerel, (frozen) 50 cents; halibut, 16 cents; haddock, 8 cents; kingfish, 25 cents; black fish, 10 cents; flounders, 10 cents; porgies, 15 cents; eels, 18 cents; sheepshead, 20 cents; pickerel, 20 cents; salmon trout, 20 cents; soft shell crabs, \$2. per dozen; hard shell do, 40 cents; pompano, \$1. per pound; frog's legs, 50 cents; green turtle, 20 cents; terrapin, \$12. per dozen, lobsters, 8 cents per pound.

HELL GATE.—Bass fishing since the last storm is reported as being excellent in the Gate and the upper portion of the East River. On the 10th one man took a dozen off Eighty-ninth street, the largest weighing five pounds. On Wednesday of last week Mr. Tripler, a lumber dealer, took one, while trolling with live squid, weighing sixteen pounds.

—Our friend, the veteran angler and sportsman, John Krider, of Philadelphia, has just returned from an expedition to Betterton, Md., and reports the perch fishing there as something superb. We note, however, that it takes a two pound sinker to catch a one pound fish.

—Smelts this season appear to be more plenty than ever in Boston Harbor and its estuaries, which makes the members of the Anglers' Association, who enlisted the strong arm of the law in their protection during the spawning season, happy. Good returns and results are reported from all their resorts.

A REMARKABLE FEAT.—A few days since a dog, a cross between a retriever and a Newfoundland, belonging to a gardener in the employ of General R. B. Potter, of Newport, caught in the surf near "The Rocks," General Potter's residence, a bass which weighed forty pounds. We can vouch for the truth of the story as far as the dog catching the fish is concerned, and as the gardener sold the bass in the Newport market for four dollars, the weight is probably also correct.

CONGERS.—A correspondent some time since asked us to decide a bet relating to the weight of eels, one of the parties having bet that an eel weighing fifty pounds had never been caught. We decided at the time that conger eels frequently exceeded that weight, and we now note an account in *Land and Water* of one of these monsters weighing seventy pounds having been recently caught off Bon-nenut, on the coast of Jersey. As the Jersey pound exceeds the English by one ounce and a fraction, the actual weight of the eel would be over seventy-five pounds. The conger is highly esteemed by the inhabitants of Jersey, a soup being made of the head and shoulders which is said to be extremely palatable. The eels are also salted and preserved. These fisheries were once of great importance, the estimated catch at one time amounting to 160,000 pounds. Falle, the Jersey historian, thinks that conger fishing lasted until it was replaced by that of Newfoundland, early in the seventeenth century.

FISH LAWS OF MAINE.—We publish herewith the laws of the State of Maine as referring to close seasons and the regulations governing certain much visited waters. We have omitted the penalties for want of space, and also the laws relating to netting and spearing, as we apprehend none of our readers capture their fish by those means:—

MOOSEHEAD AND BRASSAU LAKES.—No person shall take or kill in any way any kind of trout in Moosehead or Brassau Lakes between the 15th day of October and the 1st day of March.

ST. CROIX RIVER AND TRIBUTARIES.—The close time in which it is unlawful to catch, take or kill any land-locked salmon, trout, or togue in the St. Croix River or its tributaries, is hereby extended from the 15th day of September to the 1st day of March, during the five years beginning with the 15th day of September, 1874.

RANGELY WATERS.—The yearly close time for taking trout in the tributaries of the Androscoggin River above the outlet of Umbagog Lake and Sturtivant Pond in No. 5 Range 1, shall be five months, commencing October 1st and ending March 1st, during which time no trout shall be taken or killed in any manner, under a penalty of not more than thirty nor less than ten dollars.

The law of close time for land-locked salmon, trout and togue for the rest of the State of Maine is from the 1st of Oct. until the 1st of Jan.

BLACK BASS.—Whoever shall take any black bass during the months of April, May and June, or at any time, from their spawning beds, shall forfeit for each offense not more than twenty nor less than five dollars, and a further penalty of one dollar for each black bass so taken.

MASSACHUSETTS ANGLERS' ASSOCIATION.—Quite a spirited and interesting meeting of this association was held Tuesday evening, 5th instant, at their rooms in Boston, Dr. J. P. Ordway, the President, in the chair. Several new members were elected and a large number of proposals for membership presented, among which were several quite influential names. The meeting was addressed by Colonel Daniel Needham, Messrs. John Shields, John F. Mills, S.

W. Hathaway, C. R. Dame, E. Delano, L. M. Chase, and the President, Dr. Ordway. On motion of Colonel Needham, a committee was appointed for the purpose of considering the propriety of bringing the objects of the association more prominently before the people, to report at an early day. The committee is composed of Colonel Needham, B. P. Ware, and S. W. Hathaway. A portion of the entertainment of the evening was the reading by Mr. Hathaway of the letters of George Dawson, Esq., editor of the *Albany Evening Journal*, giving an account of his salmon fishing trip with General Arthur, Chief Justice Gray, and Chief Justice Ritchie, of New Brunswick, which was extremely interesting.

NEW JERSEY.—*Kinsey's Ashley House, Barnegat Inlet, October 7th, 1875.*—Occasionally some bluefish are taken outside the beach. The only fish now worth trying for are sea bass and black fish. C. Parker took fifty-one to-day, averaging from one to two and a half pounds. B.

THE FISHERIES.—There have been 56 arrivals of the Gloucester fishery fleet the past week, as follows: 30 from Georges, 8 from the Banks, 16 from off-shore mackereling, and 2 from the Bay. The receipts are 10,700 pounds Georges halibut, 205,000 pounds Bank halibut, 635,000 pounds Bank codfish, 348,000 pounds Georges cod, 1,000 barrels shore mackerel, and 460 barrels Bay mackerel. Reports from North Sydney, C. B., state that the fish are very scarce at the Magdalene islands and the Banks, but there are prospects of good fares on this shore, as the mackerel had commenced to strike in pretty well the last few days.—*Cape Ann Advertiser, Oct. 8.*

LAKE TAHOE—ITS SCENERY AND TROUT FISHING.

SAN FRANCISCO, Cal., September 24th, 1875.

EDITOR FOREST AND STREAM:—

James Lick, of whom you have no doubt heard, one of the wealthiest men of this city, is spending nearly the whole of his riches benefitting many scientific objects and worthy public institutions, and one of his great gifts to California is an appropriation of \$800,000 to build an astronomical observatory on this coast. The place he first pointed out for this purpose was one of the highest mountains close to the beautiful and romantic Lake Tahoe, not very far from the snow clad Rocky Mountains. Since then, however, he has altered his ideas as to its site, and at present has fixed upon Mount Hamilton, in Santa Clara Valley, as being more convenient to this city, and for the public generally. The apparatus for this project will be about the finest and most expensive in the world. This grand undertaking leads me to speak of this Lake Tahoe—formerly called Bigler—where so many persons go to enjoy its splendid scenery, fishing and excursions in sailing and steamboats on its clear, blue and deep waters. The Indians say that Tahoe means Big Lake, while those who have a smattering of the Indian tongue insist that its significance is deep water; and others, again, say it means fish lake. It is about forty-eight hours' journey from San Francisco, and thousands every year go to revel in its glorious beauties, grandeur and magnificence. Many of our first families visit it every season, and bring home numerous sketches in oil or otherwise, of its scenes and surroundings, to be worked up into complete pictures. But the grand realities of these majestic mountains and other pieces of water in lakes, streams and waterfalls connected with it, can hardly be conveyed satisfactorily to the eye by the brush or pencil of the most eminent artist. Paintings of this lake contrasted with the grand reality cannot but carry with them great defects. Descriptions, too, fail to convey the true loveliness of the scenery, and although my nephew, P. H. Hooper, visited these sublime wonders of nature on a fly-fishing excursion to capture trout this last Summer, with others who were so fortunate as to then have the leisure to linger on this lake's shores, I had not, and therefore I can only enter the lists of its admirers with the aid of his description to place my humble tribute to its merits on record in the *FOREST AND STREAM*; yet no doubt those who come after me will say: "How far wide of the true mark he came."

My nephew informs me that when he first saw this lake he thought of all the different scenes of land and water views which he has ever visited (and he has traveled in Switzerland and Italy) and none could compare in beauty and sublimity to that before him, except Niagara, though the beauty of the Falls and the lake are dissimilar—the former strong and gigantic in its grandeur, while the latter is, mostly, as peaceful and placid as an infant's smile, though at times it is something like an infant in the suddenness of its squalls; for he sailed upon it on its whole length in a small sail boat. Here, at an altitude of 6,215 feet above the level of the ocean, reposing in the strong embrace of dark and frowning mountains and laying the feet of the most craggy hills, lies a sheet of water, from the lovely bosom of which the roughest nature or the most insensible of human beings might draw inspiration. It is twenty-three miles in length and fifteen in width. The water is tri-colored—my nephew so described it, if he might be allowed that expression regarding its tints. For half a mile from the shore (which is generally a soft, fine yellow sandy beach) the color is a most beautiful pea green, tinged with blue, and as clear as crystal, objects on the bottom being as distinct in most places as though just before your eyes. For half a mile further it changes to a green about two shades darker, still with the blueish tinge, but as clear as before. From the last color it changes instantaneously to the deeper color of indigo blue. The water is purity itself, but on account of the highly rarified state of the air it is not very buoyant, and my nephew, although a good swimmer, found some little fatigue in moving in it, or, in other words, he was compelled to keep moving all the time he was in the water. The depth of the water is very deceptive. The greatest depth found is 1,523 feet. People drowned in it never appear again on the surface it is said. Standing on its southern shore listening to the regular beat of the surf, toward sunset, the receding sun arrayed in all the gorgeousness of his evening drapery, and as the shades of night commence their gradual approach, no scene can be more impressive. To the west the cold and sterile mountains rise in majesty, their tops covered with eternal snow, fringed with a bright blush from the setting sun and from the reddened clouds above, and resting against the sky with a profile as clear and defined as if cut with a sculptor's chisel. To the north and east mountains and hills rise up as if on guard to protect the beauties of the place, and thick forests of fir, balsam, pine, red wood, and oak trees like regiments, straight and luxuriant, appear almost to the sandy beach with well filled ranks. New beauties, as my nephew said, constantly unfold themselves. At times a gentle breeze wafts across the bosom of the lake, but at others its surface is as fretful as an unruly child. The waters become agitated all at once, the white-crested waves dance and sparkle, and all the wondrous mysteries of the storm-tossed ocean show themselves in miniature form.

About three-quarters of Lake Tahoe lie in California, the remainder being in the State of Nevada. The trout were in great plenty when my nephew visited it, and he captured about three hundred in four days; yet the Indians spear them when in the very act of spawning. This drives both the male and female away, and the trout then seek the deep water and keep more out of view at such times. They are now enforcing more stringent laws regarding this, and soon Lake Tahoe and the neighboring streams will be better trouting waters than they have hitherto been. I hope next year to make a fishing tour on these tempting and attractive waters, and enjoy a personal cognizance of these wonders and beauties of landscape and almost matchless views, without taking them, as I have in this article, second-hand from another party.

E. J. HOOPER.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

BOSTON NEWS DEALER.—The matter is being investigated. An error exists no doubt.

VAL, Nashville, Tenn.—Will you please state the best goods used in making pantaloons for the field in a rough country? Ans: Corduroy or velveteen.

S., New Bedford.—What is the length of barrel of the rifle used by Mr. Wm. Hays, at Conlin's Gallery? Is it a rifle, or a shoulder rest pistol? Ans. A 26-inch Ballard rifle.

G. N. B., Delphos, Kan.—How shall I patch balls so that the paper will not wrinkle when the gun becomes a little foul? Ans. There is no method known to obviate this. The gun must be kept clean.

F. TH., New York.—Where in the vicinity of New York, that is not over fifty or sixty miles, could I find fair quail shooting, and can I find grouse within about the same limits? Ans. In the vicinity of Norwalk, Conn.

J. N. D., Jr.—Do you know anything of a breech loading gun made by William Moore & Sons? If so, please answer. Ans. William Moore, who was a celebrated gun maker, is dead. Several other gun makers use that name upon their guns.

N. Y., Carmansville, N. Y.—I have a rabbit hound three years old, and he has a habit of frothing at the mouth. Can you suggest a remedy? Ans. Examine your hound's mouth; the whole trouble probably arises from broken or otherwise imperfect teeth.

A. F. J., Brattleboro, Vt.—Can you tell me anything regarding the reputation and workmanship of guns made by James King, of London, and guns and rifles made by Stevens, of Chicopee Falls, Mass.? Ans. James King is not on the list of London gun makers. Stevens is a reputable gun maker.

PLANKERS, Hudson, N. Y.—Please decide: B' says that by the game law of 1875 that he has a right to shoot quail Oct. 1st. H says 20th, and we abide your decision. Ans. The law was changed in March last, and the close season for quail now (very erroneously, we think,) expires in this State on the 1st of October.

M. F. BONZANO, Troy, N. Y.—1st. In buying a Remington \$75 shot gun, what length of barrels will give best result? 2d. What pattern and penetration will such a gun give at 40 yards? Ans. 1st. We would recommend a 12-gauge, 30 inch barrels. 2d. Guns vary so much in pattern and penetration we cannot say what such a gun will do.

TRANSIT, Peacedale, R. I.—Please inform me about my gun. I have been shooting it with three drachms of powder and two ounces of shot. It kicks more than is pleasant. Would you please inform me how to remedy it? Ans. The extra weight of shot is the cause. Use one ounce of shot to three drachms of powder, and your gun will shoot pleasantly and effectively, if held in the right direction.

E. S. G., Brockport, N. Y.—W. & C. Scott & Sons advertise that no guns are genuine without their trade mark stamped on the under side of the barrels. Now there are several guns bearing Scott's name, etc., all correct, but they have no trade mark. Are they genuine, or not? Ans. All genuine W. & C. Scott & Sons' guns have their trade mark stamped upon the barrels, or on the action under the barrels.

C. A. W., Kansas City, Mo.—I would like your advice as to the treatment of my setter. She appears in good health, but vomits continually and does not get in as good condition as I would like to see her. If you can advise me from this meagre description as to the disease and cure, you will greatly oblige a constant reader of your paper. Ans. Your setter is probably affected with worms; have mailed to you some powdered areca nut, with directions for its use. Try it.

W. H. C., Cazenovia.—Do you know of anything that will waterproof a hunting coat? I wrote to W. P. Co., Dey street, as you recommended, but found that it was a trade secret, as I expected. The coat is heavy cotton duck? Ans. One half pound sugar of lead; one-half pound powdered alum. Dissolve in a bucket of rain water, then pour off the fluid with the dissolved ingredients into another vessel. Steep your coat thoroughly, letting it stay in for a considerable time. Hang it up to dry but do not wring it.

E. H. S., Milton, Mass.—I have noticed strong recommendations in your valuable paper of a certain nut, good for worms in dogs (I have forgotten the name of nut). Now I believe I have read every number of your paper, and I have a good of faith in your recommendations, so I would like to try some of this new remedy, as worms in dogs always bothered me, and I have never found any remedy equal to powdered glass, but always hate to give that. Can you send me some, or tell me where I can get it, and also amount of dose? Ans. We have sent to you some powdered areca nut—the nut you allude to with directions how to use it.

CROOK, New Haven.—Is a gun apt to burst if the wad starts from the shell and gets down six inches or more into the barrel of the gun? I use brass shells, and if such is the case, and I am told it is, I shall be careful and change the shell to the other barrel after shooting, as it is apt to start the wad—that is if only one barrel is shot. Ans. The gun would be very likely to burst. Try a drop of Spaulding's glue on the top of your wad. This is an excellent device with paper shells, as it does away with both creaser and reamer, and makes the shell to fill the chamber. We have tried it with great satisfaction.

C. F. C.—Will you please inform me if conical base metallic shells are being manufactured, and where I can get them? Also advantages, if they have any, over other shells, as I see by your paper there are fifteen patents on them. Ans. The conical base shell is manufactured by the Hart Shell Company, of Newark, N. J. (No. 216 Market street). The advantages claimed for it are the same as those claimed for the conical chambered breech, introduced into muzzle loading shot guns just before the advent of breech loaders, viz: a concentration of the effect of the powder and less recoil.

J. H. W., Fort Wayne, Ind.—Please inform me what position Mr. Bodine takes when shooting at long ranges? Ans. Col. Bodine has shot, so far, in the face downward position, lying on his stomach, and has shot all matches in that position. We are assured, however, that he will change the position and shoot lying on his back. He states that when in good condition he can, he thinks, shoot well enough when face down, but that for general shooting, the lying on the back position is the better. Consult Wingate's Manual, Fifth Edition, page 225, where a cut of Mr. Bodine's method may be seen.

R. S. B., Waterville, N. Y.—J. A. B. wishes to know when a boat is on the starboard tack. Supposing the wind to be due north, if the boat heads to any point east of north or north of east, she is on the starboard tack, and when she changes her course by luffing up and standing west of north, being on the wind, she is on the port tack. If, however, a vessel had the wind abeam, and she could hold her course without making leeway, I should consider her as not tacking at all, having a fair wind. Ans. The expression is used even when a vessel has the wind abeam, that she is on this or that tack.

G. H. W., Cornwall, Ont.—1. How can I obtain a sample of the Dittmar powder? I have written to the Company but have received no answer. They do not say in their advertisement anything about samples, or whether any money is to be sent, or in fact anything at all about the price of it. 2. Where can I get a pair of choke bore barrels for my shot gun? 3. What would be the result of a cross between a thoroughbred Gordon black and tan setter dog and a good water spaniel bitch, lemon and white? 4. In case a player is injured during a match game of base ball which captain shall decide who shall run for the party that is injured? Ans. 1. Address Carl Dittmar, Neponset, Mass. 2. We would suggest your sending to England for them. 3. We would not advise such a cross. 4. The captain of the nine to which the injured man belongs names a substitute, but the selection must be approved by the opposite side.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOCTRINATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
(Post Office Box 2832.)
127 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, OCTOBER 14, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, October 14th.—Racing at Jerome Park. Trotting at Parker City, Pa.; Paterson, N. J.; Rockland, Me.; Lowell, Mass.; Philadelphia. Cricket—St. Georges vs. Young America, at Philadelphia. Base ball—Hartford vs. Athletic, at Hartford; Philadelphia vs. Chicago, at Philadelphia.

FRIDAY, October 15.—Trotting at Lowell, Mass.; Philadelphia; Terre Haute, Ind. Cricket—St. George vs. Germantown, at Philadelphia. Base ball—Athletic vs. Chicago, at Philadelphia; Doerr vs. Archer, at Philadelphia.

SATURDAY, October 16th.—Racing at Jerome Park. Creedmoor—Luther Badge; Seventh Regiment "Shells"; Irish-American Club Challenge Cup. Scull race between Coulter and Morrison, at Pittsburgh. Regatta at Troy, and Charles River, Boston. Cricket—St. George vs. Young America, at Philadelphia. Base ball—Athletic vs. Chicago, at Philadelphia; Hartford vs. St. Louis, at Hartford.

MONDAY, October 18th.—Base ball—Hartford vs. St. Louis, at Hartford; Philadelphia vs. Chicago, at Philadelphia.

TUESDAY, October 19th.—Trotting at Goshen, N. Y.; Woodbury, N. J.; Washington, D. C. and Lawrence, Mass. Creedmoor—Hofe Field Glass Match. Rifle meeting at Macon, Ga. Base ball—Athletic vs. Chicago, at Philadelphia; Alaska vs. Resolute, at Elizabeth, N. J.

WEDNESDAY, October 20th.—Racing at Baltimore. Trotting at Cambridge City, Ind.; Washington, D. C. and Goshen, N. Y. Rifle meeting Macon, Ga. Creedmoor—Morrison Medal. Single scull race between Wilbur Bacon and R. B. Bainbridge, on Harlem River. Base ball—Hartford vs. St. Louis, at St. Louis.

CAPT. WEBB AND HIS SWIM.—The furore over Capt. Webb continues in England, and his feat of swimming from Dover to Calais having outlived the nine-day period, appears to have settled down as a national wonder. We should be the last to decry, or attempt to detract from, the merit of Capt. Webb's performance, but we would ask Cousin John if he is not rather overdoing the thing, you know, and following a line which, when adopted on our side of the pond, he is apt to sneer at. Twenty-five thousand dollars, John, is "big money" even for a big swim, and although Capt. Webb's feat is unparalleled, we don't see how any one but Capt. Webb is to be benefitted by it. Contrast the amount of money paid for this simple performance of an act of endurance with the amounts paid men of science for their great discoveries. For example, in this country, in 1867, Seth Green made the discovery relating to the hatching of shad, which has been, or will be, the means of restocking our rivers, and is worth millions to the country. He has the name of benefactor, and perhaps a medal or two, but it don't buy bread. We only mention this instance as a case in point, and probably could name hundreds who have been no better rewarded, while the singer or dancer who caters to the senses alone is enriched.

THE CLOSE SEASON FOR DEER AND QUAIL.

THE laws of this State allow us to kill deer only in the months of September, October, and November, but allow venison to be sold in December and January as well. It will be seen from the letter which we publish below that the question of a change in the law will be brought before the Legislature during the coming session. We shall feel obliged if our correspondents at the West and in the interior of this State will, in accordance with Mr. Phelps' suggestion, favor us with their views upon the subject. Upon referring to the files of our paper, we find that caribou from Canada was exposed for sale in our markets as late as February 18th, and antelope from Nebraska as late as March 4th, although the close season in the latter State commences on the 1st January, and in Canada, for caribou, on the 1st of December, and 1st of January in the Provinces of Ontario and Nova Scotia and Quebec and New Brunswick respectively. Now, in this State the law regarding the possession of game mentions "moose, wild deer, and fresh venison," and if caribou and antelope are not included under these heads we would suggest that they should be without delay.

While on this subject we would call the attention of the society to the fact that the close season for quail now expires on the 1st of October. Comparatively few sportsmen are aware of the fact, yet nevertheless it so stands. Now, it is a notorious fact that quail, as a rule, are unfit for shooting on the 1st October. A gentleman mentioned to us that he shot a quail only a few days since on Long Island the body of which was not much larger than a sparrow's. The adjoining States of Pennsylvania and New Jersey hold to the 1st November as the expiration of their close season. In making our date a month earlier we are opening a market for pot hunters and offering a premium for poaching. Where was the energetic member for Suffolk, who has already had so many amendments inserted in the laws for the protection of game within the limits of his own county? Scarcely a section of the law but contains some exception in favor of Long Island, but we look in vain in the act passed April 29th, 1875, for any clause which gives to the quail a longer lease of life. Mr. Phelps' letter is as follows:—

22 EAST SIXTEENTH STREET,
NEW YORK, Saturday, October 9th, 1875.

EDITOR FOREST AND STREAM:—

We shall have to go to the Legislature this Winter for some amendments to the Game Law of the State, and I should like very much to know what the people from the interior, as well as from the Western States, think of the present law in respect to deer, which, while it only allows us to kill deer in September, October and November, it allows venison to be sold during the months of September, October, November, December and January. Would the people from the localities named wish a change in the months for selling venison? If you can, through FOREST AND STREAM, draw out an opinion and the reasons for it. I should be obliged, and I will lay it before the Association for consideration. Yours truly,

ROYAL PHELPS,
President of the N. Y. Association for the Protection of Game.

GAME LAWS—THEIR ORIGIN AND OBJECTS.

IF we go back to the earliest history of game laws, or, as they were originally termed, forest laws, in Great Britain, we find that less importance was given to the observance of close seasons than to the restriction of sporting privileges to those persons who were solely entitled to them. And as the prerogative was at one time strictly vested in the crown alone—poaching being punished by death—it was probably presumed that the sole individual interested would observe such seasons as suited his fancy. It was not, however, until after the irruption of the Northern nations into the Roman Empire that restrictions were placed upon game other than the natural ones applying to laws of trespass. It is said that all forest and game laws were introduced into Europe at the same time, and by the same policy that grew with the feudal system, to retain as slaves the conquered races, and, by preventing their joining in the sports of the field, depriving them of the use of weapons that might be turned against their masters. With the division of conquered territories among the followers of the crown, came the game laws which, with some modifications, have been handed down in Great Britain to the present day; and of all the social peculiarities of that country they are the ones which retain in their observance the most marked characteristics of their feudal origin. In reference to this subject, Blackstone, who seems to have preferred that game should have continued the prerogative solely of the crown, writing upon the forest laws, says in his commentaries: "From this root has sprung a bastard slip known by the name of the game laws, now arrived to and wantoning in its highest vigor, both founded upon the same unreasoning notion of permanent property in wild creatures, and both productive of the same tyranny to the commons, but with this difference, that while the forest laws established only one mighty hunter throughout the land, the game laws have raised a little Nimrod in every manor." How the great commentator would open his eyes if he could look upon the laws, or rather the absence of them, in this country, and see a hundred Nimrods in every parish. We should consider ourselves very fortunate when we consider the hampering restrictions and expenses which, in Great Britain, confine the pursuit of game in a great measure to men moving only among the upper classes of society. With us the laws which secure to us life, liberty, and the pursuit of happiness, confer upon us privileges enjoyed by no other people. How much, then, does it behoove us to show our appreciation of those liberties by

strictly observing the laws promulgated for the preservation of game, that we may not only enjoy it in abundance, but that the same privileges may descend to our children. The absence or rapid decrease of game in certain localities, and which perhaps attracts the attention of sportsmen alone, should be a matter of concern to the whole people, for with them rests its preservation through a strict observance of close seasons. The increased love for field sports is the one thing which is to lift us above the reproach of being an enervated people.

But to return to the origin of game laws. In 1621 the property qualification was embraced in an act which provides "that no man hunt or hawk hereafter who hath not a plough of land in heritage, under the pain of one hundred pounds," and in Scotland to the present day this law of qualification still exists, so that nominally field sports are only to be enjoyed by those possessing land in the country. The law, however, is so liberally construed that it is understood that those holding the landowner's permission possess also the landowner's qualification. It was not until 1831 that the property qualification was removed in England, and as late as 1844 unqualified persons pursuing game, even in season, were subjected to the same penalties as the trespassing poacher. In 1850 farmers were given the right to kill hares, on their own premises or holdings only, without qualification, when it could be done without breach of contract with the landlord. At the present day, even the properly qualified landowner is obliged to take out a license and pay a tax before he is permitted to kill his own game. Penalties for killing game illegally and out of season are not only very heavy, but the commission of the act carries with it an amount of moral odium that would almost extend to social ostracism.

The defining of the ownership of game has always been a matter involving much tribulation in Great Britain. The statute books contain so many old laws of forestry—rights of manor and rights of warren—that the sportsman must be most careful that in his shooting he is not committing a trespass, or appropriating game to which he has no legal claim. As understood abroad, we have no game laws, their place being taken by those governing acts of trespass. Our laws for the protection of game refer solely to close seasons and illegal means of capture, not to ownership. The rapid settlement of our country will soon demand a closer definition and expansion of the laws of trespass, or the instituting of a code of game laws which shall confer upon the owner of land the game which may be found upon it, or with which he may stock it. Much of the interest that would be taken in the introduction of new, or the preservation of old species, is lost from the discouragement such efforts receive; and the same remarks apply to fish culture. As a matter of some interest, we print herewith extracts of the game laws of various European countries, for which we are indebted to that enterprising and wonderfully entertaining journal, *The Illustrated London Sporting and Dramatic News*:—

In Naples a license to shoot is required, which gives permission to shoot in open country, but not in inclosures.

In Venetia fines are inflicted for shooting and hunting without license.

In Austria-Hungary, poaching is punishable as theft. On holdings of less than 200 acres the shooting reverts to the commune, and the proceeds of lease is divided among the proprietors.

In Piedmont shooting is punished with fine or imprisonment. A license to shoot is required. Owners of inclosed land have absolute power over the game in its season. A similar law exists in Lombardy.

In Italy the rule laid down in the civil code is that occupancy gives a title to property in game or fish found on it, whether bred there or passing through.

In Tuscany the property in game lies only in so far as it cannot be pursued without leave in inclosures. A license to shoot is required, and shooting is prohibited from sunset to sunrise, with an hour's margin each way.

The law of Belgium decrees the right to game to be co-existent with the property in land. Owing to the number of large towns poaching is frequent.

With reference to Denmark, it is said that there are no pheasants in that country, except in the king's preserves of Amack and Klampenborg; hares are very scarce, and rabbits are almost unknown. The law, however, protects not only the nobler animals, which may be called "wild," but also the lower sorts, such as foxes, badgers, otters, martens, polecats, fieldfares, curlews, and red shanks. No licenses for carrying arms are required. Every one has a right to deal as he pleases with the game on his land, subject, of course, to the directions of the general laws.

In Spain shooting goes on at all times and seasons; snares, traps, and decoys are used all over the country, and the result is the most alarming decrease in every species of game throughout the country.

In Portugal game does not belong either to the State or to private individuals, and the laws relating thereto refer chiefly to such persons as may be found doing damage to property in pursuit of it.

The Bavarian law of 1850 admits the principle that game goes with the proprietorship of the land. Small holdings are the rule, and the shooting on these, as in other German States, reverts to the commune for the benefit of the proprietors. Close time does not apply to preserves, but game is not allowed to be sold out of season. Man traps and spring guns may be used in inclosures, if notice is posted up. In the palatinate of Bavaria the code Napoleon is in force.

In the State of Baden the law of 1850 laid down the principle that the right to own land carried with it the right to preserve and kill game upon it. For small estates this right became vested in the communal body. The close time is from February 2 to August 23 for all game, except boars, deer, capercaillie, blackcock, rabbits, and birds of passage. Poaching is severely punished; game in preserves is considered as property, and poaching dealt with as theft.

The law of Wurtemberg distinctly recognizes game as property, but this right in small holdings passes to the par-

ish. Convicted poachers are forbidden to carry firearms. In the Grand Duchy of Hesse, where a property is very much subdivided, shooting is made a corporate right, and exercised for the benefit of the community.

In Saxony game is considered public property when found outside of preserves.

With regard to Russia, it is stated that every landowner there has a right to shoot over his own property; that close time is observed; and, also, that in certain provinces a license is required. The Emperor, the members of the imperial family, and those accompanying them, may shoot over all lands in Russia without paying a license and without leave of the owners.

In the dominions of the Sultan game laws have never existed, but certain police regulations apply to the killing of game at particular seasons. Wild animals are looked upon in that country as public property. The taking out of a license to carry a gun enables its owner to shoot on crown and also on private lands, except such as are walled in. Shooting in the vicinity of the Sultan's palaces, kiosks, powder magazines, and the like is prohibited.

The game laws of Persia are very simple. Every person, as a rule, shoots when and where he pleases, except in inclosed gardens. The Shah has certain parks where wild animals are taken care of, but nearly every creature *feræ naturæ* throughout the country has been destroyed. This is pretty much the state of things existing in Ireland.

OUR EDITOR IN CAMP.

WE are in receipt of a letter from our Editor-in-Chief, Mr. Chas. Hallock, dated "In Camp, Smith county, Va., Oct. 10," in which he says:—

To-morrow night we shall be at "White Top," the highest mountain east of the Rocky Mountains. Shall attempt its ascent, if not too stormy. We hope to obtain photographs of it and the surrounding scenery; also of the Natural Tunnel in Scott county, Va., a week hence. I am enjoying myself in a rough way among these mountains. Our horses are sure-footed, and cross gullies, ravines, and river-beds as though they were graded thoroughfares. The nights are frosty, but the Autumn foliage is gorgeous—radiant with its October tints. There is game in abundance to be had for the shooting, generally from the saddle. A flock of wild turkeys flew across the ravine to our left this morning, from one mountain knob to the other, out of gun shot range. Our barn-yard fowls are not that strong of wing "by a long chalk." All the streams about are filled with speckled trout, *Salmo fontinalis*. They spawn one month later than in the Adirondacks. Any sportsman who wishes a change from his customary stamping grounds would do well to come to this luxuriant section of Southwestern Virginia at this season. There are no insects to annoy; the snakes are in bed; the temperature not too cold, and the inhabitants will appreciate the distribution of a little fractional currency among them. Money of any kind is scarce, but it is often difficult to get change for a five-dollar note, even in the large towns.

On my way hither I dropped off the train on a brief visit to our Captain Taylor, at Nottoway, and found him surrounded with a fruition of corn, tobacco, and garden truck, enjoying his *otium cum dig* with the elegance and *savoir faire* of an old-time planter. His success has exceeded his expectations. He will represent the FOREST AND STREAM at the Memphis Bench Show and Field Trial on the 25th inst., at which he is entitled to an honorable place as the introducer of field trials into America.

At Farmville I visited the English colony established by Mr. J. S. Stanley-James and others, and found that their settlement there had met with a cordial welcome from the old residents, and their anticipations with a measurable reward. Their energy will do much to develop the resources of this section. Mr. James has just completed a beautiful house, one of the finest in the city. He has located with a view to permanent residence; so have others. Some of the colony, however, are merely sojourners, we opine. These copy the architecture of the mediæval period in the structure of their dwellings, which are surrounded by large estates of many hundred acres, cultivated to some extent with tobacco and corn, and crossed by intricate paths that are much walked over to reach the covers where the grouse and the deer hide. The manse of Maj. Powell is especially noteworthy, with its large herds of swine, which it would delight the old folks at home to contemplate. The baronial castle of the Powis brothers, who are well known to the gentlemen sportsmen and cricketers of England, is fashioned of magnificent logs that are plastered without and whitened within, while its spacious apartment glows with ancient armor, rare works of art, coon skins, and other trophies of the chase that would do credit to their ancestral halls in England, a picture of which adorns their rough-hewn mantel. I would like to describe their style of life in detail, but forbear to trespass on their privacy. Most generous is their hospitality, the measure of which is large and overflowing—sometimes plain in its ministrations, sometimes enlivened by a dash of soda water. From all I could observe, their ways are ways of pleasantness, and all their paths are peace. On couches of luxurious bear skins they nightly stretch their limbs, while Judy serves them faithfully at meals, dispensing corn pone, ham dodes and chicken fixins with a lavish but ebony hand. I had the pleasure of knocking over a few quail, in company with brother Dick one day, to grace the evening meal. It was dark when I left their ranch. Turning my horse's head from the door, I dove into the sombre woods and bethought me of the "cricket on the hearth," just now left behind. Of your whilom correspondent, Major Jacob Wagner, in whose company I travel, I am compelled to say, that as each day lightens our load of provender, so it adds to the weight of obligation which I have to carry.

Every comfort is provided that is possible when on the constant move. I am enjoying myself famously, and hope to recover strength to give you material relief from arduous duty after my return. H.

AN UNTIMELY FATE.—That young man's face was apparently calm and placid, and yet the close observer might have noticed a certain vacuous, exhausted look about him as he rather sank than seated himself in the car which bore the riflemen from Creedmoor to the ferry. By his side was his rifle, at his feet was his ammunition box, and in his hand was a simple score book. Friends, comrades, companions—rivals in the rifle contests—passed by him unnoticed. Some said kind words to him, but no reply did he vouchsafe. It was observed, too, afterwards, that when the captain of his team, that grim old chief, addressed him, he threw around his words the tenderest inflections, but the young man, as he pored over his score book, heeded him not. There were men in that car, veteran soldiers, who had seen many a loved comrade fall on the battle-field and had made no comment, but who now looked with wistful, pitying gaze on that young rifleman! The merry talk, the gay laughter, was now hushed, and men only spoke in low whispers—there was silence around him. Presently, as if awakening from a lethargy, he plunged his hand into his pocket and drew out a second score book, and from his breast a third, and from various receptacles, even from his hat, an infinite variety of score books. Now for an instant that poor young fellow's eyes lost their lack-lustre gaze, and flashed with unearthly fires; but alas! the struggle was a short one—let it be hoped it was a painless one, for an instant afterwards that dull guise of inanity, like a leaden cowl, crept over his handsome features, and it was apparent that his mental faculties were in a state of collapse. Then his lips uttered some feeble sounds. Those who were near him heard him murmur as he hurriedly looked from score book to score book, for now he had quite a library on his knees: "Elevation—wind—nineteenth shot—outer—calibre—bullseye—weight of powder—sixty-five degrees—inner—open bead—five hundred and one, no, two, no, ninety-nine grains—Vernier—spirit level—alas! oh, my poor mother!" Then the pencil which he held in his hand, and with which he had been making figures on each of the twenty-nine different score books, fell from his nerveless fingers.

That poor young man, who had once been strong and virile, was now an imbecile and an idiot. Too many rifle score books had wrecked that once noble intellect.

AN HONOR WELL BESTOWED.—The Geographical Congress at Paris on the 12th ultimo awarded medals of the first class to the Statistical Bureau at Washington, and to Professor Hayden, the American geologist. This Congress was a most noticeable gathering. It numbered eighteen hundred members, from all parts of the world, every one of whom was a more or less distinguished member of an honorable society, college, or order, and the sessions of the Congress were attended by the highest dignitaries of the empire, President McMahon and suite lending their presence on the opening day. The Tuilleries, famous as the residence of the third Napoleon, was the place of their assembling, the sessions being held in the grand *salle des etats*, capable of seating two thousand persons. This was the body which honored Professor Hayden with a gold medal for his explorations in the Rocky Mountains, and no higher compliment could be paid to the merit of his great work.

[CORRESPONDENCE OF THE FOREST AND STREAM.]

THE MANUFACTURE OF GUNPOWDER.

DURING a recent visit to the thriving and prosperous little city of Wilmington, Del., I enjoyed a brief visit to the celebrated powder mills of Dupont & Co., which are located about two and a half miles northwest from Wilmington. As but comparatively little is known about the manufacture of this important auxiliary of sportsmen, and essential for modern warfare, a brief description of how gunpowder is manufactured may not prove uninteresting to your thousands of readers.

The Dupont mills are situated in a lovely valley on the banks of the Brandywine creek, and are surrounded on all sides by lofty rock-clad and wooded hills. At first sight the visitor cannot realize that these small, low, and odd-looking buildings nestling so romantically on the water's edge, are capable of making 37,000 pounds of gunpowder daily, or about 11,000,000 pounds per annum, and yet such is the fact. The location of the mills was selected by Mr. Dupont, Sr., in 1817, in opposition to the strong personal solicitation of Thomas Jefferson, who was exceedingly anxious to have them located in Virginia, owing to a variety of prospective advantages, the improbability of the neighborhood's ever being thickly populated, and the admirable water power. The original residence of the founder of the mills—a little stone house, now incorporated within the buildings and used as a storehouse—may still be seen. The manufacture of gunpowder was commenced here about the year 1819, with one set of mills, embracing the best machinery then known. Year by year they have increased in number, until now they extend along the banks of the stream for more than a mile.

In the first place, gunpowder is composed of three entirely separate and distinct substances, namely—sulphur, saltpetre and charcoal. It is not a chemical combination, as is supposed by many persons, but a mere mechanical aggregation of these substances in their varied but defini-

tive proportions, no chemical union taking place until the moment of their ignition.

The first building visited was the coal mill, where a material called coal dust is manufactured. The mill itself is a large, grimy-looking frame building, completely filled with clouds of impalpable charcoal dusts, through which are barely discernible the shadowy forms of a series of large octagonal drums or barrels, covered with sheep skins, each of which revolve with a low, rumbling sound. Here the grimy, black charcoal and the golden yellow sulphur are mixed in their proper proportions, first separately, and then together, in these barrels, with a number of iron or zinc bullets, which the rapid revolution grinds to a very fine powder. From here the coal dust goes to the composition house, which is a little building clasped, as it were, in the very arms of the hillside, sunken deeply in the banks, and sheltered and protected by its walls of heavy, solid masonry. Here the coal dust is weighed, and mixed in certain proportions with the snowy white and very finely powdered saltpetre. The composition being mixed and packed in bags, is loaded upon the miniature railroad with its little trucks, which are moved by hand or horse motion until they stop, and are silently unloaded at the dust mill, wherein are more revolving barrels similar to those in the coal mill. In these barrels the composition is placed, and yet more thoroughly incorporated and finely pulverized with great care, as now comes the first step of real danger; for were the attendant to neglect for a moment the regular cleaning of the circumference of the barrels with a mallet, to dislodge any adhering mass, it would become clogged around the axis in its rapid revolutions, and produce sufficient friction to cause an explosion. Such accidents, however, but rarely occur, as great care is taken to prevent such neglect upon the part of an attendant. After this operation the composition is termed "dust mill dust," and it is considered very dangerous.

From the dust mill the dust mill dust is conveyed to the rolling mills, two of which are always placed side by side for economy in power. Three of the sides of these mills are built of solid masonry, while the front and roof are merely of light framework, built in sections. This is done as a precaution to save the building in case of an explosion, as then merely the front and roof, acting somewhat as a mortar, are blown off. Between the rolling mills, and connecting both revolvers, the huge water-wheel, almost as high as the buildings themselves, slowly turns its busy round, splashing the crystal water into a white foam and throwing a shower of glistening water drops, sparkling in the sun's rays, and again falling to kiss the murmuring stream below. Within the rolling mills we first notice two large wrought iron wheels, or rollers, each weighing ten tons, and revolving on a horizontal axis in a trough, their bright, shining faces contrasting strongly with the black dust adhering to everything else within the building.

The dust mill compound having been well moistened, is now placed within the trough; the huge rollers having been previously stopped, are again set in motion, and with a horrible, low, rumbling sound, their twenty tons go plowing and crushing over the black mass beneath. No one is allowed to enter the rolling mill while it is in motion, as a single particle of foreign substance, such as gravel, an old iron nail, or even a few grains of sand, would, in a few seconds, blow everyone into eternity. This rolling process continues about two hours, during which the powder has to be kept well moistened, as it now contains all the chemical and explosive properties of powder. The powder is now hardened into perfectly homogeneous unequal sized cakes of a grayish black appearance, called rolling mill cakes. From the rolling mill the cake is conveyed to the press mill, where it is run through a breaker consisting of a double set of toothed rollers, which still further break it into pieces of various sizes, which are subsequently broken into pieces two feet square and one inch in thickness. To produce this change the cake is introduced into the press, which resembles a great box, within which is arranged at equi-distant parallels a series of hard rubber plates, between which the material from the breaker is placed. An immense hydraulic engine with a pressure of about three tons per square inch, is now applied, and with a groaning, cracking sound, the tortured powder is compressed up, up, until you almost imagine that the press itself is going to give way. When in motion this mill is justly feared more than any other in the yard, the immense pressure rendering it much more dangerous in its effects were it to explode. The explosive shock of one of these mills has been felt even in Philadelphia—a distance of thirty miles—where window panes have been broken by the shock.

After remaining in this press for about six hours the powder is taken out, when it resembles a very hard and compact substance, or an odd kind of stone. After this it is again run through a breaker with but one set of toothed rollers, which grinds and crumbles it up.

Next comes the graining mill, where we see a series of rollers composed of zinc, and executed in the best style of mechanical art, through which the broken press cake is run, thereby being thoroughly crushed into a very fine powder. Now comes what is generally thought to be the most interesting part of the process of powder making—the sieving or arranging of the powder into its proper and different sizes. By an ingenious arrangement of sieves of different sizes, arranged in regular order, the powder is passed over the sieves, gradually working its way into its properly assorted boxes, called respectively, large grain, fine grain, and meal powder dust, the latter being always

worked up again. Being thus entirely freed from dust, by the passage over the sieves, the process is continued by transporting the powder to the glazing mill. Here are large revolving barrels with "manholes" on one side. Into these barrels the powder is placed, with the manhole firmly battowed down, and a rotation is commenced, and continued until the grains, from constant contact with each other, become highly glazed.

In the lower grades of powder a very small quantity of plumbago is used to assist in the polish. Even now the powder is by no means ready for immediate use, as it contains an excess of moisture, and must now be removed to the dry house, which is a large frame building, within which are a long series of stacks of wooden trays, which are heated by an outside furnace. The heat, which is conveyed from the furnace inside the building by a peculiar process, is kept constantly up for about twenty hours, at a temperature of from 160° to 170° Fahrenheit, and until the powder contains only 1½ to 2 per cent. of moisture, which it is necessary for it to contain.

From the dry house the powder is conveyed to the packing house, where, after again being passed over silk sieves, to remove every particle of adhering dust, it is packed into water-tight canisters and kegs of various sizes, and then removed to the magazine.

This building, which is an immense frame structure, is perched on the hillside, at whose base glide the silent waters of the Brandywine. It is a lovely spot, and we forget the danger behind us as we gaze away up the stream, with its silent, dark green waters, throwing from their surface the shadows of the giant oaks and chestnuts which cover the hills between which they are embosomed, and whose picturesque shadows die away in the dim perspective, as if meeting against the distant skies. Here, indeed, the Indian warrior of by-gone days may have plighted his troth to some dusky maiden, or his shrill war-whoop may have sounded in strange contrast with the now pervading quiet. Who can imagine how this stillness is sometimes rudely broken by the crash and shock of an exploding mill—that these hills sometimes quake and tremble, and their crowning trees bend and sway with the terrible detonation of an explosion? Yet so it is, and men who a short time before were full of the hopes of a long life, are scattered piecemeal over these hills in shapeless masses, even unrecognizable to their mourning friends.

From such reflections as these we retrace our steps back down the shaded walk, between long lines of willow trees, (*Salix alba*) whose bright green foliage contrasts most pleasantly with the sterner oak, until we stop at the refinery, where a number of workmen are busily engaged in boiling and refining the saltpetre, which is manufactured here by a double decomposition of soda and chloride of potassium. Here there are twenty iron cauldrons embedded in the iron floor, each of which having a capacity of 1,000 gallons is kept constantly boiling. After many crystallizations, purifying and re-purifying, it is packed for draining; previous to this, however, it is pulverized under huge copper rollers. Just outside of this building is the coal, or rather charcoal house, where, in a peculiar sort of oven or retort, is burned the wood (mostly willow) which is to be used for charcoal. The wood is distilled of all its constituents, except the pure liquid, which, after the distillation, has a very disagreeable odor.

Beyond the charcoal house is the soda refinery, which is a new branch of soda manufacture wherein, for certain kinds of powder, nitrate of soda is substituted for nitrate of potash or saltpetre. Having wandered a little to look at the great piles of peeled willow, which is stowed and stacked away for daily use, we retrace our steps down the yard, past the dreaded mills and the sulphur house, with its piles of golden yellow dust, to the machine and millwright shops, where thousands of dollars are annually spent in endeavoring to devise labor and danger-saving machinery, and as we pass out of the frowning gate we realize that, although one may not think it the most cheerful place to live in, yet there hovers a spirit of quietness over the place.

NEDO.

—The following from *Blackwood* may be interesting to our military readers as indicative of the change rifle practice has made in warfare:—

"The distance at which guns open fire, and the dread of exposing them to the rifles of the infantry, prevent artillery from being brought as much to the front as in former times; while the system of concentrating fire without massing together large numbers of guns causes batteries to be scattered and out of hand, not only of the Generals of corps or of divisions, but of their own proper commandant; consequently the criticism more than once passed on the tactical employment of the artillery was to the effect that their operations were too diffuse and not sufficiently confined to the main object at issue. The very excellence of our guns, especially of the new 16-pounders, adds to the difficulty of solving the problem in regard to the line of demarkation between the individual responsibility permitted to commanders of batteries and their proper supervision by superior authority. The most effective fire of artillery is at ranges over a thousand yards; consequently to bring them nearer would be entailing danger without any advantage, excepting the moral support that the presence of guns might produce; but the further they are removed from the infantry the more they are beyond the control of the General who would probably be directing the movements of attack or defense, and there arises a risk lest his intention either from not having been sufficiently impressed on the commandant of artillery, or on the officers of the batteries, should fail to receive the support which the guns ought to afford."

The Rifle.

CREEDMOOR.

—This week at Creedmoor has been a busy one, and interest in rifle shooting has not flagged. As they may still have a good month's practice, our marksmen do not seem inclined to allow any opportunity to escape. On Thursday last, the 7th October, the several regiments composing the left wing of the Eleventh Brigade of Brooklyn were to have been on the range for practice in the second and third classes, as a preliminary for the Marksman's Badge, but the weather kept all back save the Eighty-fourth. The "Boylan" and "Conklin" badges were shot for by the Eighty-fourth Rifle Club. Corporal Davis of company H won the Boylan badge with 39 out of a possible 50, and Drum Major Nolte carried of the Conklin with 35. On Friday the 8th October, the Fifth Brigade Second, Division, closed their practice. The Thirtieth, Twenty-eighth, and Fourteenth sent their best men to the front to compete for the prizes. Conditions: 5 shots at 300 and 400 yards:—

THIRTEENTH REGIMENT.							
Name.	Yards.			Name.	Yards.		
	300	400	Tot'l		200	400	Tot'l
Corpl. Fadenburg.....	23	24	47	Lieut. Watson.....	14	12	26
Sergt. Miller.....	19	9	28	Lieut. Coffin.....	17	9	26
TWENTY-EIGHTH REGIMENT.							
Sergt. Feiten.....	19	21	40	Pvt. Schweitzel.....	20	10	30
Private Lutz.....	11	21	32	Lieut. Bossert....	16	10	26
FOURTEENTH REGIMENT.							
Pvt. Robinson.....	20	19	39	Capt. Parkinson....	22	12	34
Corpl. Miller.....	16	21	37	Pvt. Vauxhall.....	18	14	32
Pvt. Smith.....	18	16	34	Capt. Maher.....	16	14	30

Corporal Fadenburgh's total 47, in a possible 50, is a telling score.

On Saturday the Crouch and Turf, Field and Farm matches were shot. The Crouch Match is better known as the "Bullseye Match," the prize being given to the greatest number of bullseyes. The weather was good, but the breeze was uncertain. Conditions: 15 shots at 800, 900 and 1,000 yards; members of international teams excluded:—

W. B. FARWELL.

900.....	0 3 3 0 2 5 0 5 2 3 3 3 5 5.....	42	
1000.....	0 0 4 2 4 5 5 4 2 0 0 0 0 0.....	26—112	

The number of bullseyes made in order of merit was as follows:—Canfield, 19; Farwell, 17; Hyde, 15; Geiger, 14; Bruce, 11; Rathbone, 10; Mr. Crouch the giver of the badge, 9. Last month Mr. Canfield won the same badge with 23 bullseyes. It has been won with 18.

The Turf, Field and Farm badge followed. Distance, 200 yards, won by Mr. Elmendorf with 43 out of a possible 50, which is quite good shooting:—

Name.	Score.	Name.	Score.
W. S. Elmendorf.....	43	W. Burton.....	38
L. H. Greve.....	42	W. C. Clark.....	38
F. E. Scrymger.....	41	C. E. Huntington.....	38
J. L. Allen.....	41	T. L. Price.....	37
W. A. French.....	41	D. Channacey, Jr.....	37
S. G. Perry.....	41	E. A. Perry.....	36
W. B. Farwell.....	40	E. Hyde.....	36
H. Fisher.....	39	C. F. Robbins.....	36
G. Crouch.....	38	J. V. Meserole.....	36
L. C. Bruce.....	38		

There were seventeen other scores under 36.

There should have been held on Saturday a Marksman's Badge competition, to have been shot for by the rifle inspectors, but as none were on the ground the match was indefinitely postponed.

At a meeting held at Creedmoor on Thursday evening, a Creedmoor Rifle Guard was formed, composed of the markers and officers of the range. W. H. Brower was chosen President; E. H. Brower, Secretary, and Captain Klein, Treasurer. On the 19th inst. the Guard will have a competition for badges. The range will be 200 yards, ten shots for each man.

SUPPLEMENTARY PRIZES AT CREEDMOOR.—Prizes offered by Mr. Steward, of London, were awarded as follows: To E. H. Sandford, score 115, highest aggregate in the Gatlin Match, a binocular glass valued at \$45. To F. Hyde, score 173, highest aggregate at short, mid, and long range, a "Lord Bury" telescope, value \$40. Protest of the Seventy-ninth against score of the Twenty-second, in the Gatlin Match, was laid over by the committee of the N. R. A. for further action.

RIFLE ENGAGEMENTS FOR OCTOBER.—Luther Badge, Amateur Rifle Club, Saturday, October 16th at 10:30. Distances, 800, 900 and 1,000 yards; rounds, 5; weapon, any rifle; to be won three times. Seventh Regiment Shells Challenge Badge, Saturday's Oct. 16th and 30th, at 3 o'clock. Distance, 500 yards; weapon, Remington. Seventh Regiment rifles, Tuesday's, Oct. 12th and 26th, at 3 o'clock. Distance, 200 yards, weapon, Remington State Military Rifle; rounds, 5. First competition for the Hepburn Trophy, N. R. A. Saturday, October 23, 2 o'clock;

any breech loader; distances, 500, 800 and 1,000 yards; rounds, 7; entrance fee, \$1.; to be competed for monthly, and to be won three times, not necessarily consecutively. Morrison Medal, Scottish American Rifle Club, each Wednesday throughout the month at 2 o'clock; open to members of the S. A. R. C.; distances, 200 and 500 yards; weapon, any rifle. Fifth Competition Hofele Field Glass, Eight Regiment Rifle Club, Tuesday, Oct. 19th, 2 o'clock, open to members of the Eighth Regiment; distances, 200 and 500 yards; ten rounds; weapon, Remington State Military rifle. Challenge Cup, Saturday, October 16th, at 2 o'clock, Irish American Rifle Club, open to members of the I. A. R. C.; distances, 200 and 500 yards; rounds, 7; weapon, any rifle. On the 19th the Washington Gray Troop Rifle Club will shoot at Creedmoor for prizes.

—At the regular monthly meeting of the Board of Directors of the National Rifle Association, Major Henry Fulton resigned his position as Secretary, and Col. H. A. Gildersleeve was unanimously elected as his successor. Col. Gildersleeve previously held this position to the satisfaction of the board, and was cordially welcomed back to it.

—Some of these days skirmishing competitions must be started at Creedmoor. The English system is somewhat as follows: Competitors stand with unloaded pieces opposite their respective targets at certain specified distances. On the word advance, the marksmen run forward and load and fire. Say the rifleman starts at 500 yards. Between the stake at 500 and 400, he may be required according to the rules, to fire three times at the target, or having ten cartridges, to fire ten times between 500 and 100 yards, or with five cartridges, to shoot as he passes the 450, 350, 250, 200, 150 yard stake. There would be lots of amusement in this, though the markers might see no fun in it. That it would greatly improve the soldier is evident. Efficient skirmishing is one half of a battle.

THE FOREST AND STREAM BADGES.—The first match for the new badge presented by this paper was shot on Thursday evening last at Mr. Conlin's gallery, No. 930 Broadway. The match was shot under the Creedmoor rules as to counting, etc., and at a target reduced to correspond with the 200 yards range. The following is the result, Mr. Wm. Klein taking the first badge for the best score, Mr. G. W. Hamilton the second for the best score of centres, and Mr. J. E. Whitely the third for the best score of inners. The next match will be shot on Thursday, the 21st:

Name.	Score.	Name.	Score.
William Klein.....	43	Thomas Lloyd.....	39
G. W. Hamilton.....	40	W. K. Williamson.....	39
D. L. Beckwith.....	39	L. C. Bruce.....	38
M. P. Lennon.....	39	W. Conley.....	38
Robert McPeely.....	35	P. Hyde.....	35
W. B. Farwell.....	36	William Bailly.....	35
W. McDonald.....	36	William Moser.....	36
Robert Milley.....	35	F. H. Lord.....	35
A. G. Hellwig.....	35	J. McGlenssey.....	35
J. O. Wright.....	36	Alonzo Forrester.....	35
H. C. Merry.....	35	S. Freeman.....	32

Joseph Woodward.....	32	C. M. Velle.....	30
H. M. Post.....	31	E. P. Jones.....	29
George H. Glenney.....	31	H. Crowell.....	28
J. E. Whitely.....	30	A. E. Wiley.....	27
E. P. Whitney.....	30	H. M. Wheatmoore.....	27
H. C. Faber.....	29	Robert Boyde.....	26
J. H. Ripley.....	29		

YONKERS RIFLE ASSOCIATION.—The new Morsemere range at Yonkers, of the Yonkers Rifle Association, was duly opened on Saturday for the first competition. The Association numbers already thirty-five members. The officers of the Association are as follows:—President, G. Livingston Morse; Vice President, Col. Matt. H. Ellis; Secretary, H. L. Garrison; Range Committee, Frederick Shonnard and Douglas Smyth. Among those present at the opening of the range, were Thomas Cooper Campbell, Cyrus Cleveland, John T. Waring, Dr. J. N. Swasey, Jonathan Vail, Colonel John Bodine, L. W. Ballard and a large number of ladies. The first match was for two prizes, a handsome field glass and a life membership. Ten shots at 500 yards. We give the six best scores:—

Name.	Score.	Total.
Frederick Shonnard.....	5 3 3 3 5 3 4 2 3 2	23
Henry Quinn.....	0 3 3 4 4 3 5 3 5	33
Douglas Smyth.....	3 2 4 2 4 3 3 5 4	32
Colonel Bodine.....	4 4 0 4 0 4 2 3	23
Edward Connell.....	3 3 0 3 0 3 2 0 5	22
E. L. Morse.....	2 3 0 2 4 0 4 2 2	21

In the tie between Shonnard and Quinn, the former made a centre to the latter's inner and secured the first prize won at Morsemere. A handicap followed of 10 shots, which was handsomely won by Mr. Smyth, though having against him such doughty opponents as "Old Reliable" and Mr. Ballard. We append the scores:—

Name.	Score.	Total.
Smyth.....	4 5 5 4 4 4 5 4 4	43
Bodine.....	4 3 4 4 2 5 5 5 4	41
Ballard.....	4 3 5 3 5 5 3 3 4	39
Quinn.....	3 4 3 4 5 4 5 4 5	39
Shonnard.....	2 2 5 3 5 3 4 5 5	36

The opening of the range at Yonkers was a most brilliant one. The name chosen—Morsemere—is a happy one; the final "mere" is of the same family as our "moor" of Creedmoor.

PARTHIAN RIFLE CLUB OF HUDSON, N. Y.—The last competition match for the field glass by the Parthian Rifle Club, took place at the close of last week. The glass was won by Mr. Thomas Denegar. In addition to this valuable prize there were three other prizes offered, one being a year's subscription to the FOREST AND STREAM, which was won by Mr. J. A. Smith, the second a score book, won by Mr. Leonard Geiger.

—The Sixth Division Rifle Association, at Syracuse, has the following directors:—Major-Gen. D. P. Wood, Gen. Richardson, Col. Hawley, Lieut. Col. Manning, Major Griffin, Major McCarthy, Capt. Birchmeyer, Lieut. Edwards and Messrs. A. C. Chase and F. B. Klock. At a late meeting Major Griffin of the range committee presented

plans for the construction of a range, which the finance committee were instructed to proceed in establishing.

TELEGRAPHS ON RANGES.—A correspondent to the *Volunteer Service Gazette* writes thus sensibly:—

"There should, I think, be some telegraphic communication between the firing points and each set of targets. I mean such as would permit of messages of inquiry being sent and replied to, and not a mere signal."

[Why could not some of our military organizations add to their regiments a small body of telegraphers? A military telegraph is to-day one of the necessities of war. A ground wire could be laid readily at Creedmoor and practice could be had. To drive a buggy up and parade it before the targets in order to find out an error, sometimes stops firing for a half hour. It is a wonder the telegraph has not been used before at Creedmoor.—Ed.]

FOREIGN ITEMS.—It seems that the Swiss are getting uneasy in regard to their rifle laurels. Recently at Stuttgart, in a match between the Swiss and Germans, though the former were the victors, it was but by a few points. Three years ago the Germans, so it is stated by the Swiss, knew little or nothing about rifle shooting. Rifle drill among the German soldiers requires that each soldier should practice annually with 300 cartridges. A Swiss authority says that as they (the Swiss) have enlarged their target "they have lowered the former high standard of national rifle practice seriously."

—The influence of climate and light on rifle shooting are quite marked in Natal Africa. A correspondent of the *Natal Rifle Association*, writing to the *Volunteer Service Gazette*, says that "Wimbledon men break down with the lighter air and stronger lights of the country, but gradually improve and 'plant them on,' but are not at first able to beat the old stagers, who can bowl over a springbok at 500 yards, or make a pot shot bullseye from horseback at the same range." This method somewhat recalls Buffalo Bill's idea of shooting at Creedmoor, which was to ride a mustang at full speed, and with rifle in hand, blaze away at the targets. We have seen this kind of thing in romantic books of adventure, but when it is tried we want to be behind the horse and rider every time. The family circle of the English N. R. A. is a widespread one, and seems to flourish hugely in South Africa.

THE RIFLE IN INDIANA.

PORT WAYNE, Ind., Sept., 1875.

EDITOR FOREST AND STREAM:—

The Amateur Rifle Association of Fort Wayne and Longview, the name of our range, although unknown as yet to the country at large, are by no means unappreciated in this locality; and I wish you could have been with us to have witnessed the enthusiasm with which the good people of Kendallville received us on Saturday, Sept. 25. The occasion of the invitation was the "Ladies Centennial." The preparations for our reception had evidently been made. A large number of the most prominent citizens received the members of the club at the depot, whence they were driven to the Dodge House, and entertained until 11 o'clock, when dinner was served in elegant style.

It had been arranged that the shooting should take place across Bixler Lake, which lies close to town, and Vice President Cordrey made a careful measurement of the shortest distance across by means of a theodolite. It was found to be 750 yards. About 2 o'clock the "teams were driven to the point selected, where an immense crowd awaited them, the gate money going to the Centennial fund. The distance was a great surprise, as it had not been anticipated that it would be more than 500 yards, none of the club having shot at longer range than that. The targets, too, had been prepared at home, and were of the second class, with 22 inch bullseye only. At 750 yards range a target of the first class, with a bullseye 86 inches in diameter, would have been the right size. The fact that the shooting was across the water presented another difficulty, inasmuch as there was no means of judging the force of the wind, away from the firing point, except from the movement of the waves. Owing to the peculiar formation of the ground, the wind was unsteady and generally unreliable. These considerations will account for the poor scores made by some members of each team.

The ladies had provided a beautiful banner, on which appeared the emblematic rifles, crossed, and the inscription "Indiana Amateur Rifle Association." The conditions of the match allowed the use of any rifle, two sighting and five scoring shots. Col. Zollinger, Mayor of Fort Wayne, who is a member of the club, and an ardent rifleman, was executive officer. The Lafayette team won the match, as will be seen from the following score:—

LAFAYETTE.				LONGVIEW.			
Name.	Score.	T ^l		Name.	Score.	T ^l	
Dr. D. D. Weisell	5 3 0 4 5	17		W. W. Stennett	0 3 5 4 4	16	
J. C. Beeks	5 5 4 0 2	16		Z. Hopkins	2 0 4 3 5	14	
Gen. A. F. Devereux	4 2 4 4 0	14		J. S. Finkenbeimer	4 0 2 2 4	12	
W. Edsall	0 3 0 5 0	8		Dr. J. S. Gregg	4 0 0 3 0	7	
J. H. Stopple	0 2 0 3 0	5		Capt. James Harper	3 2 0 0 0	5	
Henry Overman	0 0 0 3 0	3		T. P. Cordrey	0 0 0 4 0	4	
C. Rundel	0 0 0 3 0	3		Geo. J. E. Mayer	0 0 0 4 0	4	
J. Leichner	2 0 0 0 0	2		C. Graffmiller	0 0 0 0 0	0	
Total	65			Total	62		

The rifles used were the Remington sporting, except Leichner's, a German breech loader; Graffmiller's, a muzzle loader, and Captain Devereux and W. W. Stennett's, Remington Creedmoor rifles. The members of the club speak in terms of the highest praise of the kindness and hospitality of their hosts. Yours truly, W. R. R.

RHODE ISLAND RIFLE ASSOCIATION.

CENTRAL FALLS, R. I., Sept. 27th, 1875.

EDITOR FOREST AND STREAM:—

As I have seen no notice in *FOREST AND STREAM* of the formation of the Rhode Island Rifle Association, I enclose a list of its officers. The Range Committee have hired a strip of land containing thirty-five acres at Greenwood Station, about eight miles from Providence on the Stonington Railroad, and are busily at work fitting it up. It is 4,000 feet long by 400 wide, and will require but very little grading to make it fit for use. The committee are in hopes to have it ready for use within two weeks. They will start with four targets—two of 200 yards, one each for 500 and 1,000 yards. The fence will probably be built next Spring. The Association has a large membership already, with some fine marksmen. Among them we would mention Mr. Rabbeth, of Pawtucket; Mr. Perkins, of Providence; Mr. Thomas, of Central Falls; Mr. Howe, of Providence, and many others who give promise of sustaining the credit of the State. Mr. Rabbeth is no novice in shooting, though he has practiced but little at long range. Last week, Tuesday, he made 45 out of a possible 50, and on Thursday last, in his forenoon practice, made 95 out of 100, and on the afternoon of the same day made 50 out of a possible 50; in the forenoon he made fourteen bullseyes in succession, and in the afternoon every shot (10) were bullseyes. This shooting was

done at Valley Falls, some five miles from Providence, on the range of Mr. Mr. C. M. Perkins, at 500 yards, with regulation target, and according to the rules of the National Association, in the presence of several gentlemen.

The officers of the Association are, Maj. General Ambrose E. Burnside, president; Hon. George F. Wilson, 1st vice; John B. Anthony, 2d vice; Arthur W. Dennis, treas.; Capt. E. F. Annable, sec'y. Directors, Maj. General Ambrose E. Burnside, Maj. General Wm. R. Walker, Brig. General Thomas W. Chace, Brig. General Frederick Miller, Brig. General Heber LeFavour, Brig. General James Shaw, Jr., Colonel Elisha Dyer, Jr., Colonel R. H. I. Goddard, Colonel A. N. Crandall, Colonel E. L. Freeman, Colonel A. C. Eddy, Major Hugh Hammill, Captain E. F. Annable, Hon. George F. Wilson, John B. Anthony, Esq., Mr. C. H. Perkins, Mr. Newton Dexter, Mr. A. W. Dennis. Superintendent, Captain E. F. Annable; assistant superintendent, Major Hugh Hammill.

E. L. F.

BROOKLYN, N. Y., October 1st, 1875.

EDITOR FOREST AND STREAM:—

At a rifle match held at Bellasylva, Wyoming county, Pa., in the last week of September, the following scores were made: Distance, 100 yards; target, 2 feet square; bullseye, 6 inches; center, 1 foot; bullseye counting 4, center 3, and outer 2:—

Name.	Score.	Name.	Score.
Geo. Housewart	3 4 3 4 3	Louis Ernst	0 3 2 3 4
John Housewart	2 4 3 3 3	Joe Girven	2 2 1 2 2
Bruce Girven	2 3 4 4 4	August Eicht	3 2 2 3 3
Rush Girven	2 3 3 3 3	A. T. Ross	2 2 2 2 2
John Delclisur	3 2 3 2 3		

Messrs. Bruce Girven and John Delclisur used a Winchester repeating rifle and Remington sporting rifle respectively; the rest shot with muzzle loaders.

D.

HOLYOKE, Mass., October 11th, 1875.

EDITOR FOREST AND STREAM:—

The Holyoke Rifle Club now numbers forty members; field days each Saturday. Only a few members entered for the contest last Saturday, October 9th. The following is the score; distance, 400 yards; seven shots; position, any without rest:—

Name.	Score.	Name.	Score.
A. Knight	23	E. A. Whiting	22
A. Manger	32	J. E. Mercier	21
D. H. Smith	34	J. Frank	21
W. H. Heyward	29	Samuel Chapman	19
E. C. Smith	26		

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

THE RESOLUTE AND ESTELLE.—The first of the series of races arising out of the challenge of Mr. Rufus Hatch was sailed on Wednesday last. The day was disagreeable in the extreme; raining, and with a strong easterly wind that brought the coasters down to double reefs and deterred any of the yachts at the club house anchorage from accompanying the contestants over the course. The arrangements were very satisfactory. Mr. Krebs as judge for the Resolute took his station on board the Estelle, and Mr. Chase, judge for the Estelle, was on board the Resolute. The signal being given, the Resolute at 9:19:35 crossed the line, followed in less than half a minute by her smaller antagonist. The course was that usually sailed over in the New York Yacht Club regattas. The wind was about east-south-east, enabling them to lay a course for the Southwest Spit, which was rounded by the Resolute four minutes ahead of the Estelle. From this point to the light-ship it was a dead beat to windward, and once clear of the Hook, the heavy seas almost buried both yachts. But little being known of the sailing qualities of the Estelle her movements were watched with much interest, and her fine weather qualities excited general admiration. The Resolute's jib topsail having gotten adrift, volunteers were called for to stow it, and the four men who responded were at times completely submerged. At 12:30 the Resolute was close to the light-ship, but owing to a miscalculation was unable to fetch it, and being compelled to make two more tacks lost several minutes by the operation. At 12:34:30 she lowered her peak and gybed around the Estelle, rounding just four minutes and a half after. Topsails were now set and both yachts headed for the Spit again with sails wing and wing. At one o'clock an unfortunate flaw struck the Resolute and carrying over her foresail, the strain of the foretopsail against the stay carried away her foretopmast. At the Southwest Spit the Resolute had gained a little more on the Estelle and on finally reaching the club house was more than ten minutes ahead. Her time allowance to the Estelle, however, was twelve minutes and ten seconds, which gave the race and the dinner to the latter by two minutes and eight seconds. The official time as given out by the judges was as follows:—

Yacht.	Start.	Arrival.	Actual time.	Corrected time.
	H. M. S.	H. M. S.	H. M. S.	H. M. S.
Estelle	9 19 53	2 18 28	4 58 30	4 46 20
Resolute	9 19 35	2 08 03	5 48 28	4 48 28

It was a good race, pluckily sailed and stubbornly contested; a few more such would relieve our yachtsmen of the imputation of being only fair weather sailors.

THE RESOLUTE AND COMET.—The second of the "Hatch" matches was sailed on Friday over the same course. The day was a most unpropitious one, the wind being so light as to indicate a drifting match, and Mr. Hatch was desirous of postponing the match, but to this Mr. Langley would not consent, and he also obtained a further concession in his favor of an abrogation of the rule of the club which demands that all races shall be sailed within eight hours. The result was a forgone conclusion; nothing but a sudden gale of wind could prevent the Comet from winning, and in addition she was receiving a time allowance of 17m. 38s. Mr. James D. Smith was on board of the Comet as judge for Mr. Hatch, and Mr. G. L. Haight accompanied the Resolute in the same capacity for Mr. Langley. Shortly after half-past ten o'clock the signal was given for the start, and with the light air that was stirring the Comet very easily took the lead. The match was for the most part devoid of interest. It was four o'clock before the Comet reached the light-ship, with the Resolute but three minutes astern. After turning the wind fresh-

ened for a while but again fell away. At the Southwest Spit, on the return, the Comet had increased her lead to ten minutes. From this point there was more wind and the Resolute gained so rapidly that when the home time was reached those on board claimed that she was leading. The judges could not agree on this point owing to the darkness, but the race was awarded to the Comet on time allowance. Both yachts were over the eight hours prescribed by the club rules for making the course, and had not Mr. Hatch, previous to the start waved this rule, the race would have been sailed again. Mr. Hatch has challenged both the Comet and Estelle to another trial, but Mr. Langley, for the Comet, declines.

PERTH AMBOY YACHT CLUB.—A race was sailed on Saturday, October 9th, by the Perth Amboy Yacht Club for a handsome silk pennant, presented for the purpose by the Misses Meeker of that city. As usual, there was very little wind, and consequently the race was long and comparatively unexciting. The prize was easily won, however, by Com. Miller's yacht Cynthia, of Elizabeth, formerly the Lizzie. The conditions of the race were that boats should be sailed by their owners and carry working rig only, and had there been a good breeze the winner of that pennant would have had to earn it.

THE SEAWANHAKA OCEAN RACE FOR SLOOPS.—Captain Center, of the Vindex, last Spring offered a silver prize of the value of \$500, to be sailed for by sloops of the Seawanhaka Club some time in October, the course to be from Sandy Hook Lightship to and around Cape May Five-fathom Lightship and return, to be sailed without time allowance. The regatta committee were to have received entries up to 3 P. M., of Tuesday and fixed upon a day not later than the 20th inst., on which the match would be sailed.

ATLANTA BOAT CLUB.—This club held their twenty-eighth annual regatta on Saturday last on the Harlem River. The water was as smooth as glass and a large number of spectators had assembled on the various steamers to do honor to the occasion. The interest in the principal race, that for the senior single sculls, was somewhat marred by the withdrawal of Mr. Eben Lozee, the present holder of the championship belt. In his absence Mr. R. B. Bainbridge was made the favorite at the odds of five to three, but there were not wanting supporters for Mr. P. C. Ackerman, whose condition gave promise of pushing the favorite closely. Mr. S. M. Clarke also started, but fouling a stake was out of the race. The distance was three miles with a turn. Bainbridge took the lead at starting but was passed by Ackerman, who finally won in 23m. 38½s. The second race was for pair-oared gigs, two miles with a turn, the crews being W. H. Downs, stroke; E. D. Blake, bow, and J. H. Kent, coxswain; and J. E. Eustis, stroke; W. H. Catlin, bow, and B. F. Kobbe, coxswain. Downs' crew were the winners in 19m. 12s.; that of their opponents 19m. 16½s. A single-scull contest between juniors was the third race, the prize being the Columbia belt, distance two miles with a turn. There were four entries: E. Mills, Jr., Geo. M. Young, John Gunster, and Thomas Scanlon. At the finish Mills' time was 15m. 14½s; Scanlon's, 15m. 36½s., and Gunster's 15m. 56s. Young's time was not taken. For the fourth race, with four-oared shells, same distance, there were three entries, but only two crews came to the scratch. They consisted of W. H. Downs, stroke; P. C. Ackerman, No. 3; E. Mills, Jr., No. 2; E. Blake, bow, and J. E. Eustis, stroke; W. H. Catlin, No. 3; S. M. Clarke, No. 2, and E. Lozee, bow. The race was a plucky one throughout, but Downs' boat finally came in an easy winner. Time—13m. 37½s., and its rival, 13m. 39½s. The last race was between the eight-oared barges Atlanta and Gramercy, distance one mile; won by the Atlanta in 7m. 37½s.

GRAMERCY BOAT CLUB.—The sixth annual regatta of this club was rowed on the Harlem River on Friday last. The weather, however, limited the attendance. The first race was the senior sculls for the championship belt, three miles straightaway. Frank Winne and H. R. Mills were the only starters, the former winning in 26m. 56s. Three started for the junior sculls, the distance being one mile straightaway, H. Spitzka winning in 10m. The third race was for pair-oared gigs, distance one mile, with the following entries:—H. Brown, bow; H. R. Mills, stroke; C. I. Hudson, coxswain; blue and white. M. L. Sutton, bow; E. J. Atkinson, stroke; E. B. Welch, coxswain; blue and red. G. H. Pierce, bow; C. Earwicker, stroke; D. Pentz, coxswain; red and white. Hudson's crew won in 10m. 31s. The fourth race, for four-oared shells, was declared by the referee "no race."

The day's sport wound up with a contest between two eight-oared barges, the distance being one mile, for a set of colors. The following entered:—J. Kiefer, bow; H. Spitzka, No. 2; G. H. Pierce, No. 3; H. Brown, No. 4; F. Winne, No. 5; W. H. Smith, No. 6; M. L. Sutton, No. 7; E. J. Atkinson, stroke; C. F. Naething, coxswain; blue and red. H. Mills, bow; D. Pentz, No. 2; J. Baird, No. 3; H. Braisted, No. 4; H. A. Palmstine, No. 5; C. H. Wilcox, No. 6; R. E. Wiesner, No. 7; H. R. Mills, stroke; C. I. Hudson, coxswain; blue and white. The start was an even one and for some distance the two crews pulled well together. After a ten minutes' struggle blue and red came in the winners by a length.

NAUTILUS BOAT CLUB.—The last of a series of monthly races for the senior and junior championship of this club took place on Friday last on the Harlem River. For the senior championship Fred. Levein and Gerald McLaughlin rowed over a two-mile straightaway course from the powder schooner, McLaughlin winning in 14m. 45s. This race decides the match, as McLaughlin has won a majority of the series. For the junior championship Daniel Herndon and Louis Rouse entered, the course being one mile from the same starting point. Herndon won in 7m., which makes him the junior champion of the club.

BOAT RACE AT SPRINGFIELD.—The double scull Whitehall boat race between M. DeLowrey and M. J. Mahoney, of the Boston Boat Club, and F. A. Plaisted and M. Ahern, of San Francisco, took place on the Connecticut River at Springfield on Tuesday afternoon of last week. Owing to a foul the race, which was over a five-mile course, was rowed twice, the Boston men winning in 46m. 18s.

About ten miles from Denver, Col., is situated a mammoth henry, which was established a short time ago by two brothers. It covers four acres, and is laid out in streets and avenues like a village. The population is about 2,000, divided into Brahmas, Cochins, and Dorkings.

HURST'S
Stereoscopic Studies

Natural History

For Object Teaching in Schools

PARLOR ENTERTAINMENT.

We are prepared to furnish the first sixty numbers of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign specimens, and various Animals and Birds in grotesque attitudes, never however violating their natural instincts. We offer these views not as pictures only, but as studies from nature. One of the great moving elements in our modern system of education is object teaching. The unerring fidelity of the stereoscope transfers the animals and birds from their natural habitat to the rooms of the student and the fireside of our homes, where they cannot fail to leave a lasting impression of the form, color, habits, and locality of each specimen.

An experience of more than twenty-five years as Taxidermist of the New York State Cabinet of Natural History, and in gathering his large collection of native and foreign specimens, enables Mr. Hurst to combine in every view the locality of the specimen with its appropriate rocks, woods or water, and coloring from the originals.

SMOKE VANITY FAIR.
It is shaved from the best Natural Leaf, for Meersbaum and Cigarettes. Does not make the tongue sore. Liberal sample on receipt of money. Highest award, Vienna, 1873.
Send for circular, **WM. S. KIMBALL & CO.,**
PEERLESS TOBACCO WORKS, Rochester, N. Y.

From J. E. CORNELL, Fall River, Mass.
Your Vanity Fair smoking tobacco is the best I ever used.

It has a decidedly beneficial effect upon the intellectual power. Companion in our solitude, amuser in our idleness, and soother in our troubles.

From F. B. TAYLOR, U. S. A., in camp, Ellijay, Ga.
I consider your Vanity Fair of superior quality, its flavor approximating so closely to Havana roll leaf that I can scarcely tell the difference in cigarettes. Being a great lover and consumer, and conscious of how much happiness you are conferring upon my brethren of the weed, in your efforts to furnish them a good article, I desire to express my appreciation and thanks.

From E. A. GREENE, Richmond, Vt.
Found your Vanity Fair at Montpelier, and think it the best smoking tobacco out.

There must be some magical properties in it akin to the wonderful Eastern plant that made captive the senses of those who inhaled it.

** This is a book that has long been needed by Winter tourists to Florida and persons seeking settlement there. It gives a full classification of the game and fish of the Southern Peninsula, routes of interior and coastwise travel, the agricultural resources of the country, and sites for settlement, hints for camping out, resorts for game, hotels, and such other information as will be of great benefit to visitors seeking Florida for health, pleasure, exploration, or permanent settlement.

SCOVILL'S

Blood and Liver Syrup

All cutaneous eruptions on the face or body indicate An Impure Condition of the Blood, and this may or may not be SCROFULA; but in either case is nothing more than an insidious poison, that

BURNS LIKE A TERRIBLE FIRE

as it courses through the veins, sowing seeds of death with every pulsation.

In this condition of things something is needed AT ONCE TO CLEANSE THE BLOOD; and

Scovill's Blood and Liver Syrup

will positively effect this desideratum, expelling every trace of disease from the blood and system and leaving the skin

SOFT, FAIR AND BEAUTIFUL.

Hundreds of certificates attest its value. Price \$1 a bottle.

FOR SALE BY ALL DRUGGISTS.

Dr. Rogers's
VEGETABLE WORM SYRUP

A brave man may suffer pain, when inflicted upon himself, heroically; but he

Cannot see his Child Suffer.

There is no other malady incident to childhood that is accompanied with more indescribable wretchedness to the little sufferers than that

Produced by Worms;

and when the parent fully comprehends the situation he will not delay a moment in securing the most prompt and efficient remedies to insure the expulsion of the intruders. The remedy may be found in

Dr. Roger's Vegetable Worm Syrup.

Please bear in mind that ROGERS' WORM SYRUP is the reliable preparation.

ROGERS' WORM SYRUP is a palatable preparation.

ROGERS' WORM SYRUP is liked by children.

ROGERS' WORM SYRUP positively destroys worms.

ROGERS' WORM SYRUP leaves no bad effects.

ROGERS' WORM SYRUP is highly recommended by physicians, and is unquestionably the best WORM MEDICINE IN THE WORLD.

Price 25 cents. For sale by all druggists.

HENRY'S
Carbolic Salve.

FOR SALE BY ALL DRUGGISTS.

The wonderful celerity with which this combination of Carbolic Acid with other soothing and Curative Emollients acts, is something akin to the marvelous.

It is with pride that the proprietors call attention to the gratifying fact that

Physicians give it the highest
meed of praise,

and use it and prescribe it in their practice.

NEW YORK, Dec. 22, 1869.

JOHN F. HENRY, Esq.:

Your CARBOLIC SALVE proves an excellent article, and I thank you for it. This is another evidence of the great value of the discovery of Carbolic Acid. Yours truly,

GEO. B. LINCOLN,

Pres't Board of Health.

Price 25 cents per box.

REV. R. B. LOCKWOOD'S

Catarrh Cure!

The Best Remedy Known, and Endorsed by all the Principal Physicians of the Country.

Rev. R. B. Lockwood's Nasal Douche will be found valuable in obstinate chronic cases.

Rev. R. B. Lockwood's Liver and Stomach Pills dyspepsia, receive the endorsement of thousands. Price 50 cents each.

JOHN F. HENRY, CURRAN & CO., Proprietors, 8 and 9 College Place, New York.

HENRY'S
SEWING MACHINE OIL

A PURE OIL that does not gum up and has the endorsement of the principal Sewing Machine Companies.

Price 25 Cents per Bottle.

MOTT'S LIVER PILLS

It is easy enough to make a pill, but to make a good pill, and that's the difficulty. There are cheap, harsh, drastic pills, that are of even less benefit than a dose of salts. But a good medicine, like Dr. Mott's Liver Pills, which penetrates to the seat of disease, is a desideratum indeed. Will positively cure all diseases of the Liver. Sold everywhere. Price 25 cents per box.

Green's Oxygenated Bitters.

At certain periods of life a tonic is a necessity; but there is danger in using stimulants that injure the organs of digestion while giving temporary relief. To obviate this and present to the public a tonic free from Alcoholic Poison, Dr. Green prepared the Oxygenated Bitters, a sure cure for dyspepsia and all kindred complaints. Sold everywhere. Price \$1 per bottle.

Packer's All-Healing Tar Soap.

It cures all kinds of Skin Diseases with a most wonderful certainty; it promotes cleanliness, personal purity and general health; it is a preventive of many kinds of disease, and it is an absolute necessity in the nursery. Price 25 cents.

Miscellaneous.

Breech Loaders.
W. & C. SCOTT & SONS.

Winners of the "Turf, Field and Farm" Gun Trials.

(See issue October 3d, 1873.)

In which competition the committees have awarded our guns, First and Second for POINTS OF MERIT OF ACTION, MATERIALS, PROPORTION, AND SHOOTING QUALITIES combined, in all the four classes.

THE PREMIER GUN.

W. & C. SCOTT & SON call attention to their very FINEST weapon, combining all their recent improvements, marked on the rib between their name and London, address the brand—"THE PREMIER QUALITY."

Medium and fine guns bear full name and address, and plain guns full name and "London" only.

Each gun is numbered and the actions are stamped with name and trade mark.

W. & C. SCOTT & SON, Sole makers of the Patent Top Lever, solid, Double Locking Bolt Breech Loader, bearing the full name of the firm. W. & C. SCOTT & SON caution sportsmen against imitations of their patent and name. Guns bearing the name abbreviated, or with different initials, are not genuine.

TRIAL OF SCOTT & GREENER'S NEW SYSTEM OF BORING, BY THE EDITOR OF "THE FIELD," LONDON.

(See The Field, January 30th, 1875.)

"From a comparison of the two tables it will be seen that with Walker's shot, Messrs. Scott's guns showed a marked superiority over Mr. Greener's, both in average and in the highest score made. Indeed, with the left barrel, in his third shot, Mr. Scott got a selected group pattern of 239 and a penetration of 37, equalling the highest pattern made by Mr. Greener, and exceeding the penetration of that particular shot by eight sheets."

H. C. Squires, No. 1, Courtlandt st. New York.

THE GREAT
London Gun Trial,
1875.

W. W. GREENER begs to inform his numerous clients in the United States that he has been very successful in the above trial, having secured the first prize, a silver cup, value 40 guineas—class 2 for 12 bores; also winner in class 1 for 8 and 10 bores, and class 4 for 20 bores. He has won in all the classes for improved boring, which is upon a different plan to any other maker, and is far superior in the three most essential points, viz., PATTERN, PENETRATION, and REGULARITY OF SHOOTING.

Mr. HENRY C. SQUIRES, of No. 1 Cortlandt St., New York, is now importing my DOUBLE CLOSE-SHOOTING GUNS to order, an invoice of which will be shipped to him on the 1st July, and can be examined about the 15th. All special orders given to Mr. Squires will be carefully filled. A full report of the GREAT TRIAL, showing the marked superiority of my guns over guns made by Dougal, Pape, Tolley, and others, will shortly be published, and can be had on application at No. 1 Cortlandt St.

W. W. GREENER,
Champion Gun Maker,

St. Mary's Works, Birmingham, England.

HENRY C. SQUIRES, of No. 1 Cortlandt street, has just received an invoice of these close-shooting guns, and from him any information in reference to the results of the Great Trial can be obtained on application.

J. & W. TOLLEY'S
FINE ENGLISH
BREECH LOADING GUNS,
Made to Order

Miscellaneous.

W. W. GREENER'S

DOUBLE CLOSE-SHOOTING GUNS. Winner of the Silver Cup, value 40 guineas, at the Great London Field Trial 1875, beating 33 competitors with 68 guns, also winning in all the other classes for the Improved System of Boring. These guns will kill from 80 to 100 yards, loaded with large shot, and will shoot well with small shot with a less powder charge than guns bored upon the old system. For report of the Gun Trial apply to Messrs. McLaren, Williams & Co., Agents, St. Louis, U. S. A. Address

W. W. GREENER,

St. Mary's Works, Birmingham, England.

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENGTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supercede all the complicated and manifold grips now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.

Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.

NO. 25 SOUTH CASTLE STREET,

LIVERPOOL.

Established 1780.

aug26-tf

J. D. DOUGALL'S
EXPRESS SHOT GUNS.

(Title registered.)

SHOWN by trials at Wimbledon by Editor of the Field to possess the GREATEST PENETRATION and therefore LONGEST RANGE—thus: Circle, 30 inches; 300 pellets; average, 191; penetration, 37. The Editor's trial of Greener guns with 340 pellets of same shot and same charge of powder, gave 180, and penetration 30, although there were 40 more pellets in each charge. Should any controversy arise as to the durability of these new systems, we herewith warn all beforehand that our system is our own invention (though founded on the American idea) and is DURABLE, a fact remarked on by the Field, that the guns tried had been in use during last season, and references permitted to the owners. Send for Illustrated Circulars to

59 St. James's Street London.

Mortimer & Kirkwood,
24 ELM Street, Boston, Mass

Dittmar Powder Manufacturing Co.,
MANUFACTURERS OF

CARL DITTMAR'S Patent Sporting Powder

BLASTING POWDERS, &c.,
NEPONSET, MASS.

I have succeeded in overcoming all objections that may have been raised to the kind of Sporting Powder previously manufactured by me. By an entirely new process, and with the assistance of new machinery, I am now able to make the grains as hard as those of Black Powder, thus avoiding the great compressibility of the kind first introduced, and allowing an even loading every time. In addition to the greater density of the new powder, I have also obviated the great rapidity of ignition. There is now no fear of overloading. No necessity for any special directions for use, simply use it like Black Powder, and use the same quantity in bulk.

The powder can now be used from an ordinary powder flask. The same kind of powder can be used for both Shot Guns and Rifles. The sizes and numbers for the grain are the same as those for black powder. The Medium size is best adapted for general purposes, the largest size for small bores, and the finest size for large bores.

Every package of the new powder bears my signature. None genuine without it.

I manufacture none of the old kind, and all connection with my former agency, the so-called Dittmar Powder Co., is at an end. Please address all orders to me. Any letters unanswered or orders not filled since September 1st will be immediately attended to if parties will please re-write to me. I will exchange, when requested, any of my powder bought before that date for the new kind.

My best thanks to the friends of my New Powder, who have by their kind suggestions helped me to make it perfect, so that I now have no doubt of its complete success.

CARL DITTMAR.

roughest usage. A very

light, strong and durable

frame of ash or other tough

wood with canvas cover, and can be folded in one-eighth space, for transportation, and carried in a light buggy, wagon, horseback, or by single person, and can be unfolded ready for use in three minutes' time. Boats shipped by express anywhere, same rate of freight as other goods. For descriptive circular and price list, address as above.

THE HAZARD POWDER CO., MANUFACTURERS OF GUNPOWDER.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFg, FFG, and "Sea Shooting" FG, in kegs of 25 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFFg is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFFg and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER. GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office.

88 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6 1/2 lbs. each, and in canisters of 1 and 5 lbs.

AUDUBON POWDER,

Very quick. For woodcock and quail Nos. 1 to 4. Packed in metal kegs of 12 1/2 lbs. and 6 1/2 lbs., and in pound canisters.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes Fg, FFg, FFFg, the last being the finest and most used. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 pound.

All of the above give high velocities and less resistance than any other brands made.

Ramblings in Oregon.

For Forest and Stream.

PART III.

FROM Albany I went to Salem, the capital of the State. This is situated on the Willamette River, and has a population of 5,000. It is one of the most picturesque cities on the continent, as every dwelling house is surrounded by a pretty flower garden, and often by shade trees. The surrounding country is highly cultivated, and this gives the place a very interesting appearance. Salem contains several good public buildings, the most important being the penitentiary, an octagonal structure with three radiating wings. It cost about \$160,000—no small sum for the Oregonians to pay. It is a model institution in every manner, and the unfortunate inmates who are domiciled within its walls are as well cared for as the law will permit. A Capitol building is now in process of construction, and when finished will be a plain, substantial, and unpretending edifice of the Roman order of architecture. The Legislature has heretofore held its sessions in a couple of rooms in the second story of a shop, but now that the State is increasing in wealth and importance the Solons do not care to occupy their simple apartments any longer. Perhaps none of the galaxy said to form the Union has had her laws prepared at such little cost as Oregon. When first organized into a Territory, after the vacation of the Hudson Bay Company, the members of the Legislature were allowed \$1 25 per day. They had to board themselves, but, being indifferent to the Grundies, they found this an easy matter, as they provided themselves with food and prepared a wigwam of boughs or tents, where they rested after the severe toil of the debate. They were primitive people in those days; a fact which is attested by their simple mode of life and the instructions they gave the gentleman whom they honored with the title of Judge of the Supreme Court, for he was told to "do as he liked until he could get the New York statutes." He proved to be a Rhadamanthus, for though his justice was often incompatible with the wordy tomes of his prototypes elsewhere, yet it was founded on natural laws, and, as such, gave satisfaction. When the Territory became a State the pay of the legislators was increased to \$3 per diem, and that of the Governor from naught to \$1,500 per annum. I witnessed a night session of the Oregon House of Representatives, and a more mirth-loving party it would be difficult to find, judging from their actions. The speaker's chair was occupied by a witty member of the "Third House," and beneath him sat grouped the Solons of the State, who, amid much hilarity, debated hypothetical questions. Whenever the decision of the Chair was needed, and it seemed to be every minute, the worthy functionary who represented that wooden authority referred to the patent office reports or to an old almanac for instruction, and read from them with much gravity something about a new bolt, or facts about onions. The debate was becoming fast, furious, and provokingly personal, when a "message from the Governor," announced by a very small page, brought the assemblage to order and caused a resumption of the regular business, much to the regret of the audience that packed every cranny of the room, and even disputed their seats with members. Such scenes may not represent in a worthy manner the dignity of statesmen, yet it was thoroughly characteristic of pioneer life in its hilarious freedom. Salem was settled by the missionaries of the Methodist church, sent out to instruct the Indians in 1840-1. The country was then British territory—at least it was governed by a British monopoly, the Hudson Bay Company—and from the time these pilgrims settled in the then unknown Oregon they were the most determined foes of all English intrusion, and did more than any class to have the State annexed to the United States, principally through the influence of Senator Benton. But for their labors, and those of the hardy pioneers who followed them, the whole of the Pacific coast west of the Rocky Mountains and north of California would to-day acknowledge the English standard as its flag. The diplomatic correspondence which

gave that immense region to the Union displayed the brilliancy of our statesmen to better advantage than any we have had since, for it was characterized by subtlety, boldness, and the most undoubted logic. The treaty then made is known as the "Ashburton Treaty," and was one of the acts which made Polk's administration so popular. The early dedication of Salem to the cause of religion is felt there yet, for it contains more churches than any city of its size found between the Missouri River and the Pacific Ocean. The residents seem to be largely composed of the natives of the New England and Middle States, judging from their quietude and love of learning. They have a university for boys and girls under the control of the Methodist denomination, and a splendid structure for young ladies under charge of the Sisters of Mercy. The former, though bearing a high sounding name, must not be supposed to resemble any of the great seats of learning known in the Atlantic States; yet it is fully capable of imparting a thorough literary or medical education. It has a large corps of teachers in every department—although the building is rather small, and as ungainly a mass of brick as one would care to behold—who occupy recognized positions in the classical and scientific world.

From Salem I went to Oregon City, thirty-eight miles further south, a town which one would take for another Sleepy Hollow. The scenery in the vicinity has the elements of the picturesque, and this relieves the place of its monotony for a brief period. High walls of augitic basalt extend along the rear of the city and crowd it towards the river. To reach the summit of these bluffs, wooden stairs wind around them and terminate in a ledge of broken scoria. The entire region in this neighborhood is of igneous origin, hence the forests are very heavy, and the soil is unproductive, except where alluvial deposits exist along the course of streams. This basaltic formation loses its individuality to the south, and is supplanted by argillaceous shales and schists. The Willamette Falls are in close proximity to the city. These have a height of thirty-eight feet, and present a respectable array of eddies and cascades in the rainy season, as they extend the width of the river. A ship canal now enables river boats to pass them, so that communication on the river is uninterrupted to the head of navigation, a distance of one hundred and forty miles. Leaving this place I next visited Portland, fifteen miles to the north. This is the metropolis of Oregon, and the pride of its citizens. It has a population of about 13,000, and is probably the richest city of its size in the world. It holds commercial intercourse with the South American republics, the islands of the south Pacific, the Oriental nations, and the British kingdom. The greater portion of its trade is with the latter, as several London houses have branch establishments there for the purpose of dealing in grain, canned salmon, hides and other products. It exported products valued at one million dollars to England last year, and as much more to other countries, while its exports to domestic ports must have been at least three times these sums. This would make the total annual exports amount to eight million dollars, and this is a close approximation. Considering that the white population of the State does not exceed one hundred thousand, this is a very good showing, and one which reflects credit on the people, as it proves them to be both enterprising and industrious. The latter qualities are evident from the fine warehouses and mercantile establishments which grace the city, while the general thrift of the citizens is proved by the many elegant private residences of the wealthy and the neat cottages of the poorer classes. No signs of poverty display themselves, for the lowliest laborer receives liberal wages, and is generally in regular employment. The latter is certainly a much higher individual, socially and morally, than his kindred in Eastern cities, as he has a better opportunity for the display of his manhood, the rules of caste not being so arbitrary as they are elsewhere. Even the Chinese population, which is comparatively large, seems more contented than that of San Francisco. This is largely due to the fact that the prejudice against race, which is so active in the southern city, is unknown in Portland, or if it is care is taken not to manifest it. The Celestials occupy a

series of low, foul rookeries near the principal business street, and these abodes of filth and disease are the only blot on the fair face of the city. The residences of the principal Chinese merchants also reek with vile odors, the product of bad ventilation, tobacco smoke, opium, often putrifying meat, and general uncleanness, so that the proverbial bad habits of the Chinese are verified. Even their temple, or Joss house, partakes of the characteristics of the dwellings, it being a rickety, unswept and unpainted wooden structure, which is garnished in the interior with a few scraps of tinsel that are arranged about the gods. The latter are as unkempt as their abode, for not a vestige of paint remains on one of them, except an individual that typifies moral greatness by leading a mule, despite its earnest protestations with legs and head, from one portion of a city to another. This fellow is kept in a cage, hence his bright looks and the freshness of his tawdry apparel. The respect that those children of the Flowery Land bear for their temple and its sacred host of deities may be deduced from the fact that they play cards and smoke opium there. I saw four or five vagabonds enjoying themselves there by sucking heavy brass pipes filled with this narcotic; and judging from their vacant, glassy eyes, yellowish, wrinkled skin and ghoulis appearance, they were long its votaries. A more wretched picture of humanity cannot be seen anywhere than the slaves who are enchained by this drug. The Chinese temple presents a sorry contrast to the Christian churches so numerous there, and while none of the latter can be called handsome, yet all are solid and commodious. The proudest structures in the city are the public schools, which are large, well-furnished, and admirably adapted to their purpose. Education receives a large share of attention from all classes, a fact which is evident by the number of academies, and their high order. The Catholics, Episcopalians, and Methodists have schools for the education of both sexes, all of excellent reputation.

Society in Portland is cosmopolitan, but not so much so as in cities of equal size in California; and, although these petty, childish little distinctions of political and religious creeds are, as a rule, obliterated, yet coteries rather than broad social gatherings seem to be the most prevalent form of uniting the people for an evening's pleasure. Democracy is the ruling social penate, on the very natural principle, or ground, that the most exalted in the city have risen by their own efforts from obscurity, and, being known to all the old inhabitants, any pluming with stilted pretence would become a matter of ridicule. The people, as a body, are much colder and more sedate than those of California, and also lack the frankness and electrical buoyancy of the latter. This frigidity must be the result of climate, as both classes are composed of the same material, yet, while those of the more southern region are easily aroused, and prompt to undertake any scheme that promises even the most shadowy results, their northern kindred never yield to excitement, and indulge in no speculations that do not give an emphatic indication of success; hence they bear an excellent name in the marts of the East and Europe. Their social pleasures, are, like other characteristics, founded on moderation and quietude. Reception and parties at private residences are much rarer than in the East, and large mixed assemblies are still rarer.

Much attention is paid to beautifying the city, hence the streets are kept in admirable order, and in Summer they have a charming aspect, as they are shaded by the broad, rich leaves of the white maple and perfumed by the flowers of acacias. The scenery around it is wild, as the country is covered with firs, above which loom, in the east, the gigantic snowy peaks of Hood, St. Helens, Adams, and the Three Sisters, while the Willamette River, which courses on to join the Columbia, is seen in the foreground.

JOHN MORTIMER MURPHY.

Schroeder's air ship, now under construction at Baltimore, will be completed in two or three days. He expects to fly to Washington, thirty-five miles, in eighteen minutes; New York, 200 miles, in one hour and forty minutes; and he thinks he can make Liverpool from New York, 3,300 miles, in forty hours. A new phase of "great expectations."

For Forest and Stream.

TISHOMINGO.

"Hath not old custom made this life more sweet
Than that of painted pomp?"

TISHOMINGO—what memories of a wild free life are revived at that name; of days of rapturous excitement spent in the chase; of the melodious music of the pack in full cry; the boom of guns, and the mad gallops after the hounds. A quarter of a century ago the north-western part of this country was a veritable hunter's paradise. It was a sort of *terra incognita*, close to the borders of civilization. The old stage road from Memphis to Tusculumbia, Alabama—the only thoroughfare through the country—ran along a pine ridge that traversed it from east to west. Persons passing on this route and seeing nothing but pines and poverty, concluded naturally enough, that the whole country was nothing but a desolate waste of dreary pine lands, nor dreamed that on each side of this divide lay broad forests overshadowing rich and productive soils. And so it stood; and "Tish." was a synonym for poverty and desolation. No railroad had then penetrated this almost primeval wilderness. The inhabitants were uneducated and ignorant, and few of them had even been beyond the confines of their own county. They wore home-made clothing, drank spring water, tempered with a little good old home-made peach brandy, sweetened with wild honey—for even at that early day the Arabic art had found its way among them—chewed home-made tobacco, shot flint lock rifles, looked upon "scatter guns" as only fit to waste ammunition and kick men down; and abominated "niggers" and "hound dogs" as they did the Evil One. But a change came over the spirit of their dreams; this fair country could not remain for ever unexplored. A different class of people came. The forests disappeared, and the farmer's house took the place of the squatter's cabin. Railroads were surveyed and built, and towns sprang up. The early settler looked on, dazed and wonderingly for a while, and then went "farther back." Tishomingo had not been at that time divided into three counties, and was almost as large as one of the New England States. Near the northern boundary, and running nearly parallel to the county line, flowed a small stream, with a wide strip of bottom land on either side; south of the stream was a broad extent of second bottom, and beyond a gentle undulating country extended on to the steep "Hills," where

"Up clombe the shadowy pine above the woven copse."

The bottom lands were at that time grown up with switch cane, alternating with thickets of hornbeam. The second bottom was covered with a growth of magnificent forest trees in endless variety, with very little undergrowth. The hills with pine, chestnut, oak and other trees, with clumps of thick underbrush, affording cover for game.

When the writer first hunted here, in 1851, game of every description was abundant; deer roamed the forests in herds; turkeys, ducks, countless thousands of wild pigeons, squirrels, and all kinds of small game, were as thick as leaves in Valambrosa. The streams were filled with fish—the black bass, perch, bream, pike, catfish, and other varieties. Of the fur bearing animals, there were beaver, raccoon, otter, mink, muskrat, and two varieties of hare. The rat-tailed marsupial, that the old plantation darkey loved so well, baked with 'taters, roved around at night and could be found at every grape vine and 'simmon tree. The gray fox only, was found here. We hunted him sometimes for a change, though I must confess that I never "hankered" after the chase. The custom was to hunt him at night, and I was never particularly anxious to hang my eye balls on the underbrush, or to have my head sawed off with a bamboo briar, or have any of the hundred accidents happen, that might befall a man riding to hounds at night. Cats—that did not live in purloins—wild cats inhabited the bottoms, and polecats the hills. One of the latter once made me leave a deer stand. He was colored black and white, and came at me like Joe Johnston advanced through Georgia, or like Cornelius Agrippa come into the world. As he would not retreat worth a s-cent for a vigorous bombardment with pine knots, and, as I was not pining for a whiff of his scent, which I imagined would not "come o'er me like the sweet South breathing upon a bank of violets," I fled and left him master of the field.

I brought the first hounds and pointers to this part of the county, and for ten years we had it all our own way. It is something to have passed one decade in a life as that was passed, in a splendid game region with all the auxiliaries of the chase, and nothing to do but to enjoy life. Yet I sometimes think we did not enjoy it as we could now, with the same surroundings. A man's capacity for a full realization of the pleasures of this life grows with his growth and strengthens with his ripening years. What would I not give now for one year, one month, of such sport as we had then? The improvements in sporting arms add greatly to the pleasures of the hunt. We had to use such inconvenient guns then. Think of a man having to get off his horse, as we did, to load his gun from the muzzle, and while he is down the hounds clean gone, deer and all, out of hearing. And worse, I have shot turkey and deer too, with a flint lock rifle. Shades of the mighty Nimrod and the chased Diana. Just think of it, ye who now shoot, an "Express." Your hounds have flushed a flock of turkey, and one immense old fellow pitches into a tree right over your head; you draw a bead on him with old flint lock and touch trigger. Kerwhack—it misses fire, about a teaspoonful of powder pours down from the pan into your shooting eye, the old gobbler goes boomeranging off through the trees in search of safer quarters, and maddened by pain and the loss of the game you leap around as frantically as a kangaroo with the *mania a potu*. A man that could stand it and not use words "ye like whereof are not in Watt's hymns," could run his neck against a clothes line on a dark night without indulging in any appropriate remarks.

We generally drove for deer, but sometimes stalked them, and occasionally "fire hunted," thereby violating a statute of the commonwealth of Mississippi. The *modus operandi* was as follows: armed with a gun, a long handled pan, and some split pine, you sallied forth. When you got to the woods you lit your head-light and went ahead. The first pair of eyes you saw you blazed away, and dropped your deer, colt, or yearling, as the case might be. I heard of a native that went out one night, and traveling in a circle, came back to his unfenced cabin, shined the eyes of his honest watch dog, who neglected to bay deep mouthed welcome as he drew nigh home—lammed away, and killed the animal as he lay on the door step.

We always used the double barreled shot gun in driving, and the rifle in still hunting. I would not have the reader imagine that we always used the old flint lock rifle. 'Twas only in an emergency when there were more hunters than good guns. Every one who has bagged his deer remembers the first; 'tis like the remembrance of his first love. Nothing can give him such exquisite joy again—it can happen but once in a lifetime. Well, I remember my first deer—and dear too, for that matter. Though nearly a quarter of a century has rolled away since that October day, and they who rejoiced with me are all sleeping in nameless graves on far off battle fields, and the old gun from which I fired the fatal shot is standing rusty as a crowbar, broken and useless in a neglected corner. Shall I tell you how it happened? We had gone to the bottom for a drive, I took the hounds, the rest went to the stand. Two deer soon broke cover, but ran the wrong way. I followed hoping to get a shot or turn the deer to the stands. After going a short distance the deer separated, part of the pack following each. I pressed on after the larger part of the pack and the deer coming to the stream crossed over and the pack were out of hearing in a few minutes. Knowing the deer would come back to the same crossing, I hitched my horse out of sight from the stream, and sat down at the root of a tree near the water. I had up to that time fired perhaps fifty shots at deer without ever touching a hair. Had fired at them running, walking, standing, and even lying down, always with the same result—no venison. Sometimes after being shot at, they would wave their white tails defiantly—fling out their banners to the breeze—and bound gracefully away. If it was a little fellow, he would be scared like sixty and shoot off at top speed. Some old forest monarchs would stop and gaze at me in blank astonishment as if asking, "Why the thunder didn't you kill me?" and then giving their antlered heads a contemptuous toss would disappear in the dim forest. It was unaccountable. I shot birds fairly—never missed a good shot at a turkey, but could not hit a deer. Gradually the conviction had forced itself upon me that I did not hold on them, and I determined the very next chance I got, to take dead aim or not shoot. I had been sitting down perhaps an hour when I heard a faint note from the hounds; then another and another, nearer and nearer, louder and louder; they were coming straight back. I had on a light colored hat and fearing the deer would see it I walked back a little way, threw it on the ground and returned to my stand. The hounds were getting so near that I looked every moment for the deer to rush out from the cane and take the water. How my heart leaped at the wild cry of the pack. In a few moments I found the deer had passed and was going up the stream to a crossing above. Just as I was about to turn away I heard a slight noise in the cane behind me, and looking saw an immense buck. He stood with dilated nostrils and heaving flanks, gazing at my hat in blank astonishment. As I raised my gun he saw me and threw up his head. Now or never, thought I, and taking fair aim at his breast, I pulled trigger. He wheeled off at the shot and bounded away, head and tail up. After getting out of gunshot he stopped, looked at me for an instant, and then giving his tail a rapid flirt, disappeared amongst the trees. "Missed him, by the great Diana. Why the thunder didn't I shoot the other barrel? No use; if I can't hit one standing I certainly can't when he is running." Thus soliloquizing I picked up my hat and did not even look for blood. As I mounted my horse I thought I heard something plunging in a slough, in the direction the deer had gone, and rode out to it, but all was still. By this time the hounds had crossed the stream above, and were coming back, (the deer had got a good distance ahead and was trying to give them the dodge when he ran upon me). Thinking it was another deer I dismounted to have a better shot. On came the hounds, and when they reached the place where the deer stood when shot at, they rushed around frantically for a moment, then taking up the scent, ran to the slough, plunged in, swam over, but could not take off the trail. At that moment an old hound came up, and going down the bank near me, gave a loud yelp and seized something that lay in the water amongst the reeds and rushes. I looked, and 'twas the dead monarch. I gave an exultant shout, such as I never gave but once afterwards, and that was when Joe Johnston rode up the lines as the sun went down, at the first Manassas, and "the red field was won." I'm *loil* now and I shouldn't mention it. I never saw a deer go off after being mortally hit as he did. From that day I became at one stride a mighty slayer of the *Cervus Virginianus*. I had found out how it was done.

The most fortunate snap-shot I ever made at a deer, was one day as the hounds were working up a very cold trail of an old buck that we had driven for without success several times. I sat sideways on my horse near the edge of a very dense cover. Suddenly with a burst of canine music the hounds raised him. I had barely time to cock my gun when with a crash he bounded into the open, not ten yards away. His sudden rush, with horns covered with wild pea vines, was too much for the steadiness of my horse. He wheeled round and I went sprawling to grass. The hounds were so close on the buck that he could not turn back, and rushed by, so scared that his eyes looked like small saucers. I knew from the nature of the ground that a few jumps would put him into the bed of a dry slough out of sight. Rising to my knees I let drive at him as he disappeared down the bank and knocked him over with one shot—perhaps a stray one—in the orifice of the ear.

The woods were filled with turkey, both hill and bottom, and I have often seen them from the house in long lines feeding in the wide fields that stretch away toward the bottom as peacefully as tame ones in a farm yard. We hunted them Fall and Winter with hounds, shooting them from trees when first flushed, and calling them up when well scattered. In "gobbling time" they were either shot off the roost or called up and killed with a shot gun. I have frequently bagged two in a morning's hunt, at this season. They are exceedingly shy and usually approach with great caution, stopping at intervals to look and listen, and are off instantly on the least suspicion of danger. For ways that are dark and for tricks that are vain, they go ahead of the heathen Chinese. I have called at some old fellows that like La Fontaine's dog, would run the other way. One I recollect that had been called and shot at until he would not come up within shot, but would gobble and strut as long as he could hear a yelp. He was a patriarch, and I went after him one morning with a big rifle—not a flint lock. Selecting an open space where a fallen tree with a limb on top made an excellent hiding place, I gave a yelp in answer to his gobble. He gave a stunner in reply that waked all the owls—who were just comfortable

in bed—within a mile. After a proper interval, I tried him again. He answered as before, and came so near that I could hear him drum, but would not come in sight. He went entirely around me, gobbling at intervals for fully two hours. Finally I stopped yelping in answer, waited half an hour, and was beginning to think that he had gone, when he gobbled again. I did not answer; and in a few moments, looking through my "port hole" saw him standing erect and motionless not fifteen yards away. He was a magnificent bird; his plumage shone with a metallic luster, and in the bright sunlight glittered with as many changing colors as "show upon the burnished dove." His eyes sparkled in liquid brilliancy; he was adorned with a sweeping beard and spurred legs. All this I took in at a glance, and drawing a "bead" just to miss the side of a bush that stood in the way, touched trigger. The sharp crack followed, and the ball grazing the bush was turned aside, striking the butt of the wing without touching his breast. He leaped into the air and came down running a quarter-horse speed, and I got out my bullet pouch and went for him, and for about two hundred yards we held our relative positions. Then his staying powers began to show; a little farther on "I got so puffed up mit vind," as Smidt says, that I was distanced, and saw him pass out of sight. However, my horse was not far off, and going for the hounds I soon had them on Mr. Gallo's trail, and jumping him from a fallen holly, they ran into him in a twinkling. He was the finest turkey I ever bagged.

One spurt on the home stretch and I am done. This is to be taken *cum grano salis*—a handful if you like. A native had seen a gobbler fly up to roost, and came to borrow a gun to shoot him with. As he only had the light of the moon to shoot by he concluded to try a shot gun. He took an old fusee, stocked to the muzzle and brass mounted, that out-kicked a Spanish mule; loaded it, and went forth. He put in hardly enough powder to blow the shot out of the gun muzzle, and the old gobbler merely raised up, looked around and sat down again, after being fired at. This so riled the native that he came back, put in a handful of powder and a corresponding load of "slugs." This time he crawled up, got right under the tree and lying flat on his back with the muzzle pointed toward the zenith, pulled trigger; a blaze leaped far up into the branches of the tree, a report that shook the everlasting hills followed, and with a shock that nearly jarred the soles from his cow-hide shoes, the old arquebuse bounded into the air and coming down the heel-plate stamped him square in the forehead. A cloud of smoke as from a cannon ascended, and the fragments of turkey, legs, flesh and feathers, with pieces of burning tow, and bark and limbs from the tree, fell in a shower. Then the reverberations died away and all was silent save the sough of the night wind through the forest trees and the mocking laugh of the owl. "Captain," said the native as he set the old gun in its accustomed corner, "that ere piece were a leetle to heavily loadened."

Corinth, Miss., Oct. 1875.

GUYON.

For Forest and Stream.

STRAY NOTES FROM CANADA.

I PROMISED you some notes from here some time past, but have deferred sending them until I returned from Pêche a Malcolm, on the North St. Anns. I started a few days prior to the expiration of the season, intending to include partridge shooting with my fishing. I had an excellent Indian from the village, but he was unable to speak a word of English. Our communications were, therefore, necessarily limited to our common wants. We endured considerable hardship, and were four days in reaching the Pêche. The weather was very cold, and one day we were camp bound by a terrific snow storm. It commenced about seven in the morning and lasted until ten at night. Over eight inches of snow fell. Next day, when we continued our journey, there was still some five inches on the ground. I camped one night only at the Pêche, and had but a couple of hours' fishing. I took only nine trout, four of which were between three and four pounds, and the remainder between two and three. The river was too high and too cold for a large take or very heavy fish. They would not rise to the fly. My friend Neilson, who was there three weeks ago, returned laden down with a magnificent lot of fish, salted and smoked. The distance to the Pêche and the hardships to overcome deter many from going there, and as a consequence the river is well stocked. It is impossible to expect very fine fishing in close proximity to the settlements, although this season I have taken some exceptionally fine fish in the Jacque Cartier.

The stocking of lakes is beginning to receive some attention here. Messrs. Glass and McLeod, of Quebec, have a fine lake here which they stocked with black bass from Lake St. Joseph. This Summer they have enjoyed some fine sport. One rod in a single day took from one to two dozen fish, none under a pound, and from that to three. There are many fine lakes here that, at a very moderate outlay, might be made to yield splendid results if stocked with black bass. They are better adapted for such lakes, as they are run out of trout and their place supplied with suckers and minnows, which the bass would soon kill off. I saw a barrel of live trout, taken with a seine, going in to Quebec to stock Bilodeans Lake. There was an ingeniously contrived pump attached to the barrel for supplying the fish with air. They appeared active and in good condition. The men informed me that they have taken in over fifty dozen in the above manner, and the loss was very trifling. Not a bad way to stock a small lake, if fish were easily obtained.

The hunting season is fairly inaugurated. Partridges and pigeons are in fair abundance in the back settlements. Ducks are just beginning to make their appearance on the river. By next week I hope to have a crack at them. Hares are very numerous, and will afford first rate sport later in the season, when we have some snow to track them. They do not burrow like our common rabbit, but take shelter under any fallen brush. Start them out and they go off at the rate of a mile in 2:40. It requires a quick shot to bring them down. They are esteemed good eating, but are so plentiful that after a short time they are neglected. The Indians have many of them started on their annual Fall trapping and hunting trips. I am going to try my hand at it soon, taking one of them into partnership. Good bye for the present. Yours truly,

G. M. FAIRCHILD, JR.

Valcartier, Canada East, Sept. 24th, 1875.

—Weston too has mounted the rostrum and discoursed on "What I Know About Walking."

Fish Culture.

—Fish culture in Minnesota must be looking up. At the recent fair held at Red Wing, Mr. S. S. Watkins exhibited 300 trout and salmon raised by himself. The trout were *salmo fontinalis*, but the salmon were of three varieties, California, eastern, and landlocked. Mr. W. is of the opinion that all of these fish could be easily and abundantly propagated in the waters of the State.

—At the Virginia State Fair, which opens at Richmond next week, a room has been furnished to the fish commissions, where they can receive and confer with all who choose to meet them, on the best mode of propagating fish and with regard to further means of protection.

—Prof. Baird, of Washington, has presented the Canada Fisheries Department with 100,000 eggs of the California salmon, from the State hatching house at Sacramento.

BLACK BASS IN NEW HAMPSHIRE AND CONNECTICUT.

ON the subject of stocking ponds with this fish, the *Mirror and Farmer* says:—

"If the Fish Commission of New Hampshire had accomplished nothing beyond the introduction of black bass into the waters of the State, it would have made a most handsome return for the small expense which it has been to the public treasury. Previous to 1868 the black bass was a fish almost entirely unknown, even by name, to New Hampshire people, but so completely successful have been the efforts which have been made since that time to introduce and acclimate this prince of the perch family in our waters, that to-day the trout and pickerel are hardly better and no more familiarly known than he.

More than to any other one, or indeed to all other men, we owe this success to Dr. William W. Fletcher, of Concord, a gentleman whose tastes and intelligent study of the nature and history of fishes abundantly qualified him for the position of head and chief executive of the Fish Commission, a position which he held and filled with great zeal and without pecuniary reward, from '69 to '74. Through the courtesy of this gentleman we are enabled to give our readers the dates when the several ponds in the State were stocked with bass. From this list of dates those interested can easily see when the different ponds become open to legal fishing, the law protecting the fish in each pond for five years from their introduction and during the months of May and June in all ponds and in all years.

During the year 1868 Dr. Fletcher stocked the following ponds or lakes: Mascoma Lake, Westfield; Webster Lake, Franklin; Pennacook Lake, Concord; Massabesic Lake, Manchester; Cocheco Lake, Rollinsford; Sunapee Lake, Wilson's Pond, Keene; and Echo Lake, Franconia. These waters have all been open to the angler during the past two seasons, and there is scarcely a sportsman in the State who has not taken more or less. Large numbers have been taken from Sunapee, Massabesic, and Webster Lakes, showing that they have multiplied and grown with great rapidity.

In 1870 the following ponds were stocked by Dr. Fletcher, as agent of the Board of Commissioners, he having been appointed the year previous: Pleasant pond, Warner, Aug. 25th; pond, Munsonville, Aug. 20th; Blaisdell's pond, Sutton, Aug. 25th; Pleasant pond, New London, Aug. 30th; Highland Lake, East Andover, Aug. 23d; Hat Hole pond, Loudon, Aug. 18th; Rocky Bound pond, Croydon, Sept. 16th.

In 1871 the Commissioners continued their work by stocking the following: Wakeman Lake, Meredith, Aug. 29th; pond, Canaan, Sept. 7th; Long pond, Webster, Sept. 5th; Clough's pond, Canterbury, Sept. 9th; pond, Harrisville, Sept. 13th; Loon pond, Hillsborough, Sept. 15th.

In 1873 the following were added to the list: Winnepeaukee Lake, July 28th and Aug. 8th; Long pond, Moultonboro', Aug. 8th; Red Hill pond, Moultonborough, July 28th; Gregg's pond, Antrim, Aug. 5th; Partridge pond, Littleton, Aug. 13th; Stinson's pond, Rumney, Aug. 21st; Baboosic Lake, Amherst, Aug. 28th; Beaver pond, Derry, Sept. 18th; Pleasant pond, Deerfield, Sept. 12th; Suncock pond, Northwood, Sept. 12th.

We are not advised what, if anything, has been done during the past year by the new Board of Commissioners towards extending the work of their predecessors, but judge it has been very little. This, however, is not of so much matter, as it is now a very easy task for anyone interested in a body of water to obtain a few live bass and throw them loose in it, which is all that is required to stock any pond. The commissioners, as will be seen, have made the transfers from one pond to the other in the Fall, it being much more easy to obtain the fish at this than any other season of the year; but those anxious to save a year's time can do so by obtaining a number of fish in April and carefully transporting them to the waters they wish to stock. The fish begin to spawn about the middle of May. About a month previous to the spawning season they pair, and leave the deep, still water where they have spent the winter, and seek out some retired spot in shallow water, about eighteen inches or two feet deep, but near deeper water to which they can fly when alarmed. Here they make their nests by scouring from the pebbles on the bottom all the mud and slime. The nest is circular, and about twice the length of the fish in diameter. Here the female lays her eggs, which at once become glued to the pebbles, where they remain for eight or ten days, when they hatch, the female all the time remaining on or near the nest to keep off predatory intruders.

In two or three days after hatching the young fry rise and separate, the old ones having to take care of themselves. While young the fish feed on insects, worms and larvæ, but when larger they appear to rely mainly upon other small fish. They are not very particular as to their diet, their main care being to get plenty of food. They are voracious eaters, and when hard pushed by hunger do not scruple to devour the smaller and weaker of their own kind, and in this fact probably exists the reason why they have multiplied much more rapidly in some ponds than in others which, to all appearance, are equally as well adapted to them. Waters which abound in chub, minnows,

suckers, insect larvæ and crawfish afford plenty of food for the bass, and in them he multiplies and grows apace, but in waters where these are wanting he is reduced to the necessity of eating his own kindred, and of course his increase is very limited.

A report recently made to the United States Fish Commission says that the bass which, a few years after their introduction into the Potomac, literally swarmed in that river are now becoming scarce, because they have nearly cleaned the river of the *Cyprinidae* family, upon which they formerly subsisted. To the same reason is ascribed the fact that they each year move further down the river, abandoning the feeding grounds which they have exhausted and seeking for others.

Except a lack of food there seems to be no limit to the production of black bass. Nearly every body of water in our State is fitted to their propagation. They thrive in the largest lakes and smallest ponds, and are at home in rivers and large brooks, and at the same time they are abundantly able to protect themselves from all water enemies. They are a match at equal weights for anything that swims, and their gaminess does much to save them from the destruction that lurks in the covered hook. Little need be said of the merits of this fish for the table. Few better pan fish are known to epicures. He is thick, solid and heavy, has little waste and few bones about him, is sweet, tender and juicy, and when well cooked makes a dish fit for a king.

Few directions can be given as to angling for the bass. Probably, as a rule, live bait is the best, and from eight to twelve feet of water the best depth; but some of the finest specimens which have been coaxed from ponds in this section have been taken with worm bait in fifty feet of water. A bass that will weigh three pounds is called full grown, though some have been taken which weighed six pounds each.

The fish is said by writers to arrive at maturity at three years of age. During the first year they grow about two inches in length; and the same the second, while if well fed, at three years old, they are from eight to twelve inches long."

And now comes a voice from Connecticut, taking quite a different view of the subject. Perhaps Mr. Mather will reply to the accompanying letter, which we find in the *Live Stock Journal*, and let us have his valuable opinion upon the merits of this fish, both from the sporting outlook, and as a means of increasing the fish supply:—

"It is now about eight years since sufficient interest in inland fishery was taken to create the necessity for the appointment of Fish Commissioners, whose duty it was to carefully guard the fishery interest. For the first year or two the operations of the commission were confined more particularly to the proper protection and increase of shad in the Connecticut River, and subsequently to their dissemination by means of transporting the small fry obtained by artificially hatching the ova. In a little time attention was directed to the stocking of some of the many lakes, reservoirs and ponds by which the surface of our State is dotted, and black bass (*Grystes fasciatus*) were the fish first employed. These were highly recommended by the Commissioners as being a gamey fish, affording ample sport in the catching, a nice pan fish, and withal of exceedingly rapid reproduction. For some three years or more the Commissioners were active in introducing these fish into some sixty or eighty of the inland bodies of water; some had been previously stocked, and many others by private enterprise, so that the ponds were pretty generally supplied with this kind of fish. Very many of these ponds previously furnished excellent fishing grounds for the more common kinds of fish, such as perch, pickerel, bull heads, etc.; but in consequence of the high recommendations of bass, the desire for their introduction was very strong, and now it is believed that our waters are well stocked; but with this increase of fish and a few past years' experience comes a very decided reaction, and prejudice against the action in introducing this variety of fish. The complaint for the year past has been, that not only is it impossible to catch the bass in any very considerable quantities, but that in consequence of their being in the waters it has entirely destroyed fishing for all other kinds of fish, and in some instances the Commissioners have been severely censured. We are not prepared to judge of the facts any further than our own observation extends, and in that it goes to establish the charge of destruction to general fishing. The Columbia Reservoir, a body of water covering some three hundred acres, was originally stocked with pickerel, which with these more common kinds inhabiting our waters, furnished good fishing ground; but as bass were highly spoken of, a few of these were introduced; they multiplied rapidly, but with their increase all other fish appeared to diminish, and now the reservoir is nearly abandoned as a fishing ground. The same is true of a lake in Coventry; and in fact the same is said to be true of all those cases where black bass have been introduced. On the other hand, in North Lake, where none exist, good fishing prevails to-day.

Now, will Fred Mather rise and explain? In the first place, are black bass destructive to all other kinds of fish; or, more correctly, of such as are usually found in our inland waters? Do they prey upon existing fish, or is their work confined to the destruction of the spawn and young fry? Does the gamey character of the bass cause the difficulty in catching, or is it for want of the knowledge of the manner, or in consequence of a want of the proper bait? When is the most proper time for catching? And if there is no patent on the same, will Mr. Mather please give in detail a description of the habits of the fish, the kind of bait and apparatus necessary, and the most successful manner employed in catching them, in connection with this article, if his time will admit, and I am sure that the fishing community generally will be very grateful for the information. We are not professional sportsmen, but have become interested in the subject somewhat, or would not trouble you with these inquiries."

—There has been great controversy in Ohio for some time about the location of the State Fish Hatchery. From the acrimony involved one would be led to suppose that it was a matter of great value in a pecuniary sense to have the hatching house near. Indeed to such an extent has this fight been continued that the Fish Commissioners were afraid to act definitely, and adopted the miserable temporizing policy of erecting six little hatcheries, not to cost the State over \$75 each—one at Toledo, two on the islands around Sandusky, one at Castalia Springs, one at

Put-in-Bay, and one at Cleveland—in order that it may be found out where the best water for desirable kinds of fish is located! Well, well, this is better than nothing; it will be a beginning, and Ohio will be glad some day, not long in the future, that a beginning was made.—*Germantown Telegraph*.

—The Societe d'Acclimatation of France has awarded gold and silver medals to the American naturalists, Messrs. Green and Jerome, and a bronze one to Mr. Stone, Secretary of the American Fish Culturists' Association, in recognition of their labors to transport transatlantic salmon eggs to France.

Natural History.

ORNITHOLOGY AS A RECREATION.—It is easy to see several reasons which account for the popularity of ornithology as a rural recreation. In the first place, it can be pursued everywhere. Even the barest common has its birds, and yet there is just such sufficient diversity among the birds which haunt similar localities in different countries to interest the mind and induce philosophical reflection on the causes of this variation. Indeed, the number of problems which the study of birds presents is another reason why it is so generally fascinating. The more dilettante can amuse himself in solving these, while the professed student finds many which baffle his closest scrutiny. The migrations of swallows, for instance, were until recent years beset by the same haziness which attended them in Gilbert White's mind. People, sensible enough on other points, gravely affirmed that the approach of Winter drove the *hirundines* to their hibernating quarters, hollow trees or the bottoms of rivers. The claims of overlapping species, of partial migration, of the abundance or paucity of allied species in different years, of the curious changes of color in the plumage of many shore birds without their undergoing a molt, together with that special *crux* of most departments of natural history, what constitutes a species? are specimens of the speculations to which ornithology addresses herself. But even more difficult and delicate inquiries remain on such points as the presence of instinct and violation of bird life. The disappearance, whether partial or total, of different species from the several provinces of Great Britain, forms another interesting branch of study, and others might be indicated if the extent and variety of questions which imperatively demand an answer from the scientific ornithologist had not been sufficiently demonstrated. Perhaps the being brought face to face with nature while prosecuting these and the like inquiries, and freedom from the drudgery involved in the use of the microscope indoors, enter largely into the pleasures of the bird lover. And yet ornithology demands in the open air minute and extended observation, large powers of discrimination and comparison, and an enthusiasm which never flags at disappointment. The ornithologist might almost be weighed against the comprehensive standard of virtues required of the angler in the seventeenth century. He must be untiring and eagle-eyed, sanguine yet disinclined to believe on insufficient premises, a clever antagonist, a well taught disciple of the inductive method, skillful at forming a hypothesis, but slow to admit its truth without the most rigorous collection of instances and testing of their agreement. Such an admirable Crichton is the scientific ornithologist of the nineteenth century, and among our countrymen such men can be counted on the fingers.—*Cornhill Magazine*.

MORE ABOUT SNAKES.

GARDEN OF THE ZOOLOGICAL SOCIETY, PHILADELPHIA, Oct. 14, 1875.

EDITOR FOREST AND STREAM:—

Your correspondent "Speculator" in "A Few Remarks on Snakes," Vol. IV., page 406, says: "There has from time to time been considerable discussion as to whether snakes produce young by birth or by eggs. * * * Most species lay eggs; a few give birth to the young, while others are oviparous." I will mention two instances to corroborate part of his statement that have come under my notice, and will probably interest many of your readers. A garter snake (*Eutania striata*), captured in the Philadelphia Zoological Gardens on August 30th last, was placed in one of the glass cases used for snakes, and the same day produced fifty-six young oviparously, as several had not the egg-formed skin broken when observed. They were five inches long when born. The next case was of a water moccasin (*Toxicophis piscivorus*), received a week or two later at the Gardens, which gave birth to fifty-one young, each nearly eight inches in length. All but one of the garter snakes have since died, it being impossible to get them to eat; the moccasins have fared little better. An idea may be formed from the foregoing of the amazing fecundity of snakes. W. K. A.

THE SWALLOW-TAILED HAWK.

EDITOR FOREST AND STREAM:—

I notice in your issue of October 7th an item in the Natural History column of a queer bird having been shot in Lebanon county, Pa. From the brief description therein given there is no doubt but that the bird is the beautiful swallow-tailed hawk (*Naucerus furcatus*—Linn.). Below is the description from "Birds of North America." Wings and tail long, the latter deeply forked; head and neck, under wing coverts, secondary quills at their base, and entire under parts, white; back, wings and tail, black, with a metallic lustre; purple on the back and wing coverts; green and blue on other parts; tarsi and toes, greenish blue; bill, horn color; total length, female, 23 to 25 inches; wing, 16 to 17½ inches; tail, 14 inches; male rather smaller. Although this bird is most abundant in the Southern States, yet it is sometimes found throughout Pennsylvania. It is one of the most beautiful and graceful of all our birds of prey, the long, clean cut wings and long, forked tail giving it power of continued, rapid and very graceful flight. NIMROD.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, NEW YORK, Oct. 15th, 1875.

Animals received at Central Park Menagerie for the week ending Oct. 16th, 1875:—

One Capuchin Monkey, *Cebus capucinus*. Presented by Miss Roselle A. Heiser.
One Woodchuck, *Arctomys minax*. Presented by Mr. Theodore Roosevelt, Jr.
One pair Silky Fowls, *Gallus domesticus*. Hab. Japan. Presented by Mr. P. A. Chichester. Hatched out from eggs sent from Japan.
One Marsh Hen, *Rallus elegans*. Captured in Central Park.
Two Yellow Birds, *Chrysomitris tristis*. Captured in Central Park.
One Rhea, *Rhea Americana*.
One Sun Bear, *Ursus malayanus*. W. A. CONKLIN, Director.

Woodland, Farm and Garden.

CHINESE AGRICULTURE.

IN no nation is the labor of the agriculturist held in the same repute as in China. As an occupation it ranks next to letters, and to perpetuate and encourage this feeling the emperor himself, during the Summer solstice, grasps the handles of a golden plow and turns a furrow. We say that it is held in the same repute, but to a large extent the consideration is but nominal, for while the literary man is always a candidate for official position, the agriculturist must abandon his fields for study in order to cope with the other for equal honors.

The foreigner, upon first viewing the rude implements used by the Celestial agriculturist, would sneer at such appliances, so different are they from anything in use among even the ruder of European peoples; but a sight at the neat and weedless fields, the trim and inviting appearance of crops of every kind, soon changes this feeling of contempt to one of admiration at the patient plodding which has produced such results. Nor is simple industry the only cause of success. John Chinaman is a slow-going, methodical being, who is sufficiently cold-blooded to study cause and effect to the very bottom, and make practical application of the results of his research. His implements, it is true, are of the rudest kind, and apparently have descended from his father Adam, but upon examination each will be found to be peculiarly adapted to the use intended. For instance, their plows appear to be nothing more than pointed sticks, with which the ground is serrated, and yet by repeated applications these same ploughs turn a deep furrow in lines drawn with mathematical precision. In most instances man power is the one used, as the few horses, or rather ponies, bred on the plains of Tartary, are required for, and are solely in possession of the Tartar cavalry, of which a body is stationed in or near every large city. The only neat cattle in the country are the zebu (*B. indicus*), the soft-skinned cattle of India, and the buffalo (*Bubalus bubalus*), or water buffalo, as they are more commonly called. The latter are huge, ungainly creatures, almost hairless, and with great flat horns lying back from their heads. The buffalos are used for draught purposes, for turning wheels to give motive power for lifting water used in irrigation, and for milking. The milk used by foreigners is procured, or supposed to be, from these beasts. We say supposed to be, advisedly, for it is a matter of extreme doubt where the milk used in the maternal coffee comes from. The old Canton story contains more truth than poetry. A luckless foreigner, on abusing his cook for not providing the milk, was told—"that cow hab got chilo, that pig hab lun away, that woman hab got sick; how can?" It is customary among foreign residents to have the buffalos driven within the house enclosure, or compound, as it is called, and there milked in the presence of some member of the household. In the interior they sometimes run almost wild, and the sportsman coming upon a herd unexpectedly would be apt to find himself somewhat embarrassed. On such an occasion the only course to pursue is to face them and advance, when they will retire. In districts where active cultivation is being carried on they are sometimes very useful in crossing small streams. With a youthful native to sit on his neck and guide him, the buffalo makes a very acceptable ferry.

There is nothing better understood by the Chinaman in pursuing his agricultural occupations than the value and uses of manure, albeit his mode of application is very repulsive to our Western ideas. Having nothing like our barnyards, almost the sole resource is in human odore, and everything of this description is most carefully preserved. This is not scattered upon the ground and plowed in, but after being largely mixed with water is thrown broadcast upon the growing crop. The traveler will sometimes pass a field of succulent and inviting vegetables, perhaps celery, turnips, or radishes, but the odor proceeding from them stays his hand. The refuse of large cities is distributed throughout the neighboring districts by boats and sold to the farmers. The collection is a large source of revenue, and public receptacles are provided in the cities with an adjoining tea house, where the wayfarer is invited to stop and refresh himself with a cup of tea, furnished gratis.

The Yang Tze performs for a large tract of country in China the same offices as the Nile does for Egypt, that is, overflows it annually and leaves a deposit of alluvial matter washed from the far western mountains, which adds greatly to the richness of the soil. But the Chinese are by no means satisfied with cultivating their accessible lands only. Mountain sides are terraced, and if irrigation can be managed such crops as rice are cultivated far up the hillsides. In handling this cereal, which is the staple article of food amongst all classes, they are of course adepts, the seed being first planted on low land, near the course of a stream if possible, and at the proper time transplanted to its permanent bed. Irrigation is firmly believed in and largely practiced, and in this respect we believe a lesson is to be learned from them. The huge water wheels used for lifting the water and conveying it through flumes to the fields are not unlike those in use on the Nile, yet there is no lack of rain in China; much of the soil, however, is of a clayey nature, and requires constant working to prevent it from baking.

In the northern and western provinces large flocks of sheep are to be met with, used by the natives for the fleece alone, but providing for the foreigner a very fine quality of mutton, and an agreeable addition to his bill of fare. The

breed of sheep is the same as that which is so abundant throughout Tartary, and is known as the fat tail. The fat accumulates on the hind quarters in large masses, and the little short tail, almost as wide as the animal itself, is one mass of cleaginous substance. Tallow is therefore an article of commerce, but a large portion of that used in the empire is not animal matter, but the product of the tallow tree.

Of barn yard fowls, the Shanghais and Cochins are familiar to all, but the traveler rarely meets with the huge specimens that are to be seen at our poultry shows, and are supposed to have sprung from a Chinese origin. The largest fowls ever seen by the writer were on the island of Formosa. Whether it arises from the food, or from a peculiarity in the breed, we will not pretend to say, but the flesh of Chinese fowls cannot begin to compare with that of our own poultry. Caponizing, however, is understood and largely practiced, the effect of which is to increase the size and largely improve the quality. The wife of a well known captain in the China trade was so pleased with the capons she ate at Canton that she wished her husband to bring some home in order to introduce the breed into this country! Turkeys there are none, except those brought from Manila, but ducks exist in great abundance, the artificial hatching of ducks' eggs being carried on to a large extent. Ducks are also split and dried, and sold in this condition.

Although the last named subjects may not, strictly speaking, come under the head of agriculture—and indeed in China are usually treated as specialties—they are nevertheless valuable adjuncts, as showing some of the resources of a wonderful people.

FOOT AND MOUTH DISEASE.—This singular complaint has broken out in almost every county in England and Scotland and is largely on the increase, causing much consternation among farmers, shepherds, and stockraisers, both sheep and cattle being similarly affected. As a plague, it must be almost equal to our western grasshoppers or the Colorado beetle. One of the alleged causes of the spread of the disease is most remarkable, and it is attributed to the laws affecting ground game. It is said to be carried from place to place by hares, and a Perthshire farmer has recently trapped two hares, both of which were ill with the disease. Disinfection by means of carbolic acid is said to be the best preventive.

—One of the great cattle breeders was recently visited by an old college friend who frequently overtaxed his host's memory by using Latin quotations long forgotten by reason of disuse. One day the great cattle breeder got even with his pedantic guest. Pointing to an immense herd of fine young cattle in prime condition for the market, the visitor said, "You must have had good luck since you commenced this pursuit?" "Yes," replied the host, "it is due to my luck that I can say, 'Hinc, illæ lachrymæ,' in looking at my herds." "What do you mean?" asked his astonished guest. "Why, don't you see? 'Hence these steers.'"

WATER PIPES.

The following unsolicited testimony, taken from the *Engineering and Mining Journal* of New York, is a most gratifying tribute to the excellence of the goods furnished by the National Tube Works Company, of Boston, Mass., and McKeesport, Pa.:

EXTRA LARGE LAP-WELDED TUBES AND ENAMELED WATER PIPES.—At a recent visit to the works of the National Tube Works Company at McKeesport, Pa., we witnessed the operation of making lap welded tubes of such a size and quality as to call for notice. The company makes these seamless tubes or pipes of any size up to fourteen inches diameter. And as every length is tested by hydraulic pressure before leaving the works, their strength and quality is fully guaranteed. They have been found admirably adapted to carrying water for the hydraulic mines of California, Nevada, and other Western States, and for water works which do not require larger mains than fourteen inches. The company has just completed an order for the Virginia City and Gold Hill Water Company, of Nevada, of seven miles of 10-inch pipe, the most extensive order for a large size that we believe has ever been given in this country. These seamless pipes, even without coating, are more durable and are also less expensive than the riveted pipes, but the company applies a patent enamel to them that, it is claimed, makes them almost indestructible, and, indeed, the company is willing to guarantee their durability for any length of time. The appended reports by Dr. S. Dana Hayes, Massachusetts State Assayer and Chemist, and Prof. Otto Wuth, of Pittsburgh, Pa., fully establish the claims of this pipe to durability. We commend it not only to our gas and water companies, but also to our mine owners and others who have to use or convey impure water, such, for example, as in many anthracite mines. These large pipes would make excellent screen shafts for our coal breakers, and the enamel would doubtless be of great advantage for coating the exposed iron work about the mines.

In bringing the matter to the consideration of "those whom it may concern," we believe we are doing consumers as well as manufacturers a service.

REPORTS.

"I have recently made a series of tests of your enameled pipe, for the purpose of ascertaining its value as a service pipe for conveying water and other fluids, and now submit the following brief report of the results obtained:—

Portions of the enamel covering itself were first removed from several pieces and submitted to chemical analysis, to determine the presence of deleterious substances, but the result of these analyses are entirely negative, as there is nothing of this kind present. The pipe is made of wrought iron, covered, inside and outside, with an elastic, enamel-like material that does not contain any unwholesome or objectionable ingredients.

Its durability was then tested, by exposing different pieces of the pipe to the solvent action of hard, soft, and sea waters, alcohol, and other fluids, for many days, and finally those fluids were boiled in the pipe for several hours in each case—the object of this boiling being to obtain, as nearly as possible, in a comparatively short time, the effect produced in the pipe by long-continued usage. These tests have been very complete, and I am quite surprised at the durability and power of resistance of the enamel covering determined in this way. It has not failed in any trial with natural waters in my laboratory, and it has withstood the action of boiling corrosive fluids for a longer time than specimens of other water pipes now in common use.

I commenced this investigation with some doubts about your enameled pipe, but the severe tests which I have employed prove that it is perfectly harmless, and possesses great durability, these being the properties of most importance in water pipe.

S. DANA HAYES, State Assayer and Chemist, Massachusetts.

"I have made a complete series of tests in order to ascertain the quality of your patent enameled pipe, and found that the enamel covering perfectly both the inside and the outside of the wrought iron pipe is not in the least affected by the action of alkalies, acids, salts of any composition, alcohol—in fact, any liquids which in practice are apt to be conveyed through the pipe. The enamel itself contains no deleterious substances whatever, and even if it did it would not make any difference, as not a trace of it will become soluble. Pipe so enameled is especially adapted for water and gas.

O. WUTH."

The Kennel.

ON BREAKING DOGS.

FORT SCOTT, Kan., Oct. 12, 1875.

EDITOR FOREST AND STREAM:—

For the benefit of amateur dog trainers, or Western sportsmen who train their own dogs, please give some of the fine points, say in training of the setter Joe, spoken of in your issue of 7th inst., or any other famous dog—what does he excel any ordinary broken dog in? 1st. Does he go straight from the party "shooting over him" to the "dead bird" and immediately return with it? 2d. Does he carry or fetch by wing or leg? 3d. Does he point the "wounded bird" and await command to fetch? 4th. What are his points of excellence in quartering his ground, down charging, "coming in," or remaining at heels? Please publish for general information of country sportsmen who break their own dogs the general terms now in use in handling dogs in the field. Has not custom made general terms abbreviating the "good dog business," so often used in "Frank Forester's Breaking or Training?" We of the West cannot buy or get hold of "broken dogs" at anything like reasonable figures. We have twelve-month dogs here that "hi on" at command "quarter their ground" in chicken shooting an eighth of a mile right and left, thus ranging a quarter mile; turn and go in opposite direction at sound of whistle; "come in to heel" at prolonged whistle or command "come in;" "seek dead" at command from "down charge" after shot; point the "wounded bird" and wait for command to "fetch," or immediately return with dead bird when found. These pups are few, but we have two in this community. As to nose, they find birds and are staunch when they find them, and do their back pointing, we think, finely; yet where there is so much "blue blood" written about, we expect there must be better dogs, and would like to read of them and their fine points. One of the dogs above spoken of is a pointer with an unknown father. This dog found in July of this year, when he was less than a year old, eleven covies of prairie chickens in one afternoon, and out of upward of 200 chickens killed over him he retrieved at least 180, before he was a year old.

[We have done much shooting over the famous setter "Joe," the dog you allude to. His great reputation arises from the fact that he is an exceedingly beautiful, high-bred, well formed dog, of great endurance and stylish action in the field; and then he was carefully broken by one of the best breakers among us, and when sold he went into the hands of a very skillful, energetic sportsman, who keeps him constantly at work in the shooting season, and an unusual quantity of game of all kinds has been shot over him, and now, as he is five or six years old, and always having been skillfully handled, he has become, no doubt, about as good as dogs ever get to be. There are certainly hundreds of dogs possessing all the good natural qualities of this dog, yet but few have been so well broken, few so well handled, and few have had so much game shot to them. He does nothing but what hundreds of other dogs will do, but whatever he does he does it well. He was not broken to fetch by wing, leg or head, as we have had them, but at the crack of the gun he will "charge down," and remain until ordered to "fetch dead," which he does without "mouthing" his game. We do not think his owner requires him to "point dead," because, to us, it appears an absurdity to ask a steady old and good retriever to point a dead or wounded bird. All such dogs know to a certainty, if a bird is dead or wounded, and there is about as much necessity for a dog to "point dead" before retrieving, as there would be for a boy sent for the bird to be required to stand upon one leg awhile before he picked it up.

In breaking a rash pup or young dog, it is well to make him "point dead," but after they come to discriminate between a dead or live bird they give it up almost invariably.

All that we require of our dogs, is that they shall quarter the ground regularly, ranging wide in the open and closely in cover, come "to heel" when ordered, point and break steadily, and to either "drop to shot," stand in their tracks, or to come quietly "to heel" and remain sitting, standing, or at "down charge" until the gun is reloaded, and they are ordered to "fetch" dead, if the bird is killed, and to "hold up" and "heigh away" if not. To "drop to shot" is all well enough on dry land, but in snipe shooting, when the water is often as cold as ice, the shooter who would compel his dog to "drop to shot" should at once be attended to by "The Society for the Prevention of Cruelty to Animals."

We have no pups in the East any better than those you describe, but as a general thing the dogs in the East are far better broken than those of the West, and this state of things arises from the fact that game being so much more scarce with us we require better dogs to enable us to make a bag.

We have made periodical shooting trips to the West, Southwest, and Northwest, since 1859, and with but few exceptions have ever met with well broken dogs. In this section of the country, as before stated, we are obliged to have good well broken dogs, and such we know can be purchased at reasonable rates.

In regard to the dogs of "blue blood," you allude to, let us say, that the importers of such do not claim that they will do any better work in this country than American bred dogs, but all good sportsmen will admit that the infusion of fresh blood through dogs imported from the best kennels in Europe is well calculated to improve, or at all events keep them up to the high standing they have attained, and consequently it is wise to encourage such importations.

—An international dog show was held at Baden Baden last month under the patronage of her Serene Highness the Duchess of Hamilton, Princess of Baden, with whom the idea originated. At the request of her Highness the Rev. J. Cumming Macdonald came over from England to officiate as judge, in which capacity he was assisted by eight gentlemen from different parts of the continent. Very costly prizes were given by the Grand Duke of Baden, Dowager Duchess of Hamilton, Princess of Monaco, Duchess of Hamilton, Prince Albert Solms and others.

The last named gentleman won no less than ten first prizes, including two with Irish setters in dog and bitch classes, first in English setters with a grand white and tick colored young setter whelp by Mr. Macdonald's champion field winner Ranger, from his sister Vaynol Ino, and first with his black and tan Gordon setters, Duke and Duchess. Mr. Mahler, a well known German sportsman exhibited a grand team of pointers, winning first with a daughter of Mr. Garth's Drake. The first prize in the dog class went to a very fine lemon and white dog of Mr. Whitehouse's strain. Of course the entries included a large number of German boarhounds and dachshunds. The show was held in the Gymnasium, the dog benches being covered with pine leaves, the smell from which counteracted any unpleasant odor from the dogs, and acted as a disinfectant. The show is to be repeated next year and will help, with the races, to restore some of the prestige of Baden, lost since the abolition of the gambling rooms. A bench show on a large scale is to be held in Berlin next year, to be followed by a public field trial for English and German sporting dogs over the extensive shootings of Mr. André, and under the Kennel Club rules.

THE DOG TAX.—It is stated that the dog tax last year yielded the State of Tennessee the sum of \$300,000, which will be used in remunerating the owners of sheep for losses occasioned by dogs, and that if the tax is continued four years there will not be ten sheep killed in the State in any one year.

Other States have nominally a dog tax, but we believe that nowhere else is it sufficiently well enforced as to produce such a revenue as the above. The imposition of a tax, and the strict enforcement of the law, would be hailed with delight by all sportsmen. Not only would it soon rid the world of an immense number of worthless curs, but it would give to the dog a recognized status as property, and confer upon him the same rights and immunities as are enjoyed by the sheep. Let it be as much of an offense to steal a dog as it is to steal a sheep, and let the penalty be great as for stealing a horse, and dog owners will willingly pay a tax. Good dogs are rarely sheep killers—they are too well trained to the knowledge of what is right, and although the proclivity, when once indulged, can never be destroyed, it is generally found in mongrel and ill bred curs. Let each owner of a dog, on paying the tax, receive a metal tag, with a number, to be attached to the dog's collar, and we shall soon hear less of worried sheep and stolen pets.

THE DOGS OF PORTSMOUTH.—We have received a letter from our correspondent, "Quail," taking exception to the remarks of another correspondent, "Axe," on the former's report of the Portsmouth dogs. He says:—

Now, it did not occur to me at the time to mention Mr. Thurston's dogs, neither did it occur to me to mention some twenty or twenty-five other dogs (and good ones) that are owned in Portsmouth. I merely spoke of a few of the best dogs in Portsmouth. But "Axe" seems to feel that Thurston's dogs were slighted, and as I did not mention them before I will now do so. They are very handsome native setter dogs, unbroken, with the exception of Pete, who is getting too old for the field; but when he claims that the pup is probably the finest in the State he certainly is making an assertion that would be hard to sustain. He cannot be well posted when he says that he knows very little about Mr. Nelson's Dash, for there is not a dog in Portsmouth so well or favorably known as said Dash. In regard to Mr. Nelson's name having been given with the addition of naval rank, which he does not possess, I will say that it was certainly a mistake, and one that has mortified Mr. Nelson very much, as he does not hold any naval rank, being not a watchman, as "Axe" says, but Captain of the Watch at the United States Navy Yard at this place, the same yard at which Mr. Thurston is an employee. Mr. Thurston had plenty of opportunity to show his dogs at the Manchester fair, and if they were worthy they would certainly have taken prizes, but the mere assertion that they would have taken prizes does not make the matter certain by any means.

QUAIL.

THE GORDON SETTER FLIRT.

BROOKLYN, Oct. 4, 1875.

EDITOR FOREST AND STREAM:—

In Vol. V., No. 6, page 85, I noticed a communication from "Fred," of Montello, Wis., requesting me to send the pedigree of my Flirt for publication in FOREST AND STREAM. I inclose you the draft of Flirt's pedigree as I received it from Mr. Arnold Burges to-day. The copy of the pedigree is the same as it will appear in Burges' coming stud book. Flirt, I can vouch for, is the handsomest black and tan in this country. She is the most perfect marked bitch I ever saw. In color she is a shiny jet black with rich mahogany tan, and a faint white frill on chest. She was formerly the property of Mr. Arnold Burges, now of Maysville, Ky. I am getting her broken at A. C. Waddell's, Newton, N. J. Whenever you go there I wish you would give your opinion about her. She is, in fact, the handsomest Gordon bitch I ever saw. I saw some of Hamilton Thompson's Gordon stock yesterday, but they could not come near my Flirt. Flirt took premium at the Watertown (N. Y.) Bench Show last June; she is very gentle and easily handled. When I get her from Waddell's I will show her to you. I had a very superior litter of seven pups out of Flirt last March by J. L. How's Duke. (Duke was imported by H. Thompson.) For one dog pup I got \$75, and for the balance I got from \$40 to \$60. Sold them all through the advertisement in FOREST AND STREAM. I have still a bitch left out of the litter which I intend to keep, and I must say, in my judgment she will excel Flirt when full grown. Yours truly,

JOSEPH E. FISHER.

FLIRT—BORN SEPT. 9, 1872.

Bred by T. A. Fowler, Esq., Orange, N. J.

Mr. T. A. Fowler's Duchess.	Mr. H. N. Munn's Duke of Gordon.
Mr. J. N. Andrews' Grouse.	Mr. T. A. Fowler's Duke.
T. A. Fowler's Kate, of the Stockton breed.	Dr. Gautier's Dandy.
Langstaff's Moll.	Jobling's Dandy.
Jobling's Nell.	Rodman's Pelter.

FAIRY AS A PRIZE WINNER.

LANGHAM HOTEL, LONDON, Sept. 30, 1875.

EDITOR FOREST AND STREAM:—

I have seen published in your issue of the 16th inst. an article over the signature of G. T. Teasdale-Buckell, Mr. Llewellyn's breaker, in which he says he has "never seen it stated in an American paper that Fairy, when the property of Mr. Llewellyn, won first at Bangor and second at Birmingham Dog Shows, facts which Mr. Raymond may like to know." Together with your correspondent "Viatores" I visited Mr. Laverack last August and heard him say that Mr. Llewellyn never owned Fairy, but that Mr. Llewellyn was anxious to purchase her prior to her shipment to America. I further heard him remark that Mr. Llewellyn had borrowed Fairy for field purposes, promising to send her back when she came in use so that she could be bred to Blue Prince. Mr. Llewellyn, however, failed to return her in time. These are facts, and I have no doubt that when Mr. Laverack sees your paper he will publish a card stating that Mr. Llewellyn (or his breaker) never owned Fairy.

Yours truly,

A. V. V., JR.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

Black Bass, *micropterus salmoides*, *micropterus nigricans*.
Striped Bass *Roccus lineatus*. Bluefish, *temnodon solitor*.

[Under the head of "Game and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

FISH IN MARKET.—There has been a fair display of fish on the slabs during the past week, but very little in the way of novelties, if we except a lot of small gar-fish brought from Boston. Striped bass are being received from Rhode Island as well as along the Long Island shore, and sell for 20 cents per pound for fish weighing from 15 to 40 pounds, and 25 cents for the smaller ones. Green smelts from Maine are worth 25 cents; bluefish are gradually working their way south, the catch coming now from the lower Jersey coast, price 12 cents per pound; frozen salmon, 50 cents; mackerel from Massachusetts, 25 cents each; weakfish, 10 cents; white perch, 15 cents; Spanish mackerel, frozen, 50 cents; halibut, 20 cents; haddock, 10 cents; kingfish, 25 cents; codfish, 8 cents; black fish, 15 cents; flounders, 12 cents; sea bass, 18 cents; eels, 18 cents; sheepshead, 20 cents; whitefish, 15 cents; pickerel, 18 cents; salmon trout from the lakes, 18 cents; green turtle, from Indian River, Florida, 20 cents; terrapin, \$12. to \$15. per dozen; scollops, \$1.50 per gallon; hard shell crabs, 40 cents per dozen. The season for soft shell crabs is now over and there are none in market. BAIT, shedder crabs, \$2. per dozen; shrimp, \$1. per quart; soft clams, 20 to 40 cents per 100.

NEW JERSEY—Forked River.—Our correspondence from this point came to hand too late for last week's issue. The report dated October 11th, says:

"The fishing here during the past week has been excellent. Boats are catching from 40 to 60 weakfish to a man, averaging two and three pounds. Whenever the bar is quiet enough to permit the boats going outside, the bluefish suffer considerably; they average ten pounds each. Striped bass are being taken now in fair quantities, weighing from one to four pounds. The bay is alive with snapping mackerel (so called), and they serve as first-class bait stealers, if nothing else. The fishing season has been good and bad by spells; this is one of the good ones. How long it will last we cannot tell.

PENNSYLVANIA.—Philadelphia, October 18th, 1875.—The bass fishers are still at it, and report fair success. Fair success, so far as one can learn, is not more than from three to five to the rod, averaging perhaps a pound, with an occasional two or three pounder. The up-river anglers have told some interesting fish stories about their catches at Flat Rock, Conshohocken, Pawlen's Bridge, and Norristown. One Reading basket was said to number nearly a hundred, and several from one fourth to one half that number. One of the well-posted, after stoutly insisting on a big score until our incredulity gave place to our native politeness, said, "but there's an old fellow down there who fishes all the time, and puts all his fish in a bank, who will piece out your string for a consideration. We use a 'green fly,' and will until specie payments come again." Verb. sat.

SCULLS.

OHIO—Newark, Oct. 15th.—Situated about ten miles from this city is the Licking Reservoir, a noted place of resort for sportsmen in this vicinity, as well as abroad. This reservoir is a sheet of water covering about five to six thousand acres, abounding in good fishing and hunting. Black bass, pickerel, sunfish, and Lake Erie bass, wild ducks and quail are found in this locality. There are three hotels; cost of board from \$1.50 to \$2 per day. Boats at all of these places for 50 cents per day; man to row for \$2. It is reached from Newark by rail for 25 cents, or by team for \$3 per day. Distance from Newark, Licking county, Ohio, ten miles. Fishing season, April, May and June—best in last two months. Hunting from October 1st through the Fall. Rolling country. One hotel is located on the line of the Newark, Somerset and Straitsville Railroad; other hotels reached by teams; they are kept open the year through. F. G. McC.

THE FISHERIES.—There have been 77 arrivals of our fishing fleet the past week, as follows: From Georges, 29; Banks, 11; off shore, mackereling, 34; Bay of St. Lawrence, 3. The receipts are—Georges codfish, 316,000 lbs.; Banks cod, 930,000 lbs.; Georges halibut, 18,100 lbs.; Bank halibut, 83,000 lbs.; shore mackerel, 2,875 barrels; Bay mackerel, 380 barrels.—*Cape Ann Advertiser*, Oct. 15th.

THE CANADIAN FISHERIES.—A dispatch from Ottawa, Canada, announces that Mr. Ford and Mr. Bergne, the English officials appointed to act with Sir A. T. Galt, the British Commissioner of the International Commission on the Fisheries Settlement, are busily engaged in preparing the case for the Commission. It is understood that Lieut. Gov. Clifford, of Salem, Mass., will be United States Commissioner, and Judge Foster, of Boston, the American

agent. A third Commissioner remains to be chosen by the Austrian Ambassador at London. When this takes place the Commission will be fully organized and will proceed to business.

The counsel engaged by the Canadian government to conduct their case before the Fishery Commission will meet in St. John early in November to consult.

CLOSE SEASONS IN CANADA.—The Honorable the Minister of Marine and Fisheries has issued the following regulation to the fishery overseers of the Province of Ontario:—

Three of the fisheries regulations of 3d of April last are rescinded and others passed instead, making present close seasons for whitefish, salmon trout, and lake trout in Ontario from 12th November to 1st December, both days inclusive, and doing away altogether with close time for herrings.

W. F. WHITCHER,
Commissioner of Fisheries.

Ottawa, October 1st, 1875.

LARGE TROUT IN THE RANGELY WATERS.—The *Hartford Times*, of a recent date says that Mr. Thomas Sedgwick Steele, of that city, who has of late turned his attention in leisure hours to trout painting, has among his studies drawings of brook trout from five to ten pounds in weight, with the date and place of their capture, as well as the name of the fortunate angler who landed them; and their varied proportions make an interesting study. These fish are all from the Rangely region in Maine. Professor Agassiz is authority for the statement that "no other waters in the world produce such large brook trout as these pure cold streams in the wilderness of Maine," and they grow very rapidly in the first few years of their lives. Many of them have been liberated after capture with weight and year stamped on a platina tag inserted in the dorsal fin, and Thomas Moran (artist of the Yellowstone) captured a two and a quarter pound fish with one of these tags attached, stamped 1871, showing that the trout had increased one pound and three-quarters in two years.

At the headquarters of the "Oquossoc Angling Association" on the Rangely River, a place of annual resort by Mr. Steele, and where he captured a six-pounder in June, 1873, there is a book in which a record of all large trout is kept, with dates, place and weight affixed. Here on one page is an exact account of the numbers and weights of thirty brook trout taken by eight gentlemen visiting this locality in 1869, the average time of fishing being about six days each. In this list none are mentioned under four pounds each, although a large quantity of smaller ones were taken.

3 brook trout.....4 pounds each	2 brook trout.....6½ pounds each
1 brook trout.....4 pounds each	2 brook trout.....6½ pounds each
1 brook trout.....4 pounds each	1 brook trout.....7 pounds each
2 brook trout.....4 pounds each	1 brook trout.....7½ pounds each
3 brook trout.....5 pounds each	1 brook trout.....7½ pounds each
1 brook trout.....6½ pounds each	3 brook trout.....8 pounds each
4 brook trout.....5½ pounds each	1 brook trout.....8½ pounds each
2 brook trout.....6 pounds each	1 brook trout.....9 pounds each

Making thirty trout, total weight, 181½ pounds, or averaging over six pounds each. There is another account of a gentleman taking in three-quarters of an hour 24½ pounds. Mr. Page, the president of the association, some seasons ago took with a fly on the Rangely River a brook trout weighing ten pounds, and if the reader has any doubts of this statement the next time he is in New York, if he will call on Mr. Page at No. 10 Warren street, (second floor) he will be permitted to examine the fish, now at rest under a glass shade. A party in the Spring of 1874 took, in two weeks, 175 trout, weighing 232 pounds, and among the lot were fish which turned the scales at three, four, five, six, six and a half and eight pounds. In July last, in this same region, a gentleman landed four in one day that averaged over five pounds each; and during one week's fishing there were captured two of seven and a half pounds, and three of six pounds each; while a novice to the sport was made happy by a string of twenty-four, which weighed seventy-five pounds. The past season was the best in five years, the trout not being so plenty but of larger growth.

They have all the beautiful spots, tints, and recognized peculiarities of brook trout; such as square tails, small heads, the inside of the mouth black (instead of white, like lake trout), and are no doubt the genuine *Salmo fontinalis*, as lake trout are not known in that locality.

A number of these large trout are now frozen, preparatory to their exhibition at the coming Centennial, and they certainly have every right to be there, as it is estimated that the ages of two of the largest combined would make a hundred years.

The facts certainly prove beyond all question the statements regarding the extraordinary growth of speckled brook trout: still, it's considerable satisfaction to know that there is a limit, and that we are not to be annoyed by those of the size of whales and sea-serpents.

FISHING IN LAKE ERIE.

KELLEY'S ISLAND, Ohio, Lake Erie, Oct. 12, 1875.

EDITOR FOREST AND STREAM:—

The usual number of regulars have been here this season enjoying themselves black bass fishing—anglers from Cincinnati, Cleveland, Columbus, Pittsburg, Indianapolis, Covington, Ky., and numerous other places far and near. The fishing season commenced about the 20th of last month, and is now almost over. The catches have been good. On the 5th inst. one boat with two rods took 127 bass, all good sized fish, some 3½ and four pounds. One angler, using an Orvis "Coming Bass Rod," made two quadruple catches—one catch aggregating eight and one half pounds, and on a subsequent day, using a McGinniss bass rod, made another quadruple catch, all fine fish. In former days at this point heavy rods were used entirely, but now it is conceded that fine tackle is more effective, as it is certainly far more pleasant to handle. The fishing here continues to improve from year to year, which is owing to the fact that now there are but three pounds off the island, whereas a few years since they might be counted by the score, rendering it almost impossible for any bass to escape them. This island contains some 2,700 acres, almost a solid bed of the best limestone, about 1,000 acres being set out in vineyard, which produce most excellent grapes of many varieties. There is only one hotel on the island, but as it is capable of accommodating some 250 guests, and as the pleasure season is over before the fishing season commences, there is ample room for all anglers, to whom the fare is \$2 per day. Mine host Jacob Rush is an efficient landlord, and is always on the alert to make his guests happy and comfortable. This is written in the interest of lovers of our gentle art who may be looking for "fresh fields and pastures new." X.

FISHING FOR EELS IN FIJI.

A correspondent writing from Fiji is furnishing the *London Field* with some very graphic letters regarding fish and fishing in the principal of those distant isles of the Pacific. We take the following from a recent issue:—

"We sometimes fish for these fellows with a hand line at night, and my servant tried one evening a lump of dough for want of a better bait. He felt something nibble, nibble at his line, and at last a steady haul; so, returning the compliment, he hauled too, and presently landed a strange fish, like a gigantic English bream in shape. It was cooked and pronounced A1 by all the household, and, encouraged by his success, P. tried again next night. Another rewarded him, and he fished on. Presently a bite, and then a dead pull. Having a strong line and wired hook, he hauled away, and dragged up an ugly brown eel. When he attempted to seize it the creature turned and bit him across the knuckles, nearly clearing two of the joints of skin and flesh! Fishing in Fiji has its dangers! After dressing his wound I sat up writing, the household having retired to bed. I was interrupted by a young boatman rushing in, 'Oh, please, sir, give me a light. I have got a big eel like that which bit P. this evening. He lies in my boat biting furiously, and I can't get him off the line. I have jumped overboard and come for help.' He was dripping. We lit a lantern, and, taking the big office ruler, adjourned to the battle-field. First Charley drew in the boat, at the bottom of which,

"By the lantern dimly burning,"

I could see the enemy cruising about. He dropped in, and I passed in the lantern and scrambled down. As soon as we approached him, he made at Charley's naked feet. The young fellow made a spring, nearly shot me out of the cranky little boat, and upset the lantern. As I stooped to lift it the brute charged me. I had quite enough to do to save myself, and, as I had dropped the ruler at the first surge, I had no weapon. The ruler kept rolling about with the rocking boat, sometimes just within reach, but as I tried to seize it away it would roll! The eel was master of the situation for the time, but at last Charley fetched him a crack with the stretcher, and, having managed in a lull of the fight to catch the errant ruler, I seized the blow with a 'stunner.' The heavy ebony did its duty, and the slimy brute lay quiet while Charley rained blows on it, and finally severed his head from his body with his clasp knife. I never saw a more savage, fierce beast; he fairly sprang at us, with his jaws wide open and his small white eye gleaming ferociously. The way the lad and I danced in that rocking boat, with the lantern, the ruler, and the fish rolling at the bottom, would take cleverer pens than mine to describe.

Next evening, however, P. met with a more serious affair. He and my son were out at the end of the pier trying for a big cod. Presently I heard four or five heavy blows, then a yell, and my son came rushing into the office. 'Help, for God's sake, help!' he shouted, 'a huge eel has severed P.'s wrist, and he will bleed to death.' I started up, and in the doorway stood my servant, as pale as a sheet, and streaming blood from his wrist. Seizing the ruler and some red tape I made a temporary tourniquet, poured half a tumbler of brandy down his throat, and carried him off to a chemist, who luckily lives close to me, and is a good surgeon, as all these men should be. Here we sewed up two frightful gashes, that had severed some small arteries, just missing the main one of the pulse, and thus causing the severe hemorrhage. After the wound was dressed and the bleeding stayed we learned the following account of the accident.

P. had hooked and hauled up the eel, about four-pound weight. Remembering the fight of the previous night, he had swung the brute round his head, bringing him down with a thump on the boards; this was the sound of blows I heard. The last blow dislodged the hook, and then the creature sprang at him and seized him by the wrist. How he got him off he cannot tell, for the pain was extreme, and he was covered with blood in a second, but he remembered dashing it down, and it slipped away between the interstices of the planking. It was a very narrow escape with life.

There are several kinds of eels here in the rocks and stones under the pier, and two in the fresh water. These fellows grow to a great size. I have heard of one as thick as a man's thigh. The sea eels are sometimes very prettily mottled with brown. Lately I was watching a rush of danifa from a big fish. It was low tide, and many of the little fellows sprang on shore; escaping from one foe, they became the prey of another. As they tumbled about in the rocky little pools and between the interstices of the stones, half a dozen of the mottled eels rushed at and seized them; and here I witnessed what I never before suspected. I saw an eel constrict a fish as a snake does its prey, in its convolutions, and, fastening its teeth in the fish's head, it drew it through the folds of its coils and swallowed it."

Yachting and Boating.

THE RESOLUTE, DREADNAUGHT AND VESTA.—The third of the Hatch series of matches was sailed last week, when the *Resolute* contended against the *Dreadnaught* and *Vesta*, over the outside course around Cape May lightship and return. As there is a material difference in the construction of these yachts, and as at least one of them has a celebrity which is almost world-wide, a description of them may not be inappropriate. The *Resolute* is a centre-board schooner, built in 1871 by David Carll at City Island. In length she is 114 feet over all; beam, 25 feet 1 inch, and 8 foot depth of hold; tonnage, 208 tons o. m. The *Resolute* has not participated, except as a spectator, in many of the regattas of either of the clubs to which she belongs, her owner preferring to keep her in cruising trim to the nuisance of tearing to pieces in preparation for racing.

The *Vesta* is also a centre-board schooner, built by the same party in 1865; her length over all is 102 feet; beam, 25 feet, and depth, 8 feet 7 inches. The *Vesta* attained celebrity in the memorable ocean race to Cowes, participated in also by the *Henrietta* and *Fleetwing*, being at that time owned by Mr. Lorillard. The *Dreadnaught* is a keel schooner, built in Brooklyn by the Poillon's in 1871; her length over all is 117 feet 11 inches; beam, 24 feet; depth, 9 feet 7 inches. Her original owner was Capt. Samuels, who sailed the *Dauntless* in her ocean race against the *Cambria*. She was purchased from him by Mr. Stockwell, of Pacific Mail notoriety, and from his hands passed into those of Mr. C. J. Osborne. There is no finer specimen of yacht-building afloat than the *Dreadnaught*, and with all things equal, probably none of her size possessing greater speed.

THE RACE.

On Tuesday of last week the racers got under way at noon, and proceeded with a fine breeze to the lightship to prepare for the start. The ocean tug *Cyclops* had been engaged to tow the yachts from the club house anchorage; but this was found to be unnecessary. Mr. E. S. Chapin and Mr. J. H. DeMott as the judges representing respectively the owners or the *Dreadnaught* and *Vesta*, were on board the *Resolute*, which vessel was represented by Mr. J. P. Williams on the *Dreadnaught*, and Mr. W. E. Greenleaf on the *Vesta*. At 3:53 P. M. a gun from the *Resolute* signalled the yachts to make for the line, from which all were distant about three miles. At 4:25 the *Vesta* luffed around the lightship followed by the *Dreadnaught* at 4:35, and the *Resolute* at 4:40. At the time of the start a fresh breeze was blowing from N.N.W., and all the

yachts seemed to be going through the water at a very rapid rate. The *Resolute* was sailing remarkably well, logging, it is said, 11½ knots, and more as the wind increased. In half an hour she was abreast of the *Vesta*, and at 6 o'clock had passed the *Dreadnaught* and taken leading position, the latter having passed the *Vesta* some time before. At 7:30 Barnegat Light was passed, and at 11 o'clock the wind hauled to the north, and main booms were jibed over. The *Vesta* had gradually fallen astern, but before the lightship on Five Fathom Bank was reached had regained a position close to the *Dreadnaught*. At 1 o'clock A. M. on Wednesday morning the *Resolute* jibed, and heading to the eastward, rounded the lightship eleven minutes later, with half the distance accomplished. The *Dreadnaught* and *Vesta* each went to the eastward of the lightship, and rounded from the other direction, the former at 1:20:15 and the latter at 1:24. From this point the *Vesta* was in trouble. First, her main topsail was found to be badly torn, and later in the night, or rather day, the leach of her foresail parted close to the gaff, and before the sail could be taken in it was badly torn. The delay of patching and rebending effectually extinguished any chance she may have had in the race. At about 2:40 A. M. the wind died out, so that the yachts made but little headway. When Barnegat was reached the *Resolute* was about six miles ahead of the *Dreadnaught* and the latter twelve miles ahead of the *Vesta*. Here the *Dreadnaught*, which was inshore, caught a breeze from off the land that carried her up to the *Resolute*, and at 4:30 she was leading by five miles. From that time throughout the long day the yachts were becalmed, and at nightfall the *Resolute* was nine miles to windward of the *Dreadnaught*, and the *Vesta* had drifted out of sight of both. At daybreak on Thursday morning the Highland lights were to leeward, the *Resolute* and *Dreadnaught* being about four miles apart. A most exciting race now ensued between these two, resulting in the *Dreadnaught*, by very skillfully luffing when close to the lightship, passing the mark by a shave less than one minute ahead of the *Resolute*. The official time given was as follows:—

	Arrived.	Actual Time.
<i>Dreadnaught</i>	6:18:15 A. M.	38:14:30
<i>Resolute</i>	6:19:53 A. M.	38:15:33
<i>Vesta</i>	8:47:38 A. M.	40:45:06

The *Resolute* is entitled, according to the New York Yacht Club rules, to an allowance of 8m. 54s., and on this allowance wins the race. The owner of the *Dreadnaught*, however, claimed that the rules only applied to races sailed over the regular regatta course; but the judges, after many consultations, decided on Friday in favor of Mr. Hatch. The victory of Mr. Hatch affords general pleasure, for the plucky manner in which he issued his challenge and sailed the match; and although two of the races were against him, his fine yacht has done herself much credit by vanquishing such worthy antagonists as the *Dreadnaught* and *Vesta*.

—The proposed ocean race between the sloops of the Seawanhaka Yacht Club, for Captain Center's \$500 cup, will not be sailed this season, there being no entries. The prize certainly is handsome enough, but the course—around Cape May lightship—perhaps a little too long.

—Mr. Roussell, the owner of the keel sloop yacht *Eugenie*, has issued a challenge, open to any sloop yacht, except the *Vindex*, to sail twenty miles to windward and return, from the lightship, on the same day that the *Mohawk* and *Dauntless* sail their match. Mr. Roussell proposes to sail for \$150, to be divided among the winning crew. It is a sportsmanlike challenge and is worthy the attention of the owners of such boats as the *Addie*, *Vision*, *Sadie*, *Active*, *Undine*, *Orion* and others.

THE CHAMPION SCULL RACE.—On Saturday last, at Pittsburgh, Evan Morris and Henry Coulter rowed a five-mile single scull race over the Hutton course for a stake of \$1,000 and the championship of America. Coulter managed to take the lead at the start, and at the end of the first mile he was three lengths ahead. After rounding the stake boat, however, Morris made a spurt, and passing Coulter, crossed the line first a length ahead. Time, 35m. 20s.

—On Friday last Messrs. R. W. Rathburn and W. E. McCready rowed a two-mile race on the Harlem River for the championship of the Athletic Club. McCready took the lead at the start, and kept it until three quarters of a mile had been accomplished, when Rathburn passed him and won by fifteen lengths. Time, 14m. 40s.

PHILADELPHIA, Oct. 18, 1875.

EDITOR FOREST AND STREAM:—

The Fall review of the Schuylkill Navy will take place at Turtle Rock, Fairmount Park, on Saturday next, at 4:30 P. M. This will be virtually the wind-up of a very active boating season, nothing else of interest being likely to come off unless some of the enthusiasts get up a race for Thanksgiving Day.

SCULLS.

The Colleges.

YALE FALL RACES.—The Fall regatta of the Yale University Boat Club took place on Saturday last on Lake Saltonstall, the attendance of students and New Haven citizens being large. The first race was between the six-oared shells of the law school and the class of '77; distance, three miles. The law school crew, composed of V. H. Metcalf, (bow) C. Ives, J. W. Westcott, A. A. Canavan, J. B. Ward, R. H. Johnson, (stroke,) won in 19m. 27s.

The next was a barge race, two miles, between the Freshmen crews of the Academic and scientific departments, the former winning in 13m. 33½s. The victorious crew is as follows: J. B. Clarkson, (bow) B. S. Keator, F. A. Stokes, W. S. Asay, A. L. Holmes, F. E. Hyde, (stroke) E. S. Rowland (coxswain).

For the single scull race there were three entries: H. Livingston, '78; T. A. Vernon, '76; and W. A. Ransom, '78. Livingston was the winner, doing the two miles in 15m. 26½s., Vernon's time being 16m. 38½s. and Ransom's 16m. 50½s. The last race was the most exciting of the day. It was between six-oared shells of the law school and classes of '77 and '78. '77 was victorious, doing the two miles in 13m. 18½s. It is said to be the first race ever won by '77, hence the names of the winning crew should be handed down to posterity. They are, F. J. Stimson, (bow) C. L. Alvord, C. S. Mervine, A. W. Cole, W. W. Colin, E. C. Coake (stroke) — Atwater, (coxswain). Mr. E. P. Howe acted as starter and referee, and R. J. Cooke as timekeeper.

—Yale students are being stirred up on the subject of athletics, and the students of '77, '78 and '79 are appealed to to spoil the monopoly in prizes which '76 is likely to establish. A meeting between Yale and Harvard, similar to

the yearly contests between Oxford and Cambridge, is prognosticated.

HARVARD.—In referring to the election of a new captain for the University crew, the *Crimson* says:—

"The election of a man who has never rowed on the University crew to the position of captain of the crew marks a new departure in our boating affairs. The leaf which we are about to turn will, we trust, be brighter than the last one. For the new captain of the crew we can confidently promise that his sole idea will be the conscientious discharge of the responsible duties committed to his charge. He believes in having only those men in the boat who are (to use his own words) 'heart and soul in the crew,' and he will endeavor to find five men in the University who have, beside the requisite amount of muscle, a sufficiently high idea of the trust confided to them to exert themselves to their utmost, both before and during the race.

In the crew of last year there was more lack of enthusiasm than of muscle. The men went through the regular routine of work laid out for a university crew, but they thought more of going to Saratoga and of wearing their University hats about Cambridge than they did of winning the race. This feeling the new captain intends to keep down. The object of the crew will be to win, and if he succeeds in picking out for his crew men who will enthusiastically devote themselves, mind and body, to the work, we can begin to cherish hopes of victory."

The Fall scratch races were rowed on the Charles River on Saturday last, the course being one-half mile and return. The first race was for single sculls, the boats coming in as follows: Danforth, 1st; Weld, '76, 2d; James, 3d; Weld, '79, 4th; Lemoyne, 5th; Denton having fallen out of the race.

The second race was between four-oared boats, with the following crews and positions: Martin, '77; Katzenbach, '79; Page, '77; Price, '79, inside; Wells, '78; Wells, '77; Weld, '79; Gale, '79, second; Bird, '77; Brown, '77; Upham, '77; Ives, '79, third; Raynor, '78; Powell, '77; Preston, '79; Earl, '79, outside. The start was even. The Martin crew won by several lengths.

The next race was for double sculls, but proved a fizzle, Denton and Danforth pulling over the course at leisure.

The concluding contest was between four six-oared boats manned as follows: First boat—Wiley, '77, stroke; Perkins, L. S. S., 2d; Hastings, '76, 3d; James, L. S. S., 4th; Riggs, '76, 5th, and Lemoyne, '78, bow. Second boat—Loring, stroke, Martin, '77, 2d; Crocker, '79, 3d; Preston, '79, 4th; Katzenbach, '79, 5th; James, '79, bow. Third boat—Wells, '76, stroke; Wetmore, '75, 2d; Wells, '79, 3d; Morgan, '78, 4th; Upham, '77, 5th; Jacobs, '79, bow. Fourth boat—Thayer, L. S. S., stroke; Bancroft, '78, 2d; Littaner, '78, 3d; Wetherbee, '78, 4th; Page, '77, 5th; Shillets, '75, bow. This race was well contested, and was won by the Wiley crew.

DARTMOUTH.—The students of Dartmouth held their Fall athletic sports on the 13th and 14th instants. The most important event was the rowing match between the Senior and Sophomore crews, in six-oared shells, over a two and a half mile course. The Seniors took the lead at the start, but were passed by the Sophomores, who came in first in 14m. 35½s. The Seniors, however, claimed a foul, which was, after much discussion, allowed, and the race rowed over again on Friday afternoon. On this occasion the Seniors also took the lead, but retained it to the end, winning in 14m. 52½s.

TRINITY.—A race was rowed on Saturday last between two six-oared boats of the Trinity navy. The distance was two miles, and the crews composed as follows, the first two named being short two men through sickness:—Upper crew—Prout, stroke; Sherman, DuBois, captain; Rutherford, bow. Lower crew—Ebberts, captain and stroke; Potwine, Bredin, Deuell, Roberts, Scott, bow. Referee—B. E. Warner, '76. Judges—Professor G. O. Holbrooke, J. D. Tuckerman, '76, W. V. Chapin, '78. In endeavoring to clear a schooner the boats collided, and in the melee the stroke of the upper class crew lost an oar. The referee decided that the foul was the fault of the lower class crew, and gave the race to the upper crew.

National Pastimes.

THE PROFESSIONAL ARENA.

—The contest for the professional whip pennant is nearly over, and the closing record of Nov. 1st will find the Boston Red Stockings possessors of the pennant for the fourth time. This year the Athletics will occupy second position, and as for third place, the fight is now pretty close between Hartford and St. Louis, the former occupying third place, when the record was made up—Oct. 18th—as will be seen by the appended table:—

CLUB.	Boston.	Athletic.	Hartford.	St. Louis.	Philadelphia.	Chicago.	Mutual.	Games Won.
Boston.....	8	7	7	6	6	10	24	24
Athletic.....	2	3	5	7	7	6	30	30
Hartford.....	0	4	4	4	3	8	23	23
St. Louis.....	2	1	4	5	5	6	23	23
Philadelphia.....	0	2	4	4	7	1	18	18
Chicago.....	2	1	4	5	3	2	17	17
Mutual.....	0	3	2	0	5	3	13	13
Games Lost.....	6	19	24	25	30	31	168	

This table does not include forfeited games.

The record of all the games lost and won in the arena since April 19th, and up to October 18th, is as follows:—

CLUB.	Boston.	Athletic.	Hartford.	St. Louis.	Philadelphia.	Chicago.	Mutual.	New Haven.	Red Stockings.	Washington.	Centennial.	Atlantic.	Western.	Games Won.
Boston.....	8	7	7	6	6	10	4	1	5	5	6	1	66	66
Athletic.....	2	3	5	7	7	6	7	0	5	2	7	0	51	51
Hartford.....	0	4	4	4	3	8	7	3	4	1	0	0	48	48

Games lost.....	7	20	25	26	30	32	34	36	14	22	13	12	118	118

This week the Chicago and St. Louis clubs play their

last games in Brooklyn for the season. The games played in the championship arena in October are as follows:—

Oct. 2—Boston vs. Hartford, at Boston.....	2 to 2
Oct. 1—Mutual vs. Athletic, at Philadelphia.....	4 to 2
Oct. 8—St. Louis vs. Chicago at St. Louis.....	4 to 2
Oct. 2—Cincinnati vs. Philadelphia at Cincinnati.....	5 to 1
Oct. 4—Mutual vs. Boston, (exhibition) at Troy.....	6 to 3
Oct. 9—Chicago vs. St. Louis, at Chicago.....	7 to 1
Oct. 7—St. Louis vs. Chicago, at St. Louis.....	6 to 4
Oct. 5—Athletic vs. Hartford, at Philadelphia.....	7 to 4
Oct. 8—Hartford vs. Athletic at Philadelphia.....	8 to 1
Oct. 7—Boston vs. Philadelphia, at Philadelphia.....	8 to 7
Oct. 13—Hartford vs. Athletic, at Hartford.....	18 to 2
Oct. 13—Athletic vs. Hartford, at Hartford.....	8 to 7
Oct. 14—Hartford vs. Athletic, at Hartford.....	10 to 10
Oct. 14—Chicago vs. Philadelphia, at Philadelphia.....	10 to 6
Oct. 14—Boston vs. St. Louis, at Boston.....	12 to 8
Oct. 15—Athletic vs. Chicago, at Philadelphia.....	6 to 2
Oct. 18—Philadelphia vs. Chicago, at Philadelphia.....	11 to 3
Oct. 18—Hartford vs. St. Louis, at Hartford.....	5 to 0

THE AMATEUR ARENA.

—The revolving season of the amateur fraternity will not end until Thanksgiving Day, in November, up to which time games will be played every fine day, especially at Prospect Park. The important match of the week was the return game between picked tens of New York and Brooklyn, in which New York was again successful, this time by 8 to 0. Mr. Chadwick awarded the prizes, as follows: Best batting to Hankinson and Lee; best fielding to Tracy and Dunn. The model games in which amateur nines took part since our last are as follows:—

Oct. 9—La Belle vs. Clipper, at Wheeling, Va.....	4 to 1
Oct. 13—New Haven vs. Yale, at New Haven, Ct.....	4 to 2
Oct. 13—Active vs. Philadelphia, at Reading, Pa., (16 ins.).....	4 to 4
Oct. 12—Chelsea vs. Concord, at Brooklyn (3 innings).....	7 to 4
Oct. 18—New York vs. Brooklyn, at Brooklyn.....	8 to 0
Oct. 2—Enreka vs. Olympic, at Oakland, Cal.....	8 to 4
Oct. 2—Etna vs. Cass, at Detroit, Mich.....	8 to 7
Oct. 9—Portsmouth vs. Athletic, at Portsmouth, Va.....	9 to 0
Oct. 15—Philadelphia vs. Active, at Reading, Pa.....	9 to 4

CRICKET.

—The young Americas polished off the Merions on Oct. 2d to the tune of 379 to 82 in one inning play. John Large scored 74 and Bussier 81, Soper Baird carrying his bat out for 88. The five Newballs added 97 to the score. Ashbridge's 22 was the best on the other side. Only eight of Young America went to the bat.

GRECO-ROMAN WRESTLING.—The novelty of the long-promised exhibition attracted a large crowd to the Grand Opera House on Wednesday evening of last week, to witness the wrestling match between M. Andre Christol and William Miller. The latter is a tall, muscular man, weighing 225 pounds, while the Frenchman is much smaller and turns the scale at 170. Both men were stripped to the waist, and were splendid specimens of muscular activity. This mode of wrestling is different from anything of the kind usually practiced in this country or in England. The contestants are allowed to catch each other in any way above the waist, and a fall is decided by the loser being thrown flat upon his back with both shoulders touching the floor simultaneously. Christol was much the trickiest and quickest, but Miller evidently possessed the greatest strength. The former, however, gained the first fall, laying his opponent flat upon his back. Miller won the second and third falls and Christol the fourth. The deciding round was intensely exciting; the men pushed and struggled, until Miller, by main strength, pushed his adversary down, and catching hold of his outstretched wrists, pressed his whole weight again and again on his breast, until Christol's shoulders were touching the floor. Miller was declared the winner, and the stakes—\$1,000—handed to him.

—One hundred and forty members of the New York Stock Exchange have organized a rowing association, to be known as the New York Stock Exchange Rowing Association. On Tuesday the following officers were elected:—President, Brayton Ives; Vice President, Alex. Taylor, Jr.; Secretary, E. A. Drake; Treasurer, R. B. Hartshorn; Captain, C. H. Leland; Lieutenant, C. G. Peters; Trustees, J. W. S. Oddee; W. Lummis, M. Burr, Jr., S. J. Drake, and F. K. Stuges.

New Publications.

BOOKS RECEIVED.

FIRST BOOK OF ZOOLOGY. By Edward S. Morse, Ph. D., etc., etc. New York: D. Appleton & Co., 1875.

This very notable and entirely original work will immediately receive and retain the favor of all to whom the instruction of our youth in Natural History is confided. Certainly no work has appeared in this country which so perfectly answers the requirements of the case; and we suspect that not a few of the teachers themselves will be taught by it. Prof. Morse's reputation as a naturalist is like that which Caesar's wife had, or ought to have had, for virtue. Few, if any, of the younger zoologists of this country stand higher, and none more deservedly so. His brilliant career as a public lecturer is well known; but as in all similar cases the public is less familiar with the enormous amount of patient, laborious application, both in the closet and in the field, which have been the distinguishing features of Prof. Morse's scientific career, and which alone could have given him the enviable position he now holds among men of science. It is a gratifying indication of the healthy state of science in this country that a man like Prof. Morse, absorbed as he is in study of the most important and abstruse questions in biology, will yet take time to smooth the way for the timid beginner, and set forth the fundamental principles of zoology in a manner which will enable even a child to understand them. Nothing can be clearer than his description of the various animals he treats of, or than his explanation of their modes of life, or than his exposition of the principles of their classification. With equal fact and judgment he does not seek far for rare or strange objects, but in our homes, streets, and gardens he picks up the objects that meet us at every turn, tells us all about them in his own inimitable way, and invests each with a charm. He moreover tells where to look for such things, and how to find them, and preserve them and study them. Such a work as this will be of the greatest possible use, not only as a text book from which certain facts may be learned, but as a stimulant to the young mind, exciting interest, calling for the powers of observation and judgment, and fairly placing the student in position to take care of himself. To ourselves, the book comes as the welcome reflection of the man himself, whom we have known only to respect, admire and love; and this, too, not alone in the brotherhood of science, but in the higher relations which may subsist between men. Certainly no safer, or surer, or more delightful teacher of the rising generation in all matters of which this book treats, could be desired.

The success of the volume, which is placed beyond contingency, will of course be in no wise affected by anything we might say about it; but this is no reason why we should not add our slight tribute of praise to the many high encomiums which the work merits and receives.

NEBRASKA: ITS ADVANTAGES, RESOURCES, AND DRAWBACKS. By Edwin A. Curley. New York: The American and Foreign Publication Company.

Mr. Curley visited this country in the interest of the London Field as its special commissioner to the emigrant field of North America. The book under observation is one of the results of his travels and re-

searches. Looking at it from our own standpoint, we cannot but regret that the author, during his tours of observation, should not have given more attention to the sporting facilities afforded by the wide plains and the waters of the Platte River and its tributaries; for the English emigrant is by no means always confined to the agricultural classes. Younger sons and others who seek the New World to engage in sheep growing or stock-raising are invariably tinctured with the love of field sports inherent in British nature, and the country affording these facilities, in conjunction with those of the more material pursuits, is the one to which their attention can be most easily directed. And of all the States in our Union, Nebraska, probably, taken as a whole, is the most tempting. Sufficiently removed from civilization, by which we mean the proximity of crowded and overgrown cities, for the settler to find an abundance of rich and virgin soil, the hand of the speculator has not as yet grasped its fairer portions to consign them to disuse until such time as he can command a fancied value. Watered by beautiful streams, and with timber in the Rio Brar, its farthest boundaries still the home of the red man and the bison, a railway, one of the arteries of the continent, connecting it with both Atlantic and Pacific, it offers inducements for settlement and emigration which Mr. Curley has by no means overstated. His work, indeed, is a plain statement of facts and figures with no strain of romance but matter-of-fact detail, and hence its value. He has gone into the subject in a spirit quite contrary to that which produces the usual speculative hand book, made up of ancient and apocryphal maps and traveler's stories, issued in the interest of local speculators or a railroad land grant. Our emigrant system is described in detail, and the emigrant advised of his course from the moment of his arrival at Castle Garden until he is landed in his Western home. The resources of the soil and the mode of cultivation are all explained, and a mass of information colated in its four hundred and odd pages. The book is a handsome addition to the library, and can be relied on for accuracy.

SHELDON & COMPANY will publish in a few days a second series of "Our Poetical Favorites," by Prof. A. C. Kendrick, of Rochester University.

This volume will contain selections of longer English poems. The remarkable success of the first series proved that Dr. Kendrick, with his fine poetic taste, had made a selection of unusual excellence; and this new series will doubtless find a ready sale.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

J. B. T., Astoria, Ill.—Are the sporting rifles made by the Whitney Arms Company good and reliable? Ans. Yes, equal to any.

JUSTICE, New York.—Please decide the following:—A bets B that C will not walk two miles in nineteen minutes before Oct. 1, 1875. C does not intend to walk before Oct. 1, nor does he attempt it. Is the bet off, or does A win? Ans. We should decide the bet off.

H. H. S., New York.—I have a black and tan slut near seven months old, who has been troubled with her eyes running for some six weeks—some days not at all, and others a good deal. I have been told that sugar of lead is good. Is it so, and how and how often must I use it? Ans. Apply a weak solution of sugar of lead or sulphate of zinc two or three times a day.

H. G., New York.—Please inform me what shoot there is, if any, in Pike county, Pa., and at what stations to stop; also if any guide and dogs can be had up there? Ans. Go to Milford. Erie Railway to Port Jervis; thence stage. "Bub" Wells will find guide, but you had better take your own dogs. Game, ruffed grouse, quail (after 1st prox.) and wild pigeons.

E. H. D., Peotone.—Please tell me where I can obtain the *Naturalist Advertiser and Historical Bulletin* for 1875, and its price. How should book manuscript be prepared for publication—that is, on what size paper should it be written, and with pen or pencil? Ans. Address the *Naturalist's* agency, Salem, Mass.; we do not know the price. Prepare your manuscript on large sized note paper and write with pen and ink only on one side.

E. W., Hudson, N. Y.—1st. Is your your book, "Camp Life in Florida," issued yet? 2d. Which do you consider best for general use in Florida, a Stevens single barrel breech loading gun or a good double barrel muzzle loading gun? Ans. 1st. "Camp Life in Florida" will be ready early in November. 2d. The double gun by all means, as, if one gun only is carried, one barrel could be used for ball or buckshot.

G. P. D., Brookport.—Please inform me which is the best ornithology, others than "Birds of North America," by Prof. Baird, and the price? Ans. Cone's "Key to North American Birds," price \$7, is a concise account of every living and fossil bird at present known north of the Mexican boundary. Published by the *Naturalist's* Agency, Salem, Mass.

S. H. P., Bridgeport, Ct.—I have fished this Summer and early Fall on the Housatonic River for black bass with fair success, but since our first frost they have ceased to bite almost entirely. Is it usual for them to stop biting so early, and does the depth of water make any difference with them? Ans. The same report reaches us from every locality visited by frost. We think the bass find the deep water when practicable, and are not inclined to bite.

H. C., Columbia, S. C.—I see by your paper that you answer questions which pertain to field sports. Please answer in your next issue the following: What size shot is best to be used in a single barrel Parker muzzle loading shot gun, 15 bore 27 inches in length, for duck shooting, and at what distance it will kill duck with the shot you advise me using? Ans. For ducks we would suggest one ounce No. 4 shot; the distance depends on the gun; forty yards would be very fair.

BOY HUNTER, New York.—I would like to go shooting on election day, Nov. 2, and I do not know where to go. Would you tell me where, within an hour's or less ride from New York, say from ten to twenty-five miles, I can find good shooting for rabbits, robins, squirrels, quail, or any small game? I would like to go as near New York as possible, but would like to go where the game is pretty thick. Ans. No place to our knowledge within that distance of New York where you would not be likely to trespass on private grounds. Go to Rockaway beach or on the flats about Barren Island and shoot sand pipers and peeps.

H. E., Poughkeepsie.—I notice in the *FOREST AND STREAM* a note about the beaver in Virginia, and I should like to have a little information regarding whether it would pay, and what other game there is, and if there are many trapping there yet for the beaver? Is the country settled very much or not? Ans. We are told that the Nottoway and Meherrin Rivers are full of beaver, and that all their small tributaries are dammed by them to the injury of lands and crops. A large number of persons have gone there, and we should think they would soon be cleaned out. There is small game in abundance, and some turkeys and deer.

NEOPHYTE, Brooklyn, L. I.—1st. What quantity of powder and shot would make a reliable killing load for a muzzle loading 14 bore gun, weight 8½ pounds? 2d. What brand of powder would you recommend? 3d. Where, within two hours' ride from the city, could one go for a couple of days' shooting, a full bag rather than a few choice birds being the desideratum? Ans. Try three drachms powder 1½ ounces shot. 2d. The different brands of powder advertised in our columns are all good. 3d. Farmingdale, Monmouth county, N. J., where the season opens on the 1st of November.

ATTORNEY, Washington, D. C.—I have a thoroughbred Gordon setter pup, eight months old, that is troubled with an eruption or rash, which seems to be confined to his ears, and between the toes of the forefeet the feet are very warm and feverish; he walks with great difficulty, keeping one foot off the ground most of the time; appetite not very good. If you can give me any advice as to what treatment to follow I will be greatly obliged. Ans. Take one ounce flour of sulphur, one ounce powdered charcoal, and lard enough to make an ointment. First wash the

feet and ears well with castile soap suds, and when dry, anoint thoroughly with the ointment. Give him very little or no meat. Well boiled mush made of Indian or oat meal is good food. A purgative, we think, would be beneficial.

YOUNG SUBSCRIBER, St. Louis.—You informed me in your last issue that I could obtain good duck shooting in any of the counties of Illinois southeast of St. Louis. Please state in your next issue what county in the above given State you think is best for good sport, where I had better leave the cars, and also in what direction I shall travel to find the given place. Ans. If you will walk six miles east of St. Louis to Breese Lake you will probably find as good duck shooting as you would by going further from home; or go toward Alden, only ten or twelve miles distant; there inquire for Long Lake; or go to Maradosla, in Morgan county, or almost anywhere in Greene, Scott, or Morgan counties. Ask the station master in what direction you are to walk after leaving the cars.

NIMROD, Boston.—I made a careless mistake in my last inquiry. I should have said Henry Buckley, Birmingham, instead of Charles. 1st. Can you give me any information concerning this man as a gunmaker? 2d. Can you give me the names of a few reliable dog trainers in the vicinity of Boston? 3d. Will "F.," who owns the Greener choke bore that made such a fine target at thirty yards try it at forty and forty-five yards and report through the columns of your paper? Ans. 1st. We have examined the list of Birmingham, England, gunmakers, and find no one named Buckley among them. 2d. Know of none near Boston. H. J. Perry, Palmer, Mass., has a good reputation. 3d. Perhaps "F." will reply to this.

J. B., New York.—Will you be kind enough to let me know the Post Office address of Wm. Moore & Co. gunmakers? Also inform me of the proper way of loading a double barrel muzzle loading shot gun made by the above parties, size 30-inch barrel, weight 8 pounds, No. 11 bore; and also the best way to clean a gun after coming home from a good day's shooting? Ans. Wm. Moore, the gunmaker, is dead, and we do not know that any of the firm are manufacturing guns now. For upland shooting use three drachms of powder and 1½ ounces shot. For ducks, four drachms powder. After a good day's shooting wash your gun with tepid water and a little soap; dry thoroughly and oil with sewing machine oil.

J. F. F., Montreal.—Can you inform me where I can get within 80 or 100 miles of this city (Montreal) shooting of the following description:—Snipe or woodcock, ruffed grouse and ptarmigan, and lastly, squirrel (gray and black)? Are dogs or guides required at any place where you can get squirrel shooting? Ans. We are told that in the neighborhood of Kilkenny Lake most of the game you mention is to be found. Route from Montreal to New Glasgow by stage every day; from thence you must hire conveyance to the lake. On the road to New Glasgow inquire for John Haile, who will post you. At the lake, W. Hamilton, or "Rapid-dee Willie," as he is called, or the Ward Brothers, will act as guides. Take your own dogs if you have any.

C. W. T., Yonkers.—Please give me the exact distinction between canvas back and red-head ducks. Ans. The red-head is the pochard of Europe, although abundant in this country, while the habitat of the canvas back appears to be confined principally, if not altogether, to North America. We give you the exact description of both, italicizing those parts wherein the distinction appears. Red-head—bill, *dull blue*, with a black belt at the end, *broad and depressed*, shorter than head, the nostrils within its basal half; color, of head, rich pure chestnut, with bronzy or red reflection; of back, mixed silvery-gray and black in equal amount; the dark weed lines unbroken. Canvas back—bill *blackish*, high at the base, and *narrow throughout*; not shorter than head, the nostrils at its middle; head much obscured with dusky, black waved lines of the back, sparse and much broken up into dots, the *whitish* thus *predominating*. A little practice will enable you to distinguish between them.

J. H. J., Green Bay, Wis.—1st. Please give me John Mortimer Murphy's address? 2d. Can you furnish me a book on zoology of Oregon or Washington Territory, or any kind of a book on hunting in that locality, or name of person, paper, or publishing company in that part of the country who might give me such information? 3d. I am thinking of going there principally for hunting, can you tell me whether Oregon or Washington Territory is the better place to go, and what part in the State and Territory do you think preferable? Ans. 1st. Box 3,166 New York city. 2d. You can get a book on the zoology and resources of both countries by writing to S. J. McCormick, Portland, Oregon. Mr. Murphy has compiled both; also others on the entire region west of the Rocky Mountains. 3d. The same class of hunting can be found either in Western Oregon or Washington Territory. Any part will afford you all the sport you desire from elk to panther hunting.

CONSTANT READER, Wilkesbarre, Pa.—Will you kindly answer the following questions in your valuable paper:—I have a pointer pup a little over four months old. When he first came to me he had a slight eruption on the poll. After I had had him a few weeks this spread and came out all over his body indiscriminately; no actual sores, but the hair seemed to get thin and come off in small patches not larger than an old fashioned three cent piece. I rubbed him with carbolic acid and glycerine, and the eruption has nearly passed away, but he lost flesh from the time I first received him, and three weeks ago he was but a living skeleton. Sometimes his appetite would be good; at others he seemed not to care for anything, shivering and wanting to be quiet. At this time I noticed he had a diarrhea, and changed his food from corn-meal to bread and milk and the general scraps from the table; he has improved a little under this change, but the diarrhea still continues, and some blood is passed occasionally; the faces are generally black to a lead color, and have a granulated appearance, as if wet gunpowder had passed through him undigested. When the diarrhea first commenced I noticed a few fine worms were passed; the worms were not larger than hairs, and about an inch in length. I have given him also a few of the tonic pills recommended in Dinks, Mayhew & Hutchinson, on page 156, but as yet have seen no improvement. I should think he had the distemper, but I do not find the other symptoms; his nose is cool and moist, eyes clear and normal, tongue normal, breath not offensive. 1st. What is the matter with him? 2d. What shall I do to cure him? 3d. Is the leanness all caused by his disease? Ans. The distemper in pups comes in such a variety of forms it is often difficult to detect; yet we can hardly think your pup has that disease. He probably is afflicted with worms, and would advise you to give him thirty grains of powdered areca nut, to be followed by half an ounce of castor oil. It can do him no harm, and may relieve him.

—The theory in a recent inquest that the deceased was killed by the glancing of a rifle ball fired in another direction but striking the water, has elicited the statement from Mr. W. W. Winchester, of the Winchester Arms Works, that the deflection from any given rifle is always to the right. Where the twist is to the right the ball on striking the surface of the water will go to the right. The ball has two motions, direct and rotating, and when it meets with an obstruction, as the surface of the water, the first motion is opposed or arrested to a certain extent, while the rotating is not obstructed, but on the contrary accelerated, and caused to pursue its flight on the angle of motion, viz., to the right. A ball fired from a rifle with the twist from the right to left would glance to the left. Mr. Winchester believes that a ball fired from a smooth bore rifle striking the water at a complete right angle at the point of its impact would not be deflected either way.

—Mrs. Maria R. Audobon, granddaughter of the great naturalist, is a remarkable swimmer, and at Watch Hill, this season, ventured out to sea far beyond the most adventurous man in the place.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOOR RECREATION AND STUDY OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[Post Office Box 2832.]
127 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty percent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, OCTOBER 21, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited.

We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, Oct. 21.—Racing—Baltimore, Md. Trotting—Deerfoot Park, L. I.; Indianapolis, Ind.; Goshen, N. Y.; Woodbury, N. J. Rifle—FOREST AND STREAM Badges, Conlin's, 930 Broadway. Base Ball—Boston vs. Chicago, at Boston; St. Louis vs. Hartford, at Hartford; Alaska vs. Olympic, at Manhattanville.

FRIDAY, Oct. 22.—Racing—Baltimore, Md. Trotting—Cambridge City, Ind.; Lawrence, Mass.; Washington, D. C.; Goshen, N. Y.; Deerfoot Park, L. I. California Rifle Association Tournament commences. Base Ball—Boston vs. Chicago, at Boston; St. Louis vs. Mutual, at Brooklyn.

SATURDAY, Oct. 23.—Creedmoor—Hepburn Trophy Match. Base Ball—Athletic vs. Philadelphia, at Philadelphia; St. Louis vs. Mutual, at Brooklyn; Flyaway vs. Active, at Philadelphia.

MONDAY, Oct. 25.—Trotting—Prospect Park, L. I. Tennessee State Sportsmen's Association, Memphis; trap shooting. Rhode Island Rifle Association. Base Ball—Hartford vs. Chicago, at Hartford; St. Louis vs. Mutual, at Brooklyn.

TUESDAY, Oct. 26.—Racing—Washington, D. C. Trotting—Prospect Park, L. I.; Pottsville, Pa. Tennessee State Sportsmen's Association, Memphis; trap shooting. Creedmoor—Seventh Regiment "Rifles" Match. Yachting—Mohawk vs. Dauntless. Base Ball—St. Louis vs. Mutual, at Brooklyn; Hartford vs. Chicago, at Hartford.

WEDNESDAY, Oct. 27.—Racing—Washington, D. C. Trotting—Prospect Park, L. I.; Pottsville, Pa. Creedmoor—Morrison Medal. Base Ball—Hartford vs. Chicago, at Hartford.

GAME PROTECTION.—The Executive Committee of the International Association for Protecting Game and Fish will meet to-morrow, October 22d, at the Secretary's Office, 17 Chatham street, at 11 o'clock A. M.

—The critic of the Great Thunderer must be quite ignorant in regard to rifle shooting and its practice. In a late number of the *London Times* he naively states that "wind has of course less effect on a man when he is in a recumbent position, such as is assumed by riflemen when shooting at long ranges." Wind, in this sense, must be applicable to certain internal derangements of the rifleman himself. Then the rifle critic of the same paper gravely states "that when once a rifleman has learned to strike the target over and over again in calm weather, it might be better for his efficiency as a soldier that he should practice only on days when the elements are adverse." As it rains now and then in England the opportunity might of course occasionally be found. One very good thing proposed by the *Times*' rifleman is, that "all soldiers, particularly volunteers, should be taught to shoot at night." An admirable idea! Another notion equally good would be for them to shoot under water. The Thunderer is usually superb, but the great Jupiter of journalism drivels when he talks rifle. Let him stick to his bolts.

SUBTERRANEAN RIVERS.

IT has long been a mooted question as to what becomes of the surplus water of Lake Ronkonkoma in Suffolk county, Long Island, and the stream which flows past and through the property of the South Side Club is supposed to connect by a subterranean passage with the lake, and to form its outlet. The recent discoveries at Garden City would indicate a remarkable condition of the sub-strata of the island, and if the report is correct the presence of so many springs culminating in trout streams can be accounted for. Mr. Hinsdale, who is in charge of Mr. Stewart's improvements at Garden City, has written a letter to Professor J. D. Dana, of Massachusetts, describing the results which have followed the excavation of the gravel in the vicinity. At a point within three quarters of a mile of Hempstead, he says, they are simply removing gravel from a river, which he describes as a sheet of water flowing southerly in a continuous stream, with a descent of eight feet to the mile. Its motion, of course, is retarded by the gravel, but it is nevertheless moving, and as unceasing in its flow as the Hudson or the Mississippi. In boring for artesian wells it is not uncommon for the workers to come upon such subterranean streams, and when found between two stratas of clay or rock, the water, finding no other outlet, is forced through the pipe and forms a flowing well. But when the stream is found flowing through gravel the loose soil permits the water to percolate through it without "heading," and hence it can not be forced to the surface by means of its own pressure. The peculiarity of the Long Island stream appears to be in its proximity to the surface, although we have in mind a whole district of country where artesian wells are found at a depth of one hundred feet.

At many points on the coast of California where the coast range of mountains are some distance from the shore line, the plains between have been successfully tapped and that greatest of blessings in a dry country, an abundance of water, easily procured, and that at a depth varying from sixty-five to two hundred feet from the surface. The ease with which flowing artesian wells are obtained in those localities, is however, very readily explained. The mountain range extends usually for thirty miles in width; in the southern counties there is scarcely a stream from them which finds its way to the sea; although there is a rainless Summer, yet in Winter the snow covers the summits of peaks five thousand feet high, and the immense drainage of all this surface must be stored in great subterranean lakes, or in underground rivers finding its way with the dip of the impervious strata until it reaches the sea. Hence, when the pipe taps the water the pressure behind forces it through the aperture, and where the pressure is sufficient or the fountain head higher than the locality where the boring is being done, it rises above the surface in an endeavor to obey the law of hydraulics which compels water always to find its level. The principal is the same with artificial fountains. The peculiarity of the Long Island discoveries is that there is no apparent cause for the storage of so much water, located as the island is between two bodies of salt water, whose depths must be so much greater than that of the subterranean stream.

Artesian wells, so named from the province of Artois (*Lat. Artesium*) in France, were first bored in Europe a century or more since. One at Aire, in Artois, has been flowing constantly for more than a hundred years, and still rises eleven feet above the surface at a rate of two hundred and fifty gallons per minute. In some instances warm water is obtained, and at Wurtemberg large factories are heated by the water being conveyed through pipes, a uniform temperature being thus obtained. The well at Paris used for warming the Grenelle hospital, the water being always at a temperature of 83° F., is one of the deepest in the old world. It was commenced in 1833, and in 1841 at a depth of 1,797 feet the boring rod penetrated the rock over the subterranean waters and fell fourteen feet. The water immediately commenced to rise, and in a few hours had reached the surface, bringing with it an immense quantity of mud and sand. It now yields 500,000 gallons in every twenty-four hours. This flow, however, does not compare with the well at Passy, which, with a depth of 1,923 feet emits daily 5,500,000 gallons of water. The higher the piping is carried above the surface, however, the less is the flow of water.

There is an immense area of our country which could be brought into cultivation and made of practical value if artesian wells could be bored to supply it with water. And such we doubt not will be the result when the increase of population shall have brought the lands into notice and demand. A large portion of California, Colorado, Arizona, and New Mexico require water as a first necessity. That with patience and the proper appliances it can be procured is beyond a doubt. As far back as 1858 a French engineer commenced boring for water in the Sahara, and now there are seventy-five wells in that desert, yielding an aggregate of 600,000 gallons of water an hour. Such a supply would almost answer for a county in California for irrigating purposes. The effect in Africa has been most surprising. Villages embowered with palm trees have sprung up where before were dreary wastes of sand, and a thousand tropical gardens now exist where once even the prowling jackall could only find a living in picking the bones of luckless travelers. We see that it is under discussion to cut a canal from the Mediterranean and flood the Sahara with water, thus opening up an easy mode of travel to hitherto unexplored districts. What the unfortunate inhabitants of Timbuctoo would say to being, perhaps, incontinently

drowned out, it is hard to imagine, but the lonely missionary would no longer dine off the succulent missionary and spoil his digestion with the "hymn book too." A similar project has for its culmination the flooding of the great Arizona desert by means of the waters of the Gulf of California. Although much more feasible than the first mentioned plan—which might indeed, by drawing so much water from one place to deposit it in another, throw the earth off its centre of gravity and send us spinning through space—if artesian wells could be bored the land could be put to much more practicable value. Our government have already made examinations of a portion of the wastes of our country with a view to their water resources. In 1855, Captain, now General Pope, bored several wells on the staked plains, near the borders of Texas and New Mexico, and although water was found in each instance, none with sufficient head to rise to the surface was met with, although in one instance after boring 641 feet the water rose 400 feet in the tubing. The artesian well at St. Louis is 2,199 feet deep and that at Louisville, Ky., 2,086. Water flows from both, but so highly charged with mineral substances as to be practically valueless. In Onargas, Irroquois county, Illinois, there are over 200 artesian wells within a radius of twenty miles, the estimated daily yield from which is over fifty millions of gallons. The value of such an amount of water in one of the southern counties of California could hardly be estimated. Wells are bored there, but by a careless, thriftless class of men, without proper appliances, who, if water is not struck at the first effort, discourage their employers and abandon the attempt for another location. We shall look for the results of Mr. Hinsdale's work and Professor Dana's report with much interest.

OUR YACHT SQUADRON.

THE recent ocean matches between the *Resolute* and her four antagonists, the *Comet*, *Estelle*, *Dreadnaught* and *Vesta*, and the approaching matches between the veteran *Dauntless* and the new *Mohawk*, come at a time when people had begun to ask if, after all, our yachtsmen were not smooth water sailors, and carried the possession of their pleasure machines only to the point where pumps could be worn with safety and white ducks remain immaculate. And unthinking persons are still inclined to believe that, with a few notable exceptions, the imputations cast upon our amateur sailors are not without foundation.

Time was when yachting and yacht building were encouraged as a means of improving naval architecture, and it is not many years since George Steers produced our finest ships, and sent a model yacht across the water to show how near perfection our ship-modeling and building had reached. The yacht in question, after almost marvellous vicissitudes, is still afloat, and promises to last for years. Does any one suppose that the majority of the elegant and costly yachts of the present day will continue in existence, unless as oyster boats, for more than a fraction of the period the America has been afloat?

And after all, if many of our yachtsmen dislike trusting themselves to the mercies of a gale of wind or a heavy sea, we question the justice of taunting them with it when we consider the cockle shells in which they would be obliged to expose their lives. Judging from the frightful array of broken masts, parted rigging, upsets and leaks of which we hear on the occurrence of almost every regatta, a trip to the lightship must be fraught with almost as much, or more, danger than a voyage across the ocean. And who is to blame? Does it rest with ship-builders, who take large pay and build for their patrons mere shells in place of good seaworthy vessels? or do yachtsmen insist upon having unsubstantial sailing machines like weedy cup horses, the ownership of which will result in loading the buffet with plate instead of proving a means of encouragement to the youths who might form our navy, and continuing that march of improvement which seems to have died out with Steers? Probably both are to blame, but it is no less a fact that some of the yachts set afloat each season are, so far as construction and fastening are concerned, a disgrace to the builders. One of many instances we could cite is that of a yacht belonging to a well-known gentleman of Albany, handsome enough to look at, and modeled for speed. Twice last Summer, in friendly races with other yachts at Fire Island, did she leak so badly as to compel her owner to abandon the matches, and on one occasion absolutely threatened to sink before she could be brought inside the inlet. The clubs are also somewhat to blame. In the old days, when time allowance was based upon area of canvas and not upon displacement, we never heard of all these accidents, and the yachts were good and fast, too. Many times have we seen Mr. Rutherford's *Una* and Mr. Waterbury's invincible *Julia* racing up the bay under jibs and mainsails, and with topmasts housed. There was no inducement then for all the kites which now flourish, making a first class yacht look like a laundryman's yard on drying day. And, although it may be old fogysm to say so, we believe the yachts of twenty years ago were almost if not quite as fast as those of the present day. Certainly they were more substantial than those of the shoddy era. There is the *Widgeon*, formerly belonging to Mr. Lloyd Phenix, and now, or last Summer at least, doing duty as a pilot boat; she must be more than twenty years old. And then there was the old *Maria*, with her huge hollow boom built of hoops and staves, like a barrel; she also is afloat, and when last heard from was figuring in a case of smuggling arms to the Carlisle. We never heard

of these yachts carrying away their masts and having to be towed up the bay by tugs. There is something wrong in our modern yacht building. If a little more was spent on the hulls and less on the cabins it might effect a radical change.

RIFLE TYPES—No. I.

The man who believes in himself.—He has just fired. Position *a la* Fulton, (*Logueur*.) "There—bull, sure; didn't you hear it go ping? Heard it get on myself. I say, you fellows with the glass, can't you tell me where it is? Ought to be just on the right hand of the exact compass centre of the bullseye, and nowhere else. I am positive about that. May be three inches off, and not a fraction more. That is where I aimed, and I never held her more plumb in my life. Confound those markers; awful slow, ain't they? Don't believe one of them understands his business. Wind is kind of uncertain, but made an allowance for it. Got the wind down to such a fine point, so dead sure, that I wouldn't have the least difficulty in making a bullseye every time in a hurricane. Time though the ball reached that target. No sign yet? Not even a centre; not an inner? By George, I hope it ain't an outer. What are you chaps giggling at? I never made an outer yet. Haven't made a black this season. No sign yet? Well, now, that is strange. This morning I just polished off a string of fourteen bullseyes straight, one after another. Every one of them most in the same place; you could have covered them all with a pint tin cup. Don't believe me? Look at my score book. It is all written down there. No show yet about that shot of mine? Must have fired on the wrong target; no getting over that. If it ain't that, I must have got hold of a badly loaded cartridge. There, that accounts for it; I couldn't miss that target if I tried—no, not with my eyes shut of a pitch dark night.

The slow man.—He takes his position with the utmost deliberation, as if he was stretching for a sound nap on a sofa. Suddenly finds that his dead-latch key is sticking into his ribs. Assumes a sitting position, extracts his key, and finds that his penknife incommodates him. Puts his knife in his vest pocket, but gets entangled somehow in his watch chain. At last he extends himself out, but the rim of his hat is too limp to suit him. Moves his hat around his head several times, and finally settles it just right; but there is something wrong with the lapel of his coat; smooths out a crease there, and now he looks as if he was ready. So he would be, but the shade on his sight don't suit him; the bit of rubber on it is not sound—he is sure of that; it might be wanting in elasticity. He snaps the bit of rubber once or twice, and is apparently satisfied. Of course, before he shoots he must be sure of his elevation. He turns the vernier solemnly—deliberately, an unappreciable difference, such as no micrometer could ever measure; and of course this delicate operation takes time. All right now; but stop! He remembers that a week ago he saw a cartridge with a wrinkle on the paper. That cartridge may be now in his rifle. Prudence dictates his looking at it. He opens the breech, extracts the cartridge, and finds it perfect in every respect. "Now for it Mr. Lightning," sportively remarks a bystander. "I can't stand being hurried," says the slow man, "it just destroys all my nerve. I won't make rifle shooting a business when it should be a pleasure. Where is my pad?" He now adjusts his pad. Evidently there is either one side softer than the other side, or there is a favorite side to that pad, so he tries it every way before he is satisfied. Now the *win!*, which has been just stirring the flags, barely shakes a fold in them. He stops until they droop on the masts again. Now for it. His face bears a determined look, but his gun don't go off. "It is at half cock, Mr. Lightning," says a kind informant. "Disturbing a man just as he is about shooting is the most annoying thing in the world," is all the thanks the slow man vouchsafes as he removes a microscopic chip from under his elbow. He does cock his gun though, after having let the hammer go down once or twice on the load; he accomplishes this, at intervals of half a minute, quite reflectively. At last, having aimed full ten minutes, his gun does go off. Fortunately for the excellence of the piece, it does not follow the idiosyncracies of its owner, or it would have hung fire. He makes a high outer, just barely missing the target. The markers somehow, out of spite apparently at having been kept waiting so long, show both signals at once. Mr. Lightning even now seems as if chained to mother earth, but at last slowly gathers himself up, saying—"Just my luck. A lot of fellows hurrying a man so; men who don't shoot themselves nor let anybody else shoot in comfort." Mr. Lightning then proceeds to clean his gun. He looks through the barrel for five minutes by the watch, as if his rifle was a telescope, and he was waiting for the next transit of Venus, and cleans and sponges for thirty minutes more. By the clock, Mr. Lightning is ready to shoot again in a trifle over an hour.

—Mr. Andrew Peck, of the firm of Peck and Snyder, was the recipient on the night of the 14th instant (his birthday) of a massive gold-headed cane by his employees—and which reflects enviable honor on recipient and credit to the donors.

—Parties desiring an excellent water pipe are referred to the advertisement of the National Tube Works Co., in our paper to-day. The California State Fair, just closed at San Francisco, awarded to this company a special gold medal for their enameled water pipes.

CHOKE BORE GUNS.

WE have so many queries as to the advantages of choke bored guns, the mode of manufacture, etc., that we publish the following extract from *Land and Water*, in the hope that it will prove of interest to our readers, reiterating, however, our former caution with regard to haste in changing a serviceable gun for an untried one, and suggesting, also, that all letters bearing upon the subject which appear to have been written in the interest of this or that maker be taken *cum grano salis*. We also print a letter from a gentleman, whose assertions should carry great weight, on the same subject, as referring to the description of shot to be used in choke bore guns. We notice that in all the reports commendatory of the new system chilled, or hard shot, is spoken of as being used, and if the wonderful results of pattern and penetration claimed can only be obtained by the use of this hard shot the choke bore is not the gun for general work in this country. For pigeon shooting it certainly possesses advantages, but we believe a modification or abandonment will be the result of another year's experience:—

"The latest and most important alteration made in the internal construction of the modern breech loaders is what is known as 'choke boring.' This system has only been brought into prominent notice during the last twelve months or so, and has been the cause of, we may say, unusual excitement amongst gunmakers, and that section of the shooting community who are always on the *qui vive* for anything like an improvement or invention in a weapon in the use of which they take delight. Probably we are in error in assuming that a majority, or, at any rate, a large minority of sportsmen are not conversant with the principles, or the meaning of the term, choke bore, but nevertheless we should imagine that scores of gunners who have had the good fortune to be tramping over the moors and stubbles and root crops during the last month or five weeks, are unacquainted with this new system of boring. Under the circumstance, we may be pardoned for presuming to explain them. To the uninitiated, therefore, we would say the 'choke bore' system is intended to produce a better concentration of the shot charge, that is to produce close shooting, and consequently to have greater effect on the object receiving the charge. Many years ago Espinar recommended widening or relieving the muzzle, and even such an authority as Colonel Hawker was favorable to enlarging the muzzle slightly. Numbers of the old type of blunderbuss were widened there to such an extent as to give them the appearance of a postboy's horn, but we can scarcely imagine it could be with the hope of producing concentration. A favorite way of causing shot to adhere in their range was to mix oil or water with them, and even now.

It has been stated that the theory of 'choke boring,' as it is now termed, was known in this country in the old Manton's time, but fell into disuse several years ago. Choke boring consists simply in enlarging a portion of the bore of the gun by 3-1000th of an inch, commencing about one-fourth of an inch from the muzzle (which is left in its normal size,) and continuing the enlargement some three and a half inches toward the breech. The theory is that, in discharging the piece, the charge, after traversing the unenlarged portion of the barrel, and coming to that part of the chamber so increased by the extra boring, expands, but the muzzle being smaller than this proportion of the barrel causes the shot to become compressed or concentrated in a more compact mass before they can make their exit from the piece, thus, by balling the pellets, preventing them from diverging from each other so early in their course.

A few days since we paid a visit to E. M. Reilly & Co.'s (the well-known London and Parisian gunmaker) shop at 502 New Oxford street—a course we propose continuing in reference to the other principal London gunmakers who may not be unfavorable thereto, with the view of noting any specialty or other matter, and reporting thereon in our columns for the benefit of those of our readers who may be interested in guns and subjects connected therewith—when, at our request to make a trial of some of this firm's guns bored on the new system, they sent some specimens of their central fire breech loaders bored on the newly introduced 'choke' system down to their range at Wormwood Scrubs for trial. We simply give the result of our experiments, which we confined as nearly as possible to the course pursued at the late gun trial at Wimbledon, and leave our readers to judge of the efficacy of the new system.

We found that their twelve-bore fifteen-guinea guns, bored on the new system, would, with a charge of three drachms No. 6 Curtis & Harvey's powder, with 1½ ounce chilled shot, throw an average of over 200 pellets within a 30-inch circle. Now, this, of course, compared with the pattern ordinarily made with a gun of the usual boring, shows a considerable improvement in concentrative quality, as 140 is a very good average for one of the latter. Of course, in firing at a mark or given surface much depends on accuracy of aim, and the chances are that the bulk of the charge, or rather the central portion thereof, may, through inaccuracy of aim, be put outside the margin of the circle, which would not then under such circumstances represent fully the actual concentrative powers of the piece. In a series of experiments with the same guns, selecting circles, that is that portion of the plate where the body of the charge had fallen, we found on an average that about three-fourths of the whole charge was placed within a 30-inch circle at forty yards, while firing at thirty yards produced greater concentration than even the amount of the decrease in the distance would warrant one in expecting. It is unquestionable that guns bored on the new make decidedly better patterns than those on the old system. So far, then, choke boring is an advance in the art of gun-making in this particular. Regarding the penetrative powers of guns 'choke bored,' we found those referred to equal to thirty-six sheets of the orthodox pads used for testing the qualities of guns in this respect. It has been contended that the choke bore's superiority of pattern has been gained only at the expense of penetration. This, however, has never, so far as we are aware, been borne out by authenticated facts, but the contrary has been proved to be the case. If penetration were to be sacrificed to pattern, the improvement in the latter respect would more than negative itself by the falling off in the former, and the concentration of the charge would be a positive disadvantage. Of course it

rests entirely with the shooter whether he prefers a very close-shooting gun to one which does not produce such concentration of the charge. If the former, then we can assert that a choke bore will be likelier than any other to meet his views. No doubt gunmakers can so 'choke' their guns as to make them almost club or bull the charge at thirty yards, but such a quality is decidedly not desirable for field shooting."

September, 1875.

EDITOR FOREST AND STREAM:—

The very fairly written letter over the signature of "Fair Play," in your paper of the 16th ult., shows that American sportsmen are in search of genuine information on the above subject. What I would desire to point out to them is, that the "trial" was quite as much one of hard *versus* soft shot, as of guns themselves. The report bears out this all through, and when at the entire end of the whole, Mr. Greener's gun or guns were tried with the regular soft shot, as used by all scientific sportsmen, the targeting, etc. fell so immensely that I decline giving the figures, lest your readers may fancy that I write in prejudice. The whole report is published in a pamphlet, to be had for one shilling at the *Field* office, Strand, London, and in it your readers can find the facts for themselves. The hard shot used on the trial is not at all what is called "chilled" shot in America, and is very unlikely to be ever used there. If, however, American sportsmen desire to have the benefits of the choke bore, as carried out to what the very best judges here and in your own great country consider a mistake, they must import the hard shot along with their guns. "That's the talk to suit Americans," as "Fair Play" says. It is only fair also to Mr. Dougall, whose guns have for a long period been so famed for hard shooting, to say that he only entered the competition out of courtesy to the *Field* editor, and under the protest printed in that paper before the trial began, that he could not possibly win, as his guns were bored for regular game shooting, and not for the occasion. It is a great advantage in the Dougall boring that either hard or soft shot can be used; but all experience at game and scientific data are in favor of soft shot.

ENGLISH OPINION.

The Rifle.

CREEDMOOR.

—Representatives from two cavalry troops and from three regiments were at Creedmoor on Thursday. The practice was quite good. Captain Hinrich's score, a total of 41, is quite excellent. We give some of the best scores. Distances for cavalry, 200 and 300 yards; for infantry, 200 and 500 yards; shots, 5:—

CAPT. KREUSER'S TROOP.				
Name.	Yards.	Total.	Yards.	Total.
Private Kramer.....	200	19	300	17
Lieut. Behlen.....	200	11	300	14
CAPT. SANDHUSEN'S TROOP.				
Private Gerken.....	200	16	300	19
Private Wechtee.....	200	16	300	19
Lieut. Morhman.....	200	16	300	14

Sergeant Bryant.....	200	17	500	17

—On Saturday the fifth contest for the Luther badge took place. Conditions—Distances, 800, 900, and 1,000 yards. The very bad weather which prevailed deterred marksmen from contesting in the match. There were only four entries. The following are the leading scores:—

R. Rathbone.....	{ 800—4 5 5 5 5—24 900—5 4 5 5 5—24 1000—2 4 4 5 2—17 80—5 5 5 5 5—25
W. B. Farwell.....	{ 900—4 5 3 5 3—20 1000—4 5 4 5 0—18

The Seventh Regiment Rifle Club contested for the regimental "shells" at 500 yards; position, lying; five scoring shots. Mr. W. A. French was the successful competitor upon the score of 19 out of a possible 25 points. At four o'clock the rain fell so heavily that shooting was impossible.

—The contest for the "Boylan" badge by Inter-State teams will take place next Saturday at two P. M. Distances, 200 and 500 yards; position, standing at the first, any at the second range; two sighting and seven scoring shots at each distance; weapons, Remington military rifles, State model. The badge will be finally awarded to the successful competitor on that occasion.

—The entries made for the match for the "Nevada" Badge are as follows:—Seventh Regiment, Company H, Captain Smith, and Company I, Captain Casey commanding; Twenty-third Regiment, Company A, Captain J. G. Story commanding; Forty-seventh, Company G, and Forty-eighth, Oswego, Company A, Captain Burtiss commanding.

—The members of the several regiments comprising the First Division, who have qualified to shoot for the "Marksman's Badge," will contest for that trophy next Friday at 200 and 500 yards distance.

—The "markers" match at Creedmoor promises to be quite a remarkable event. Indifferent to such baubles as medals and badges, the "Creedmoor Guard" go in for the substantial. The grand prize, we are led to believe, is a barrel of prime flour; and boots, shoes, and tobacco are to be the other awards. Distance will be 200 yards, 10 shots, with military rifles. On the evening of the match there will be a grand entertainment at the Century Hotel.

AMATEUR RIFLE CLUB.—On Wednesday the Amateur Rifle Club met for the purpose of electing a President. Mr. Sandford called the meeting to order. General Dakin was unanimously elected President, an honor well conferred, which position the General will undoubtedly be comingly fill.

—We call attention to a letter from a Canadian correspondent in regard to the late Autumn meeting at Creedmoor. The points taken by "Shooter" are well put, and they recall an editorial on this subject to be found in the fifth number of the current volume of this paper.

FOREST AND STREAM BADGES.—These badges will be shot for again to-night at Conlin's gallery, No. 930 Broadway. A large attendance and some capital shooting is anticipated.

ROD AND RIFLE ASSOCIATION OF JAMAICA.—The third contest, and last but one of the season for the \$50 gold badge, took place at the range of the association on the 13th. The weather was fine, and everything was conducted in the most admirable order. Distance, 200 yards. Mr. W. S. Elmendorf, the winner of the *Turf, Field and Farm* badge, carried off the prize, making 65 out of a possible 75. The attendance was a large one:—

Wm. S. Elmendorf	65	G. W. Damon	55
Theodore Rogers	61	Hon. J. M. Oakley	52
Geo. H. Creed	59	Elijah Nostrand	49
John Fleming	58	Thos. Fish	47
Hon. J. M. Crane	57	Wm. Darland	35
Elbert Remsen	56		

This is the second time that Mr. Elmendorf has carried off the prize. The last match will take place November 10th, if the weather will permit; if otherwise, it will be continued over until next season.

CONNECTICUT—WHITNEY RANGE.—On the 14th instant the Second Connecticut Regiment had their trial. Both individual and team shooting were fair in character. We append the various team scorings:—

Teams.	200 Yards.	500 Yards.	Total.
Company A	119	66	185
Company B	82	5	87
Company C	83	20	103
Company D	105	67	172
Company E	98	61	159
Company F	103	59	168
Company H	119	96	215
Company I	122	85	207
Company K	132	75	207
Governor's Foot Guard	123	66	189

For the Colonel Smith medal the highest count was 20, seventy-nine members engaging in the contest. For the Colonel Barrio medal, at 200 yards, twenty-two entries were made. The highest individual score made was 21. Members of the press were well represented, gentlemen from the *Palladium*, *Courier*, *Register*, and *Union* competing, Mr. F. D. Root, of the former paper, making 20 in five shots. Our own press man here, Mr. Bruce, will have to look out for his laurels.

CHICAGO RIFLE CLUB.—On October 10th the Chicago Rifle Club met at South Park to contest for the Hamilton, Rowe & Co.'s medal. The medal is of solid gold, and bears the following design:—"The Hamilton, Rowe & Co. Medal;" suspended thereto is an open circle, attached to the upper half in relief the word "Chicago;" below and upon the face of the lower half the words "Rifle Club." This circle is surmounted by a cross of arms and a Wimbledon 500 yard target. Suspended from the circle is a shield-formed plate, upon which is to be engraved the name of the winner, his score, and the date when won. To this prize, valued at \$100, were added the following:—A life membership in the Chicago Rifle Club, transferable, value \$25; cash, \$12; cash, \$10; cash, \$5; cash, \$3; and a pocket knife valued at \$4.50. The rules of the club prohibit any excepting members to shoot for these prizes. The badge is to be competed for every Saturday afternoon until won, or until otherwise ordered by the executive committee; in the meantime to be held from one competition to the next by the contestant making the best score at such competition, and to become the property of the contestant who shall win it three times.

Considering that the day was stormy, the wind puffy, and the weather cold, the shooting was remarkably good. The following are the best scores in a possible 35:—S. W. Burnham, 29; George Willard, 28; S. E. Bloss, 27; J. Muir, 27; C. W. Prouty, 27; C. Fuller, 27; W. C. Dyer, 26; S. B. Sexton, 26; R. S. Thompson, 24; A. H. Simon-ton, 24; H. H. Howe, 23; George Blumenmuller, 23. The order and system on the range was all that could be desired, under the supervision of J. A. Shaffer and his assistants, Messrs. S. W. Burnham and A. R. Rooney.

—Our Syracuse correspondent in furnishing us a report of the recent Empire State Rifle Club Tournament, stated that it was to have opened with a match between J. W. Fowler, of Croton Falls, and H. V. Perry, of Jamestown, but that the latter gentleman declined to shoot, and paid forfeit. Mr. Perry now writes us to the effect that the statement was entirely erroneous: that he had no match with Mr. Fowler, and very justly objects to have his name mentioned in that connection; and further that H. D. Warner and G. W. Fowler were to have shot such a match, but by mutual consent it was postponed until the 28th inst., when it will be shot at Jamestown, N. Y. We make this correction with pleasure. Our correspondents will see the necessity of using great care in mentioning names on such occasions.

RHODE ISLAND RIFLE ASSOCIATION.—The following is the programme of the first annual prize meeting of the Rhode Island Rifle Association, to be held at the What Cheer Range, Greenwood:—

MONDAY, Oct. 25.—Pool shooting from 8 to 10 o'clock at 150 yards, and from 10:30 to 12 o'clock at 200 yards. Competition I.—*Short Range Match.*—Conditions—Open to all comers; weapon, any rifle; distances, 50 and 200 yards; rounds, seven. Ten prizes, value \$90.

Competition II.—*Rhode Island Military Match.*—Conditions—Open to teams of eight from each regiment, battalion, or company, also Grand Army Republic teams in the State of Rhode Island. Ten prizes, value \$248.

TUESDAY, Oct. 26.—Competition III.—*Long Range Match.*—Conditions—Open to any team of six; weapon, any; distances, 600, 800 and 1,000 yards; rounds, seven at each distance; position, any. Ten prizes, value \$870.

WEDNESDAY, Oct. 27.—Competition IV.—*New England Match.*—Conditions—Open to all teams of eight in New England, including military

and Grand Army Republic; distances, 300 and 600 yards; rounds, seven at each distance; weapon, any rifle; competitors using rifles other than military to allow those using military rifles of 50 calibre seven points, and all military rifles of less calibre three points. Those using military rifles of less than 50 calibre to allow those using rifles of 50 calibre five points. Twelve prizes, \$534.

Competition V.—*Consolation Match.*—Distance, 200 yards; weapon, any military rifle; rounds, five; competitors using military rifles of less than 50 calibre to allow those using that calibre three points. Ten prizes, value \$112. Total amount of prizes, \$1,874.

Ambrose E. Burnside, President; G. F. Annable, Secretary; Prize Committee, Messrs. Frederick E. Perkins, Chas. R. Dennis, J. Albert Monroe, Newton A. Dexter.

—English conservatism is a strange thing, and though in her army she does now and then strive to shake off old customs, yet the fashions of other times seem to stick to her. In fact, all army regulations have something peculiarly antiquated about them which refuse to be molded or fashioned in order to assort themselves to present wants and requirements. For the first time in history the British army, at the Browdown meeting, had their rifle competition arranged on the same plan as that common to the English volunteers for the last sixteen years. One strange thing was that the English regular had to buy his own ammunition in order to learn how to shoot. Another remarkable fact was that rigorous distinctions of classes were made. We may perfectly understand that a major may not choose to shoot with a private, but it seems to us stupid that sergeants should be pitted against sergeants, and rank and file only with rank and file. The hierarchy of military grade is one thing, and of course then the school of rifle practice something else. Then volunteers have never yet been allowed to shoot with regulars. Thank goodness, we are wiser of late about these things in the United States. Undoubtedly in England the volunteers can far outshoot the regulars, and it would not be pleasant for the Duke of Cambridge to see the British soldier generally nowhere with his rifle. Perhaps our own military functionaries would do well if the practical instruction of the rifle school were more cared for in regular service. No better arms are made in the world than those turned out at Springfield, but the use of this queen of weapons is but little understood by the regular United States soldier.

THE RANGE AT INVERNESS.—The situation of the rifle ranges is the same as that on which the shooting has taken place for the last few years, and a more suitable locality for the purpose is perhaps not to be found in the kingdom, Wimbledon not excepted. It is conveniently close to the town of Inverness, and the ground occupied for the work of the association is very extensive, and allows every facility to carry on the competitions to the greatest advantage, with perfect safety and comfort to all concerned. The magnificent surroundings of the shooting ground—its advantages in point of natural situation and the beauty and variety of the surrounding scenery—have been so frequently described that we will not repeat a thrice-told tale. Suffice it to say that these are always fully appreciated by both competitors at the meeting and visitors who may not be actively engaged in the work going on; and although mist and rain occasionally obscure the pleasant prospect, some time or other during the proceedings there is certain to be a break in the clouds, with a gleam of sunshine following, which permits the country around to be seen to full advantage.—*Inverness Advertiser.*

—The following table shows the composition of the different gunpowders:—

Mills.	Nitre.	Charcoal.	Sulphur.
Royal Waltham Abbey	75.00	15.00	10.00
France, National Mills	75.00	12.50	12.50
French Sporting	78.00	12.00	10.00
French Mining	65.00	15.00	20.00
United States of America	75.00	12.50	12.50
Prussia	75.00	13.50	11.50
Russia	73.78	13.50	12.63
Austria (musket)	72.00	17.00	16.00
Spain	76.47	10.78	12.75
Sweden	76.00	15.00	9.00
Switzerland (Round Powder)	76.00	14.00	10.60
Chinese	75.00	14.40	9.30
Theoretical proportions as above	75.00	13.23	11.77

FROM ONE OF THE CANADIAN TEAM.

HAMILTON, Ontario, Oct. 9, 1875.

EDITOR FOREST AND STREAM:—

The match between the Amateur Rifle Club, of New York, and the Victoria Rifle Club, of Hamilton, having been fairly won and lost, your kind remarks and those of other papers in New York in regard to us (the losing team) makes it nearly as pleasant for us to be in that position as on the winning side. I only hope that it may be our turn next time to return the compliment in as soothing a manner as you have done on this occasion. In fact, the reception and kindness which we received from the members of the Amateur Club and other gentlemen is beyond my powers to describe. It certainly will not be forgotten, and I trust that it will be only the first of many other friendly contests.

I suppose you are fully aware that nearly all riflemen have apologies to make when their shooting is not up to the mark, and I am no exception to this general rule. To begin: Before leaving Hamilton for New York, on trying to take out the nipple of my rifle, it broke. I carried my rifle to a gunsmith, and he had some difficulty in getting the broken part out, and the new one was not put in to my satisfaction. I had doubts about it standing, as it was not very well screwed in. I shot with it in the match on Saturday, fearing it would blow out every shot, which fortunately, it did not do before getting through; but the following week, in commencing to shoot in the matches of the N. R. A. I had fired just four shots when my presentiment proved correct; out the nipple blew, and broken at that, which prevented me from putting in another at that time, so, of course, that put an end to my shooting for the time. My next misfortune was that on going to get a small Maynard sporting rifle, which I had left in the tent of some friends, it was gone. It had been taken away in mistake, but I have no doubt it will turn up.

I must acknowledge that you on the other side of the line have advanced in the art of rifle shooting to a most wonderful degree, and far ahead of any other nation, taking into account the short time you have devoted to it. But there are several points which you have yet to learn in the management and conducting of your competitions before they approach anything near perfection. Allow me to mention just one: The number of matches which were shot might have been pushed through much quicker than they were by having the day and the hour on which each competitor or team shoots marked on his or their ticket, and a rule should be enforced that if riflemen are not at the firing point at the proper time they should lose their chance of shooting. This is done at Wimbledon and at all well-regulated rifle tournaments where there are a great number of men to shoot; and it is really astonishing with what dis-

patch they get through. This does away with men hanging back for this or that hour for a good time to shoot, which I have seen frequently practiced at Creedmoor. That is one of the causes of a great deal of time being lost, and also of dissatisfaction and of protests being lodged. There were so many causes of delay at Creedmoor, all on account of men having too much spare time on their hands, that I was myself becoming so imbued with the feeling of protesting that I thought at one time of sending in mine. By the way, the gentlemanly editor of the *Hamilton Times* says that if I get protested against he will have to discharge me; so I think my best plan will be to forego the pleasure of shooting among my brethren of the quill at Creedmoor any more rather than lose my situation. Yours very truly,

SHOOTER.

THE WINCHESTER REPEATING RIFLE

MOUNT VERNON, Oct. 15, 1875.

EDITOR FOREST AND STREAM:—

Among the topics which have made *FOREST AND STREAM* so interesting and valuable to the gentlemen sportsmen of the country, none have been more instructive than the discussions in reference to the various firearms now in use which have from time to time appeared in your columns. A recent visit to the armory of the Winchester Repeating Arms Company, at New Haven, gave me an insight into the progress made in the manufacture of sporting rifles by that company, which was as surprising to me as no doubt it will be to many of your readers. It has been their leading aim to increase the efficiency of a weapon by multiplying its capacity, while at the same time preserving all the important features of strength, durability, comeliness of outline, and accuracy of performance. The Winchester Repeating Rifle, by its essentially destructive features, forms a separate class or type from any other gun produced in this country. This destructive power is obtained by the magazine attachment, which carries from ten to seventeen cartridges, according to the variety of the arm, and may be fired at the rate of two in one second. It is unnecessary to describe this attachment further than to say that it is located under the barrel, extending its entire length, and the cartridges are inserted through an apparatus covered by an automatically closing lid. It is so simple and easy of manipulation that it may be fired with one hand—a very desirable feature to the cavalier, or sportsman in the chase; it may also be loaded without looking at the gun, leaving the eye free to watch the game or the enemy. The cartridge is inserted by a lever, which opens the breech, extracts the empty shell, carries the cartridge to the barrel, cocks the gun, and closes the breech, all by one motion, forward and back, leaving no other motion necessary, save that of pulling the trigger. Thus it is apparent that the claim of the manufacturers that it may be fired every two seconds is not exaggerated. If rapid firing is not desired it may be used as an ordinary breech loader, by inserting one cartridge every time it is discharged, and this without removing the gun from the shoulder. This arm is made in different styles for sporting and target use, to meet the varied demands of hunters and sportsmen, and the cavalry carbine and infantry musket for military purposes. Nearly 200,000 of the various patterns are in use in all parts of the world. The Winchester Repeating Arms Company succeeded the New Haven Arms Company in 1866, who formerly manufactured the Henry rifle, and until recently produced the Winchester model adopted at the time. They are now producing only the guns known as the "new model of 1873," as above imperfectly described. The works of the company are located about two miles from New Haven, and embrace an area of five acres of floor room, the present capacity of the company reaching 750 to 800 guns per day.

The company also manufacture metallic cartridges, and has facilities for producing one million military cartridges and half a million pistol and sporting cartridges per day. Besides making cartridges for their own guns, which was their chief design, they are executing orders for all known varieties of military and sporting guns and pistols, and are shipping them to foreign governments in lots of several millions at a time.

I was deeply interested in looking through every department of their vast establishment, where several hundred hands were employed, and would like to describe more in detail the various processes through which the rough iron and wood is carried in the production of this wonderful arm, but must not trespass further upon your space. As the magazine or repeating arm is regarded by high military authority as the gun of the future, this outline of what American enterprise has done to inaugurate an important advance in the military art may be acceptable to your readers.

Game Bag and Gun.

GAME IN SEASON IN OCTOBER.

Moose, <i>Alces macchis.</i>	Red Deer, <i>Cervus Virginianus.</i>
Elk or Wapiti, <i>Cervus Canadensis.</i>	Squirrels, red, black and grey.
Hares, brown and grey.	Quail, <i>Oxya Virginia.</i>
Wild Turkey, <i>Meleagris gallapavo.</i>	Pinnated Grouse, <i>Tetrao cupida.</i>
Woodcock, <i>Scelopax rusticola.</i>	Carlew, <i>Numenius arquaria.</i>
Ruffed Grouse, <i>Tetrao umbellus.</i>	Sandpipers, <i>Tyingana.</i>
Plover, <i>Charadrius.</i>	Willetts.
Godwit, <i>Limosine.</i>	Reed or Rice Birds, <i>Dolichonyx oris von.</i>
Rails, <i>Rallus Virginianus.</i>	Wild Duck.
Snipe and Bay Birds.	
Caribou, <i>Tarandus rangifer.</i>	

GAME IN MARKET.—The market is a little more liberally supplied with game of most all descriptions than it was last week. We note the arrival of a fair quantity of venison, in very fine condition, from the Adirondacks and from Minnesota; it sells for 30c. per pound. The bulk of the ruffed grouse in market comes from Connecticut; price \$1 per pair. St. Louis and Chicago are the principal shipment points for Western game, and it is difficult to fix the locality where most is being killed. Prairie chickens are worth \$1.25 per pair. Quail are coming from Long Island and Connecticut, none being received from the West, many being so small that dealers will not offer them; they sell for \$4.50a\$5 per dozen. Woodcock are worth \$1 per pair, and are more abundant. Granby, in Connecticut, and Westly, in Rhode Island, are large shipping points at present. English snipe are also more abundant; some we saw yesterday were in very fine condition; they are being shot in this State and in New Jersey; price \$3 per dozen. Reed birds from Philadelphia and from Savannah are worth \$1.25a\$1.50 per dozen; bay birds have about disappeared. Canvas back ducks have arrived, the first received being from Wisconsin; they sell for \$3 per pair. Mallards are worth \$1.25; teal, \$1; widgeon, \$1. Stall fed wild pigeons, \$2.50a\$3 per dozen. There are a few rabbits in market, but the demand for them is so small that a quotation would be worthless.

—The proposed pigeon match between Messrs. Bennett and Bogardus on one side and Livingston and Paine on the other, has been declared off. Another is reported between Mr. Bennett and Mr. Travis Van Buren for \$2,000 a side. The conditions to be fifty single rises each at thirty-five yards, London Gun Club rules. The match is announced to take place in November. Still another match on the

tapis is that between J. G. Hecksher and Carroll Livingston, of this city, and Messrs. Randall and Grubb, of Philadelphia, to be shot on the 20th instant at Baltimore. The stakes and conditions are the same as those governing the Bennet-Van Buren match.

PROTECTION OF GAME.—The Tremont Shooting Club, at a meeting held at Young's Hotel, Boston, on Tuesday evening, 12th instant, formed themselves into an association for the purpose of the protection of game and the enforcement of the game laws of Massachusetts, under the name of the Tremont Sportsmen's Club. It will use its influence, under the authority of the club, in prosecuting all persons who may be found killing game out of season, or unlawfully snaring or killing of game. In view of the scarcity of game and the depredations made by snaring, etc., the sentiment of the club was unanimous for the enforcement of the laws.

PENNSYLVANIA STATE SPORTSMEN'S CLUB.—A number of representatives of sportsmen's club met on the 12th instant at Harrisburg to organize a State society, for the purpose of securing the passage of laws for the better protection of game, its propagation and improvement. It was agreed that the Corresponding Secretary of the meeting should send circulars to all the known sportsmen's clubs in Pennsylvania, inviting them to send delegates to an adjourned convention which will meet in Harrisburg on November 18th.

MISSOURI STATE SPORTSMEN'S ASSOCIATION.—The next meeting of this Association will be held in Sedalia, when the members will engage in a prairie chicken hunt. The last meeting was held ten days since at St. Louis, when Mr. Jeff Bedford, of the Lexington Sportsmen's Club, was elected Recording Secretary.

THE PETERBORO FISH AND GAME PROTECTIVE SOCIETY. We noticed recently the excellent work which the above society is doing in bringing to punishment parties found guilty of infraction of the game laws. We are now indebted to Mr. C. A. Post, Secretary of the association, for the following report of a recent meeting:—

"The October meeting of the county of Peterboro Fish and Game Protective Society was held at the Huffman House, on Wednesday evening last, the 6th inst., Mr. E. J. Toker in the chair. The Secretary read letters from H. Stewart, of Hastings, and Henry Merriam, of Rice Lake, making complaints of illegal trapping by the Indians and others; from George Cochran, Fishery Overseer at Lakefield, notifying the society of certain alterations in the fishery act, making a uniform close season for whitefish, salmon trout, and lake trout in Ontario, which is from November 12th to December 1, in each year, both days inclusive; the act respecting the close season for herring is repealed; from Jas. Stewart, Buckhorn, and from Lord Dufferin's Secretary, at Halifax, expressing His Excellency's regret that, on account of his not leaving England till the 8th of October, he would not be able to accept the society's invitation to a deer hunt on our back waters. The resignation of Mr. G. B. Sproule as a member of the Central Committee (one of the society's most active members,) was tendered and accepted. We are still increasing our membership list, and the diligence displayed by our district committeemen throughout the county gives us every encouragement."

MASSACHUSETTS—Salem, Oct. 16th.—Stock in the gunning line is about as usual. There have been more fowl in the bay this season than for several years. I have shot a number this week. There have been a few woodcock killed about Beverly lately, also some partridge. The quail will be heard from probably next week. An occasional snipe is also shot. I have also killed some "winters" this week, and they were solid fellows. Weather for the past forty-eight hours, easterly, with fogs and rain at intervals.

CONNECTICUT.—Ruffed grouse are said to be very plentiful throughout the State. In Hartford, last week, they were selling at 60 to 70 cents per pair. A number of instances are noted of late where grouse have dashed themselves against houses. In Meriden, last week, one flew against a large plate glass window, valued at \$100, in a piano manufactory, and shattered the glass, which was a quarter of an inch thick, to pieces. Of course the grouse was killed, but it seems incredible that the bird could have broken the glass.

PENNSYLVANIA—Milford, Oct. 12th.—Partridge (ruffed grouse) abundant. Ed Quick and Halsted, and Bob Wells, the champion hunter, are daily out with New Yorkers and Philadelphians, and some good bags have been made. The best scores lately were 13, 19, 12, 23, 17 and 20 birds in about five hours' shooting. Woodcock scarce, but expected on the flight after a couple of frosts, when the shooting on the Delaware will be excellent. Last year in five days' shooting between the 12th and 22d of Oct., seventy-four woodcock were killed to three guns on these islands, one day's score fooling up 21. Quail will be numerous.

NEW JERSEY—Forked River, Ocean county, Oct. 11th.—The season for wild fowl shooting will open on Friday next, Oct. 15th, and preparations are completed for that purpose. The amount of game now in the bay is very encouraging, and the prospect for good gunning is much better than for many years past. We expect to make good work next week, and have already received notice from several of our citizens that they would be with us on Thursday night. We have nothing, therefore, to do but to bide our time and await results, which in all probability will be highly enjoyable to all save the ducks. English snipe have been plenty during the past week. E. H. Frame killing 17 in two hours on the grounds immediately in front of this (Carman) house, over the imported Gordon setter Dan, the property of Mr. Chas. W. Wingate, of Brooklyn, and his own setter, Grouse. These are excellent snipe dogs, but their "great grip" is on quail. By-the-by quail are literally as "thick as hops," and can be found in large quantities within three minutes' walk of this house. When the close season is over there is nothing that can be foreseen to prevent the biggest kind of shooting. Bay snipe are gone, save a few golden plover and some "big tell-tales." Surf snipe are on the beach in clouds, one gentleman from here killing 143 in two shots. For any one who likes this kind of fun the sport is plentiful and easy got at. So you see that with all the birds here reasonably good gunning and plenty of game during the season just opening may be expected.

[The above reached us too late for our last issue.—ED.]

MARYLAND—Deer Park, Oct. 18th.—The shooting season is in full swing, and sportsmen have been more than usually successful. Ruffed grouse, quail, rabbits and squirrels were never more plentiful. Ducks have been very scarce, and so have wild pigeons, although there were plenty of the latter during the last of September and first of October in the "beech marsh." Deer are frequently seen but few have been killed, as yet. Our second snow storm, on Saturday, the 6th, opened the ball for rabbit and fox hunting. Several wild turkeys have been killed near town.

ALLEGHANY.

OHIO—Lenox, Ashtabula county, Oct. 15th.—Quail were quite plenty early in the Fall, and the farmers still say, "O, there are plenty of them just back of the barn, in the corn lots and grain stubble; you can't miss them." But diligent search fails to find them. The cold, wet and unseasonable weather has driven them somewhere out of sight. Ruffed grouse here are not so abundant as last Fall, but still afford good bags to experienced sportsmen. Wild pigeon not plenty enough to make a good string with gun, but many are netted by "old hands," principally for pigeon shoots. Not late enough to say much about wild turkeys, but reliable information from a party working on a section of railroad near Leon, in the Big Woods, say that a large flock have been about there for a week, crossing and recrossing the track, and numbers setting along the fence, while others were busily engaged scratching in the leaves and dirt, apparently not noticing the workmen, although not one hundred yards away. They will soon be interviewed. During the Winter many are killed with rifles, and last season a number were brought in weighing, when dressed, 21 and 22 pounds; but it requires endurance, nerve, and an expert shot to make a success at it. Gray and black squirrels, which were so plenty last Fall, have disappeared, and quite mysteriously. They are scarce and wild. A party living on the next farm shot 123 on a fence running from a cornfield to the woods, not one-quarter of a mile from the house, last Fall, and left as many more. This season I have interviewed that fence many a bright morning and failed to score one; could bag ten to fifteen as easily last Fall as three or four can be now. When it takes longer than until breakfast time to shoot all the squirrels we want, game is considered scarce. Many claimed the hard Winter killed them off. My deductions, though, are that perseverance will fill your bag; still game is scarce.

ULL.

MISSOURI—Sedalia, Oct. 15th.—We are having fine plover shooting now. Our fields and meadows are full of them. Quail are quite plenty. The second brood are very plentiful. Prairie chickens are also plenty. Ducks are coming in. Squirrels are also plenty. Shooting this season will be fine. Crops plenty and birds will fare well. J. D. B.

WISCONSIN—Montello, Oct. 16th.—Duck shooting in Northern Wisconsin has proved to be the poorest for years, for some unknown reason, possibly that the early frosts killed the seed of the wild rice before it had ripened, and thus deprived the water fowl of their accustomed food. The scaup ducks (known as blue bills, etc.) are plenty, but afford little sport, as they frequent the open waters and cannot be approached. Wild geese are coming in from their northern sojourn, and furnish the most exciting of all sport in wild fowl shooting, with the exception of swan shooting. Snipe are abundant, and I have no doubt a fair shot, with or without dogs, might bag from fifteen to twenty brace per day, or even more, on the marshes outlying from Puckaway Lake and the Fox River. This sport is seldom indulged in by resident sportsmen, and the birds are both tame and fat, rarely flying upwards of 100 yards when shot at.

FRED.

CANADA—Peterboro, Oct. 11th.—If any of your friends want good Fall duck shooting now is their time. Send them to Rice Lake County, Peterboro, via steamer Norseman from Rochester to Cobourg. Rail 12 miles to Harwood, when they are right in the midst of the best Fall duck shooting in Canada; canoe and gun hunters. Inquire for Henry Merriam at Harwood, an experienced canoe and old hunter. Good hotel accommodations at Harwood and Gore's Landing, both on the shore of the lake, and in sight of millions of ducks. Capital sport until the lake is frozen over.

P.

BLOOMING GROVE PARK NOTES.

OFFICE BLOOMING GROVE PARK ASSOCIATION, 37 PARK ROW, Oct. 12, 1875.

EDITOR FOREST AND STREAM:—

Members returning from the Park report ruffed grouse very plenty; also wood ducks in Lakes Giles and Laura. Messrs. Avery and Anderson were in camp at Lake Laura last week, having transported a boat and camp equipage from the club house. Matt officiated as steward, and Ned Quick provided the table with fish and game.

The President acknowledges a donation from Smith W. Anderson, Esq., of High Bridge, of a curious relic of past hunting days—a double-barreled flint-lock fowling piece, made by Booth, of England. Agents have been appointed to watch the park lands and prevent depredations by lumberers and others. The annual dinner will take place in New York at a time and place to be determined by the Executive Committee.

JOHN AVERY, President.

CHILLED SHOT.

BOSTON, Oct. 11, 1875.

EDITOR FOREST AND STREAM:—

I recollect perfectly well, while reading some time since in the columns of the London *Field* the interesting account of the last great gun trial, of being strongly impressed by the conspicuous advantage obtained by those guns using the Newcastle chilled shot, both as regards pattern and penetration. The excitement of our English friends on choke bores and close shooting was not contagious in my case, as those matters had been pretty thoroughly tried in this vicinity by one of our best gunmaker's years ago. Moreover, I have a very poor opinion of an extremely close shooting gun, and believe that most of our sportsmen with Mr. Greener's prize gun in their hands would, in the great majority of American shooting, miss most of their birds outright, while a few crack shots would enjoy the inestimable privilege of bringing to bag continuous shapeless masses of flesh and feathers. I belong to the first class, and don't want that Greener gun. But the shot question interested me, and I hoped to hear through your journal of experiments in that direction. For myself, having obtained a few pounds through the kindness of a friend who had used them with great success and satisfaction in England as well as here since his return, I have tried them both at targets and game quite thoroughly and to a reasonable extent, and find them, in my guns at least, to increase both pattern and penetration, the latter being to my mind of much greater importance. I account for this gain on the hypothesis that, being much harder, they suffer less than soft shot from the crowding process in the barrel during their expulsion, leaving it, therefore, with a much larger percentage of perfect pellets absolutely spherical in shape, and consequently reaching either target or game in greater number; with more even distribution, and, of course, in better condition

for penetration, where again their hardness gives them a marked advantage. I have just returned from a fortnight's shooting, and can only say that I shall never use any other shot when these are obtainable. I hope to hear more from my brother sportsman on this matter, which I think an important one. I know that some dozen of our best sportsmen here have come to the same conclusion as myself, and now use them exclusively. As it is probable that these shot may not be readily found, I will say for the information of the numerous readers of your paper, that they can now be purchased of any size and in any quantity of Mr. William R. Schaefer, 61 Elm street, Boston, where I obtained mine, and who has, I believe, made arrangements to have them always in stock direct from the only manufacturers, Messrs. Roberts, Lamph & Co., Newcastle, England. Let every one try a few and compare notes.

UNDER GRIP.

[Our correspondent will find a letter on this subject under an article on choke bores in this issue.—ED.]

CLOSE SHOOTING GUNS.

CAZENOVIA, N. Y., October 5th, 1875.

EDITOR FOREST AND STREAM:—

I see in your valuable paper a good deal about close shooting guns, choke boring guns, etc., and what amount of powder and shot shall I use for such a gun, giving the weight, bore and length of gun. Now I think that at the head of your "Answers to Correspondents" you would do well to put something like this: "Try your guns with different size shot and different amount of powder and shot, and use that which it shoots the best." Although not so very old, I have had a little experience, and find that certain guns shoot better with certain size shot.

Some ask the question if choke bored guns are the thing for the bush, and from my limited experience I answer, no. I have had quite a number of guns made for me, and now have one that suits me to a fraction; have one stock and two sets of barrels which fit it—by fitting, I mean that all the joints are as near perfect as they can be made. One pair are thirty inches long and weigh nine pounds one ounce; the other pair are twenty-four inches and weigh eight pounds—of course that includes stock in both cases. The thirty-inch pair are bored so that with 1½ oz. No. 10 shot, 5 drachms powder, in a thirty-inch circle 100 feet, I can put 400 pellets, and drive them in or through so that it is death to a bird. The twenty-four inch pair are bored to spread, and spread very evenly, so that shooting the same distance it covers over quite a space where one cannot put down their hands without covering two or three shot holes. Some may say that an eight-pound gun is too heavy for woodcock, snipe, etc.; but it possesses one or two advantages. Being short, it is much easier to get in the birds, and as it is 2½ at the breech, it will stand a heavy charge if necessary. I have killed one and broken the wing of another woodcock, so that the dog retrieved him, 67 yards, with short barrels, two drachms powder and one ounce No. 10 shot. There is still another advantage. The gun hangs about the same with both pairs of barrels, and the bend of stock, reach of trigger, etc., is just the same, saving the annoyance of getting used to two guns. Then if one goes away duck shooting, where there is a possibility of seeing quail, snipe, etc., it is much easier carried than two guns and takes up less room. If I were to use the close shooting pair, and should I be so fortunate as to get in a bird in the bush, where we generally kill woodcock, it would be useless for the table. I should think that all who have guns of a little above the medium weight, would have them bored to shoot close, and have a short pair fitted to the stock, both of which can be done. I am convinced that they would be very much pleased with it.

S. S.

SHOOTING IN VIRGINIA.

JEFFERSONTON, Culpepper county, Va., Oct. 9, 1875.

EDITOR FOREST AND STREAM:—

On the 15th of this month the law forbidding the shooting of "partridges" ceases, and all sportsmen are actively engaged in preparations for the coming season. I notice that the love for the old muzzle loaders and prejudices against the new breech loaders are disappearing, and sportsmen are recognizing the fact that they are behind the times in adhering to an obsolete firearm. What the mass of people of Virginia want is a good, plain, serviceable breech loader which can be bought for \$25. The manufacturer who will meet the popular demand and advertise freely will realize a rich harvest. I have been hunting in this section for a couple of weeks—more for the purpose of marking the coveys of birds than shooting them. It was first thought that birds were very scarce, but during the last two weeks sportsmen have changed their opinion, and now feel assured that there is more than the usual number of quail. The unprecedented rains of August have caused weeds, briars, and vegetation generally to shoot up in the wildest luxuriance, and sheltered the birds from observation and notice.

This section of Virginia, and especially this immediate locality, I consider the best hunting ground anywhere in the middle part of the State. The fields are alive with rabbits, and the woods abound in squirrels; wild turkeys are also numerous. To those who desire first rate sport they must leave the line of the railroad, where every station sends forth daily a motley gang of amateur huntsmen, armed with every variety of gun and accompanied by every conceivable style of dog, from the thoroughbred pointer down to the "cur of low degree," and who scare up all game within a radius of five miles. Well, as I was saying, the very best place I know of is a little village of about a dozen houses called Jefferson-ton, in Culpepper county, and fifteen miles from Culpepper Court House. It is surrounded by many well-tilled farms, which have large fields, and in these stubble fields the partridges feed. There are but few of the citizens who keep dogs; their time, as a general thing, is too precious to be wasted in hunting, and but few, very few, of the lands are posted. To a party of good shots with fine dogs they can get their fill of the best of shooting, though I would not advise them to come until the 1st of November; for it will take several heavy frosts to kill the weeds enough to allow the dogs to scent the birds.

To those who desire to get full information let them write to George Myers, at Jefferson-ton, who will board them, and give them all the particulars, though I will state for their benefit that to get here you take the cars at Washington City at 7:30 A. M. on the Virginia Midland Railroad, and arrive at Warrenton at 11 A. M.; from there Myers will, if notified, bring you to Jefferson-ton, distant ten miles. I have no axe to grind in giving this location; I merely, as requested, write for the benefit of gentlemen sportsmen who desire a good place to shoot. I leave next week for the finest hunting ground in the Middle States—I mean the Nottoway River region, in Virginia, bordering on the North Carolina line. In my next I will write you a full account. I go there for sport alone.

CHASSEUR.

GAME PROSPECTS IN MISSISSIPPI.

CORINTH, Miss., Oct. 8, 1875.

EDITOR FOREST AND STREAM:—

The weather has been, and still is, too warm for much work in the field. The high weeds, grass, and growing crops in the fields, and the leaves and brush in the woods, make it almost impossible to either see the dogs or to shoot. The frost has not yet killed any vegetation, and until it is killed we cannot do much with bob white. Squirrels are plenty, and ducks will come in as soon as the weather gets a little cooler. Mercury to-day at 12 M., 69° in the shade; sun warm, and sky perfectly clear. I am very anxious to have a whole day after quail. Those that I have shot with the gun built for me by Tolley have been killed clean, and it knocks a squirrel out of the high trees like a rifle. It is a long way ahead of any gun I ever shot. I had the pleasure of seeing a "Challenge" gun, 10 bore, by the same maker, built for a friend; it is a splendid piece of workmanship, and is in every respect a first-class arm. While on the subject of breech loading guns I would state, for the benefit of those sportsmen who have the Sturdevant shell with the anvils broken—and they will all break if shot awhile—that the Orcut primer fits them without any difficulty. Hope to meet you in Memphis at the dog show.

R. Y.

—The meeting of the Tennessee State Sportsmen's Association, which begins at Memphis on the 25th inst. and continues during the week, promises to be well attended. Thirty-five hundred dollars have been offered for trap shooting, \$1,300 in cash, and \$450 in plate for field trials, and \$500 in plate for a bench show of field dogs. Several fine kennels from the Eastern States have already arrived, and the West will be well represented.

A TAME GULL.—Located as he is now, in a country place, among dogs, ducks, and poultry, with plenty of liberty, but well looked after, Peter has become quite domesticated, after his own fashion. During the last Winter he was allowed by his friend the cook to come into the kitchen and sit before the fire, where a small piece of carpet was placed for him. Peter took possession of this, entirely excluding two small kittens from any share in it. To these little animals he was quite a tyrant. If they attempted to sit on any part of his carpet, he drove them away; they were permitted to sit as near as they pleased to the edge of the carpet, but not on it. He invariably took away from them sticks or anything else that they began to play with, and on one occasion kept one of the kittens a prisoner in a drain-pipe into which it had run. No sooner was it in than Peter, always on the alert, took up his station outside, and there kept guard, pecking the kitten every time it tried to come out, until he was seen and the kitten rescued. In fact, they had a very bad time of it while in Peter's society. Another occupant of the kitchen, however, found more favor with him. This was a retriever pup, now a very large dog, and the friend and companion of a sea gull! To see these two together is most amusing. Whenever the dog lies down anywhere near Peter he does not long remain unmolested; the bird leisurely walks up to him, and at once begins to pull his hair and peck his tail every time it moves. To all this the good-tempered dog makes no objection—in fact, Peter can do what he likes with him. He will sometimes sit on his back, at others lie down close to his side, or even between his fore paws, and when the dog is having his food, run off with portions of it from the plate, a liberty that none of the poultry dare take. This is a very strange friendship, but not altogether an unusual one. Almost all animated beings are so fond of society of some kind or other that, when they cannot get that of their own species, they will select creatures of a very different character, and often form very strong attachments for them. Morris mentions a tame gull that was kept in a garden, where it made a great friend of a terrier dog. Gavel speaks of another that made great friends with a pair of silver pheasants. But the most curious anecdote of a gull is given by Mr. Donaldson, in the *Naturalist*. This bird acquired a taste for sparrows, and scarcely a day passed on which he did not regale himself with four or five. His system of catching them was this: He was on the best terms with a number of pigeons, and as the sparrows fed along with them, he mixed with the grays, and by stopping, assumed as much as possible their appearance, and then set at the sparrow as a pointer dog would do at his game; the next instant he had his prey by the back and swallowed it without giving it time to shut its eyes. The sporting season with him began about the middle of July, as the young birds were leaving their nests. This was, however, rather a mercenary friendship. Like most gulls, Peter will eat almost anything, although in his younger days nothing would satisfy him but fresh fish. Now he is not so particular; he will eat meat, young chickens, and even small rats and mice—the latter he seems to have a great relish for. At one time he lived on nothing but snails and slugs. This was after his removal from Falmouth; for, being so far inland, we could no longer supply him with the fish he had been accustomed to, and for a few days we were afraid he would starve, as nothing seemed to suit his taste; but he very soon got used to different fare, and now there is no trouble whatever in finding food for him. At first, when fish was his only food, he seldom swallowed it without previously soaking it in water, and now almost everything he eats goes through the same process.—*Argosy*.

ARE CATS SNAKE PROOF.—In an article entitled "Two Years in Natal," the authoress writes, "Perhaps every one does not know that cats are snake proof. A bite has no effect on them. We had an opportunity of proving this. A long green imamba was engaged in a fierce tussle with a big cat, in which the cat had bitten out one of its eyes, and in return had got a wound on its face that swelled up to an enormous size, but beyond that he seemed none the worse for the encounter, and in a few days was well again." On referring to those magnificent works by Dr. Fayer, on "The Thana-topia of India," and by Dr. Günther,

on "The Reptiles of India," I fail to find the term imamba mentioned by either of those authors, so I conclude it is a special name given by colonists to a snake indigenous to Natal and the Cape of Good Hope; but the question arises, Does this so-called imamba possess all the deadly qualities of a poisonous snake? I cannot imagine any animal receiving a wound in the face, causing it to swell up, from a snake said to be deadly in the strict sense of the term, and yet to survive. It is true that pigs in the United States destroy numbers of rattlesnakes, but I suppose they would succumb to the effects of the poison if they were bitten by the snakes. In the same way it was maintained that the mongoose was capable of resisting the venom of the cobra, I believe, but few believe it now. Many years ago, while in India, I saw a tame domesticated mongoose on two occasions seize cobras by the back of their heads and carry them off in triumph. It was much too wily and active to be bitten by a cobra. Had it received the full charge from the poison fang of the latter, death, I doubt not, would have ensued. If the common domestic cat of this country were to be bitten by our only poisonous English snake, the adder, would it escape death? I believe not.—*Land and Water*.

The success of the pig in this country in destroying the rattlesnake is not owing to any immunity from the effects of the poison, but to the fact of his always presenting his jaw to his adversary to receive the bite; the thick fat on the cheek containing no blood vessel by which the poison could be carried to the rest of the system.

—Fruit is kept in Russia by being packed in creosotized lime. The lime is slacked in water in which a little creosote has been dissolved, and is allowed to fall into powder. The latter is spread over the bottom of a deal box, to about one inch in thickness. A sheet of paper is laid above, and then the fruit. Over the fruit is another sheet of paper, then more lime, and so on until the box is full, when a little finely powdered charcoal is packed in the corners and the lid tightly closed. Fruit thus enclosed will, it is said, remain good for a year.

CHLORIDE OF LIME.—Among the things which should always be kept in the house is a small quantity of chloride of lime in a tightly corked bottle. This is to be used in case of wounds inflicted by dogs or rabid animals, in the following manner: Mix thoroughly two table-spoonsful of lime with a half pint of fresh water and bathe the wound almost without cessation until the physician arrives, or until the poison is neutralized.

Send for circular. WM. S. KIMBALL & CO., PEERLESS TOBACCO WORKS, Rochester, N. Y.

From JAS. H. STAAT, Arch street, Phila. Please inform me where in this city I can procure your world-renowned "Vanity Fair," can't keep house without it.

From HENRY WAGNER, Captain 1st U. S. Cavalry, Camp McDermitt, Neb. We like Vanity Fair now as well as we did a few months since, and only hope that it may be sold in its unadulterated quality for a hundred years to come.

It is clean and sweet, and a most pleasing soother of disturbed feelings, and a capital companion, and a comforter.

From HORITZ BIELSCHOWSKY, Coneyos, Col. As I opened the box of Vanity Fair a good many friends present tried it, and all considered it the best tobacco we ever smoked.

It is a kind of oil and balm for whatever was stormy and harmful; it gives a permanence to the smile of existence.

From H. C. HASBROUCK, Capt. 4th Artillery, President, San Francisco. Please send me ten pounds Vanity Fair. I recommend your tobacco to my friends and dealers in town.

It is a wonderful solace, and the best proof that it works no injury is the refreshing feeling you awake with next morning, conscious that there is no reasonable task you would not perform.

FOR SALE.—AN ENGLISH BUILT Baden Powell canoe. Address E. W. Forest and Stream.

HURST'S

Stereoscopic Studise

—OF—

Natural History

For Object Teaching in Schools

—AND—

PARLOR ENTERTAINMENT.

—O—

We are prepared to furnish the first sixty numbers of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign specimens, and various Animals and Birds in grotesque attitudes, never however violating their natural instincts.

We offer these views not as pictures only, but as studies from nature. One of the great moving elements in our modern system of education is object teaching. The unerring fidelity of the stereoscope transfers the animals and birds from their natural habitat to the rooms of the student and the fireside of our homes, where they cannot fail to leave a lasting impression of the form, color, habits, and locality of each specimen.

An experience of more than twenty-five years as Taxidermist of the New York State Cabinet of Natural History, and in gathering his large collection of native and foreign specimens, enables Mr. Hurst to combine in every view the locality of the specimen with its appropriate rocks, woods or water, and coloring from the originals.

Breech Loaders.
W. & C. SCOTT & SONS.

Winners of the "Turf, Field and Farm" Gun Trials.

(See issue October 3d, 1873.)

In which competition the committees have awarded our guns, First and Second for POINTS OF MERIT OF ACTION, MATERIALS, PROPORTION, AND SHOOTING QUALITIES combined, in all the four classes.

THE PREMIER GUN.

W. & C. SCOTT & SON call attention to their very FINEST weapon, combining all their recent improvements, marked on the rib between their name and London address the brand—"THE PREMIER QUALITY."

Medium and fine guns bear full name and address, and plain guns full name and "London" only.

Each gun is numbered and the actions are stamped with name and trade mark.

W. & C. SCOTT & SON, Sole makers of the Patent Top Lever, solid, Double Locking Bolt Breech Loader, bearing the full name of the firm. W. & C. SCOTT & SON caution sportsmen against imitations of their patent and name. Guns bearing the name abbreviated, or with different initials, are not genuine.

TRIAL OF SCOTT & GREENER'S NEW SYSTEM OF BORING, BY THE EDITOR OF "THE FIELD," LONDON.

(See *The Field*, January 30th, 1875.)

"From a comparison of the two tables it will be seen that with Walker's shot, Messrs. Scott's guns showed a marked superiority over Mr. Greener's, both in average and in the highest score made. Indeed, with the left barrel, in his third shot, Mr. Scott got a selected group pattern of 239 and a penetration of 37, equalling the highest pattern made by Mr. Greener, and exceeding the penetration of that particular shot by eight sheets."

H. C. Squires, No. 1, Courtlandt st.

New York.

THE GREAT
London Gun Trial,
1875.

W. W. GREENER begs to inform his numerous clients in the United States that he has been very successful in the above trial, having secured the first prize, a silver cup, value 40 guineas—class 2 for 12 bores; also winner in class 1 for 8 and 10 bores, and class 4 for 20 bores. He has won in all the classes for improved boring, which is upon a different plan to any other maker, and is far superior in the three most essential points, viz., PATTERN, PENETRATION, and REGULARITY OF SHOOTING.

Mr. HENRY C. SQUIRES, of No. 1 Courtlandt St., New York, is now importing my DOUBLE CLOSE-SHOOTING GUNS to order, an invoice of which will be shipped to him on the 1st July, and can be examined about the 15th. All special orders given to Mr. Squires will be carefully filled. A full report of the GREAT TRIAL, showing the marked superiority of my guns over guns made by Dougal, Pape, Tolley, and others, will shortly be published, and can be had on application at No. 1 Courtlandt St.

W. W. GREENER,

Champion Gun Maker,

St. Mary's Works, Birmingham, England.

HENRY C. SQUIRES, of No. 1 Courtlandt street, has just received an invoice of these close-shooting guns, and from him any information in reference to the results of the Great Trial can be obtained on application.

J. & W. TOLLEY'S
FINE ENGLISH

Miscellaneous.

W. W. GREENER'S

DOUBLE CLOSE-SHOOTING GUNS. Winner of the Silver Cup, value 40 guineas, at the Great London Field Trial 1875, beating 33 competitors with 68 guns, also winning in all the other classes for the Improved System of Boring. These guns will kill from 80 to 100 yards, loaded with large shot, and will shoot well with small shot with a less powder charge than guns bored upon the old system. For report of the Gun Trial apply to Messrs. McLaren, Williams & Co., Agents, St. Louis, U. S. A. Address

W. W. GREENER,

St. Mary's Works, Birmingham, England.

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENGTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,) its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supercede all the complicated and manifold grips now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.

Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.

NO. 25 SOUTH CASTLE STREET,

LIVERPOOL.

aug26-tf

Established 1780.

J. D. DOUGALL'S
EXPRESS SHOT GUNS.

(Title registered.)

SHOWN by trials at Wimbledon by Editor of the *Field* to possess the GREATEST PENETRATION and therefore LONGEST RANGE—thus: Circle, 30 inches; 300 pellets; average, 191; penetration, 37. The Editor's trial of Greener guns with 340 pellets of same shot and same charge of powder, gave 180, and penetration 30, although there were 40 more pellets in each charge. Should any controversy arise as to the durability of these new systems, we herewith warn all beforehand that our system is our own invention (though founded on the American idea) and is DURABLE, a fact remarked on by the *Field*, that the guns tried had been in use during last season, and references permitted to the owners. Send for Illustrated Circulars to

59 St. James's Street London.

BROWN'S
ESSENCE OF
JAMAICA GINGER

PREPARED ONLY

—BY—

FREDERICK BROWN,
PHILADELPHIA, PA

THIS RELIABLE PREPARATION, one of the oldest of American Pharmaceutical Products, still maintains its enviable reputation, and finds a steadily increasing sale without advertising, and in spite of piracy.

Its high reputation has tempted the cupidity of parties, whose only excuse for their unfair simulations, exists in the great popularity of the original, and accidental similarity of their names.

BROWN'S ESSENCE OF JAMAICA GINGER is protected by the private Proprietary Stamp of the manufacturer, which is incorporated with the steel plate label.

The attention of Druggists and the Trade generally, is called to the Price List of

ENGLISH & FRENCH
MEDICINES & PHARMACEUTICAL
PREPARATIONS,

Which will be mailed on application.

THE
HAZARD POWDER CO.,
MANUFACTURERS OF
GUNPOWDER.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFFG, FFG, and "Sea Shooting" FG, in kegs of 25 lbs., and 6 1/2 and 12 1/2 lb. cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER. GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office.

88 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6 1/2 lbs. each, and in canisters of 1 and 5 lbs.

AUDUBON POWDER,

Very quick. For woodcock and quail Nos. 1 to 4. Packed in metal kegs of 12 1/2 lbs., and in canisters of 1 and 5 lbs.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes. Sizes F.g., FF.g., FFF.g., the last being the finest and most used. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 pound.

All of the above give high velocities and less residuum than any other brands made.

Ramblings in Oregon.

For Forest and Stream.

PART IV.

FROM Portland I went to Astoria, at the mouth of the Columbia, and distant one hundred and ten miles. I passed several fishing hamlets on the way down, and they were a scene of bustling activity, being in the height of the season. The canning of salmon is now one of the best industries in Oregon, the quantity of salmon exported last year being valued at \$1,000,000. England and China are the greatest purchasers of this most edible product, but nearly all the Pacific Republics and the nations of Continental Europe are now sending orders for it. The canned salmon is prepared as follows: The fish are first cut into pieces weighing a pound; they are then packed in cans, which have a small orifice in the lid, and boiled in salt water half an hour; they are then boiled in fresh water; a few spices are added, the hole is soldered air tight, and the fish is ready for exportation. This was formerly a great secret, but the number of establishments now in existence have caused it to be known. Arriving at Astoria I visited Young's Falls, a romantic cascade situated in a dense forest, and surrounded by shrubbery so luxuriant as to be almost impassable; thence proceeded to Clatsop Beach, the most fashionable watering place in Oregon. This was prepared by Ben Holladay, Esq., for the reception of guests, and through his energy one of the wildest abodes on the continent has been made into a beautiful park, with fine buildings and all the comforts of civilization. The place is historical as the spot on which Lewis and Clarke, in their explorations of the Columbia in 1805, spent one Winter. They hunted elk, made salt, and studied Indian character there, and the same advantages now exist; hence it is doubly interesting, as barbarism and civilization can be contrasted at a glance. Board is only \$15 per week at this Summer resort, and added to this are fine opportunities for hunting and fishing within even two miles of the hotel. Within that distance the Nimrod may possibly encounter the deer, elk, and perhaps a surly black bear, while the woods teem with the grouse, dove, and quail. The copices adjoining the hotel are also interesting, they being the burial grounds of the Clatsop Indians for centuries. They contain large numbers of canoes, in which the moldering bones of many a child of the forest is placed, and little mounds, frequently made of several skeletons—evidently those ejected from their charnel house to make room for the newly deceased followers. All the coast Indians bury their dead in canoes. This must have been a costly species of sepulture in the past, as the construction of a canoe occupied several months, owing to the blunt stone instruments which were used; and from this we can obtain an idea with what veneration they regard the dead. Being anxious to explore the streams in that section, I made an examination of the cemetery to find a sound canoe, and having found one, I summarily ejected its ghastly occupants, and was exploring the sinuosities of the rivers and creeks in a short time thereafter. Had the friends of the deceased learned of my sacrilegious act they would have bestowed blessings upon me neither pleasing nor acceptable.

Having finished my tour of that section, I returned to Portland and took one of the Oregon Steam Navigation Company's excursion steamers up the Columbia River. The trip as far as the Lower Cascades, a distance of sixty miles, is quite interesting on a beautiful morning, as one beholds the snowy peaks of St. Helen's and Hood along the route, and encounters several picturesque falls and massive crags that loom upward hundreds of feet. Both sides of the river are heavily wooded, and farm houses appear only at distant intervals, so that one enjoys the sensation of traveling in a new country. The first object of scenic importance encountered was Cape Horn, a massive ledge of basalt that has a length of several hundred yards and an altitude of 215 feet. It received its name from the earliest pioneers, owing to the difficulty they experienced in passing it with

their batteaus during a storm. A heavy breeze is generally blowing about it, and this frequently prevents the passage up or down of all sail boats; even the steamers are often driven to their utmost power to crawl against it or even withstand its leviathan force. When seen in profile, the ledge resembles somewhat an aggregation of organ pipes, as thin rivulets, which constantly flow over it, have worn deep furrows in its face in several places. Two other isolated crags, remarkable for their size and shape, lie east of this. They are called respectively Rooster and Castle Rock. The latter is a gigantic crag 880 feet high. The most picturesque cascade seen was Multnomah Falls, a ribbon of foamy water that courses through a dense forest, and finally leaps into the river from a bluff eight hundred feet high.

Reaching the Lower Cascade landing passengers were transferred to the cars, which carried us five miles, when we took another steamer. This short ride is generally one of keen pleasure, as a person is borne along the edge of the Cascades, so that he has an opportunity of thoroughly enjoying the brawling, foam-flecked surges that circle around black crags, or rush onward through a narrow crevice. On this route the stockade in which Gen. Sheridan had his first fight with the Indians is pointed out with pride by the Oregonians, and beyond it the log cabin in which President Grant took his first lessons in roughing it. At the Upper Cascades the scenery becomes grand indeed, as the river assumes a lake-like aspect, and its tranquil water reflects every tree and mountain peak within range with the fidelity of a mirror; islands, small and tree-clad, dot the stream in various places; an almost tropical growth of foliaceous trees skirt the valleys, and high above all, thousands of feet, loom the dark or gray crags—mountains of stone. No river in the United States can at all compare with the Columbia in grandeur or variety of scenery, and no words are adequate to paint its multifarious beauties. From Portland to the Dalles, a distance of 120 miles, it is a panorama that one can steadily gaze at with intense pleasure. An object of peculiar interest on this route is Mameloose Island, so called from its being used as a grave-yard by the Indians. It is a small, rocky islet of basalt, on which a few stunted firs struggle for existence. It is covered with diminutive houses, made of a few boards, in which the dead of the Dalles Indians have been placed for many years. Old bows, arrows, and camp utensils, the property of the deceased, are strewn about, it being customary with the Northwestern tribes to place all the property of the dead in or on their graves.

I stopped at Dalles City to enjoy the scenery in the vicinity and note the character of the country. The former is confined entirely to the passage of the Dalles, where the river contracts to a few feet, and breaks its way through black, adamantine masses of trap. This is a great resort for the Indians during the fishing season, and many a son of the forest may be seen on a projecting rocky shelf hurling his spear into the glittering masses of salmon that play beneath him, or casting his scoop net as they rise to leap. Their camps are always close by at such times, and are the scene of merriment; for this is the festal season with all the tribes who depend mainly on salmon for food. Beyond this town, about five miles, is another Cape Horn, which is situated on the short line of railroad connecting the two navigable points of the river. The country in the vicinity of Dalles City is of igneous formation—in fact, the whole of Eastern Oregon is a volcanic region. Trap terraces to the number of twenty often rise one above another to a height of three thousand feet, and this is what gives the scenery of the Columbia its rude, savage wildness. The overflow of lava is estimated to have spread over an area of 300,000 square miles, as it extends from Oregon to the Wyoming frontier on the east, and British Columbia on the north, and to have a depth ranging from one to five thousand feet. The Northwest is, therefore, one of the most interesting regions on the continent to the geologist and lover of paleontology, as fossil animals of the Miocene period are very numerous in its lacustrine formation. Eastern Oregon embraces nearly two-thirds of the State, it having an area of sixty thousand square miles, but it dif-

fers from the western division not only in its topography, but in climate and character of resources. The former is composed of high, rolling, treeless plateaus, seamed by deep cañons, marked by truncated cones of medium altitude, which spring abruptly upward, and traversed by chains of mountains varying from two to six thousand feet in altitude, while the latter is principally formed of a series of large valleys, separated by mountains which are covered with immense forests of fir, spruce, and kindred trees. Even the flora and fauna of the two sections are the opposite of each other, for the Cascade Range is the most arbitrary chain on the continent in its distribution of plants and animals. Animal life is very abundant in the western division, owing to its mild climate, extensive shelter, and profusion of food, but that of the eastern is confined to a few species, the most important of which are the elk, black-tailed deer (*Cervus macrotis*), mountain sheep (*Ovis Montana*), the black bear, badger, sage hare (*Lepus artemisia*), and the sharp-tailed grouse, and one or two species of squirrels. The botany of the eastern division is also quite marked, from its paucity. The most prominent shrubs are the artemisia (*Artemisia tridentata*), and greasewood (*Purshia tridentata*), which often cover an area of hundreds of miles—a desert of vegetation. The famed bunch grass (*Festuca scabrella*) of the pioneers is the only indigenous grass of any importance, and as this covers nearly the entire country, and retains its nutritive qualities throughout the year, the region is one of the best stock-raising countries on earth. Sheep and cattle thrive admirably without any care, except in unusually severe Winters, and these come so seldom that they are scarcely worth considering. The yearly mean temperature of Eastern Oregon is 53°, the temperature of Spring, and only one degree warmer than Autumn. The Winters are usually short and the Summers long and dry, so that crops are never endangered by storm. Although grazing is the most prominent industry in the eastern division, yet some very fine farming land is found along the creeks and rivers, the soil being a rich alluvial deposit which produces all the cereals. Fruit thrives even better than in the western division, especially peaches, in whose production it will equal either Delaware or Maryland. This difference in climate, soil, and resources makes Oregon one of the best States in the Union; for it has all the elements necessary for the support of a large population. Its contrast in topography makes it exceedingly rich in scenic charms, so that nearly all phases of nature known to the Pacific coast may be seen there. While the western division is the more interesting, owing to the presence of forests, of which the eastern division is bare, except on the mountains, yet the latter has more of the grand and sublime, quaint and strange in its scenery than the other. Its chasms and cliffs, sage plains and ocean-like plateaus, gigantic pines, and rivers fringed with amantaceous trees arouse the traveler's attention immediately by their unusual appearance. Even the falls are of the rugged order, and depend more on the erratic forms of the rocks for effect than the leap of the water. A characteristic scene of this sort is White River Falls, which makes three leaps ere it reaches the basin, in which it soughs and eddies and rises and falls with the utmost regularity. The most prominent industry of the country being stock-raising and sheep husbandry, he who desires to engage in these pursuits will find it superior to any portion of the continent for such business. This fact is now recognized, for sheep-raisers from Australia, Scotland, and England are flocking thither. It is a peculiar fact in connection with the region that all animals brought there improve in size and weight, so that they are worth from ten to forty per cent. more the second than they were the first year of their arrival.

Throughout the whole of Eastern Oregon, except in a few instances, the farm houses are usually made of logs, and seldom exceed one story in height. They follow the courses of streams, and as these are much rarer than in the western division, one may travel several miles before he sees a cabin. The grazing plateaus of this region present one of the most magnificent spectacles the eye can behold in Summer when they are robed in their luxuriant robes of

verdure and gaudy flowers; for they roll away in undulating lines until they are lost in the distant horizon. They are devoid of trees, except where a slender margin decks the bed of a meandering stream as it babbles on its way to mingle its waters with the mighty Columbia, so that the view is unbroken from horizon to horizon. Their solitude may also be unbroken, save by a group of Indians moving camp or out on a hunting expedition, or a long train of "prairie schooners" that winds in and out among the many bluffs. There is very little of the picturesque in Eastern Oregon, for magnitude, as in all basaltic regions, is the prevalent expression. The traveler's sense of the strange and grand is constantly aroused, but seldom the quieter emotion produced by picturesqueness, and which he frequently longs for. The most common, and, indeed, the only strikingly individual scenery in this division, is the mountains of many-formed basaltic rocks that spring abruptly upward from the plain in many places, and the terraces of the same material that skirt the river. As I passed up the Columbia my attention was riveted by these terraces, which hugged the stream so closely as to leave no shore in some places, while they towered to such an altitude as to make our steamer look a most insignificant atom. They resemble the Palisades of the Hudson very much in arrangement, but the comparison can go no further, for the latter are mere pigmies compared to them. There is a sameness about Eastern Oregon that one soon wearies of, but along the course of the Columbia there are so many deep cañons, falls, eccentric ledges, and brawling cascades that the interest never relaxes. I followed it upward to where it joins the Snake River, in Idaho, and found some attractive objects every few miles. Not the least interesting are the Indian graves seen quite frequently. These are readily recognized by the horse hide stretched on a pole that surmounts the stockades, for the Snakes kill a pony to take each departed warrior to his abode in the spirit land. Indian weirs for catching salmon, poles for Summer encampments, and occasionally a lodge of some wandering tribe are seen along the banks, but they only add to the air of wildness and solitude the region possesses. The tourist fond of bold, striking scenery, and desirous of enjoying that weird romance which Indian life has for many, will find a trip through Oregon and up the Columbia as far as Idaho one of the pleasantest that can be made on the continent, while the lover of the rod and gun will find it unsurpassed by any region on earth for indulgence in his favorite amusement. The material advantages of the State, its scenic charms, and wealth of animal life, cannot be made known in these notes, which must necessarily be comparatively brief; hence all that can be done is to give a glimpse that will convey a fairly correct impression of its many sources of wealth and pleasure. A tour through the State will cost about \$150, including the fare to and from San Francisco, and for that sum the tourist will reap as much of the pleasures of travel as he can in any portion of the world, if rapids and cascades, erratic crags, deep chasms, grand old rivers, dense forests growing in tropical luxuriance, gentle vales, and immense plateaus and rugged hills and towering pinnacles clad in robes of eternal snow possess any charms for him. It is both a Switzerland and a France combined, and while it equals them in some scenic beauties it excels them in many, and is, therefore, well worthy of a pilgrimage from all students and lovers of nature.

JOHN MORTIMER MURPHY.

For Forest and Stream.

SPORT IN NEVADA.

WADSWORTH is situated on the C. P. R. R., Washoe county, Nevada, on the Truckee River, distance to Pyramid Lake eighteen miles, the reservation for the Pah Ute Indians. The lake is an extensive and beautiful sheet of water, slightly salt, and abounds with innumerable water fowl. Gulls and pelicans breed here on some of the rocky islands, and many eggs of the gull's are gathered during the breeding season.

Commencing about October 20th and until March the trout leave Pyramid Lake and Mud or Winnemucca lakes, and ascend the Truckee River to spawn. During this season a great quantity are taken, in fact it is the chief source of subsistence to the Indians. During the past year upwards of fifty tons of trout were shipped from this station to Virginia City and San Francisco markets. They are taken entirely with hook and line, the law prohibiting the use of seines or other fixed machines, and all dams are furnished with fish ladders to enable the trout to reach Lake Tahoe, or any of the tributaries of the Truckee. They take minnow or grub worms readily, but the favorite and most successful bait is fish spawn, tied up in mosquito bar, cut in squares of about two inches and firmly tied with thread. They resemble a large sized strawberry, and make the most successful bait I know of. The favorite manner with the Indians is the spear, with which they are very skillful, and the spear itself is a novelty and entirely different from anything I have ever seen or heard of. It consists of a very light and flexible handle about fifteen feet long, at the end of which are two prongs of wire, usually No 8, to this is attached by a stout line two very sharp points about half inch long, which slip off the ends of the wire when the fish is struck, and have a tendency from the peculiar formation of the points, to cross themselves in the fish, making it next to impossible to pull out, as it only requires a very gentle shove to strike deep enough to make it secure. No fish, however large, can get off, unless the lines which are attached to the points and connected with the handle should break. The Indians post themselves near the spawning beds and only kill the male trout, which always accompanies the female during this operation. The largest male will drive all the small ones off. The Indian takes advantage of this fact, and never disturbs the female, but as soon as the largest male is killed the next will take his place, and the Indian will wait patiently by those beds and pick off all the male fish as fast as they appear. To anyone not experienced in the art it would almost be impossible to see the fish. The spearing is all done during the day time, and a novice might stand near the bed and not see a fish all day. They resemble a dark yellow cloud in the water, and the spear is allowed to float down the current until opposite the object, when a very gentle stroke makes the fish secure.

Minnow and spawn are the principal baits used by those using rod and line. The fish weigh from four to nine pounds, and are darker than the Eastern salmon trout. These come mostly from Pyramid Lake, but another species called the silver trout come from Winnemucca Lake. Both kinds are taken freely during the season in the Truckee

River; 100 pounds per day to the rod being of frequent occurrence. No other fish inhabit these waters that I know of, except the black mullet, or coxies, as the Indians call them. They come up the river later than the trout, but are not molested by the whites. The Indians take and dry them for their Winter's food, which with the pine nuts form their principal source of subsistence.

Humboldt Lake, the Sink of the Humboldt, as it is usually called, is about forty miles from here, in close proximity to the railroad, and abounds with all kinds of water fowl, ducks, geese, swans, curlew, snipe, &c. The shooting, however, is very difficult, owing to the absence of cover, as no flag or tule grows near the lake. Very few fish are taken here, and of a small size. The water is strongly impregnated with alkali, and hardly fit to use. About eight miles west of Wadsworth the country becomes mountainous. Here a few mountain quail, grouse, and sage hens can be found, but not in plentiful quantities. A few black tail deer and occasionally mountain sheep are found, but more an exception than the rule. Jack rabbits abound in every direction, and any quantity can be killed—twenty or twenty-five per day would be an average day's work for one gun. They are usually in good condition, and weigh from six to seven pounds when full grown. I shot one mountain quail this season about eight miles from here which weighed exactly three-fourths of a pound, and know I have killed much larger ones, but never put one on the scales before. I also shot four sage hens, or cock of the plains, the same day. Still the shooting in this vicinity is poor, but the fishing during the season is excellent, in fact the best I have found on the coast. Lake Tahoe, situated on the summit of the Sierra Nevada Mountains, about eighty miles from here, is a great resort for pleasure seekers during the heated term, and affords very good trout fishing, the fish being usually taken with the spoon or minnow. These fish will frequently weigh thirty-five or forty pounds and do not resemble the Truckee trout. Independence Lake, about fifteen miles from Truckee, abounds with a small variety of trout which would average about a pound, but are highly prized by epicures. They take grasshoppers or flies very readily, and afford fine sport. The lake is entirely surrounded by mountains covered with timber, but game is scarce; still a few deer, mountain quail, and grouse are taken. Sierra Valley, however, is the most frequented place for sportsmen in this section, as there is such a variety of game. Stages run into the valley from Reno and Truckee; distance about thirty miles. Here may be found quail, grouse, deer, ducks, rabbits, and brook trout in all the small streams in abundance. Next to Hope Valley this affords the best shooting to be found in this State. Hope Valley is rather isolated, and too far from the railroad to be accessible to the sportsman from a distance, but parties fit out at Carson and Virginia City, and usually meet with good success. I start for Tulare Lake, California, in a few days for a week's duck shooting, and without exception it is the best place I know of for that kind of shooting. I was there last Fall and shot with a party of professional hunters. The lake is about eighty miles long and about twenty wide, with a strip of tule, or flag, near the shore, from one to four miles wide. Every variety of ducks and geese known on the coast are to be found here. Shooting is principally done from duck boats hid in the tules and over decoys. One hundred birds per day, on morning and evening flight, are about the average. One hunter last Winter killed 2,200 ducks in eleven and a half days with one gun, and a muzzle loader at that. This was not flock shooting, but all done over decoys on a pass. Two guns have frequently killed three hundred on the morning flight.

Wadsworth, Washoe County.

REFLECTIONS FROM ROCHESTER.

IT must have been about this time of the year that Burns penned the lines—

"Now westlin' winds and slaughtering guns bring Autumn's pleasant weather,

The moorcock springs on whirling wings among the blooming heather."

And although we dwellers in the domain of Brother Jonathan designate our lands and game by other names, prevail in the "land o' cakes," no one can fail to see the aptness of the quotation as applicable to field sports in our own favored land. What though we have neither moor, moorcock, nor blooming heather, we can well bear the loss while our prairies are free and the pinnated grouse struts proudly o'er the lea, or leads the startled covey on rapid wing to safety in the slough or cornfield. We have no poetic heather, but surely the tints and glow of Indian Summer are ample compensation to the lover of natural scenery for the deprivation; and for whirling wings back me our ruffed grouse against the world. Of this latter bird, the pride of our Eastern woodlands, most sportsmen retain interesting reminiscences illustrative of its wonderful cunning, instinct, sagacity, or whatever you call its power to baffle its pursuers. The destruction of the woods and the great increase of population hereabout has lamentably decreased the chance for a bag of partridges near this city, but it was a famous place, I am told, in the brave days of old. The "Dugway," "Hopper's Hill," and "Red Creek" were all noted resorts for grouse in other days, but alas, their glory has departed. Although not yet a gray-beard, I can myself remember when many a thrifty covey or pack of grouse and bevy of quail could be found just over the border of the Flower City. Many readers of FOREST AND STREAM have seen the Rochester Driving Park; others have heard of the famous ground where Goldsmith Maid astonished the equine world by her speed, but not every sportsman who has been there knows that a decade of years ago the immediate locality of the park was a small paradise for the field sportsman; yet so it was. The field north of the grounds then contained Merchant's woods, and had a wonderful attraction for grouse, woodcock, quail, rabbits, and pigeons. Here it was that the writer first found acquaintance, outside the books, with those interesting subjects; and, good lack, muckle was the sport he there enjoyed. Why, even as late as two years ago, the likeliest place I knew of to find a wisp of snipe was in the first field south of the Driving Park, now cut up into building lots, (for sale by —, at —'s block.) Oh, most woeful progress!

"Thus shall memory often in dreams sublime,
Catch a glimpse of the days that are over;
Thus, sighing look through the waves of time
For the long faded glories they cover."

That pernicious animal, the pot hunter, has a heavy score to settle for his share in cutting off the game with

us. Without him the woodman's axe could not have wrought such mischief with the game. To show how powerful for evil your downright unconscionable pot hunter is, I will relate an instance given me by a fellow sportsman whom I met on a recent excursion. He was after plover and mushrooms, and as neither birds nor fungi were abundant we naturally fell to bemoaning the degeneracy of these later times, and speculating as to the cause. We were standing on an elevated field, and Johnny S., a crack shot and generous sportsman, pointed to a woods a short distance off and with visible excitement and indignation told me that a year or two before he was walking through the wood in early Summer, accompanied by his old dog Burt; the dog pointed, and on calling him off a grouse was found on a nest containing twenty-two eggs. He did not disturb the nest, but gave orders (it was on his father's farm) that no one should molest the bird. In a week or two after one of the farm hands, passing that way, heard a shot, and fearing the worst hurried to the nest in time to see the big rascal taking the dead grouse from off the nest where he had shot her. S. was immediately apprised of the disaster, and thought to have a hen hatch the eggs, but a weazel, or other vermin, destroyed them. Johnny searched the city for three days to catch the wretch whose vulture swoop had destroyed such promise of sport, but the villain was never detected, and I suppose never will be until that final day of settlement in the Jewish valley, where doubtless among those on the left hand will be seen, distinguished above all the rest by the heat of his chains, the murderous poacher who slaughtered that grouse. I need not add that the ruffed grouse has been indeed a *rara avis* in that wood ever since. But there a few to be found here still. A week or two ago a companion and I, while seeking what we might find in a small unpretentious piece of cover, flushed six or eight grouse quite unexpectedly. Only one fair shot was had, which fell to me, but nothing more substantial than a cloud of feathers could be found when the smoke lifted. When the leaves fall in that cover perhaps I shall try again, and may be with better result.

Nearly every man in Rochester who owns a gun was greatly agitated just previous to the opening of quail shooting. It had transpired that several bevy of quail had been seen in a certain locality south of the city, a mile or two out, and, to be sure, the knowing ones made ample preparations to give them a salute early on the morning of October 1st. I wasn't there to see, but am told there were more men, guns, dogs, and horses on hand than could be seen at a batteau on the preserve of my Lord Tom Noddy; but the spoil was not as heavy as that on the ground of his lordship; in fact, I believe nine brace, divided among I don't know how many, was the result of the onslaught; but then the boys were out of practice, for there has been but little trap shooting this Summer, and woodcock were almost as scarce as the great auk. Is it Summer shooting that causes the scarcity of woodcock, or is the apparent scarcity periodical, like the return of the ten year panic, seven year locusts, and "sich?" If it is the July shooting that makes the trouble then away with it to execution, off with its head, for under the innocent guise of woodcock shooting I fear many a dark and bloody deed of violence is done to other winged game; many a grouse and quail is brought to an untimely end, even before their days of usefulness have begun. If I was not bound by the most sacred ties of friendship—if I did not feel that to betray the trust reposed in me would be an act of treachery only second to that of Benedict Arnold, I could a tale unfold that would freeze the young blood of each particular sportsman in the land, and make them with loud voice demand the abolition of Summer shooting. If the injunction of silence was removed from me I could tell of a respected and trusted young man of ancient lineage and noble descent being led through a concurrence of circumstances to stain an honorable escutcheon by killing a hen grouse with a young family on the 3d of July! I have said that if I was at liberty to speak I might tell these things. I might relate how this young man, whose previous career as a gentleman and a soldier was without spot or blemish, was led by his evil genius to try a certain swamp for woodcock—how, when a great rustling occurred in a bush, he thought a *Megatherium*, *Mastodon giganteus*, or some other gigantic cuss, was after him, and how he boldly fired both barrels at the intruder—how, a moment after, one of the party picked up a sorely wounded grouse, which, on examination, was found to be past medical aid or hope of recovery—that on consultation it was then and there determined to put the bird out of pain and proof of guilt out of existence—how this sage resolve was carried into effect, and the victim devoured. I could tell such a story, but I won't, and yet such an event might occur from the inability of a law-abiding sportsman to distinguish the kind of game that rose. When this supposititious incident occurred it was noticed by all present that Nature concurred with law to forbid the taking of game out of season, for the flesh was tasteless and actually unfit for food, confirming, to that extent, the assertions of the editor of FOREST AND STREAM before the National Association. When such accidents happen to conscientious sportsmen it is certainly unwise of the law to lead into temptation, by tolerating Summer shooting, parties who would not scruple to do intentionally an act that its author deeply deplored.

Our long billed favorites, the snipe, have been here some time, and given great sport to a certain few of us who fortunately know a locality where they can generally be found in the season. Here let me parenthetically thank the canal ring engineers who did not make the canal banks water-proof, for many an hour's sport with *Scelopax*. For, look you, if numerous little streams did not leak out of Clinton's ditch and spread over the meadows adjacent there would be but little snipe shooting near here. As it is, some of us have filled our bags several times lately with Wilson and white robin snipe, or sandpiper. I have reason to harbor no love for ring engineers, but for these snipe grounds I am greatly their debtor.

There is to be a free-for-all rifle shoot this afternoon on the new range at Rattlesnake Point, on the east side of the Genesee River, near its mouth, and as I would fain be there I must now bring this communication to a close.

Rochester, October 15th, 1875.

MUN.

—The visitors to the gardens of the Philadelphia Zoological Society are so numerous that in eight months the receipts were \$48,000; the average attendance was 936. With such prosperity the society will before long possess one of the best collections of animals known. It is intended to prepare a very full collection of American animals for the Centennial.

For Forest and Stream.
AN ANTELOPE HUNT.

DURING the Fall of 1872 I took my usual trip west, from Fort Leavenworth, Kansas, to Fort D. A. Russell, Wyoming Territory, for the purpose of enjoying the hunting of larger game than is found through Eastern Kansas. A description of one of the antelope hunts in which I took part I hope may prove interesting to the sportsmen who read the FOREST AND STREAM.

My companion upon this hunt was Major George North, better known through that section of country as the "White Chief of the Pawnees," and at that time employed by the United States Government as Captain of the Scouts at Russell. He is one of the most thorough sportsmen I ever met, and a splendid fellow in other respects. We left the Fort one morning just after daybreak, equipped for our hunt as follows: I with a Ballard and carrying the lunch, the Major with his cavalry carbine, a long California hunting knife and a pair of field glasses, the latter slung over his shoulder by a leather strap. We were mounted on two of the swiftest horses the fort could boast, as we were aware we would be compelled to "run" the antelope. Riding due west toward the Black Hill range, we arrived, after awhile, upon a section of prairie more rolling than the rest, and here we began to look sharp for our game.

Our plan of operations was to dismount in one of the small hollows, and while one of us held the horses the other would crawl carefully up the opposite slope, one moment looking nervously around for "rattlers" and the next dodging cactus plants, until he could bring his head on a level with the top, then take a survey with the glass of the crests of all the surrounding hills in sight. Here I must state that there is never much danger coming upon any antelope in the hollows of the prairie, as they rarely graze where they cannot see for a long distance on all sides of them. After continuing our alternate riding and crawling for some time, the Major at last returned from one observation, and said he could make out three feeding on a rise about five miles to windward of where we were, and proposed we should set about getting as near to them as possible without showing ourselves.

To accomplish this we started, leading our horses down one of the valleys which ran parallel to the hill upon which our game were feeding. We continued down this gully until we came to another, branching off more toward our goal; this we took and continued our serpentine course until at last we reached a point from where we could proceed no further without crossing high ground and so exposing ourselves. We now again reconnoitered, and to our satisfaction discovered the animals still feeding, and only about eight hundred yards from us. The Major now insisted he would hold the horses, while I was to crawl to the top of the hill and take the first shot. Obeying orders, I made my way on hands and knees to the top, poked my rifle through a small tuft of grass, and with a "melon-cactus" for a rest I sighted the nearest fellow just behind the fore shoulder and pulled trigger. Before the smoke cleared and enabled me to see whether my shot had taken effect, I heard a terrific noise behind me, and turned just in time to see the Major pass me on horseback on a "dead run." Of course I lost no time in mounting and following. I now discovered he was in full chase after one of the antelope, which had fallen behind the others, and which ran in a manner that plainly showed my bullet had taken effect. Although wounded, that antelope led us a good long four-mile chase before we got him. He kept steadily along the top of a range of hills for the greater distance; but towards the last he suddenly turned and went out of view up a small rocky ravine. Now we were sure of him; for, being weakened from loss of blood, he had sought refuge among the tall grass. We carefully made our way up the ravine, and when midway, discovered him crouching in the weeds, his head and neck only being visible. Being now about three hundred yards off, we halted, and the Major leveling his carbine, fired, his ball hitting the buck in the middle of the neck, and stretching him out lifeless upon the grass. Upon riding up we found him young and in perfect condition, and we immediately made preparations to carry him to the fort, which consisted in first cleaning him, then stuffing the body full of grass, wrapping him in a piece of oil skin, and tying him on behind the saddle of the Major's horse. We now turned our faces toward Russell, and by taking it leisurely, and stopping thirty minutes for lunch, we arrived home a little before sundown, rather tired, but highly pleased at the success of our hunt.

F. C. VAN VLEIT.

For Forest and Stream.
NEWFOUNDLAND NOTES.

MY last letter left us at Twillingate. This is the capital of the North, thirty-three miles or more distant from Tilt Cove, the great copper mine of the country, the resources of which were energized by Mr. C. F. Bennett, who is now an old man of near eighty-five years. The Bay of Notre Dame is a rich bay, and bids fair to be a great stronghold for the welfare of the people. The man of science entering the harbor of Twillingate will not fail to notice the prevalence of iron-bearing rocks. But then we have no coal mines near so as to smelt the ore. I believe the peat fuel was tried in Sweden with success. Why we cannot do the same I cannot tell. Perhaps if we had some American energy and skill, they would help. There are two entrances to Twillingate—the main or harbor entrance, and the Burnt Island Tickle. Your readers will understand that we call a narrow passage between an island or islands and the main-land a tickle; and, indeed, it is a tickle which will tickle one with some grave thoughts of kingdom come when there's a strong sea on. We never think of going through there without a good pilot, and it is remarkable how intelligent our fishermen are in the knowledge of rocks. Old S., our pilot, how true to duty was he.

We usually bring to anchor off Path End. Right opposite the handsome English church a beautiful grassy plot jays above the Path End landing place; a pretty road, which leads to Back Harbor, wends its way to the eastward of the church, and a fine grove of trees covers the hill. But the ground is very rocky from the landing place up toward the old Court House; still there are many fine fields and gardens, and the grass has a brilliancy which rivals that of more favored climes. There is a great deal of bisulphuret of iron in the soil. The oxide of iron is prominently visible everywhere. The Court House is an ancient building. Here Mr. Cormack, the pioneer traveler, made a fine speech

about the Boethicks in presence of the late Judge De Barres, Mr. Iyte, and many others, some fifty years ago. Twillingate town is built upon two islands, with the harbor between. The two islands are connected by a draw-bridge. The population of the islands is upward of 3,000 people, big and little. A large number of schooners go from here to Labrador codfish catching. The fish is brought home, salted in September, and made. There are several mercantile houses on these islands, and the trade is considerable, but, Mr. Editor, it is subject to the uncertain sea. The anchorage in Twillingate Harbor cannot be called good, and a gale of wind from east or east-northeast or northeast is a critical event here in the Fall. A walk to Durrell's Arm, etc., is quite interesting, and from the high hills a beautiful view is obtained of Twillingate. In Durrell's Arm there is a great deal of fine land, and there are many good farms. Back Harbor, on Twillingate Island proper, is a lively little place of about a quarter of an hour's walk from Twillingate. Picture to yourself grassy meadows, thick groves, neat houses, cows and sheep, and beautiful flocks of geese, and you have at once the pastoral idea of Back Harbor, which is defended by Patrick's Island. This little haven forms a refuge for shipping to some extent, but as it is only small, the accommodation is limited. We are thankful that as often as we laid in a ship or vessel or steamer at Path End we never had reason to regret not going to Back Harbor. Twillingate is the grand assize town of the North, but the people are so good the lawyers don't get much to do. Old John Doe and old Richard Roe are long since legally deceased, and so is the good old Northern Circuit Court, out of the remains of which has sprung up the beautiful flower of the Supreme Court on Circuit. All honor to our worthy Judges. May the Lord protect them forever. Our pleadings are now so simple that we could write a most abstruse declaration or pleading on half a sheet of note paper. We believe in simplifying law, geology, and every other "ology," and thereby the people are enlightened. And so we'll bowse up the anchor and sail for Exploits, Burnt Island, the northern terminus of our journey, and thence to Fogo, and so south to Harbor Grace, and then "Newfoundland Notes" will be finished, and thanks to FOREST AND STREAM. If such a valued paper as yours, Mr. Editor, had been in existence in the earlier days of our study I could have made these notes more interesting.

Harbor Grace, Aug. 30, 1875.

Fish Culture.

FISH CULTURE FOR RUSSIA.

CAVIARE, a favorite Russian relish, is made from the roe of the sturgeon. Whether there is a prospect of the supply failing, or whether the attention of the Muscovite authorities has been called to the falling off of their fish supply generally, is uncertain, but it is known that it is now being directed to practical fish culture as a means of increasing the supply. There has just arrived in England, says *Land and Water*, Mr. Michael Girdwoyn, engineer-lieutenant, who has been for some time past studying scientific fish culture in all its branches, in various parts of Europe, with a view to the cultivation of the hitherto neglected waters of the vast empire of Russia. For procuring a supply of eggs for the propagation of salmon Russia possesses advantages which exceed even those afforded this country by the Columbia and other rivers of the Pacific coast, although without the same facilities for transportation. During the Summer months the upper waters of the Amoor fairly teem with salmon, scarcely disturbed in their swim of two thousand miles to the spawning beds by the few aboriginal tribes of Gilyacks, Tongoos, and others, or the more recent Cossack settlements on its banks. The Russians claim four different varieties of salmon for this river, but we have never met with an intelligent classification or comparison. But little also has been written regarding the fish of European Russia beyond the fact that sturgeon abound, though we believe that a large portion of the caviare is imported. The following list shows the places at which Mr. Girdwoyn has been prosecuting his studies, and the officials from whom he has obtained certificates:—

France—From the College de France (à Paris) Laboratoire d'Embryologie comparée et de Pisciculture. Germany—From Herr Haack, director of the Imperial piscicultural establishment at Hünningen (Huningue), in Alsace. From Herr C. Schuster, chief magistrate of Freiburg (Germany), establishment at Seltzenhof. Switzerland—From Herr M. Hugi, director of the Piscicultural Society at Fribourg (Switzerland); from Messrs. Frederick Glaser and Son, at Basel. From Herr T. B. Kuffer, Germany (Bavaria) court pisciculturist at Munich; from Herr C. von Siebold, Professor of zoology at Munich. Austria—From Herr Gottein, director of the piscicultural establishment at Salzburg; from Herr C. Horak, steward of the domain of Prince Schwarzenburg, in Wittingau (Bohemia); from Dr. H. Fric, director of fish culture in Bohemia; and Baron Berlepsch, of Horskysch Centralkanzlei, at Horskysfeld (Bohemia). Germany (Poland)—From Herr Kuzia, director of the piscicultural establishment at Mokrotona (Germany, Silesia). Germany (Bavaria)—From Herr F. O. Helmstaetter.

Mr. Girdwoyn informs Mr. Frank Buckland that in the College de France they breed river trout for scientific purposes only. At Hünningue Herr Haack breeds all the principal kinds of *Salmonidae*, and sells the eggs. Herr Schuster, at Fribourg, breeds river and lake trout and salmon for the Rhine. The eggs are sold. Herr Hugi, of the Fribourg Piscicultural Society, breeds river trout to stock Swiss waters. Messrs. Friedrich Glaser and Son, at Basel, lay down principally Rhine salmon eggs for sale. They are not eyed, but simply impregnated; these are the best eggs in Switzerland. Herr Kuffer, of Munich, Bavaria, sells the eggs of *Salmo Hucho*, the Danube salmon. Herr Gottein has at Salzburg the best establishment for *Salmo Salvelinus*, *Ombre Chevalier*, that is, charr. Herr Horak has a very large establishment, there are nearly 300 lakes on the prince's property. Here they cultivate pike, perch, carp, *Perca lusio perca*, or pike perch; no *silurus*. The young

stock-fish are sold, and the fish markets of Hamburg and Vienna are supplied. The fish are carried alive in well-boats down the Elbe, and through canals as far as Hamburg, a distance, as the crow flies, of nearly 400 miles. The Spiegel carp, or *Cyprinus rex cyprinorum*, will not carry. Dr. H. Fric is inspector of fisheries in Bohemia, and has a laboratory for experiments. Baron Berlepsch breeds trout only for his own property. Herr Kuza breeds Rhine salmon and river trout to be turned out into the Oder. He has also a large establishment for carp. Herr Helmstaetter sells trout eggs.

The following is a list of the establishments which Michael Girdwoyn had visited before obtaining the above certificates: Paris—That of Mr. Carbonier's, and the Zoological Garden of Acclimatation; Brieg, (Germany, Poland)—Special fish culture of salmon; Boron, France—Arrangement of ponds for fishes; Ostend, Belgium—The oysters' and fishes' establishments; and different aquaria in Paris, Boulogne, Berlin, and Hanover; as well as the fish markets in Paris, Boulogne, and Basel (Switzerland) in Würzburg.

Carbonier sells fish for aquaria only, he also deals largely in fry of eels, calls in French *montée*, to stock ponds. Brieg breeds salmon for the river Oder. At Boron, near Mulhausen, Mr. Bourguin breeds carp, pike, and sells fry for stock.

We believe that ours is the only government that has offered impregnated eggs for gratuitous distribution. The immense quantity of salmon ova collected on the McCloud River by Mr. Livingstone Stone and his assistants, as shown by the list printed below, enables it to furnish not only the various State commissions with the means of stocking public waters, but to private individuals who may be desirous of attempting experiments on their own account. On his return to Russia, Mr. Girdwoyn, who is a scientific engineer and accomplished draughtsman, will bring out a great book on fish culture. It is to be published simultaneously in Russia, Germany, and France, and an English edition will be anxiously looked for, as it promises to be a practical work, likely to prove of great value to the fish culturists of the world.

SHIPMENT OF CALIFORNIA SALMON EGGS.—We are indebted to Mr. Livingstone Stone, of the United States Fish Commission, for the following table showing the results of this season's campaign at the United States salmon breeding establishment on the McCloud River, California:—

Sent to Connecticut.....	480,000	Sent to Iowa.....	300,000
" Massachusetts.....	50,000	" Colorado.....	240,000
" Rhode Island.....	200,000	" Utah.....	183,000
" New York.....	80,000	To Kern and Truckee riv- }	
" New Jersey.....	320,000	ers for California.....	500,000
" Pennsylvania.....	480,000	" New Zealand.....	59,000
" Maryland.....	560,000	" Canada.....	50,000
" Virginia.....	320,000	To N. W. Clarke for the }	
" Michigan.....	800,000	U. S. Fish Commission }	1,000,000
" Illinois.....	80,000	Now hatching at this es- }	
" Wisconsin.....	40,000	tablishment for Sacra- }	2,000,000
" Minnesota.....	400,000	mento river and tribs....	
Total impregnated eggs taken, 8,170,000.			

There were in bulk over eighty bushels of salmon eggs. It took 150 bushels of moss from Mount Shasta to pack them. When packed they weighed 20,000 pounds or ten tons, and filled 156 boxes two feet square by six inches deep.

Several millions of salmon eggs are now being hatched out in the waters of the McCloud River for the increase of the supply in the Sacramento. Part of the expense of this latter work is borne by Gov. Stanford and other public spirited citizens of California. Operations in connection with the taking of the eggs of the sea-salmon and of the land-locked salmon of Maine have also been commenced, and are progressing successfully under the direction of Charles G. Atkins.

—At Nugata, Japan, the latest rage is for breeding a kind of goldfish called koi, whereof the body is white and the head only a light red. A fish a foot long is reported to fetch thirty-five "yen" (about £7 10s.) The reason for this extraordinary fancy is that the rumor has been started that gold can be extracted from the scales, and some people have in consequence turned their fields into fish ponds.

FISH HATCHING.—N. W. Clark, of Northville, Michigan, publishes a letter in the *Detroit Tribune* touching priority in methods of fish hatching, in which he says:—

"In the month of November, 1871, in connection with Mr. George Clark, of Ecorse, I placed a few thousand of the whitefish ova between two layers of moss, well washed and cleansed from all impurities, and so arranged the keg in which they were placed as to receive a constant dripping of ice water until the following March, when these eggs were taken from the cold bath in which they had been for about four months, and were placed in the ordinary hatching box, where, after a lapse of about ten days, they nearly all hatched out in good condition. There was then no perceptible difference between these and others that were hatched by lying in running ice water during the same time.

"Again, in the Fall of 1872 I arranged two lots similarly; with one I used sponge, and distributed the eggs in it in such a way as to furnish moisture, as the water was constantly dripping on them, while the other was packed properly in moss. I then covered the whole with fine sifted and washed gravel, which lay in one corner of the hatchery. This gravel remained moist all Winter, but with no water dripping on it, and consequently it crusted over with frost, though so much above the eggs, and also so much below them as not to freeze. These eggs lay in this condition until about March 20th, 1873, at which time I removed them to the hatching boxes, and a large proportion of them were also hatched in good condition. Those in the sponge became perfectly worthless, in consequence, as I think, of the constantly wet sponge lying too heavily upon them and excluding the air too much. This last experiment of laying the eggs down in gravel which kept them slightly above the freezing point satisfied me that the eggs could be so packed in ice as to retard the process of incubation until such time as they could be transported long distances while in process of hatching.

"I therefore in December, 1873, arranged refrigerators in different forms, although substantially alike on general principles, all disclosing the fact, however, that by placing the ova between any light and durable fabric and then by surrounding the whole with thin layers of moss slightly moistened and kept in close proximity to ice constantly, and in such a manner that water dripping from the ice would not run upon the eggs, as I found that to hatch, fish eggs only slightly moistened will keep much more perfectly than to allow the moss to be kept so moist as to have a drop of water run from them. Consequently, my last portable arrangement for hatching and keeping the ova in a proper condition to undergo the natural process of incubation without a spoonful of water daily, was arranged at my hatchery last Winter, as can be vouched for by Governor Bagley, with the whole board of fish commissioners of this State, as well as many other first class citizens. It is also a well known fact that I packed some 5,000 of these eggs in this manner and took them to Lansing during the session of our Legislature, traveling to and from point to point with them, opening and handling them as occasion required, and then taking them home to my hatchery and hatching them out in perfect condition. This invention of mine, I will say for the benefit of Seth Green and all others interested in the matter, is secured by letters patent bearing date March 31st, 1874, to which I beg leave to refer."

FISH CULTURE IN VIRGINIA.—Dr. W. B. Robertson, one of the fish commissioners of Virginia informs the *Lynchburg Republican* that he sent to the hatching boxes at Lexington 10,000 California salmon eggs, and a like number to the hatching boxes at Blacksburg. These eggs were received from the United States Fish Commissioner, and will hatch in about two weeks. The young fish will then be fed and taken care of until they are from one to two months old, when they will be distributed among the various rivers in the State suitable for their growth and propagation. The California salmon is a very superior fish, and it is hoped that in a few years the Virginia rivers will be well stocked with them.

Dr. Robertson also says that he put a large number of young black bass in the North River last week, and next week he will have some put in the Rapidan, the Rivanna, Tye River, New River, and other streams. The Virginia fish commissioners are doing a good work, and should be sustained and encouraged in every possible way by the people and the Legislature.

TO FEED YOUNG FISH.—Dr. Pratt, in the *Prairie Farmer*, gives a novel mode of feeding young fish. He says that about as early as the young fish begin to eat in Spring the green fly appears, and by running a wire across the pond and hanging some liver to it, the fly will "blow" it, and about the third day the maggots will begin to drop off. Repeat the liver every two days and you have a constant food for the young fish, and a very good food too.

SALMO SALAR AT NEW HOPE.

New Hope, Pa., October 18th, 1875.

EDITOR FOREST AND STREAM:—

Last Monday I had a visit from a professor, who has always contended that salmon (*Salmo salar*) could not live the third year without going to sea. As he was anxious to see some of the fish in the lake, I took my best rod, adjusted three of my most killing flies, put the boat where I had seen them break very lively, and very soon hooked nine. As we were anxious to examine them without killing any, I put a tub which measured seventeen inches across in the boat. The longest could not lay straight in it by three or four inches. They were in fine condition, thick and deep; we guessed at the weight, and you will have to do the same, as we returned them to the lake. JAS. B. THOMPSON.

Natural History.

RARE FISH IN STRANGE WATERS.—Last week Captain Benjamin Lovell captured two fine specimens of the white whale in the weir at Yarmouth, Massachusetts, on the cape, which is probably the first time this kind of fish has been taken in the waters of the United States on the Atlantic seaboard. The specimens captured are a cow and a calf, the former about ten feet long, perfectly white, and weighing about 700 pounds, and the latter some two feet less in length, of a dark gray color and about 500 pounds weight, both being quite fat. Johnson, in his natural history, gives the following description of this fish: "*Genus Beluga*—Of this is the northern beluga, round headed cachalot, small catodon, or white. When young it is black, when mature it is white, sometimes having a yellowish or rosy tinge. It is twelve to eighteen feet long, feeds on fish, and is esteemed good eating by the inhabitants of the northern countries, the seas of which it frequents. It abounds in Hudson Bay, Davis Strait, and along the shores of Kamtschatka. It sometimes ascends large rivers, and is often observed near Quebec. It is seen in schools of forty to fifty, which frequently follow ships and frolic in the waters around them. They usually flock to the east coast of Greenland, where they are a serviceable supply to the inhabitants. The oil of the beluga is of the finest quality; the skin of the animal is wrought into morocco, and the internal membranes are used for windows and bed curtains."—*Boston Journal*.

REMARKABLE ATTACK BY A BOA CONSTRICTOR.—A very curious incident took place in the Zoological Gardens of Amsterdam about a fortnight ago. A gentleman well known in South Wales visited the gardens, accompanied by a friend and a courier. When passing by the compartment in the snake house, in which the huge boa constrictor is kept, the keeper asked whether the visitors would like to see the boa fed. Receiving an affirmative answer, he went for a rabbit, and on returning lifted up the glazed door a few inches with the view of giving the snake his meal. No sooner had he done so than the boa, who was coiled up in the corner, darted with fury at the opening of the glass door, and sent his fangs into the hands of the gentleman, making fearful gashes. The keeper, aided by the courier and another, laid hold of the snake by his throat, and succeeded in shoving him back under the opening of the window. I had an opportunity of examining the wounds inflicted on the gentleman's hands, and it is remarkable how he escaped further and more serious injury. He is now convalescent, but he evidently got a shake to his nervous system, which can scarcely be wondered at. It is said that the Amsterdam boa is the largest in Europe.—*Cor. Land and Water*.

BIRD WANDERERS.—Last Friday evening two curious-looking birds flew down in Marysville, DeKalb county, Mo., apparently from exhaustion. Some of the town boys, attracted by the curious noise they made, set about catching them, and succeeded in catching one, the other making its escape. The birds were rather a dark gray, speckled on the back and wings, with white breasts, and very long bills and web feet, and their wings were long, extending back and crossing over the tail. They were a little larger, perhaps, than a crow. The villagers, never having seen such birds, were at a loss at first to determine the species to which they belonged, but on examination and comparison they were found to be sea birds, and are known as terns or sea swallows, a species of sea-gull. There can be but little doubt that during the heavy storm that prevailed along the Texas coast they were blown inland, and, becoming lost, kept flying in search of salt water until compelled to light from exhaustion.—*Exchange*.

AN ELECTRICAL FISH BAIT.—In the Paris International Maritime Exhibition there is a small object deserving of notice. It is a platinum wire placed in a bottle and ignited by electricity from a bichromate battery. It is intended to be immersed in the sea, and the light emanating from it is said to attract an immense number of fishes. Experiments have been tried lately on the Côtes du Nord department with a fishing boat, and have proved very satisfactory, on a bank of sardines. The glass must be green or black, otherwise the fish are frightened by the glare and do not follow the submarine light.

A QUEER INSECT.—There was captured in the streets of Austin, Nev., the other day, a curious insect, which the *Reveille* thus describes:—"It is of the tarantula order, and its back, which is about the size of a twenty-five cent piece, is pure white in color, and when viewed from one side presents the exact marks of the features of a human face, with a complete mustache. When viewed from the reverse side the marks assume the appearance of the face of an animal of the feline species." The animal was embalmed in alcohol and placed among the curiosities in the cabinet of the Sazerac saloon at that place.

The following are recent arrivals at the Philadelphia Zoological Garden:—

GARDEN OF THE ZOOLOGICAL SOCIETY,
FAIRMOUNT PARK, PHILADELPHIA, Oct. 9th, 1875.
Two Turkey Buzzards, *Cathartes aura*. Presented by Mr. Richard Mercur, Westchester, Pa.
One Rufous Rat Kangaroo, *Hypsignathus rufescens*. Born in the Gardens.
One young Bald Eagle, *Haliaeetus cuculophalus*. Presented by Major A. C. Richards, Washington, D. C.
One Spider Monkey, *Ateles griseus*(?). Purchased.
One black Iguana, *Metapoceros cornutus*. Purchased.
Two Pinche Monkeys, *Midas adipus*. Presented by Dr. John Agnew, Philadelphia, Pa.
One Greyhound. Presented by Miss A. W. Whelen, Bryn Maur, Pa.
One crested Curasson, *Cras alector*. Presented by Capt. A. Campbell, Philadelphia.
Three Blue Jays, *Cyanara cristata*. Presented by Mr. J. Edward Farnum, Philadelphia.

Woodland, Farm and Garden.

GAPES IN CHICKENS.

D. R. CRESSY has furnished the *Scientific Farmer* with a treatise on this subject, wherein he describes with great minuteness the causes of this peculiar parasitic disease, which manifests itself in the form of "gapes." On examining the windpipe of a fowl after death, a number of small red worms will be found, varying from a half to three quarters of an inch in length, thus unmistakably indicating the seat of disease and the cause of death.

Dr. Andrew Wiesenthal, of the Baltimore Medical College, published the first account of this malady which we can lay claim to, under date of May 21, 1797. Concerning its ravages in those early days of American poultry breeding, he says:—

"There is a disease prevalent among the gallinaceous poultry of this country called the gapes, which destroys eight tenths of our fowls in many parts, and takes place in the greatest degree among turkeys and chickens bred upon old established farms. Chicks and poults, in a few days after they are hatched, are found frequently to open their mouths and gasp for breath, at the same time frequently sneezing and attempting to swallow. At first the affection is slight, but gradually becomes more and more oppressive, and it ultimately destroys. Very few recover; they languish, grow dispirited, droop and die. It is generally known that these symptoms are occasioned by worms in the trachea. I have seen the whole windpipe completely filled with these worms, and have been astonished at the animals being capable of respiration under such circumstances."

It is claimed by some that this worm is the larva of a winged insect, deposited upon the face of the chicken, and that after being hatched the young worms find their way by the nostrils and windpipe to the air passages, and thus cause the disease; but the doctor refutes this theory, as well as others equally erroneous, and proves that this parasite is a true nematoid, or thread-like worm, and of the highest order of the annelides, but, zoologically speaking, belongs to the lowest division of the articulated animals, and is therefore separated from the insects by the crustaceæ, which includes all those lobster-like creatures of the sea.

"There is a radical difference," he says, "between the larval state of an insect, and a true worm; the former emerge from the egg composed of thirteen regular segments, while the worms have no such numerical division of structure in any moment of their existence. Again, none of the insects proper are sexually mature until they have reached the last or imago state of their existence. In the larva state the male and female insect, though easily recognized upon microscopic dissection, present to the unaided eye little or no difference in form, size, or general appearance, which is not the case with this gape worm and many other verminous creatures. The female worm is much longer than the male, and is completely gorged with

ova which are mature for impregnation. This act never takes place in the larval insect, but can be very readily observed in this parasite, for the two sexes frequently become united, and form an indissoluble union for life. Hence we see that these lowly worms of the dust are the only creatures in existence which really fulfil the injunction of sacred writ, that the two sexes shall become 'one flesh.' Yet such are the facts, and hence the embryos can only escape by the dissolution of the maternal body; but this state of things is true of even other worms of the cestoid series, where the vaginal orifice is too small to allow the escape of the impregnated ova."

REMARKABLE DISCOVERY.—A coal merchant named Godwin, resident in Stanley, has just lost a valuable mare under peculiar circumstances. For some time past the animal has been ailing, and has to all appearance suffered unknown agonies, no cause being apparent for the acute pain it was evidently suffering from. A farrier of considerable experience and skill was called in, but his services were of no avail. Ultimately, on a post-mortem examination of the horse's stomach being made, it was found to contain a large stone of some ten or a dozen pounds in weight, in shape like a petrified kidney, and in color, not a bad imitation of a piece of uncalcined flint-stone. Being sawn in two, the flat surface presents the appearance of a large onyx stone, the grain being laid on in layers, no doubt the result of rolling round and round in the stomach in its efforts to collect the particles of undigested stone dust eaten along with the horse's food. The smell emitted from the stone is not unlike that given out by a decayed tooth. Horse keepers from this should be careful, when giving their horses food, that the dust often found in corn is properly sifted out before being given along with the animal's provender. Occasional analyses should also be made of the food, so as to detect fraud in mixing the same with calcined flint-stone and plaster of Paris to add to its weight, and thus deceive the purchaser.

We clip the above from an English exchange at the time that a similar case comes under our observation in this country. A few days since we were shown by Mr. Dorlan, of Fulton Market, a stone precisely similar to the one mentioned above, and which was taken from the body of a horse which had been carried to the offal depot at Barren Island. The stone in question was not discovered until the horse was dissected for the purpose of obtaining what was of value from his hoofs, hide, and bones, and from among the hundreds brought there weekly it would of course be impossible to identify this one. In addition to the causes ascribed by our contemporary we are inclined to think that drinking of water impregnated with lime is a fruitful occasion of this disease, and, as in the case under notice, many horses die from this trouble without the cause being known. Any of our "vets" who may desire to see the stone can do so by calling upon Mr. Francis Swift, the city contractor for the removal of offal.

THE ENSILAGE OF MAIZE.—For the last two or three years it has hardly been possible to look into an agricultural publication coming from the southern part of Continental Europe, or from that portion known as the "maize region," and not find one or more articles or communications relating more or less to the subject named at the head of this paragraph. To ensilage is to bury in silos or pits, and the ensilage of maize consists in cutting up corn which has made a full growth, but is still green, and chopping up the whole plant more or less finely, and then placing it in pits prepared for the purpose, and covering with earth. The details are, that the corn having been hauled to the pits—and their location should be as near the barn as convenient, and to the south of it—it is chopped small by knives or a machine made for the purpose. The pit having been opened from three to six feet wide, and of length equal to the quantity desired to be stored away—but not more than two or two and a half feet deep—and always on underdrained land, or where there is a certainty that water will not leach in, its bottom and sides are lined with straw, and the chopped corn is then thrown in, tramped and packed as hard as may be, and rounded up so as to make a complete water shed. More straw is then placed upon the pile, taking care to largely increase the quantity at the top, for the purpose hereinafter stated. The earth is then thrown back on the pile, and the thickness should not be less than eighteen inches or two feet, the perfection of the process depending on a fermentation which takes place beyond the reach of the influences of the atmosphere. The excess of straw thrown on the top of the pile is for the purpose of absorbing the resulting moisture and gases, and when in sufficient quantity will take them up effectually. Maize and other green forage plants, when so treated, undergo a fermentation not unlike cabbage when made into sour-kraut, and is greedily eaten by all kinds of domestic animals, and is particularly sought after by cows giving milk. In France, where this method of preservation was invented, the practice of ensilage has grown into almost general use, and in the north is found very profitable as a means of preserving the foliage of the beet, so largely grown there for the sugar manufacturers, and in the southern provinces as a substitute for roots and other green crops which the dryness of their climate makes difficult of production.

Prof. Miles, of the Illinois Industrial University, has made pretty liberal experiments in the ensilage of maize and broom corn seed in the course of this Autumn, the outcome of which will be given to the public as soon as the success, or want of it, in the undertaking has been determined.

If the successful ensilage of maize proves to be within the easy reach of ordinary care, and if cattle food so prepared should be found healthy and milk-producing, and be heartily eaten, it seems to me that one of the great difficulties of profitable dairying in Winter will be removed; for a substitute for green food, if not green food itself, will be at the cheap command of every milkman wherever the corn crop is common and popular in the country.—*Country Gentleman*.

—An English surveying party in the interior of India succeeded lately in capturing a couple of wild people, a man and woman, who inhabit the mountainous district of the Western Ghats. They are of dwarfed stature, and have no fixed dwelling places, but sleep on any convenient spot, generally between two rocks or in caves.

The Kennel.

—The Long Island Poultry Association will hold a Bench Show of Dogs in connection with their annual exhibition, which commences on November 30th, and will last until December 4th. This show will be held in the city of Brooklyn, and from its proximity and accessibility it should be one of the largest ever held in the country. The premium list will be on a very liberal scale. It is now in press, and can be had by addressing the Secretary of the association, Mr. Thomas Smith, at Stony Brook, Long Island. The display of pigeons and other birds, poultry, etc., will also be very fine.

COLLEY FIELD TRIALS.—Rather a novel but exceedingly practical system of proving the capabilities of dogs used in sheep herding has been instituted in Great Britain, coupled with a distribution of prizes, which is likely to have the same effect in improving the qualities of these excellent assistants to the herdsman as bench shows and field trials have had in developing the different strains of dogs used for sporting purposes alone. A series of these colley trials was recently held in Glamorganshire, on the side of the Craig-av-leysbon Mountain, where a vast amphitheatre, with a sheep quarry in the centre, afforded an excellent ground for the purpose. The sheep were liberated in trios, and it was the duty of the dog, after a certain time had elapsed, to pen them again. In the first trial a thirteen months old puppy succeeded in penning his sheep neatly in seven minutes, but this performance, good as it was, was subsequently surpassed by Mr. Jones' blue dog March, and Mr. Meyrick's Prince, who were placed first and second. The other trials were for all aged dogs. In all there were seventy-two entries, and prizes ranging as high as twenty pounds sterling each. We are inclined to think that the value of the colley dogs is underrated in this country. Our farmers, particularly those who raise sheep would find them invaluable, and their faithfulness is beyond praise.

ANOTHER IMPORTATION.—Capt. John M. Taylor writes us from Belle Fonte, Va., under date of October 22d, as follows:—

"Mr. Raymond informs me by this mail that a present of a pointer bitch pup arrived safely in fine condition per steamer Idaho from the Rev. Cumming Macdona as an addition to my kennel. Mr. Macdona wishes me to mate her with a first-class native pointer dog, and send him one of the progeny, so that he may judge of the cross on color, style, and beauty. I claim the name of Dona for this bitch, and think Squire Smith's Major of the Stockton breed would make a good cross. Mr. Raymond says 'she is little, but a more perfectly-formed pointer puppy I never saw; liver and white in color, strong, well, sprightly, and particularly handsome. I regard her as a most promising dog.' As many inquiries about the expenses of importing dogs from England have been made in your journal I give the following for the benefit of future importers:—Freight, £3@\$.65, \$16.95; Purser, \$.05; butcher, \$.3; total, \$25. This only \$1.55 more than the cheapest figure at which I have known dogs imported, and the fine condition of the puppy justified, I thought, concession of the addition."

A VISIT TO "IDSTONE."

LONDON, Eng., October 1st, 1875.

EDITOR FOREST AND STREAM:—

Blandford, one of England's prettiest villages, is situated on the river Stour, in Dorset, and is famed for being the center of an immense agricultural district. We found ourselves in this place one bright day towards the last of September, on a visit to Morden Vicarage, to see the kennel of "Idstone." East Morden, where this worthy author and breeder of setters and retrievers resides, is nine miles from Blandford, and the drive there is beautiful; but as your readers will not care to hear a description of it, I will not weary them, and only mention passing a beautiful park, in which were herds of deer, buffalo (not American bison) Australian ostriches, and kangaroo, the latter, when started from his hiding-place, going with great bounds, making an American think he has started the biggest kind of a jackass rabbit.

On our arrival at the vicarage we learned to our regret that the author of "Idstone on the Dog" was away from home, and therefore am unable to give the pedigree or age, with one or two exceptions, of the dogs shown. Many of the young dogs and some of the old ones were in the hands of breakers, and of course we missed them. The first shown us was

Ruby—black and white bitch, very good looking, her coat and feathering all that could be desired; well made body, but her nose, to our fancy was altogether too sharp. She is almost a fac simile, though smaller, of Mr. Waddell's Polly, is thoroughly broken, and a perfect retriever on feather or fur.

The next was a black dog with white hairs through his coat, by Shamrock (the famous Irish setter) out of the above mentioned Ruby.

The next was a brace of red Irish pups, dog and bitch, seven or eight months old, large for their age. The dog red with a faint star on his breast; the bitch had a white "heart." Both were remarkably fine in looks and color, but the dog was too leggy.

The next was Shot, a one-eyed dog. He is a fine specimen of the red Irish, and is darker in color than "Ajax," celebrated Dash; but his color is not so even, fading off on his legs to too light a shade. He is larger than Dash, but his shape, movements and general appearance are enough like that dog's to make one almost think they were brothers. A small white spot on his breast was all the white he showed.

With him was a red Irish bitch called Kathleen. She has a white spot on her nose, white feet and frill. She is the dam of a pup that "Idstone" has just sent to "Ajax," and although her color is not as dark as that of her companion, it is even, and we have yet to see a dog of that strain that can please us more.

Kate, a black and tan Gordon, with white feet and frill, was the next shown. She is too small to meet our ideas of a dog of that blood, but is very handsome, and her tail markings are of that deep burnt umber color that would be hard to beat. All these dogs have black noses and eyes. Two black retrievers, one smooth and the other wavy coated, the latter pleasing us the most, finished our inspection of the sporting dogs.

We saw a couple of handsome fox terriers, one with black marks and tan spots on head is the prettiest dog of that kind we have ever seen.

A beautiful Scotch terrier finished the lot. We must not forget to mention that we saw in the stable a pair of moor ponies, one a brown, the other a gray, that we were informed could take their master to Blandford and back, a distance of eighteen miles, inside of two hours.

After a glass of prime old cider, and pitting the Scotch terrier, we said good by to Morden Vicarage, greatly regretting we had not formed the acquaintance of its worthy owner.

VIA TORES.

BRITTANY POINTERS.—It may be a natural, and is decidedly a patriotic feeling, to believe that no nation in the world understands the breeding and management of dogs so well as we do.

Hounds, and their various breed,
And no less various use.

Yet the poor, uneducated peasant of Lower Brittany, the *braconnier* who gets his livelihood by the chase, shooting seven days in every week, and shooting *partout*, breaks a pointer for his own use immeasurably superior in many respects to the highly trained dogs so often met with in our turnip fields and grouse moors. The former will break fence, it is true, and will foot a hare like a very hound; but this he has been taught and encouraged to do—it is a qualification essential to the bag. On the other hand, he will, as has already been stated, face the thorniest brake, never rake in drawing for his birds, and, above all, will retrieve his wounded game by land—or water perfectly. Without these accomplishments, especially the first and last, he would be valueless to the *braconnier* in that land. However, *sum cuique* is doubtless the fair conclusion; certain it is that the thin-skinned, highly bred and highly broken English pointer is found to be utterly useless in Lower Brittany; while probably the coarser bred dog of that country would be unequal to the quick stubble work and fine style required in this.

There is a sad disfigurement practiced on Brittany pointers, which, considering the gorsy nature of the covers they draw, has doubtless its advantages, but, on the other hand, it detracts largely from the good looks, and even the dignity of the dog in action; the tail, that indicator of all a dog's thoughts, that silent tongue that explains all he means, is chopped off in puppyhood, and a mere stump is left, scarcely longer than that of a Salisbury sheep dog. Shame on the *braconnier* for his utter disregard of the pointer's beauty and graceful movement! Better might he have rounded his ears, as we do those of the fox hound, than mutilate the tail in such barbarous fashion. The former operation would be far more serviceable, and at the same time less disfiguring to the appearance of the dog. What a sorry object a stump-tailed pointer would cut side by side with those grand animals exhibited in that class at our National Dog Shows! And yet, over and through the rough cover-land of Brittany, the latter, as I have abundantly tested, will bear no comparison with his coarser congener. He is worth a parish pound full of the other for the scrub work required of a pointer in that country.—*Wild Sports in Brittany.*

KENNEL PRODUCE.—Bonnet Carre, a very beautiful red setter, bred by Mr. C. H. Raymond, and owned by Hon. Granville P. Howes, of this city, dropped four strong whelps to Pride of the Border on the 7th inst. One gyp, dark red, after the dam, and three deep chestnut and white dogs after the sire. Bonnet Carre is herself very finely bred, being by Mr. Raymond's Dick, out of his Dimity.

KITTY, by Plunkett, owned by F. H. Bierbower, of Maysville, Ky., whelped on the 9th inst. Seven of the puppies—four dogs and three gyps—are living and doing well, all being large, strong, and very lively. They were also sired by Plunkett, whom they much resemble.

GYP—A beautiful and very superior young setter bitch, owned by Horace Smith, our Field and Kennel Editor, recently gave birth, at Perineville, Monmouth county, N. J., to eight fine healthy whelps, by the famous one-eyed Sancho, the property of Forman Taylor, Esq., of Monmouth county, N. J. Gyp is a full sister to Queen, lately sold by Mr. Theodore Morford, of Newton, N. J., to J. J. Settsinger, Esq., of Philadelphia, at a very high figure. The pedigree of both Queen and Sancho were published in our columns a few months ago. From such a strain of setters we expect something altogether extra.

Sea and River Fishing.

FISH IN SEASON IN OCTOBER.

Black Bass, *micropterus salmoides*, *micropterus nigricans*.
Striped Bass *Roccus lineatus*. Bluefish, *temnodon solitator*.

[Under the head of "Game and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

FISH IN MARKET.—The supply of fish during the past week has been quite equal to the demand and our quotations show no material change, either in prices or the sources from whence the supply is received. Prices are as follows:—striped bass, 16 cents for large and 20 cents for small fish; smelts, green, from Maine, 25 cents, (we hear of quantities being caught in the neighborhood of Boston but suppose they are consumed in the home market); bluefish are worth from 12½ to 15 cents as the fish run from large to small; salmon, frozen, 50 cents. Mackerel are of various size, some very small sell for 5 cents each, while the largest bring 20 cents; weakfish, 15 cents; white perch, 18 cents; Spanish mackerel, frozen, 50 cents; frost fish, or tom-cods, 8 cents; halibut, 20 cents; haddock, 8 cents; kingfish, 25 cents; codfish, 8 to 10 cents; blackfish, 12 to 18 cents; flounders, 8 to 12 cents; porgies, 15 cents; sea bass, 20 cents; eels, 18 cents; sheephead, 25 cents; whitefish, 16 cents; pickerel, 20 cents; salmon trout, 18 cents; hard crabs, 30 cents per dozen; lobsters, 10 cents per pound; green turtle, 20 cents; terrapin, \$12. per dozen; scollops, principally from Long Island, \$1.25 per gallon; pompano, \$1. per pound; frog legs, 50 cents per pound.

FISHING FOR STRIPED BASS IN HELL GATE.—There is something about this Hell Gate fishing which, in the mode pursued, the bait used, and the fish themselves, differs from any other kind of fishing, and when once successfully attempted becomes most fascinating. The impatient fisherman, however—he who expects a bite as often as his hook touches the water—had better stay at home; in no fishing, probably, is patience so much required; in none more satisfactorily rewarded. Time was, years ago, before the myriads of tugs which now dash hither and thither like gigantic water beetles were thought of; before two opposition lines of steamers ran to Harlem and made both day and night hideous with their screeching whistles; before the nitro-glycerine with which the river bed is now so

rudely disturbed, had been discovered, that the rapids of Hell Gate, the whirlpools and eddies, were the favorite resort of the striped bass. Not the little fellows that run in schools, but the huge bass from the sea—such fish as are caught off Cuttyhunk and Newport Rocks. Then it was not uncommon for a man to catch several of these monsters of a night, weighing perhaps from thirty to fifty pounds. Now one of much less size is a satisfactory catch. Strange to say, the fish seem to take the bait, when the tide is suitable, better at night. Perhaps it is because the bait used, the squid or cuttle fish, a veritable octopus, younger brother of the huge cephalopod, so vividly described by Victor Hugo in "Toilers of the Sea," throws out a phosphorescent light which allures the prey. The mode of fishing is by trolling, the rower, when alone, fastening the line around his leg with a knot which can be cast off in an instant, and the boat being kept by a gentle exertion head to the tide, the current carries the bait astern to any particular eddy the fisherman may desire. The pleasantest way, however, is to be under the guidance of a good boatman and occupy a seat placed across the stern of the boat, with a good bass rod and reel with four or five hundred feet of line. The squid are caught up the Sound by fishermen in their nets. A strong snell attached to the hook is passed through them by means of a needle, allowing the point and barb to remain among the legs, while the long tentacles armed with their rows of suckers trail out behind, and the glassy eyes stare with a cold and clammy look. The line floats far astern, the bait being weighted sufficiently to keep it below the surface. A bass when he strikes generally swims across the current, and the rod fisherman has his hands full with one of twenty pounds. When the fish is somewhat exhausted the boat is frequently rowed to one of the coves of Ward's Island, where the fisherman can step on shore and finish the battle at his leisure. The largest fish taken this season weighed from fifteen to twenty pounds, but before the season closes some much larger ones will probably be caught. A few evenings since, in company with Mr. Edgerton Browne, of Ninety-second street and East River, who has squid and all appliances for this fishing, and whose information can be relied on, we tried the Gate fishing. But one fish rewarded our efforts, but the surroundings as night came on and the two cities were illuminated were most enjoyable. Far below us the rock drills were at work preparing for the great centennial blast on the 4th of next July. A steady stream of water pumped from the mines flowed over the parapet of Gen. Newton's bulkhead, and the puff of white steam from the high pressure engine rose unceasingly in the air. As the tide fell and the rocks on the Hog's Back and other reefs came nearer to the surface, the water danced in wilder eddies, and the whirlpools twisted and bubbled, almost turning the boat in spite of the strong arms at the oar, and as we reeled in our line for the last time where the strong tide rips were dashing wildly against the sides of the boat, the glassy-eyed octopus seemed a most appropriate bait for such hellish waters.

MASSACHUSETTS ANGLERS' ASSOCIATION.—A regular meeting of the society was held Wednesday evening, October 20th, at their rooms in Boston, Vice President Charles Stanwood, in the absence of the President, presiding. Sixteen names were added to the roll of membership. Addresses were made by several members, notably by L. Prouty, Esq., who favored the meeting with a very interesting epitome of his experience and observation during his recent three weeks' trip, accompanied by Commodore J. N. Roberts, to the Lake Rosegnol district in Nova Scotia in search of fish, game, rest and recreation, and for which a vote of thanks was tendered.

—We learn that Mr. Hiram L. Leonard, of Bangor, Me., the originator of the six-splice split bamboo fishing rod, has recently made a valuable improvement in the construction of the rod, which will add greatly to its durability. The improvement relates particularly to the ferules uniting the parts, and has been secured by letters patent.

OUR FISHING FLEET.—There have been 74 arrivals the past week, as follows:—23 from Georges, 42 from off shore mackereling, 8 from the Banks, 1 from the Bay. The receipts are 240,000 pounds of Georges cod, 98,000 pounds Georges halibut, 555,000 pounds Bank cod, 60,000 pounds Bank halibut, 2,095 barrels shore mackerel, 170 barrels Bay mackerel.—*Cape Ann Advertiser*, Oct. 22.

FAILURE OF THE LAST SALMON SHIPMENT FROM ENGLAND.—An attempt has been made to convey salmon and trout fry from England to Victoria by the Peninsular and Oriental Company's steamers carrying the Indian and Australian mails. The result has been—what most persons predicted would be the case—failure. At the last meeting of the Melbourne Zoological and Acclimatisation Society, Mr. Geo. Teals, who conducted the experiment, gave some little information with reference to the attempt. He stated the fish were in high condition when placed on board the steamer for the outward voyage, and that his apparatus worked well. The Peninsular and Oriental Company's officers on board the steamer afforded every facility for the safe transport of the fish, and furnished plentiful supplies of iced water from time to time. All went well with the experiment until Suez was passed and the Red Sea reached. Then mortality commenced, and the death rate showed an alarming increase each day. From the fifteenth to the eighteenth day the loss became terrible, and the twentieth day out saw the whole of the fish dead, and the apparatus laid on one side. Mr. Teale is of opinion the Suez route, with its forty-two days from home, cannot under any circumstances be made available for the transport of live salmonidae, whatever might be the case with ova well disposed of in ice.—*Field*.

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HIGH WATER, FOR THE WEEK.

—Mr. Ashbury, who will be well remembered in this country as the owner of the yachts *Cambria* and *Livonia*, recently met with a severe accident while driving at Luzerne, Switzerland. Another carriage coming into collision with his own, he was thrown out and his knee badly injured. In a few days, however, he was able to proceed to Venice en route to India.

NASSAU BOAT CLUB.—This club held its annual Fall regatta for the season on Saturday last. There were two events, the course in each race being from Gates' dock to Florence's dock, distance of one mile straightaway. The first race was for pair-oars, the entries being A. B. Frost and George Floyd Jones; W. Robinson and W. Lindelhon; Frank Bacon and John Gunter; J. B. Reynolds and Lindsey Watson. The first named were the winners by five lengths, Reynolds and Watson second. The second race was for single sculls, for which A. B. Frost, Frank Roberts, E. J. Foote, and J. J. Wilson entered. Foote won by ten lengths; Roberts second. The prizes were elegant silver cups and medals.

ORION BOAT CLUB.—This club held its closing regatta for the season on Saturday last, the course being on the Hackensack River. Only two boats appeared for the pair-oared race, distance a mile and a half with a turn, Messrs. P. W. Levering and Dr. Yarrington, white and blue, and H. Adams and D. Lawrence, color brown. They were sent off to an even start, and kept well together until rounding the stakeboat, when Mr. Levering and companion assumed the lead, and kept it to the finish, winning by six seconds in 9m. 30s. The second race was for four-oars over the same distance, Mr. Lawrence's crew beating Col. Toffey's in 9m. 10s.

—The Nemus Rowing Association, of Brooklyn, has been amalgamated with the Brooklyn Athletic Club, an arrangement which will probably be found of practical benefit to both clubs. As in the case of the New York Athletic Club, rowing can be joined to other athletic exercises with much advantage. The initiation fee to the Nemus Association is \$5, and the monthly dues \$2 instead of \$2 per annum, as erroneously printed in our issue of September 16th.

SCHUYLKILL NAVY.—The Schuylkill Navy was reviewed on Saturday, 23d inst., on Fairmount Dam, opposite the boat houses, by Commodore James M. Ferguson and Vice Commodore John Hockley, Jr. The line consisted of six-oared barges from the Quaker City, Pennsylvania, Philadelphia, University, Malta, College, and Undine, and four-oared gigs from the Crescent and Undine. The Faugh-a-Ballah, the six-oared outrigger of the Philadelphia, was used by the Commodore, and the four-oared outrigger of the Undine by the Vice Commodore. The drill was gone through with more than usual precision. The scrub race from Guard Bridge down was won by the Quaker City. The weather was very fine and the attendance very large. It would add much to the popularity of the navy if these reviews were of more frequent occurrence.

The Centennial Regatta Committee hold another meeting on Wednesday next.

—The Potomac will be the scene of some very interesting racing to-day, the occasion being a four-oared race between crews of the Anolatan Club, of Washington, and the Nassau Club, of this city. The New York crew is composed of John Gunter, stroke; F. W. Bacon, No. 3; Lindsay Watson, No. 2, and J. B. Reynolds, bow, with G. T. Floyd Jones as substitute. John Biglin has been training the Anolatan crew, which will be composed of O. L. Prescott, stroke; E. Cumberland, No. 3; S. Burns, No. 2, and C. A. Brown, bow. They row in a boat built for them by Elliott of Greenpoint, and the Nassaus in one of Fearon's.

HARVARD.—The *Advocate* states that the question of Harvard's withdrawal from the Inter-collegiate Rowing Association has been decided in the negative. The considerations inducing this decision were solely those of the propriety of Harvard leaving an association which she had taken the first steps to form, as a member of which she had never won a race; by leaving which, therefore, she must render herself liable to the imputation of confessing that her new competitors were too strong for her, and of being guilty of cowardice in wishing to regain the prestige of victory at the expense of limiting the number of her opponents to one. This would be a thoroughly satisfactory conclusion of the matter, but for what must necessarily be recorded with it—the action of Yale. Our decision was governed by considerations affecting ourselves only, and we certainly expected quite as much of Yale. Instead of which, the whole policy of that college seems to have been to wait and see what Harvard would do.

TRINITY.—The *Tablet* in discoursing on the question "Does Boating Pay," assumes that as regards the colleges it does, and calls upon the students to support the boat club with energy. It says:—"As our new buildings rise, we must make Trinity as familiar a word in the mouth of the people as Harvard, or Yale is now, and when this is so, it will more readily receive the support it deserves. We do not claim that success in a boat race will do all this, but certainly it will go very far toward effecting it. In this way boating will benefit us, if in no other." The unfortunate drowning of poor Cameron prevented Trinity from participating in the last inter-collegiate regatta. It is to be hoped that she will be worthily represented in the next and her many friends will wish her success.

A BOAT RACE ON THE DAUNBE.—A boat race on this river is a novelty in itself, but one over a course of over a hundred and sixty miles is so decidedly unique that we give the following description from *Land and Water verbatim*:—

"A race of a novel and interesting description took place

on September 15th, under the auspices of the Magyar Athletic Club, the course being from Buda-Pesth to Comorn and back, a distance of 166½ English miles. Entries closed on the 12th September, and the race was open to four-oared out-riggers belonging to the three rowing clubs of Buda-Pesth. First prize, five silver medals; second prize, five bronze medals given by the Magyar Athletic Club. The entire distance to be completed within seventy-two hours. The entries were:—1. Four-oared out-rigger Egyetertes, of the Egyetertes Rowing Club; coxswain, B. Rumbold; stroke, A. Balazsovitz, Odon Baranyi, Emil Novelly, M. Ferenczy. 2. Four-oared out-rigger Lidercz, of the Nemzeti Rowing Club; coxswain, Ferencz Mayer; stroke, M. Zsinger, Pal Varga, B. Denjanovitz, Jozsef Pollak.

This race was a great success, and for weeks before public excitement was on the *qui vive*, and the chances were freely discussed. Very few people believed the thing possible, knowing the strong current of the Danube, with rapids, shoals, etc., the course up the river (eighty-three miles) being an exceedingly severe one. After a good start, at five P. M., which was very numerous attended, the two crews kept well together, reaching Vacz (twenty-five miles) at 10:30 P. M., where one hour's rest was taken. The cutting head wind and severe pull against it, and the current, had very much numbed the crews, who had to land to get rubbed down, and then had a run of about half an hour on shore to keep themselves warm. After this they settled down to their night work, Lidercz leading, reaching the undermentioned stations, where they had to report as follows:—

Nazy Maros (twelve miles).....	12.45 A. M.	Egyetertes.
Szobbb.....	4.40 "	2.15 A. M.
Esztergom (Grao).....	arr 8.30 "	7.25 "
	dep 8.30 "	8.26 "

After this the Egyetertes retained the lead, pulling hard, with but one stoppage (of about one hour), reaching Comorn (83 1-5 English miles from Pesth), at 5:30 P. M., having thus accomplished their up-journey of 83 odd miles in the incredibly short time of 24h. 30m. The Lidercz, owing to some oversight in the "catering department," reached Comorn one hour and a half later, rather the worse for wear, but struggling on gamely. On various points of the river from Pesth to Comorn refreshments had been provided for the competing crews, of which, however, they availed themselves but sparingly, the crew of the Egyetertes chiefly supporting themselves on a little red wine, some oranges, concentrated food, and black coffee, and declining any more substantial refreshments. A special steamer preceded the race, with umpires, reporters, friends, and a fashionable array of ladies on board. All the piers of the Danube Navigation Company throughout the course were beflagged and decorated, and all the arrangements were excellent.

The reception at Comorn was most enthusiastic, a special committee having charge of the arrangements. The Egyetertes left Comorn on their down journey, after a stay of about ten minutes, starting September 16th, at 5:40 P. M., the Lidercz not being in sight then. After a fine run of 14h. 52m. the Egyetertes reached the winning post at Buda-Pesth on the following morning at 8:32 A. M., having accomplished the whole journey of 166 2-5 miles in 39h. 22m., pulling up fresh and well.

The Lidercz pulled in 11½ hours later, viz., at 8:5 P. M., having had to give up racing at Comorn, but being still entitled to take second honors, having done the distance in 51h. 5m. The finishing time was—1st, Egyetertes; time, 39h. 22m.; 2d, Lidercz; time, 51h. 5m.

The following gentlemen kindly took the management:—Umpire, Mr. Sarkany Janos, M. A. C.; starter, Mr. Oheolly Janos, M. A. C.; Secretary, Mr. Csaszar Ferencz, sec. M. A. C. The winning crew pulled on an average 38-40 strokes a minute the whole distance. The crews were entertained at a banquet last Saturday week, given by the rowing clubs and M. A. Club, at the Grand Hotel in Pesth, which was a very brilliant affair."

BLOOD DRINKERS.—Upon inquiry at slaughter houses it is found that there are nearly 200 persons in the city of New York who are in the habit of drinking blood flowing warmly from oxen for strengthening purposes and for the cure of certain diseases. A lady is reported to have spoken to an inquirer as follows:—

"Prof. Nalpeau, of Paris, prescribed blood for me. I was consumptive and hastening to the grave. It has prolonged my life fifteen years. I had the utmost repugnance for it at first, but now a half pint of hot blood from a well-conditioned ox is the greatest luxury of my life. My sister's baby, so far, has been preserved and nourished with little else but blood. I know twenty person who drink it in my neighborhood to whom I recommended it. It has extraordinary effect on some people, especially women, but should not be resorted to unless there is absolute weakness of the system."

On a visit of the inquirer to a slaughter house in Tenth avenue, near Forty-second street, he found a delicate looking woman with a sickly boy holding a glass to the blood which ran from an ox with its throat cut. Both drank two or three glasses in turn, and departed with an appearance of added vigor. One of the butchers was asked if he ever drank blood, and is reported to have replied to the following effect:—

"Shure an' I do, now; why not, now? faith, an' ye couldn't tell the differ betwixt it an' milk. 'Tis just as swate, shure, an' in the Winther 'tis warrum an' foine. Bedad, but 'tis stringthin' shure! Hould an an' I'll get ye a dhrap. 'Tis best warrum—runnin' right from the baste."

The proprietor said:—"All last Winter we had men, women and children every morning to drink blood. They always imbibe beasts' blood; never the blood of sheep. Some of them vince a bit at first; but when you close your eyes, blood warm from the beast's neck has just the same taste as warm milk from the cow. We don't charge for the blood, except when we sell it to sugar refiners."

The blood of beeves is said to be more efficacious for weak lungs than cod liver oil.—*The Laboratory.*

PEDESTRIANISM.—Dennis O'Leary recently walked one hundred miles at the Chicago Rink in 18h 53m. and 40s. Said to be strictly fair walking and the best time on record. The walk occurred in a match with James Ennis for \$1,000. Ennis, however, broke down on his sixty-second mile.

—On the 25th Oct. James Mesler of Trenton, N. J., and James Wheat of Pittsburg, Pa., ran a race of one hundred and twenty-five yards for a stake of \$1,000. Mesler won by eighteen inches, doing the distance in 13 seconds.

Rational Pastimes.

CRICKET.

—Mr. W. C. Grace, the celebrated English cricketer, made a great hit recently in a match between the United South of England eleven and eighteen of Hastings. On measuring the distance it was found to be 118 yards from the crease to where the ball was pitched. At the conclusion of the play the South of England had scored 350, out of which Mr. W. G. Grace made 210, and Hastings, with five wickets down, has scored 60.

BASE BALL—THE PROFESSIONAL ARENA.

—The last week of the professional championship season has been reached, and in our next issue we shall be able to give our readers the official result of the contest, as regards the number of games won and lost, which will be counted as legally won games. The record up to Oct. 25th leaves Boston first on the list, the Athletics second, and the St. Louis, third, and this is not likely to be changed by the result of the last week of play in the arena. The record is as follows:—

CLUB.	Boston.	Athletic.	St. Louis.	Hartford.	Philadelphia.	Chicago.	Mutual.	Games Won.
Boston.....	2	8	7	8	6	8	10	47
Athletic.....	2	1	5	3	8	7	6	31
St. Louis.....	2	1	1	5	5	8	8	26
Hartford.....	0	4	5	4	3	8	24	19
Philadelphia.....	0	2	4	4	7	2	19	18
Chicago.....	2	1	5	4	3	3	18	13
Mutual.....	0	3	0	2	5	3	13	13
Games Lost.....	6	19	26	26	51	33	37	178

—The professional contests since our last issue are as follows:—

Oct. 18—Hartford vs. St. Louis, at Hartford.....	5 to 0
Oct. 18—Philadelphia vs. Chicago, at Philadelphia.....	11 to 3
Oct. 19—Athletic vs. Chicago, at Philadelphia (8 in.).....	1 to 1
Oct. 23—Boston vs. Hartford, at Hartford.....	7 to 3
Oct. 20—Chicago vs. Mutual, at Brooklyn.....	13 to 3
Oct. 20—St. Louis vs. Hartford, at Hartford.....	10 to 4
Oct. 21—Philadelphia vs. Mutual, at Brooklyn (8 in.).....	14 to 3
Oct. 21—Boston vs. Chicago, at Boston.....	11 to 9
Oct. 21—Hartford vs. St. Louis, at Hartford (8 in.).....	18 to 7
Oct. 7—St. Louis vs. Mutual, at Brooklyn (10 in.).....	4 to 3
Oct. 22—Boston vs. Chicago, at Boston.....	11 to 3
Oct. 23—St. Louis vs. Mutual, at Brooklyn.....	6 to 2
Oct. 23—Athletic vs. Philadelphia, at Philadelphia (7 in.).....	9 to 6

But six good games out of thirteen.

THE AMATEUR ARENA.

—The Star Club of Syracuse has closed play on regular matches for the season and below will be found the record of their best games for 1875:—

August 23—Star vs. Syracuse, at Syracuse.....	3 to 1
October 2—Star vs. Rochester, at Rochester.....	3 to 2
August 11—Star vs. Lone Star, at Herkimer, 10 in.....	7 to 6
September 9—Star vs. Franklin, at Auburn.....	8 to 5
September 14—Live Oak vs. Star, at Syracuse.....	4 to 1
July 28—Arlington vs. Star, at Syracuse.....	6 to 2
September 2—Crickit vs. Star, at Binghamton 10 in.....	6 to 5
September 3—Elyaway vs. Star, at Syracuse.....	7 to 4
September 11—Live Oak vs. Star, at Syracuse.....	8 to 4
September 14—Live Oak vs. Star, at Syracuse.....	9 to 5

—The best games of the Star Club of Covington, Ky., for 1875 are as follows:—

July 10—Star vs. Ludlow of Cincinnati.....	2 to 0
August 2—Star vs. Buckeye of Columbus.....	3 to 2
August 7—Star vs. Ludlow of Cincinnati.....	4 to 2
August 24—Star vs. Eagle of Louisville.....	4 to 3
September 3—Star vs. Ludlow of Cincinnati.....	4 to 3
July 15—Star vs. St. Louis Reds of St. Louis.....	5 to 3
July 31—Star vs. Milford of Milford.....	5 to 3
August 31—Star vs. Cincinnati of Cincinnati, 12 in.....	5 to 5
September 11—Star vs. Cincinnati of Cincinnati.....	6 to 3
June 4—Star vs. Eagle of Louisville.....	6 to 4
June 16—Star vs. Blue Stockings of Cincinnati.....	6 to 5
October 9—Star vs. Cincinnati of Cincinnati.....	7 to 3
June 5—Star vs. Olympic of Louisville.....	8 to 0
September 23—Star vs. Americans of Cincinnati.....	7 to 6
July 5—Star vs. Olympic of Louisville.....	7 to 6
September 4—Star vs. Red Stockings of St. Louis.....	8 to 5
July 8—Star vs. Buckeye of Columbus.....	9 to 2
July 9—Star vs. Eckford of Maysville.....	9 to 6
July 19—Milford vs. Star.....	3 to 0
August 23—Blue Stockings vs. Star.....	4 to 0
June 29—Philadelphia vs. Star.....	6 to 0
July 13—St. Louis Reds vs. Star.....	7 to 0
September 18—Ludlow vs. Star.....	7 to 5
August 14—Boston vs. Star.....	8 to 1
September 20—Hartford vs. Star.....	8 to 3
August 20—Lexington vs. Star.....	9 to 7

—The amateur games of the past week were as follows:—

October 18—Lowell vs. Live Oak, at Lowell.....	1 to 1
October 19—Live Oak vs. Lowell, at Lynn.....	7 to 6
October 14—Cincinnati vs. Blue Stockings, at Cincinnati.....	7 to 2
October 18—New York vs. Brooklyn, at Brooklyn.....	8 to 6
October 19—Concord vs. Chelsea, at Brooklyn.....	9 to 8
October 14—Philadelphia vs. Quickstep, at Wilmington.....	9 to 3

HOBOKEN, N. J., October 19th, 1875.

EDITOR FOREST AND STREAM:—

A game of foot ball was played here this afternoon between the twent-ies of the Stevens Institute of Technology and the College of the City of N. Y., which resulted in the score of 6 to 0 in favor of Stevens. On Saturday, Oct. 23d, Stevens Institute of Technology, of Hoboken, play the Rutgers twenty of New Brunswick at the latter place. C. P. W.

BICYCLING EXTRAORDINARY.—David Stanton, the famous long-distance bicyclist, is about to undertake another extraordinary feat. He has backed himself to ride 650 miles within seven successive days, and was to have started on Tuesday, the 26th inst. Should he succeed he will finish on Monday, the 1st of November. Lillie Bridge, England, has been chosen as the place for this great ride, the distance of which is the same as from Vienna to Paris. The match is for \$500 a side.

GRECO-ROMAN WRESTLING.—The gladiators who recently contested at the Grand Opera House are preparing another bout. Messrs. Andre Christol and Muller have each deposited with a stakeholder \$100 as forfeit money in a wrestling match for \$500 a side, to take place on or after November 9th.

WRESTLING IN SAN FRANCISCO.—The wrestling match for the championship of America between Homer Lane, of New York, and Richard Whalen, of San Jose, took place on the 19th inst., and won by Lane, gaining the first and third falls. The stakes were \$1,000 a side.

—There will be a series of walking and running races on the grounds of the New York Athletic Association at Mott Haven on Friday and Saturday of this week. Many of the prominent professional pedestrians will compete for the valuable prizes offered.

A FOX-HUNTING CLUB.—According to the New York *Times*, a number of gentlemen of this City fond of field sports have taken decisive steps toward the organization of a fox-hunting club. The sum needed for a commencement is \$10,000, and that is for the erection of a suitable kennel and the purchase of a pack of hounds and some horses for the huntsman and whipper in, and from present indications it is believed that the total amount will be raised in a short time, and that the club will be in active existence this Winter. The price of membership is placed at \$100, and thus far forty young men have signed the roll, so that nearly one half the sum needed is already secured. A pack of fifteen couples of thoroughly-trained fox hounds of Irish pedigree have been secured in Virginia at a cost of only \$800, although they are of the very purest breed. They are deemed better for fox-hunting in this country than the English dogs, as they are not so fleet as the latter, and have a clear, ringing, melodious tongue. Their lack of great fleetness is much in their favor for hunting in this section of the continent, as the country is so densely wooded that horsemen could not follow them, hence all the pleasures of the run would be lost; but in being slow and sure and loud in the mouth they can be followed by a good pedestrian. The men will be well mounted at the expense of the club, and their duties will require them to keep pace with the pack, and see that all do their duty, and that there is no shirking. They are to be paid from \$1,200 to \$1,500 per annum for this service, and are to receive house rent free. The kennel is to be established at some convenient point on Long Island, as that section of the State fairly swarms with the red and gray fox, so that little trouble will be encountered in finding game at any time. Its insular position will prevent the possibility of losing any of the dogs, and ladies can ride to the hounds in many places. The first hunt will be held immediately after the close of the Baltimore races, for as soon as Mr. Douchue, Mr. Bennett, and other gentlemen now attending these return home a meeting will be called, and the feasibility of establishing hunting clubs both in New Jersey and Long Island will be tested. If the run proves successful, and no contrary opinion is entertained, the work of organization will be commenced at once.

DOGS AS SHEEP PROTECTORS.—I used to breed cattle, but having a natural fondness for sheep, and an opportunity to purchase a couple of Scotch Colley shepherd dogs, removing my fears on the score of destruction by mongrel curs, which deters so many from keeping sheep, I concluded to try the experiment which has resulted so satisfactorily.

In my stock of 100 ewes, I have half a dozen bells, and in case of danger, the sheep all run to the dogs for protection. This familiarity between the dogs and sheep, and the watchful care exercised, is one of the prettiest sights in the world. These faithful guardians of the flock are ever on the alert, day and night. The rapid tinkling of the bells at once arouses the dogs; and about three weeks ago, in the middle of the night, I heard an unusual disturbance among the sheep, but was so confident that the dogs would be equal to the emergency that I did not come down stairs. In the morning I had the satisfaction of seeing one of the worthless curs which go prowling about at night, lying stone dead along the fence, with marks on him of a desperate fight. I should say, however, that I made one cross, by putting my shepherd dog to a Newfoundland slut, and kept the choicest of the litter. He has proved a fine, large dog, about twice the weight of either of the shepherds, and though never interfering in what he seems to consider their especial duty, is always ready for service.

It is curious to observe how, when strange dogs cross the place, the two shepherd dogs will take a survey, and if they see much business (they are, themselves, great fighters), by a kind of silent understanding and arrangement, the three dogs go together; and although we in this country are over-run with all kinds of dogs, there seems to be a general fear of my three dogs, and we are seldom disturbed. I recommend the purchase of one or two good shepherd dogs as the first step towards keeping sheep.—*Missouri Cor. Practical Farmer.*

A NOVEL WAY TO CATCH WOODCHUCKS.—The Chester county *Village Record* is responsible for the following plan to kill the woodchuck or ground hog:—"Procure a small dog; get a water turtle small enough to enter the hole, bore a hole in his shell just above his tail, procure a piece of wire about six inches long, fasten to one end of this wire cotton wick saturated with kerosene oil, fasten the other end of the wire to the turtle, place him in the hole, and then light the cotton wick, and in a moment the turtle will enter the hole in double quick time until he reaches the end of that hole, and then retraces his steps and appears in front again ready for another march for another camp. You can imagine the surprise of the woodchuck on the entrance of such a blazing enemy. He leaves his fort only to meet death at his own door by the dog sentinel. I would remark that this effective plan is the invention of a Virginia negro. I have seen it put in practice often, and never knew it to fail. It matters not what is in the hole—woodchuck, skunk, or any other animal—he must leave on the approach of this formidable torch-bearer."

A NEW WAY OF HUNTING.—Franklin Adelbert Ham Winkle, of the Honesdale *Herald*, is the most remarkable hunter in Pennsylvania. Partridges are his favorite game, and he formerly used a gun. On one of his excursions, however, having discovered a partridge in a hemlock tree and fired thirteen times at it without hitting it, he picked up a stone and at the first throw brought down his game. He at once gave his gun to a poor blind boy, and ever since hunts with stones. When he goes into the woods he fills his pockets with well selected ammunition. When he puts up a bird he barks like a fox. The bird at once trees, and its fate is sealed.—*Sum.*

--A Yale Senior received bad "game" the other day. He boxed up a couple of coots, the gift of a sporting friend, under the impression that they were the finest mallard duck, and with the intention of sending the same to his paternal ancestor. His rage and disgust were increased when the true nature of the birds was revealed to him by the fact that he had spent all Sunday in exhibiting his "ducks" to about half the class. He has given up all hopes of eliciting cash from the stern parent by any propitiatory offering, and his destitution yet remains unalleviated.—*Record.*

MAGAZINES.

The Live Stock Journal, as we have frequently had occasion to mention, is a live journal in the best sense of the word. It caters to the interest of the farm; the turf, the dairy, the poultry yard, the apiary, and the family; and, besides all this, it has a fish department presided over by our friend Fred Mather—a sufficient guarantee of the thoroughness with which that portion is conducted. The articles coming within the above mentioned scope in the current number are all ably written, and carry much valuable information. The *Journal* is published in this city and Buffalo. The American News Company are the New York agents; price \$1.50 per annum.

The American Naturalist is published monthly by the Peabody Academy of Science at Salem, Mass., and contributed to by many of our leading savants. The current number is devoted largely to the production of the address of J. W. Dawson, Vice President of the American Association for the Advancement of Science, delivered at the recent meeting of the Association at Detroit, in which he discusses the historical or paleontological aspect in which life presents itself, as seen in fossil remains entombed in the sediments of the earth's crust. There is also the continuation of an illustrated paper contributed by A. S. Packard, Jr., and entitled "Biographies of some Worms," and copious "Notes" on Natural History.

Aquatic Monthly and Nautical Review. The October number of this magazine is before us, and we find it contains, in addition to an interesting summary of recent aquatic events, a number of letters on yachting topics. A great want of the present day is more discussion on yachting affairs. Many are deterred from expressing opinions or making suggestions by the fear of adverse criticisms; and of the very few writers on the subject the majority have assumed a blustering, arrogant style, with an assumption of knowledge which awes the modest writer into silence. The pages of the *Aquatic* are open to all comers. Let yachtsmen ventilate their ideas as our sportsmen do their's in our columns. Mr. C. A. Peverly is the editor, and August Brentano, No. 39 Union Square, the publisher of the *Aquatic Monthly*.

The current number of the *Overland Monthly* opens with an appropriate paper on the "Antiquities of the Pacific States," amply illustrated with sketches of working implements and bas-reliefs taken from Isthmian antiquities at Chiniqua, Costa Rica, Nicaragua and elsewhere. Mr. Joaquin Miller's story, "In a California Eden," is concluded, as is also Miss Kinnen's "Fantasy of Roses." Mr. J. Ross Browne, whilom Minister to China, contributes a sketch entitled, "A Quarter of a Century," which is a retrospective view of men and events in the State of California since the discovery of gold, to the present day. Names now high in naval, military and civic authority are mentioned as having then been subalterns, or as having mixed with the eager crowd in the chase for wealth. In the "Etc." the quarter centennial of the State is commented upon, and figures given showing the value of the industries, and the wonderful increase in the value of the products, mineral, cereal and manufactured, during the period. We understand that the editorial management of the *Overland* has been changed.

The American Swine and Poultry Journal, published at Cedar Rapids, Iowa, is a creditable exponent of the important departments of agricultural industry to which it is devoted. It contains much valuable information on the breeding and management of swine, poultry, pigeons and pet stock. Ward & Darrah, Publishers. Terms, \$1. a year.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

AUCTIONEER, Ballston Spa.—Are you obliged to follow suit, or trump, in auction pitch? Ans. You must either follow suit, or trump.

M. V., Baltimore.—Will you be kind enough to give me the date of the *FOREST AND STREAM* in which an account of Mr. Jacob Seitsinger's kennel was given? Ans. June 17th, 1875.

COLONEL, New Bedford.—Will you please state which you consider the best work on taxidermy yet published, and what the work costs? Ans. "Field Ornithology," Dodd & Mead, 751 Broadway; price \$2.50.

S. S., Cazenovia.—A correspondent who signs himself "Tame Indian" would be pleased if S. S. would name the maker of gun recently described in this paper; also the bore of each set of barrels, whether they are both breech loading, and cost.

W., St. Louis.—Can you oblige me with a recipe for making the best varnish for use on lashings of rods; something that will best resist the action of water? Ans. Shellac dissolved in alcohol makes an excellent varnish.

F. K. K., Syracuse.—I have one of Remington's single-barrel shot guns, No. 16 gauge. Which would you advise me to shoot, paper or brass shells, and of whose manufacture? Ans. Hart's brass for wild fowl, and Ely's paper for field shooting.

J. F. H., New York.—Will you be kind enough to inform me where I can, within two hours' ride of the city, get some good squirrel and rabbit shooting? Ans. Near Pascack, New Jersey, fourteen miles from the city. Take New Jersey and New York Railroad at foot of Chambers street.

SAM, New York.—Is Robert Hughes, Birmingham, Eng., considered a good gunmaker? 2d. Where is there a good place to go around New York to shoot duck, snipe, etc.? Ans. 1st. There is such a gunmaker, but we know nothing of his standing. 2d. Barnegat Bay, or Oak Island, in Great South Bay, opposite Babylon.

PERDRIX, Boston.—Please inform me where, within two or three hours' ride of Boston, I can get good partridge or black duck shooting; if they can both be had at one place I should like it. Ans. Fair shooting is to be had in the neighborhood of Salem, Beverly and Cohasset; also near Swampscott and New Bedford.

F. J., New York.—Will you be kind enough to inform me if surveying is a good business, and the books needed by a beginner; also if Florida is a good field for a beginner? Ans. Surveying is a good business where there is enough of it. We should recommend Davies' "New Surveyor" for a beginner. Florida might answer, but we should prefer one of the Western States, or California.

READER, Albany.—Please let us know dimensions of target used at Creedmoor for the 200 yards range, and is bullseye round or square, also where can we procure such targets? Ans. Target—4x6; bullseye, circular, 8 inches in diameter; centre, circular, 26 inches in diameter; inner, circular, 46 inches in diameter; outer, square, 4x6. You will have to have your targets made.

OZAR, Shelbyville, Tenn.—One day last week I broke the needle in my machine for recapping my cartridge shells. I tried to get a new needle in Nashville, but could not, there being no extra needles in the city. I wish to know if I can get some of the needles in New York? Ans. If you will write to H. C. Squires, No. 1 Courtlandt street, this city, giving size, etc., he will send you spare needles.

READER, Boston.—Please inform me where some of the best shooting grounds are in Virginia, or North and South Carolina, the way to reach them, and the kind of game there? Ans. Ducks and wild fowl along all the tributaries of the Chesapeake; quail and grouse in the Shenandoah Valley; deer in Dinwiddie and all through the Dismal Swamp; turkeys and bears in the Blue Ridge and Alleghany ranges. For routes, see railroad maps and guides.

A. K. J., Philadelphia.—Can you inform me what the cost would be for a Scott or Greener double barrel breech loader, which will outshoot a \$75 American? Would the latter and a \$40 central fire rifle answer for everything likely to be met with in Nebraska? Ans. A good Scott or Greener gun can be purchased at from \$85 upward; the shooting of

which will depend upon how it is bored. If choke bored, it will shoot very close. A double breech loading shot gun, and a \$40 central fire rifle will, we think, answer your purpose.

B., Erie, Pa.—I have a setter dog eleven months old that, until recently, never failed to take the scent of a bird, dead or alive, under favorable circumstances; now, the taking of a scent is like exception and not the rule. Did you ever hear of a similar case, and do you know of any assignable cause for this apparent loss of scent? If so, is there a remedy? Ans. We have never known an instance of a dog losing his powers of scent, except from severe illness, and we know of no remedy when it occurs. It may return.

CONSTANT READER, New York.—Being desirous of purchasing a good breech loader, I have taken the liberty of asking your advice. I have seen a gun at H. C. Squires', in Courtlandt street, marked "The Western Gun," with "W. & C. Scott & Son" on the locks and barrels. This is just what I want, if it be a genuine Scott. Can you inform me if they make such guns? Ans. The gun is unquestionably a Scott, and from all we hear of the "Western Gun," although it is perfectly plain in finish, it is an admirable weapon for general shooting.

J. A. L., Rockingham, N. C.—I expect to put up a ten-pin alley and a shooting gallery in this place, and would like for you to give me the following information, to wit: The length and breadth of a ten-pin alley, and where can the pins and balls for the alley be bought; also a dart gun? Ans. Ten-pin alleys vary in length from thirty to fifty feet; usual width, four feet. Messrs. Peck & Snyder, No. 123 Nassau street, of this city, will furnish you with balls and pins; also with every description of dart gun.

J. E. S., Sussex Corner, N. B.—What is the size for a revolver target, both of the target and disks 2d. Some days ago I wrote you, inquiring length of hammer handle for throwing. You answered, three feet six inches. Is it not an error? Should it not be two feet six inches? 3d. Where could a person purchase a good Newfoundland pup, and what would be the probable cost? Ans. A four-inch bullseye and eight-inch outer for any distance from ten to thirty paces. 2d. The length of handle for hammer throwing was stated correctly. 3d. From Henry Gardner, 111 South Fifth avenue, this city; price from \$15 to \$25.

W. H. S., Philadelphia.—1st. What is the best thing you know of to remove rust from the interior of a rifle barrel. 2d. What is the length of Conlin's short range rifle gallery, what kind of sights do they use, and what is the size of the bullseye? 3d. Which rifle do you consider the best, a Wesson, or a Ballard? Ans. Benzine; afterwards use Belmont's oil. 2d. 110 feet; peep and globe sights, and usually a bullseye one inch in diameter. 3d. Both good; some prefer one and some the other. The Wesson is now coming into very general use for short range shooting.

GEORGE, Cornwall, Ont.—Will you have the kindness to tell me if I could have a pair of choke bore barrels made for my gun, or if I could purchase a pair to fit? Mine is an English made pin-fire, 12 gauge breech loader; a very nice gun, but scatters too much for my shooting. I have tried every practicable quantity and quality of powder and shot, but cannot remedy the shooting. Ans. By sending your gun to our office we can have a pair of choke bored barrels of the best material fitted to the stock; or, if the present barrels are thick enough, they can be choke bored.

AMATEUR, New York.—Have bought a breech loading shot gun in the London market, marked on barrels, "Tatham, Charing Cross," cost \$25 (second hand). Can you inform me whether Tatham has any standing as a gunmaker, and whether you consider a gun sold at said price can be safe? My gun is 12 bore; I use paper shells, 3 drachms powder and 1½ oz. shot. Ans. We know nothing of Tatham as a gunmaker, and cannot give you any idea as to the safety of your gun, but would not have any confidence in such a low-priced breech loader. You are using too much shot with three drachms of powder; 1½ oz. is quite enough.

J. B. T., Atlanta, Logan county, Ill.—I am in want of a small boat, of probably the yawl style, say 25x7 beam, that could be easily decked, to descend the Mississippi, and make a tour in Florida. A second hand one would do me. Please send me a priced circular from some parties making them, or having second-hand ones for sale? 2d. Are the sporting rifles made by the Whitney Arms Company good and reliable? Ans. 1st. The expense of getting a boat to you would be as much as you could get one built at home for. A second-hand yawl could be bought for about \$60. Why not buy one in Chicago? 2d. They are.

DOCTOR, Boston.—1st. Are any of the Wimbledon targets circular bullseyes? 2d. Have any of the long range rifle matches, either in this country or England, in the last two years, been shot at targets with circular bullseye? 3d. What is your opinion of the breech loading, double barreled shot gun, and do you think the difference between the de-carbonized steel barrels at \$, and the twist at \$, is worth the difference in price? Ans. 1st. All the Wimbledon targets have circular bullseyes. 2d. The International match at Dollymount was shot with square bullseyes. At the Autumn meeting this year at Creedmoor, circular bullseyes were used for long range, and for all ranges; square bullseyes are things of the past. 3d. An excellent, reliable gun in every way, think for difference in price would prefer the cheaper gun.

LOTUS, Philadelphia.—In sporting affairs, if in doubt, I generally apply to you for information, and have always found you correct. Not knowing the proper way to proceed, I will trouble you to give us the information we ask. Having contracted for a twenty ton yacht, now building, we wish to know can we join the Brooklyn or New York Club? What is the entrance fee to same and dues, and where is the yacht list for 1876 printed? Ans. You can become members of either club on being proposed and seconded by members and your names passed upon by the Committees on Membership. The fees in the New York Yacht Club are \$50 as entrance fee, and \$25 per year dues, and the initiation fee of the Brooklyn Yacht Club is \$25, and the annual dues \$12. The Yacht List for 1875 can be had by addressing Thomas Manning, No. 318 Broadway.

AUB, Boston.—I am about purchasing a double breech loading shot gun, and am limited to \$75. What shall I do? I have examined and like the appearance of one maker's at that price. I want a gun of say 28 inches barrel, 10 bore, and weighing 8 to 10 pounds. Would that be a good arm for my purpose, viz., mainly brush shooting, but one that could be used on duck, coot, or trap shooting. It must be capable of shooting 5 drachms of powder and 1½ oz. shot without unpleasant recoil and make a fair target with that charge. Do the makers I mention permit a trial of their guns before purchase? Do they guarantee any standard pattern or penetration? Do you know of any other guns at that price that would be likely to suit me better? Ans. The gun you allude to we do not think capable of shooting 5 drachms of powder without great recoil. The makers will not allow a trial, nor will they guarantee pattern and penetration. For \$85 you can get a good English gun—one that will shoot the quantity of powder you name with safety. Call on Messrs. Wm. Read & Sons, of your city.

J. S., New York.—I have purchased a setter dog, and I wish to keep him in good health and condition. Different persons have different opinions. Some tell me to give the dog all the meat he will eat; others say that it is the worst thing to give the dog, so I would like to have you settle this for me, if you please, and let me know what the best food is. I feed him morning and evening. I have been feeding mostly meats and Indian meal. How much Indian meal is sufficient for a dog, if he is fed twice a day? Do you think that one pint a meal is sufficient, or not? Ans. Feeding a dog upon meat altogether often causes mange, canker, or skin diseases generally. The refuse of the table, comprising scraps, meat bones, vegetables, gravy and bread, is good food. Mush of Indian meal, well boiled, with some scraps of meat added, is also good; feed enough to keep him in good condition, neither too fat, nor too thin. Some dogs, like horses, require much more food than others; and dogs in the shooting season, when hard worked, require twice as much food as when they are idle. In order to keep a dog in good condition, if he is kept chained generally, he should have his liberty a few minutes twice a day.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH-CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INOCULATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[Post Office Box 2832.]
127 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, OCTOBER 28, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, October 28th.—Racing at Washington, D. C. Trotting at Prospect Park; Pottstown, Pa. Memphis Field Trials, puppy stakes. Rowing—Nassau vs. Anolostan, at Washington, D. C. Rifle—Turf, Field and Farm Badge at Conlin's, 980 Broadway; American Rifle Association, Pelhamville. Base ball—Boston vs. Philadelphia, at Boston.

FRIDAY, October 29th.—Racing at Jerome Park. Trotting at Prospect Park; Pottstown, Pa. Memphis Field Trials, braces. Walking and running at New York Athletic Club Grounds, Mott Haven.

SATURDAY, October 30th.—Racing at Jerome Park. Memphis Field Trials, setters and pointers for championship of America. Athletic Games—New York Athletic Club Grounds, Mott Haven. Rifle—American Rifle Association, De Puyster Badge, Pelhamville.

TUESDAY, November 1st.—Trotting at Washington, D. C. New Jersey Athletic Association meeting.

WEDNESDAY, November 3d.—Trotting at Washington, D. C.

THURSDAY, November 4th.—Trotting at Washington, D. C.

MR. HALLOCK.—We heard from our Editor-in-Chief on Saturday last from Philadelphia en route for home. His trip through the mountainous regions of Virginia, North Carolina and Tennessee, which was made in company with the Federal force in search of illicit distillers, was most enjoyable, and afforded some fine still-hunting. He crossed the Alleghenies on the 16th of October during a severe snow-storm, which whitened the hill-sides in every direction. White Top was ascended on the 12th, and different mountain ranges—the Unoca, Blue Ridge, Alleghenies, and Clinch—were all visible, stretching away for scores of miles, while the lesser ranges in the foreground, flattened and depressed into an almost apparent level by refraction, and sombre with October tints, and rifted and slashed with many a chasm and ravine, resembled nothing so much as the well-baked and cracked crust of a loaf of Boston brown bread. The immense elevation of 5,500 feet to which the party attained will no doubt account for this extraordinary simile. An illustrated description of his trip will shortly be given to the public through one of the magazines.

"CAMP LIFE IN FLORIDA."—This forthcoming volume is now in the hands of the binder, and its publication will not be much longer delayed. It will be a valuable book of 348 pages, price \$1.50 in cloth. Orders are flowing in very freely.

DISPLAY OF FISHES AT THE CENTENNIAL.

THERE are to be two exhibitions of this kind at the Philadelphia Centennial, one in the Government Building and the other by the Agricultural Department. Prof. Baird has conceded to the latter the Vivaria, and will give the weight of his influence and counsel to make it a success, while he will display his casts—perhaps a thousand—colored to life, with all the specimens of preparations, showing the various use to which each species is applied, economically and commercially. The Government will exhibit all the appliances for taking fish—of which the white man's forms but a small proportion—from models of pounds and seines down to the smallest minutiae of the anglers' outfit; also boats and canoes, or models of them.

In the Agricultural Hall will be exhibited the same, with the exception of canoes, boats and the fishing implements of the Aborigines. In this building there will be the competitive display of fishing tackle, fish cultural apparatus and models of spawning races and fish ways; also an exhibition of the process of fish culture, and in aquaria various food fishes in different stages of growth, and sporting and ornamental fish. In fact anything or everything to be had from avelings and minnows, to sharks and huge tunnies. Thaddeus Norris, Esq., of Philadelphia, the veteran author of two of the best American books on angling and fish culture, assisted by Theodore L. Harrison, also of Philadelphia, has been entrusted with the getting up of the display. We do not hesitate to say that he is most competent. He has given us an outline of the plans proposed, and although he declines to assure their fullest accomplishment, he still hopes that the Director General will approve and the Finance Committee appropriate the necessary amount to perfect them, notwithstanding the many demands made on them for various purposes of the exhibition.

Those who have examined the ground plans of the buildings are aware that the manufactures or products of any class extend longitudinally, while the spaces allotted to each Nation or State cross such classes; thus allowing each Nation or State, while occupying its prescribed limits, to exhibit in any branch or class. The space designed for the fish, fish cultural and fishing tackle display, in the Agricultural Building, is on the west side. It will be forty feet wide and extend the entire length of the hall—say about eight hundred feet—half of the space having been reserved for the United States. The hatching apparatus and things pertaining thereto, and the aquaria, will be on the side next to the lights, and the display of fishing tackle, etc., on the opposite side of the aisle.

Approaching the fishery department from the east, through the main transept, visitors will be attracted by a large fountain at the western side of the building. In the circular base of this fountain will be seen gold fish and other species with brilliant colors. Next will come hatching apparatus, models of spawning races and fish ways; then an exhibition of the process of hatching the eggs of fishes. Following these the sightseer will find glass aquaria of various sizes, from two to six and a half feet long with a great variety of our fresh and salt water fishes. The cold water species, such as salmon, trout, grayling, whitefish, and lake trout will be exhibited in aquaria, the water of which will be refrigerated. A constant stream will flow through all the tanks. At the northern end of the building will be three very large aquaria; one twenty, and two ten feet long; all of them seven feet wide and nearly four feet deep. The twenty foot tank will contain large marine fish, mammals and invertebrata—sharks, and dolphins and tunnies, or "horse mackerel," if they can be had—porpoises, seals, huge sea turtles, etc. One of the ten foot tanks will have the salt water fish of smaller size and in greater numbers; the other will hold the larger fresh water fishes, cat fish, buffalo fish, gars and mud or shovel fish of the West, sturgeons, and large specimens of the great northern pickerel, muscalonge and walleyed pike. These large tanks will have plate glass only in front, the backs and ends will be of substantial wood. The glass will be an inch thick; six plates 45x40 inches in the largest, and three plates of the same size in each of the smaller. This part of the building will be darkened and the light from without thrown directly on the surface of the water, a plain dark curtain extending from the top of the front of the tanks to the ceiling, thus giving the effect of looking through windows into the sea.

The plan of aerating the water in these is the same as that adopted at Brighton and other large European aquarial shows. The water flows from them into a reservoir under ground, where it is allowed to settle, and is reduced in temperature, and is then continually pumped into large vessels above, from whence it flows into the aquaria, the streams being broken in their descent so as to aerate it.

This will be a most interesting feature of the exhibition. It is always so at State fairs. One never tires of looking at a well stocked aquarium. The sight is a "calmer of unquiet thoughts," the beautiful colors and symmetrical forms of the fish; and their movements—the very poetry of motion.

THE INTERNATIONAL.—The meeting of the International Society for the Protection of Fish and Game named for the 22d inst., was postponed at the request of several leading members to the 19th November at Philadelphia, when a large attendance is promised.

—Will our friends who send us reports of rifle matches be good enough to always state the distances shot at.

THE TEMECULA INDIANS.

WHEN General Sheridan remarked that the only good Indian was a dead one, he probably did not have in mind those Indians of California who, coming under the jurisdiction of the padres, had been converted by no very gentle hands into (by profession at least) true believers. At all events, whether or no the reverend fathers had provided for their future existence, they had at least initiated them into the mysteries of husbandry, and diverted their pastime of scalp-taking into the sowing of grain. Not that the so-called Mission Indians ever were a blood-thirsty race, as compared with the Apaches and Comanches; their origin traces from a different source, and the term savage is only applicable to them as denoting their aboriginal status. The Acagchemem nation, from whom are descended the Temecula Indians, the only body in Southern California who have held together under the leadership of their own *Capitan*, at some early period crossed the Mexican boundary and settled in the many valleys of Alta California, where the missionaries found them. Of the four tribes inhabiting Mexico, viz: Tulticas, Chichimecas, Aculnas, and Mexicanos, Father Torquemada is of the opinion that the race in California proceeded from the Chichimecas, as their manners, customs, and mode of life were almost identical with that race. However, they took kindly to the christianizing process, obeyed the behests of their lords and masters, the priests, and finally, when the United States government disbanded the mission establishments, after the treaty of Monterey, instead of mixing and amalgamating with the Mexican population, as did most of the Mission Indians, they held together, settled down as rancheros, and followed the pursuits taught them by the Franciscan monks. In time their straw-thatched *jacals* were surrounded with melon gardens and modest vineyards, and at each semi-annual sheep-shearing they were in great demand on all the large ranches, as they had become expert shearers. Later, as that portion of the country became more settled up, in the Fall they would start through the valley of San Gabriel, working in a body in the vineyards, or, detached in smaller parties, engage in the same occupation, until finally their coming became anxiously looked for by the vineyard proprietors and wool growers, who depended on them for assistance. In the Summer, or early Fall, they would go to the mountains and, with characteristic want of forethought, burn down the *pinone* trees and gather the nuts. And now some one has discovered that he holds an old Mexican grant which covers the land occupied for centuries by these people, and they are to be turned from their homes—not to starve; there is too good stuff in them for that, and they have learned to work; but it must be a bitter task for them to have to remove their aged and infirm to some new spot. There is plenty of government land, not covered by any grant, probably within twenty miles of their home, to which they should be given pre-emption rights; but it does not apparently occur to their agent to thus locate them, and provide for wells or such other necessities as they may be abandoning.

If the inside history of the land grant business in California could ever be written, it would furnish all the anti-administration papers in the Union with material for a page of invective every day in the year. As to the merits of this particular grant, we have nothing to say; that it perpetrates a foul wrong upon an industrious and inoffensive people no one will deny. It is said that Don Pio Pico, the last Mexican governor of California, sat up all night before the capitulation signing grants. There was one, within a few leagues of the Temecula Indians, in which a second survey shifted the *sobranste* some six or eight leagues in order to take in the valuable tin mines of Temescal, which had been discovered and were then being worked by independent miners. The whole mission of San Gabriel was given away by a grant proven half a dozen times to be bogus, yet in some mysterious manner always admitted for further examination. But such instances could be numbered by the thousand.

We feel sympathy for even the miserable Sioux, or any of the Indians of the plains, if they are wronged. How much more are these Temeculas entitled to it? They have lived so quietly and peaceably that outside of the State their existence was unknown. And yet their history is closely interwoven with that of one of the fairest portions of our country, the annals and legends of which are most interesting, breathing of nothing but peace and good will, and marred by no strife until the irrepressible gold hunter appeared. The treatment of these Temecula Indians is but another example of the slipshod policy followed by the Government in its dealings with the "nation's wards."

THE FOREST LAKE VILLA PARK ASSOCIATION.—The objects of this association, as set forth in the articles of corporation, are the promotion and encouragement by proper means of the propagation and preservation of fish and game, and the creation of a Villa Park, to be located in the county of Herkimer. With this view the association have purchased a large track of land located as above, and embracing probably 10,000 acres, which encompasses lakes and streams stocked with fish, and contains game in most inviting quantities. The act of incorporation confers upon the Directors especial privileges in the way of naming their own close seasons and otherwise protecting their fish and game. Villa sites are set aside, upon which stockholders can build their cottages for Summer occupation, and a large club house will be erected for the reception of those who will be but transient visitors. Hon. Horatio Seymour is President of the association, and the list of Directors

comprises the names of Hon. C. W. Hutchinson, Mayor of Utica; Hon. Roscoe Conkling, United States Senator; Hon. R. B. Roosevelt, of this city, and many other well-known and influential gentlemen. The capital stock of the association is \$200,000 divided into 2,000 shares of \$100 each.

RIFLE TYPES—NO. II.

The Young Lady at the Range.—And would he be kind enough to explain it all? That was very good of him. She was afraid he would think her dull. It was too absurd on her part, but she must confess that she had not the faintest conception what it all meant. Yes, she had been two or three times at Creedmoor, and had enjoyed it very much. (Here she looked very steadfastly at a fine looking young man, who, with rifle in hand, was just about shooting.) Somebody had tried, yes, it had been always the same gentleman, who had done his very best to make it all clear to her, but then always, just as she hoped she was getting to have a glimmer of the whole matter, he had a provoking way of leading the subject off into quite other matters, of course interesting ones to her, but not at all relative to rifle shooting. It was at a thousand yards the riflemen were shooting now? Was he sure of that? It looked to her two or three miles off—ever so far, in fact. Yes, she knew that it took from twenty-five to thirty yards of silk to make a dress with overskirt and trimmings, and had now some conception—a faint one—what an awfully long stretch of silk sash it would take to reach from where she stood to those targets. She would prefer his not mentioning to her all at once such things as trajectories and elevations, for they would only puzzle her. Had they ever tried shot guns at Creedmoor? or could they put in their guns as many balls as they pleased? Now, what did that red thing mean which popped up so funnily when some of the gentlemen fired, and didn't jump up at all when others fired? What made it do that? Oh! somebody worked it. Why couldn't a rifleman take a nice comfortable chair—not a rocking chair, of course, because that would teeter, but something solid on its legs—and shoot that way? Now, what was that—that black thing getting pushed up in such an absurd way? That was an outer, and it counted two? The bullseye was three feet wide at a thousand yards and at five hundred yards twenty-two inches? Wasn't twenty-two inches just about as big as the top of a band-box? If she could only fix these things in her mind by means of familiar objects she felt sure she would get along. But didn't it make gentlemen's head ache to be shooting, with the awful noise the guns made? Wouldn't it be nicer if they could have rifles which made no noise at all? Yes; she had read when she studied chemistry, or astronomy, or something, all about air guns. Oh! they wouldn't do? She had heard something about a bubble gauge. Did they blow bubbles to see the way the wind blew? Was it not possible to make some kind of gunpowder that wouldn't black people's hands so—something, say like toilette powder? But were not the trees beautiful, with all their changing colors, their sulphur yellows, their chocolate browns, and their crimson flushes? Oh! what did those red flags mean, and their waving them so, and that man shouting "danger" until he was red, too, in the face? She hoped there was no danger where she stood. That meant cease firing. Wasn't Lady Masserene not only very beautiful, but so lady-like and dignified, and what a pleasant, courteous, whole-souled gentleman Major Leech was, and would he ever come back again? She hoped he would, and must confess it wasn't loyal on her part, but she wished he would come with an Irish team, and beat the American one; for the Americans were awfully conceited. Of course that was a sweeping remark; she meant that she knew one gentleman of the team who had been dreadfully stuck up ever since Dollymount. She half believed, too, he had lost his heart with some Irish girl; all Irish girls were so elegant looking and fascinating. She had been thinking that a nice little space might be fenced off for croquet. It wasn't military? That might be, but it would be so nice. She was sure that neither Gen. Shaler nor Col. Wingate nor Col. Gildersleeve would object, they all looked like such pleasant and amiable gentlemen. She was a thousand times obliged for his very clear description of rifle shooting, and she would think it all over. In fact, she was certain that if only she could master those horrid things, a trajectory and an elevation—and she was going to put her whole mind to it some day—she would then know a great deal more about Creedmoor than any other young lady. Yes; she wore that gold medal, but she was only taking care of it for him. He had won it at the Autumn meeting. Yes, she sported, too, the blue ribbon of the Amateur Rifle Club. But she observed he was looking quite cross and weary; for she had noticed that at his last shot they had popped up a black thing over his target, and she knew now that that meant an outer, but then maybe he might find a good excuse for it and would be allowed to shoot over again.

The careless man.—He flourishes his rifle like an Irishman does a shillalah, and has a funny way of bringing it down on the bystander's toes. He always leaves his cleaning rod at the last firing point, and scatters around promiscuously his oil cans, wipers, and cartridges. (*Loquitur.*) "Oh, I say, you fellows, it's all humbug being so dreadful particular. My elevation is two or three, or something. Screw her up until the nut jams, and then let her down again; it don't much matter. Who has got a drop of oil handy? Some fellow has put gravel in my breech arrangement. Lend us a cartridge; I have left my box in the car or at the hotel, I don't know which, but I had some in my pocket.

Baby got hold of mine and played hob with them. Found his face black with powder, and bless me if he wasn't sucking a bullet and whistling in a cartridge, which accounted for the kitchen range exploding and scalding my wife when the tea kettle blew up. My sights don't look kind of true. Yesterday she tumbled off a shelf, and somebody sat on her sights and likely put her out of kelter. Any fellow got a wiping stick? (Feels in his pocket and draws out a handful of loose powder, some matches, and a few sound cartridges.) I thought I had made a scratch on the bad cartridges, but now I can't tell tother from which." The careless man throws himself on the ground, and is no sooner in position than he fires. Somebody says "a ricochet." "Shouldn't be at all surprised," replies the careless man, quite pleasantly. "Guess that cartridge was one of those that our little Jimmy took for sugar candy."

ILLEGAL SHOOTING.—We are informed that at the Emborough, near Catskill, and also at Rodgers' Island, in the same vicinity, several parties are shooting ducks from boats armed with swivel guns. There are known to be three of those guns in use in that neighborhood, and we have positive information that on Sunday week nine ducks were killed with one of them. If there is no sportsman's association at Catskill to take cognizance of such barefaced violations of the law we would suggest the immediate formation of one; or if that is impracticable, we would say to the citizens of that place that the penalty for shooting ducks with a swivel gun is \$100 for each offense. For the benefit of those who read *FOREST AND STREAM* we give herewith the section of the law passed as last amended on May 12th, 1875, which refers to this offense:—

"SEC. 8. No person shall at any time kill any wild duck, goose, or brant with any device or instrument known as a swivel or punt gun, or with any gun other than such guns as are habitually raised at arms' length and fired from the shoulder; or shall use any net, device, or instrument or gun other than such gun as aforesaid, with intent to capture or kill any wild duck, goose, or brant, under a penalty of \$100."

The result of the use of these swivel guns is that the ducks are almost immediately driven from their feeding grounds, and honest sportsmen deprived of their shooting.

PEDIGREES.—After the poultry mania had seized so strongly upon our Western friends it was a natural sequence that the question of pedigrees should follow, and the system of giving the lineage of prize fowls has been adopted. How far back they claim to go we are not informed, or as to whether any ambitious cockerel can claim descent from the thrice crowing bird of Peter. "This is the cock that crowed in the morn" would be a capital heading for the first page of a poultry stud book, but we fear that the bar sinister would darken many a fair leaf. We had supposed that the mania would have stopped here, but in the last issue of the *London Fancier's Gazette* we find a pro-forma pedigree for canary birds, duly ruled and lined for a thorough registration. A correspondent of that paper states that the idea is not a new one, that he has followed it since 1842. The latest inventor, however, claims the cognomen Chingachgook and very naturally a "squaw" supports him in the following original manner:—

"Chingachgook, the son of Uncas, has spoken; he speak the word of Great Chief. Birds ought to have name. When Great Tamenund go to hunt, he tell squaw—Put one bird in this place, put 'nother bird in t'other place, how she know if he no name? and how you know him squaw not him sister if you buy 'em? Two hundred birds in wigwam; all got name; many warrior, many Great Chief. They no smoke pipe of piece; like war path; take many feathers. Me tell all, give bird name. Put him in book; then you know him grandfather, and him tribe, better as him who say Chingachgook, father of Uncas, when him son. Me say, give bird name; stop de prize-grubber. Make him tell tribe, then know if him show him won bird."

The writer we should imagine had recently taken a large dose of Cooper, and it has "struck in."

By the bye, speaking of pedigrees the following has been sent to us for publication, as recording the birth of "an extraordinary colt." We have not yet heard that the animal has been named, if not we would suggest Everseffort as very appropriate:—

At early noon, near the B— estate, our friend S. G. F. came in possession of a most extraordinary colt—by Indigestion out of Nightmare, she by Canvass Back, by Terrapin, by Plum Pudding; he by Otard; Green Turtle by Brown Stout, he by Kennel, out of Setter, by Snipe; he by Grouse, by Bowe, out of Ryor's Pape; she by Importation; dam by Wagstaff's Gun; he by Taylor's Breech Loader, out of William's P., by Squire Smith; he by Canonius, out of Red Setter; she by Irish White, dam by Pride of the Border, sired by Burge's Rufus; he by Bowe's Ranger, by Goldsmith's Plunkett; he by Shorbs' Count Jock; he by Pintz's Stubbs, out of Sutter's Idstone; she by Shamrock; he by Snap, by Cavallo, out of Cameron, by Sam Mathoron, out of Lunatic; she by 1, 2, 3, 4 out of Billy Mack, by Honest Old Man Holsten, by Lager Bier; he by Pedigree, by Palmer, out of Belle Brandon; she by Wrestler; he by Edgehart, out of Boatler; she by Wellsman, by Dramatic; he by No Go, out of Waddler, by Dog Sport, out of Good Girl; she by Frank B.; he by Apple Toddy, by Rifle, out of Creedmoor, by Krick, out of World, by Reporter, out of Lawsuit, by Dr. Smith; he by Whack, out of Talk-to-Death, by Veterinary, out of Beauty; she by Times, out of Herdness.

—The Brussels rifle meeting seems not to have been as successful this year as on prior occasions. There were less competitors, and the prizes were diminished in quantity and value.

—The ocean yacht race between the Dauntless and Mohawk was sailed on Tuesday last in a good breeze. The Dauntless was the winner, but owing to some misunderstanding regarding the way in which the lightship was to be passed at the finish the race was not entirely satisfactory.

The Rifle.

CREEDMOOR.

On Friday last, October 22d, the contest for the Marksman's Badge by the First Division took place. The Ninth, Fifth, and Eighty-fourth Regiments were at Creedmoor. The day was warm and pleasant, and the shooting fairly good. We give the best scores:—

SEVENTH REGIMENT.							
Name.	200	500	Total	Name.	200	500	Total.

On Saturday, October 23d, three important matches were shot at Creedmoor. The Hepburn match should have come off, but for some reason was postponed. C. E. Huntingdon, Esq., however, having offered in an impromptu way a silver cup as a prize, this contest brought out some of the most remarkable shooting ever yet made at Creedmoor. Conditions for the Huntingdon Cup, 800, 900 and 1,000 yards; five shots at each range. There were twenty-two entries. We append the best scores:—

Name.	Yards.	Score.	Total.
R. Rathbone.....	800...5 5 5 5 5 900...4 5 5 5 4 1000...5 5 5 5 3	25 23 23	71

S. Swan.....	800...5 5 5 5 4 900...5 5 5 5 4 1000...5 5 5 5 4	24 24 24	60
W. Lindsay.....	800...5 5 5 5 4 900...5 5 5 5 4 1000...3 4 5 4 5	21 21 19	

Mr. Rathbone's score, 71 in a possible 75, was very good. Most notable was a string of no less than twenty (20) bullseyes made by Mr. Farwell at 800 yards—five made on the regular score, with the two for the sighting shots, and thirteen more. We are pretty certain that this has never been equaled before by any marksman at Creedmoor or on any other range in the world. The weather was superb, not too much sunlight, and hardly any glare, the targets being nicely shaded.

After the Huntingdon the Boylan Badge was shot for. This prize was presented to the winning team for competition by the twelve members of the successful team in the inter-State match. Conditions, 200 and 500 yards, seven shots, with the State model rifle. We append the five best scores:—

Captain S. Briggs, 22d.....	200...4 4 5 5 4 5 500...5 4 5 5 4 3	31 30
Corporal E. H. Sanford, 7th.....	200...5 4 2 0 4 4 500...4 5 5 5 5 3	24 28
Private J. W. Gardner, 7th.....	200...2 4 4 3 4 4 500...4 5 4 4 4 4	25 29
Adj. Frothingham, 23d.....	200...3 4 4 4 3 4 500...2 3 5 4 4 4	27 27
Sergt. B. J. Jacobs, 22d.....	200...4 4 3 3 4 3 500...3 2 3 5 4 4	26 26

The Irish-American Challenge Cup concluded the day's programme, which prize was cleverly won by Mr. B. Burton, which makes the fourth time he has taken it, when the cup becomes his property. Conditions, 200 and 500 yards, seven shots:—

Bethel Burton.....	200...3 4 3 3 3 5 500...5 5 5 4 4 3	26 31
General Millen.....	200...4 4 0 4 4 2 500...3 5 4 4 5 5	21 30
Major Duffy.....	200...4 4 4 4 4 4 500...3 4 4 4 4 3	28 28
Ed. Browne.....	200...4 4 4 4 4 4 500...0 3 0 4 4 3	29 17

—The American Rifle Association will open their new range on the 27th at Glen Drake. Gov. Tilden, Gen. Husted, and Brig. Gen. Blauvelt will probably attend. The matches will be continued from Wednesday to Saturday. To-day the Westchester Cup Match and Ladies' Match will be shot for, and also two open subscription matches, one at 200 and the other at 500 yards. On Friday there will be team shooting, and the Twenty-seventh will contend for various prizes offered by Col. Underhill. On Saturday the match for the De Peyster medal, distance 330 yards, will be shot also a subscription match at 300 yards and an all-comers match, the first prize being valued at \$50. Office of the American Rifle Association, 25 Dey street. Entries for matches can be made there or on the ground. In our next number we will give report of proceedings. Acting upon a suggestion which appeared some weeks since in these columns the Directors of the American Rifle Association have arranged for telegraph wires from the targets to the firing points, connecting also with the main lines. These will be under the management of Lt. G. H. Thompson, 27th Inf., assisted by a corps of operators from Thompson's Manhattan Telegraph Institute.

—An impromptu rifle match was shot at Auburn last week, Capt. Coleman, of the American team, being one of the contestants, and the only one out of the eighteen engaged who hit the bullseye at 1,000 yards. His score was 49 out of a possible 50.

RHODE ISLAND RIFLE ASSOCIATION.

OPENING OF THE WHAT CHEER RANGE.

[From Our Special Correspondent.]

WHAT CHEER RANGE, R. I., Oct. 25, 1875.

It is always with exceeding pleasure that we welcome the birth of a new rifle association, and herald the opening of a range. There might have been some reasons of a local character why Rhode Island should have had some difficulty in finding a proper site for a range. Firstly, the gallant little State of Rhode Island is rather restricted in size; secondly, the country is a hilly one; and lastly, so thickly studded is she with factories and school houses that it might have been almost impossible for her to find space enough unoccupied for the purposes of a rifle range. But these reasons, rather more amusing in character than positive, have all been overcome by the enterprise and public spirit of a few gentlemen of Providence. What Cheer Range at Greenwood, the practice ground of the Rhode Island Rifle Association, partakes, as to its construction, something almost akin to the miraculous. One month ago there was no What Cheer Range at all—not even a plan on paper. On Monday, the 25th of October, when we attended the opening performances of the Rhode Island Association, we found an excellent range, in good order and perfect in all its details. They must have an Aladdin's lamp somewhere in Providence, or what is even better, no end of pluck, energy, and determination.

What Cheer Range is at Greenwood, on the line of the Stonington Road, some seven miles from Providence, and can be reached in twenty minutes by the cars from the city. The grounds are 1,400 yards long by 400 feet wide, and there is room to double this handsome space if necessary. The field is a perfectly flat one, having required but very little grading at the extreme ranges, and is surrounded on two sides by a low range of hills some half mile distant. Four targets are in position, with well-constructed traps for markers, and back of them is a blindage some thirty feet high, built of double timbers, filled in with stone. What Cheer Range, from position and extent, has every advantage, and with but little expense can be rendered one of the finest schools for rifle practice in the United States.

Generally at the opening of a range certain hitches are considered as things to be expected, but thanks to the able management of the Range Committee—Col. J. A. Monroe, N. A. Dexter, A. W. Dennis, Capt. E. F. Annable, Major Hammill, and Mr. F. E. Perkins—the programme at the opening day went off even more smoothly than at Creedmoor. Even the markers seemed to understand their business thoroughly, and the value of the shots were promptly and correctly signaled.

After pool shooting, the first competition—Short Range Match, 150 and 200 yards, seven rounds—was the real opening of the What Cheer Range. There were some twenty-eight entries. A gun our readers in New York know little about—the Peabody & Martini—seemed very much in favor. This weapon is now being manufactured in large quantity in Providence for the Turkish Government. It is quite similar in construction and rifling to the Martini-Henry, the only difference being in the size of cartridge used. It proved as a military arm to be an excellent one, winning the second prize. From the score, of which we give the ten leading ones, it may be seen for a first match how creditable the shooting was.

E. THOMAS—REMINGTON.			
Yards.	Score.	Name.	Total.
150.....	4 5 4 5 4 5.....		32

F. J. Rabbeth.....	54	J. W. Hayward.....	53
J. F. Williams.....	53	G. W. Yale.....	52
J. N. Crowell.....	53		

To Mr. Thomas was awarded the first prize, a handsome silver trophy. The second competition was the Rhode Island Military Match, open to teams of eight from Rhode Island regiments; distances, 200 and 300 yards; rounds, seven; weapon, any military rifle. Four teams contested. The following are the scores:—

Name.	Score.	Name.	Score.
The Slocums.....	320	First Light Infantry.....	301
Prescott Post.....	317	R. I. Guard.....	108

Best individual scores:—

Name.	Score.	Name.	Score.
J. C. Bent.....	49	J. Jordan.....	46
F. H. Bent.....	47	O. F. Gifford.....	45
R. J. Collins.....	46	G. A. Forsyth.....	45

The first and second teams used the Peabody & Martini. After the military match pool shooting at long range took place. On Tuesday the Long Range Match was shot for, and on Wednesday the New England Match, open to all teams, with the Consolation Match.

We congratulate the Rhode Island Rifle Association in the brilliant opening of their range, and trust we may often report its matches in our columns. If at the very start such good practice is made, New York riflemen, individually or in teams, may have to look for their laurels.

THE FOREST AND STREAM BADGES.—The last competition for these badges was shot at Conlin's gallery, No. 920 Broadway, on Thursday evening last. For the information of our readers we would say that these matches are shot at a distance of 110 feet, a rifle of 22 calibre being used, and at a target on the Wimbledon plan reduced to correspond exactly with those used at Creedmoor at 200 yards. The first prize is awarded to the best score, the

second to the best score of centres, and the third to the best score of inners, thereby giving encouragement to those who are but just commencing to shoot, as otherwise the prizes would go to the three leading scores. Mr. Conlin now gives to every competitor a card containing a record of his score with a target diagram showing the position of each of his shots. The following are the scores:—

The first of a series of similar matches for badges presented by the *Turf, Field and Farm*, will be shot to-night.

THE RIFLE IN NEW JERSEY.—The Jersey City Schutzen Corps and the Greenville Sharpshooters constitute the United Schutzen Park Association of Jersey City, and have been lately incorporated as such by the Legislature of the State of New Jersey. They have purchased at a cost of about \$20,000 a plot of ground situated in Greenville, at Bergen avenue and Newark Bay, and erected thereon a nice lofty festival hall, in Swiss style, also shooting and target houses; distance of range 200 yards. These grounds, from which one has a fine view over Newark Bay, Staten Island shore, etc.; it can be reached by the steam cars of the Southern Railroad of New Jersey, or by horse cars from Jersey City, and were inaugurated a few days ago by a prize shooting festival lasting three days, and which was attended by numerous marksmen from New York, Hoboken, Newark, etc. The weather was fine during the festival and the shooting good, considering that the place, range, etc., were new to every comer. The following is the result of the shooting:—

Target of Honor.—Only open to members of the Jersey City Schutzen Corps; three shots each; target divided in twenty-five equal rings, each ring one inch wide.

1st prize, \$20—E. H. Helmers (crowned king.)
2d prize, \$20—L. Miller
3d prize, \$20—B. Lippmann.
4th prize, two barrels of ale—H. Kahl.
5th prize, \$10—F. Etting.
6th prize, \$10—F. Schafer.

Ring Target.—Divided in twenty-five equal rings, each one inch wide; open to all comers; one ticket for three shots cost \$2; number of tickets unlimited, each shooter getting but one prize; thirty prizes, \$200.

No. of Prize.	No. of Rings.	Amount.	Winner.
1st prize.....	68 rings.....	\$30.....	Wm. Hayes, Newark.
2d prize.....	67 rings.....	\$25.....	T. J. Rathjen, S. Island.
3d prize.....	67 rings.....	\$20.....	A. Zengner, Greenville.
4th prize.....	66 rings.....	\$15.....	F. Belcher, Newark.
5th prize.....	66 rings.....	\$12.....	K. Klein, New York.
6th prize.....	66 rings.....	\$10.....	Ph. Klein, New York.
7th prize.....	65 rings.....	\$8.....	Ch. Koegel, Newark.

9th prize.....	63 rings.....	\$6.....	John Raschen, Hoboken.
10th prize.....	62 rings.....	\$6.....	J. Blinnenburg, Hoboken.

Man target.—Divided in ten perpendicular lines, each line one inch wide, from breast to top of head; open to all comers; one ticket for five shots cost \$2; number of tickets unlimited; each shooter getting only one prize; twenty prizes, \$150.

No. of Prize.	No. of Shots.	Amount.	Winner.
1st prize.....	43 lines.....	\$25.....	Wm. Hayes, Newark.
2d prize.....	42 lines.....	20.....	A. Ermisch, Hoboken.
3d prize.....	42 lines.....	15.....	A. Zengner, Greenville.
4th prize.....	40 lines.....	12.....	Ph. Klein, New York.
5th prize.....	39 lines.....	10.....	T. F. Rathjen, S. Island.
6th prize.....	39 lines.....	9.....	Captain Raschen, Hoboken.
7th prize.....	38 lines.....	8.....	F. Belcher, Newark.
8th prize.....	38 lines.....	6.....	John Raschen, Hoboken.

This association will have ready for use before the opening of the next season some more improvements, viz.: they will build a commodious hotel for the accommodation of all the visitors and Summer boarders, also a large pier for landing passengers coming by steamer from New York and elsewhere. To it will be attached a large number of bathing houses, etc. This place will without doubt be next Summer the rendezvous of a great many sportsmen as well as those whose business will not allow them to be absent from the city for a long period.

SCHUTZEN PARK, UNION HILL, October, 1875.

EDITOR FOREST AND STREAM:—

The last practice shooting of the season took place last week, and I will now give you a few items of the shooting last Summer. There were in all twelve regular shooting days on which participated 51 shooters, or 15 to 20 every day. In this period 9,032 shots have been fired at the different targets, viz.: 1,970 at the ring target, making 34,441 rings; 486 at the stich, making 55 bullseyes; 6,576 at the bullseye target, making 615 bullseyes. Average of rings in one shot, 17.5—that is, six inches from the centre. Average in bullseye target, one bullseye in 10.19 shots—bullseye four inches in diameter. Average in stich target, one bullseye in 8.81 shots—bullseye four inches in diameter.

In the bullseye target the following gentlemen made the most bullseyes: Wm. Hayes, Newark, 108; T. J. Rathjen, Staten Island, 92; Ph. Klein, New York, 73; Tac Aeschbach, Hoboken, 52; John Raschen, Hoboken, 50; A. Ermisch, Hoboken, 40. The following are the best individual scores on the ring targets:—

Name.	Result.
T. J. Rathjen, Staten Island.....	12 days, 2,330 rings, average 108.3
Ph. Klein, New York.....	12 days, 2,344 rings, average 105.3
A. Ermisch, Hoboken.....	12 days, 2,317 rings, average 105
William Hayes, Newark.....	11 days, 2,238 rings, average 203.5
John Raschen, Hoboken.....	12 days, 2,189 rings, average 182.4
Captain Raschen, Hoboken.....	12 days, 2,169 rings, average 180.7
Tac Aeschbach, Hoboken.....	11 days, 2,016 rings, average 183.3

There were five gold medals to be awarded—one given by the United Schutzen Association to the shooter who had it the most times in his possession. Messrs. William Hayes and T. J. Rathjen were tied, each one having won it three times, and had to shoot off, Mr. Hayes winning the medal with the remarkable score of 218 against the 205 of Rathjen.

Two medals of the New York Schutzen Corps, given to those gentlemen having the most and second most rings during the year, except on the first shooting day. Mr. T. F. Rathjen, Staten Island, receives the first, making 2,174 rings; Mr. Ph. Klein, New York, receives the second, making 2,162 rings.

Two medals of the Jersey Schutzen Corps, given to those gentlemen making the most and second most rings during the year, except the three first shooting days. F. J. Rathjen, of Staten Island, received the

first, making 1,797 rings. A. Ermisch received the second, making 1,705 rings.

And now, in conclusion, take the averages of Messrs. Hayes, Rathjen, or Klein—202, 198, and 195 rings, which is equal to a little more than an 8-inch bullseye on the 200 yards range at Creedmoor. Has this ever been accomplished at Creedmoor by any one shooter—to make a bullseye every shot at different times and in different weathers? RIFLEMAN.

THE RIFLE IN CALIFORNIA.—Early this month a most pleasant presentation took place at San Francisco, which will tend to fix the date of the real beginning of scientific military rifle practice in California. On the occasion of the muster of the Second Brigade, Captain H. J. Burns, of Co. E, First California Infantry, was presented with a Sharp's Creedmoor rifle, coming from E. J. Westcott, Esq., President of the Sharp's Rifle Company, as a testimonial of the great interest this officer had taken in introducing military rifle shooting into California. The rifle was of the finest make, and bore a plate containing the presentation inscription. Before the surprise caused by this handsome gift had subsided Major R. H. Savage gave to each member of the California team a gold medal. The following gentlemen were the recipients of these handsome trophies:—Private William Burke, Private J. Robertson, Sergeant George H. Strong, Corporal C. Nash, Private D. Watson, Private T. Murphy, Private J. Steed, Private R. A. Sarle, Captain H. J. Burns, Corporal C. B. Preble, Private W. Dove, Lieutenant E. O. Hunt, and the captain of the team, Private J. S. Campbell. The medal was designed to commemorate the victory of the Sumners over Co. D, of the Twelfth New York Infantry. The decoration on the medal, a cut of which we give, is as follows:—

CALIFORNIA MEDAL.

On the face is engraved the flags of California and New York, with the Creedmoor 500 yards target in the centre; surrounding the flags, on the outer edge of the medal, the title earned by the terms of the match, "Champion Rifle Company of New York and California," also the date and place of shooting. The back of the medal is reserved for the name of the wearer, and the perpetuation of the score made by him in the match.

We sincerely trust that the members of the various San Francisco regiments will put in an appearance here next year. Nothing can be more absurd than the idea that New York men are the only ones entitled to carry off the prizes in the rifle contests. There is nothing like a keen rivalry in such matters. We also hope that before long some of our Creedmoor men will pay a visit to the Golden State. We have even heard that such a thing is not only possible, but probable. Rifle shooting must not be made one-sided nor monotonous. California, from its pleasant climate and the fact that men can use their ranges almost all the year round, must in time produce a class of riflemen which will be hard to beat. As it is to-day, nothing gives us more pleasure than to record their triumphs.

—The Rifle Tournament opened in San Francisco on Friday morning at the Presidio range. Twelve teams of six each entered, besides 200 individual entries. The first match was open to members of the California Rifle Association, commissioned officers of the United States Army, and members of the National Guard; distance 200 yards. The second match was for the Kellogg Challenge Cup; open to members of the National Guard and officers of the United States Army and Navy. The third contest was the Presidio Short Range Match, open only to enlisted men in the United States Army stationed at posts in that vicinity. The aggregate value of the prizes was \$1,300.

In the first match at 200, with United States Springfield rifles, seven shots, there were 120 entries. The two highest scores were 30 each. In shooting off the tie the first prize was won by 4 points, and the second by 2. The third prize was won by a score of 29. Ten competitors scored 28 each, and shot off for the remaining five prizes. Of the 148 contestants for the Kellogg Challenge Cup, distance 500 yards, five shots; greatest possible score 25; twenty-seven scored the required fifteen points to admit them to the second stage of the match, which was deferred until Saturday morning, after which a match between twelve teams of the National Guard was shot.

A NEW RANGE ON THE HUDSON.

RHINEBECK, N. Y., October 21st, 1875.

EDITOR FOREST AND STREAM:—

A number of the citizens of our village have formally organized themselves into an association called the Rhinebeck Rifle Club, and at a meeting held on Monday evening last, elected the following officers: Geo. Esselstyne, president; Lewis H. Livingstone, vice president; Geo. Tremper, secretary; James B. Livingstone, treasurer; Peter Mendel, armorer; and the following executive committee—James Montfort, Fillmore Burgher, Mr. H. Wygant, N. B. Killmer and Arthur Williams.

The club has already begun work on the range, such as building bluffs, excavating marker's pit, and having targets built. It is the general opinion of those who have inspected it, that this will be the finest range

on the Hudson River. As soon as the club has its first practice I will send you the scores. I think they will be good ones, and no doubt the numerous friends of the members will be glad to hear from them through the medium of your inimitable FOREST AND STREAM. P. M.

Game Bag and Gun.

GAME IN SEASON IN OCTOBER.

Moose, *Alces macchis*. Red Deer, *Capreolus virginianus*.
Elk or Wapiti, *Cervus canadensis*. Squirrels, red, black and grey.
Hares, brown and grey. Quail, *Optyx virginianus*.
Wild Turkey, *Meleagris gallopavo*. Pinnated Grouse, *Tetrao cupido*.
Woodcock, *Scotopax rusticola*. Curlew, *Numenius arquaria*.
Ruffed Grouse, *Tetrao umbellus*. Sandpipers, *Tringana*.
Plover, *Charadrius*. Wilets.
Godwit. Reed or Rice Birds, *Dolichonyx oris*
Ralls, *Rallus virginianus*. vorus.
Snipe and Bay Birds. Wild Duck.
Caribou, *Tarandus rangifer*.

GAME IN MARKET.—Considering the weather and the difficulties of transporting without loss, the market is well supplied with game of every description peculiar to the season. Ruffed grouse are very abundant, the fine fresh looking birds received from Connecticut and this State being worth \$1 per pair, while those brought on ice from the West bring considerably less. Prairie chickens (pinnated grouse) sell for \$1.25 per pair. Woodcock, coming principally from Connecticut, are worth \$1 per pair for fine birds. Quail are more abundant, the law now being off in Connecticut, and prices have fallen to \$3.50 a \$4 per dozen. It is a little remarkable that no quail should be received from the West, and it indicates a short supply from that region. The supply of English snipe is very limited, most of those received being from New Jersey; price \$3 per dozen. Canvas back ducks, Western birds, are worth \$2.50 a \$3 per pair; mallards, \$1 a \$1.25; widgeon, 75 cents to \$1; black ducks 75 cents to \$1; teal, mostly green-winged, 75 cents to \$1. Venison, from Minnesota, in very fine order, is worth 30 cents per pound. Stall-fed wild pigeons, \$2.50 a \$3 per dozen.

THE DITTMAR POWDER.—A correspondent writes: "Why don't Carl Dittmar let the sportsmen of the country know (by the experiments of disinterested parties,) through the columns of your valuable paper whether his powder is now uniform in quality and free from danger of bursting guns? Sportsmen here are anxious to know more about it before adopting its use." We would suggest to our correspondent to write to Carl Dittmar, at Neponsett, Mass., and procure a sample of the powder and experiment for himself. There have been numerous results published in our columns, which appear to differ practically. We believe, however, that Mr. Dittmar now claims to have made the powder safe and sure.

—A sportsman's club has been organized at Amsterdam, Montgomery county, N. Y., with the following officers:—President, E. V. Green; Vice Presidents, Hon. Jas. Shanahan and Dr. J. C. Schoon; Secretary and Treasurer, L. H. Young. The club has twenty charter members, all sportsmen thoroughly interested in the protection of game and the carrying out of the State game laws, which for some time have been a dead letter in that vicinity, particularly the clause relating to Sunday shooting. Our correspondent mentions that last Sunday he met with a party of three "hunters," whose united bag comprised a robin, a chipmunk, and a female yellow bird. The new club means business, and will publish fair warning to violators of the law in each paper published in Montgomery county.

—Messrs. O. and C. Bell, while shooting off Rodgers' Island, near Catskill, last week, saw and killed two canvas back ducks. Very rare visitants to those parts, we should say.

AN UNFORTUNATE SPORTSMAN.—J. C. Brigham, of Elizabeth, N. J., who went to Bayonne a few days ago and shot twelve robins, was arrested and taken before Recorder Myers, who fined him \$10 for each bird.

THE NUMBER OF SHOT IN A CHARGE.—We publish the following for the benefit of game and pigeon shots alike. Both class of sportsmen will find this table useful when trying new guns at a target, as it will show the number of shots a charge contains against the number the gun puts in the target—i. e., presuming that no one fires more than 1½ oz. of shot in a charge:—

NUMBER OF PELLETS EACH SIZE IN 1 OZ.			
Leroy, Edgar & Co.	Tatham & Bros.	Chicago Shot Tower Co.	English Shot.
No. 10.....822	843	No. 10.....854	1,700
9.....560	568	9.....596	1,000
8.....375	399	8.....434	605
7.....278	291	7.....323	350
6.....209	218	6.....216	270
5.....149	168	5.....172	220
4.....121	132	4.....143	180
3.....98	106	3.....118	130
2.....82	86	2.....92	110
1.....68	71	1.....75	80
B.....59	59	B.....62	—
BB.....49	56	BB.....53	—

To find the proportion in one, and a quarter or one and a half ounces, of course it is only necessary to add the proper proportion.

MASSACHUSETTS.—Salem, Oct. 25.—During the past week there have been a few quail shot, but one party started two broods, and neither of them were grown so as to fly well—in fact, they are rather late this year. One man reports sixteen woodcock as the result of a day's sport lately, and others say they are more plenty than for some seasons. Bay birds are essentially gone, though an occasional "winter" is seen. Snipe scarce. Partridge are about as usual, and never plenty, and always shy. Ducks are about. Old squaws and shell-drake I have seen, and a large flock of geese went south yesterday A. M. No whistlers or dippers yet. Loon and other divers are quite numerous. Coots plenty.

Cohasset, Oct. 25.—Gunning for the past week has been poor, too much calm weather with fog on the coast. The

flight has been mostly black duck, shell-drake, and brant, with very few coot. Smelt fishing is still good. We expect a large flight of ducks next week. Winter yellow legs plenty for the last two days; large and in splendid condition. S. K., Jr.

NEW YORK.—Schroon Lake, Essex county, Oct. 18.—Sporting times are lively in the vicinity of this lovely sheet—the Lake Como of our country. On the 11th inst. Messrs. James G. Dimond, J. E. Sidman, Jacob B. Crane, C. L. Smith, R. E. Smith, W. D. Haven, and Will Fisk, all of New York city, engaged in a "grand hunt," with George Wickham and Ed. Jenks as guides. In the afternoon a noble deer was driven into Schroon Lake by the hounds and speedily dispatched by Mr. Dimond. On the following day another deer was killed on the same ground by Mr. Fisk and Art. Jenks. On the 13th inst. the same party, accompanied by Messrs. John Wright, J. D. and J. H. Burwell (the latter the well-known and most popular proprietor of the Ondawa House,) proceeded to Crane Pond, about five miles distant, where they encamped for three days, enjoying in the meantime capital and successful sport. Result, five deer and dozens of ruffed grouse. Schroon Lake lies on the very borders of the great forest, and within a few hours' drive and tramp of some of the wildest and most sublime scenery of the Adirondacks. Indeed, some of the noblest pinnacles of that range display their majestic forms in full view from this lake. No better accommodations could be desired than those furnished by the model establishments, the Leland and the Ondawa Hotels, both situated in the pleasant village at the head of the lake. No more efficient guides can be secured anywhere than Sam. Saunders, Ben. Wickham, Geo. M. Sawyer, N. B. Knox, and Ed. Jenks. Route to Schroon Lake: Rail from Saratoga Springs to Riverside, 50 miles (Adirondack Railroad, fare \$2;) stage to Pottersville, six miles (good road and fine scenery, fare \$1; excellent dinner at Lock's Hotel, 75 cents; steamer Effingham, through the entire length of Schroon Lake, nine miles, fare 75 cents. No more delightful trip could be enjoyed. E. R. W.

NEW JERSEY.—Somers' Point, Oct. 25.—This is a favorite locality for duck and snipe shooting, and, in fact, for shore shooting of every kind, as well as for fishing. Ruffed grouse, and an occasional deer and bear in the adjacent wilds. Capt. Japheth Townsend keeps a first rate country inn for the accommodation of sportsmen. He and his sons are expert hunters and fishermen, and are clever and obliging. He has a good yacht and plenty of boats. Charges \$10 a week. His house is five miles from Absecom Station, on the Camden and Atlantic Railroad.

VIRGINIA.—Norfolk, Oct. 23.—Have just returned from "Back Bay" and although much too early for good shooting, killed thirty-three, pintails, mallard, black duck, widgeon and teal. Heretofore we have had plenty of quail within from ten to twenty miles of this city, but this year there appears to be very few; have shot but twenty-one this season against about 100 for same period last year.

—A correspondent, writing from Helena, Ark., wishes to know if he can have two imitation swans made with machinery sufficiently powerful to tow one of Colvin's twelve pound canvas boats with a cargo of 175 pounds. We fancy that such machinery would be as expensive as a small steamboat, and that our friend will have to content himself with getting at his ducks by the old-fashioned methods. Regarding the sporting facilities of that section our correspondent writes:—

"Helena is a beautiful little city of 5,000 inhabitants, situated in Phillips county, Ark., on the Mississippi River, and about 100 miles south of Memphis, Tenn. There are numerous lakes on both the Mississippi and Arkansas sides of the river which team with all the varieties of water fowl that winter in this latitude, while on their banks roam the black bear, deer in abundance, and occasionally a panther larger than those I saw in Central Park in September. During all winter our market is supplied with what is called here the trout, weighing from 2½ to 8 pounds—a very game fish, and also what are known as the bass and white perch, weighing from two to five pounds. All three will make a reel sing." H. C.

—The Georgetown (Col.) Miner says: "Elk are found in almost every part of the park, generally in the timbered country or on mountain slopes, singly and in bands of ten and fifteen, according to the season. With proper care they can be stalked as near as 150 yards, but a good hunter who 'jumps' a herd at fifty yards will bag three-fourths of the number before they are out of range. When dressed they weigh 800 to 1,200 pounds; but as a dozen tall fellows, their shapely horns laid back, go crashing and thundering through the thick pine forest, leaving a storm of branches and dust in their wake, each elk may easily be estimated to weigh a ton."

[We should like to know what kind of a rifle they use in Colorado, where they kill two-thirds of a herd of elk before they are out of range. It must be either a "repeater," or a very good scatterer.—Ed.]

—A pigeon match was shot at Peter's Valley, Sussex county, N. J., on the 21st inst. between Hon. D. A. Wells, of Milford, and S. Danley, of Matamoras, Pa., for \$100 a side, ten birds each, twenty-one yards rise. Wells killed 9 and Danley 7 birds.

—The Tremont Sportsman's Club have been holding a pigeon shooting tournament for the last few days at Beacon Park, Boston. The first match on Thursday was at double rises, 18 yards rise, 100 yards boundary, five pairs of birds each. Messrs. Portlock, Stark, and Mingay each killed all of their birds, and agreed to divide the \$100. In a similar match which succeeded, Mr. G. Crandall killed ten birds and took first money, the second being divided between Messrs. Portlock, Stark, and Mingay. After some minor sweepstakes, one for \$100 was shot at 10 single birds, 21 yards rise, 80 yards boundary, with the following result:—

Name.	Score.	Name.	Score.
Portlock.....	3	Locke.....	10
Mingay.....	3	Anthony.....	10
Cook.....	10	S. B. Newton.....	10
Tucker.....	10	Stark.....	2
Perry.....	6	Richards.....	0
G. Crandall.....	10		

Messrs. Tucker, G. Crandall, Locke, Anthony, and S. B. Newton having tied, they agreed to divide the \$100 between them.

Another sweepstakes of \$100, at ten single birds, was

next shot for, and the result, after some excellent shooting, was as follows:—

Name.	Score.	Name.	Score.
S. Shaw.....	10	Fifield.....	7
Portlock.....	6	Healey.....	10
Mingay.....	0	Cook.....	6
W. W. Crandall.....	10	Stark.....	8
Tucker.....	1	Richards.....	5
Perry.....	3	S. A. Smith.....	2
G. Crandall.....	10	Locke.....	0
Morgan.....	6		

Messrs. Shaw, W. W. Crandall, G. Crandall, and Healey having tied, divided the whole money among them.

Next came another \$100 sweepstakes under the same conditions as the last, and this resulted as follows:—

Name.	Score.	Name.	Score.
W. W. Crandall.....	9	Tucker.....	8
Stark.....	9	Anthony.....	10
Cook.....	1	Richards.....	0
Healey.....	9	T. Smith.....	0
G. Crandall.....	10	Locke.....	10

Messrs. G. Crandall, Anthony, and Locke having killed all their birds, agreed to divide the money.

During the afternoon a match for \$25 a side was shot between Messrs. Stark and Locke, both of New Hampshire. Mr. Stark won the match, killing all his birds but the fourth, while Mr. Locke missed his eighth and ninth.

Mr. Locke, of Portsmouth made some excellent shooting, scoring his first twenty birds without a miss; three birds that were nicely killed with open wings were ruled against him, called on the ground by the referee, there being no judges in any of the matches except in the match between Lock and Stark. QUAIL.

NASSAU SHOOTING CLUB.

EAST NEW YORK, Oct. 16, 1875.

EDITOR FOREST AND STREAM:—

Yesterday the Nassau Shooting Club of this place had their regular monthly shoot. The old shooting ground of the club has been abandoned, as the close proximity to dwellings and the congregation of boys, who soon find out the days fixed for great events, made the whole thing an annoyance to all hands; so we appointed a committee to visit Mr. Dexter, of Dexter Park Shooting Grounds, and arrangements have been made to hold the rest of our shoots at his place, and, by the way, he has got all the facilities requisite for a good trap shoot. The badge presented to our club by Mr. H. Van Wiclen, of Brooklyn, is creating much interest among the members, and is looked upon as a sort of "Flying Dutchman." Every time you see it, it is somewhere else. Yesterday was the fifth time it has been contested for, and yesterday the fifth different man took it home. Our shoots we hold every four weeks, so four weeks from Thursday last, or November 11th, it will be contested for again. We generally, after the regular shoot, wind up with one or two small sweepstakes, and for pure amateurs at the sport we have considerable fun. I herewith inclose you our score of the regular club shoot at five birds each, twenty-one yards rise, 1½ ounce No. 8 shot, each man to gather his own birds, and as we have some members who count heavy on avoirdupois, it is sport in itself to see them strike a gait for a wounded bird. The score is as follows:—

Wm. A. Dunham.....	0 1 1 0 0—2	J. K. Powell.....	1 1 0 0 1—3
H. Van Wiclen.....	1 0 1 1 0—3	Henry Haubt.....	0 1 1 1 1—3
Sam Livingston.....	1 0 1 1 1—4	C. Colyer.....	1 0 0 1 0—2
Ike Vancise.....	0 1 0 1 1—3	Geo. Forbel.....	1 1 0 0 1—3
Dave Storms.....	1 1 0 0 1—3	Geo. Orr.....	1 0 0 1 1—2
W. R. Selover.....	0 1 0 1 1—3	Gerrit Bergen.....	0 0 1 0 1—2
H. Boehme.....	0 0 0 1 1—2		

The above score resulted in the transfer of the badge from Mr. Davey Storms, the previous winner, to Mr. S. A. Livingston, the Secretary of the club. Yours, etc., HIGHHOLDER.

ST. LOUIS GUN CLUB.

ST. LOUIS, Mo., October 17th, 1875.

EDITOR FOREST AND STREAM:—

You have doubtless noticed some account of the arrest and detention of Captain Bogardus in this city, on the 8th inst., at the instance of R. S. McDonald, President of the St. Louis Society for the Prevention of Cruelty to Animals, all on account of the Captain's having given an exhibition on that day at the Abbey Race track, to a few friends, of his ability to shoot twenty-eight pigeons in four minutes. He accomplished the feat in two minutes and forty seconds.

When Captain Bogardus—who is recognized by persons here who are acquainted with him to have much tenderness of heart towards dumb creatures—indulged in an exhibition of his profession, which he had done hundreds of times before unmolested, the soft-hearted President of the S. P. C. A. hired a fourteen-year old boy to attend the exhibition, as a spy and informer, and upon this youth's testimony he swore out a warrant and had the Captain arrested while at his dinner at the Southern Hotel. Bail was promptly furnished by Mr. John W. Manson, Secretary of the Gun Club. The Captain was put to considerable expense and trouble to be present at his trial. So warmly was his cause espoused by members of the Gun Club that Mr. McDonald asked to have the case dismissed, which was done. With a view to more fully show the President how little the members of the club cared for his bluster and threats to arrest every person found shooting pigeons in the city, they determined to hold their last club shoot for this year for the champion gold medal, and invite Captain Bogardus to be present and participate. The shoot was held Tuesday, October 17th, at the club grounds, at Rinkel's Six-mile House. There was quite a gathering of friends of the club members, citizens and reporters. The expectation was that arrests would be attempted, but such was not the case. The shoot passed off pleasantly, nothing occurring to interrupt nor mar its enjoyment. The following is the result of the shoot for the champion gold medal, which must be shot for twelve times during the year to become the property of the person winning it the most times in that number. H. C. Pierce is the present holder. Ten single birds; 21 yards rise, 80 boundary, H & T plange traps, tame birds, St. Louis Gun Club rules to govern:—

Name.	Score.	Name.	Score.
H. C. Pierce.....	11 11 11 11—11	H. P. Wilson.....	11 00 11 01—7
E. Capelle.....	00 11 11 01—6	C. Jeff Clark.....	11 00 11 01—7
T. Bissell.....	11 11 00 11—8	W. H. Wadsworth.....	0 11 11 01—7
W. A. Albright.....	11 01 01 11—8	C. M. Williams.....	11 11 11 01—9
Jno. A. Ringold.....	01 10 01 10—5	E. C. Sterling.....	10 01 10 01—6
Geo. Rinkel.....	11 11 11 11—11	N. V. Verrier.....	01 01 01 11—6
J. B. C. Lucas.....	11 11 11 11—10	E. S. Chateau.....	00 11 11 00—1

Messrs. Pierce, Lucas and Rinkel having tied on ten birds, moved back to 26 yards and settled the tie with the following score:—

Pierce.....	1 1 1 1—5	Lucas.....	0 0 1 1—3
Rinkel.....	1 1 0 1—3		

Mr. Pierce having won with fifteen straight birds, retained the medal. After the club match, Captain Bogardus shot at twenty birds from two traps set forty yards apart, he standing equi-distant between them. He did very clean shooting with the following result:—

Captain A. H. Bogardus.....	11 11 01 11 11 11 11 11—19
-----------------------------	----------------------------

There is no member of the Gun Club but would gladly assist Mr. McDonald to protect dumb animals from cruelty, or to carry out the full intent of the society of which he is president; but they are equally determined to protect themselves from imposition. Now that the game season is at hand, sportsmen generally are gone, or going, after the fur and feather of forest and field. Many from here are going to the Memphis shoot and show. We hope to meet you and other Eastern sportsmen there. Respectfully yours, H. C. P.

PIGEON SHOOTING IN KENTUCKY.

LEXINGTON, Ky., October 17th, 1875.

EDITOR FOREST AND STREAM:—

We have organized a club at this place, under the name of the Viley Shooting Club, and we hope to do some good work in a short time. The following is a list of the officers and members: F. W. Woolley, president; M. D. Richardson, treasurer; R. Gilmore, secretary; Executive Committee—Janus Smith, chairman; C. M. Johnson and G. A. DeLong. Members—C. Y. Peck, D. Noble, Jr., C. W. Bradley, Samuel McChesney, John Lamphear, H. P. Kinkead, John A. Headley, Samuel Smith and Thomas Martin. All are amateurs. Below I hand you the score of our first match against the Hunter's Club, of this city; and considering the difference in practice of trap shooting (the Hunter being an old organization) between the two, we feel somewhat elated at our success, and hope to come off victorious in our return match. The score is as follows, seven men from each club shooting, ten single birds, 21 yards rise, 80 yards boundary:—

Hunter's Club.....	54	Viley Club.....	50
--------------------	----	-----------------	----

I would send you the score of each, but it would take too much of your valuable space. The judges were Col. Frank Waters, C. M. Johnson and Major Joel Higgins. I will send you a report of the return match.

R. GILMORE, Secretary.

CHILLED SHOT.

BOSTON, Mass., October 22d, 1875.

EDITOR FOREST AND STREAM:—

As your foot note to my letter of the 11th instant refers to "English Opinions," communication of September, I will again avail myself of your courtesy in the way of a few brief queries. Wishing simply to get at the truth (having no interest whatever in any particular manufacture of guns or shot), I have a very decided determination to have the best of both if obtainable. Now, like Mr. Thomas Gradgrind, I want facts. E. O. says, "The shot called chilled in America are not the hard shot used at the late trial." This may be so, but I have never heard of any chilled shot here other than those I referred to as for sale by Mr. Schaefer, and imported by him from Roberts, Lampen & Co., Newcastle, England, and these, I can say without fear of contradiction, are precisely similar, and of the same make, as those used at the trial, and they are the shot we have been trying in these parts with capital results. E. O. also says, "All experience at game, and scientific data, are in favor of soft shot." Possibly, but that is not the conclusion arrived at by sportsmen here, and I confess that, failing to apprehend the theory in the case, and never having met in my readings with the facts he refers to as sustaining it, I shall feel under obligations to him if he will favor me with both. I am not quite prepared to believe a soft substance to possess better penetration and killing qualities than a hard one, and in my own guns, both choke bore and perfect cylinder, I know the chilled shot give the best results. Why should they not? I am open to conviction on this, as on all other matters.

Your correspondent, S. S., describes the correct thing in the way of a gun—one stock and two pairs of barrels; one choked, the other short and open for covert. With these one good gun is a complete outfit, and, as Frank Forester says, "The man of one gun is to be bewared; he is likely to prove an ugly customer."

UNDER GRIP.

[Will our English correspondent reply to the above? If chilled shot was manufactured in this country and would produce such superior effect it would doubtless come into general favor, unless, indeed, the constant use should result in an undue amount of wear and tear to gun barrels. But we are already taxed for our shooting appliances far beyond the imposition of our English cousins, and everything but our powder and shot is imported, and pays a duty—guns, shells, wads, caps, and, in many instances, dogs—all go to swell the list. Why our manufacturers do not produce as good material is unexplained; that they do not is beyond a question. We were recently shooting with a gentleman who used paper shells of American manufacture; his misfires amounted to at least fifty per cent., a result following which profanity was almost a virtue. Is it inability, indifference, or a niggardly economy that imposes such material upon sportsmen who are desirous of patronizing and encouraging home manufactures.—Ed.]

GROUSE SHOOTING IN IOWA—THE SETTER BISMARCK, Etc.

PHILADELPHIA, Oct. 22, 1875.

EDITOR FOREST AND STREAM:—

Meeting the "Squire" of your staff, shortly after my return from the West, he made me promise to furnish a short account of my shooting. Starting with Bismarck from this city September 8th, and spending a day at Chicago, I arrived at State Centre, Marshall county, Iowa, about 2 P. M. on the 11th. I found my friend Shipman at the depot in hunting dress, with a two-horse team and his dogs, waiting my arrival to give me an evening's shoot. In a few minutes I had unpacked my baggage, changed my dress, and with gun and Biz I was with him in the wagon, and the team making fast time for the prairies. After driving some six or eight miles we let the dogs into the stubble fields and soon found the birds. That evening I killed ten and Shipman eleven. The next day was Sunday.

On Monday I went by myself; rode out on a "buck board" with a boy to drive. A "buck board" is simply the skeleton of a wagon with a seat and a board for the feet, and on the hind axle is tied a box, in which we carried the birds. I started in a south west direction, and after proceeding about eight miles commenced shooting. This day I bagged twenty-three chickens and a few snipe. During the week I gunned in this manner, averaging about twenty grouse per day, a few snipe, and some ducks. I enjoyed the week very much, as my horse was very suitable, and took no notice of the gun or its report. She had but one eye, so certainly did not see much on the other side of the head. The place once occupied by the eye was entirely vacant. The name of this horse, which was of the feminine order, was Cyrida. She was a good traveler, true as steel, never shied at objects, nor moved a muscle at the report of the gun. I often fired from the wagon every day, killing more or less without rising from the seat, and scarcely ever doing so or getting out until the dogs pointed. Shooting in this way at my time of life is pleasanter than continued walking with pockets loaded with these huge birds. In short, I never carried over half a dozen cartridges in my pockets, everything in the nature of luggage being in the box attached to the buck board, which was always at hand. Twice I got *sloosed* (sloosed) during the week. Cyrida got fast in a quag-mire, and I was obliged to unharness before she could, only by superhuman, or rather supererquine, efforts extricate herself. Getting "sloosed" is a serious business; one of these events occurred in this manner: Driving near a slough I noticed a flock of ducks sitting among the reeds in the water. I let them have one barrel and gave them the other as they rose. Biz helped me to gather three from the water, but I noticed one fall in the grass on the other side, so I got into the buck board and started for the place. I drove, as I supposed, far enough from the slough to enable Cyrida to proceed without danger, but it was a mistake—all of a sudden Cyrida went down. I was obliged to jump out into the water about knee-deep and unharness. I then pulled the buck board out on to the dry ground, and after everything was clear I waded in to assist Cyrida. Getting hold of her shoulder

and lifting to the utmost of my strength, Cyrida reared and extricated her fore feet, only to make a lunge in my direction, falling again, this time with my legs under her body, so that I was fastened in this position with only head above water. I finally extricated myself, but with every thread of clothing dripping with water. I again assisted Cyrida; she would rear, pitch, and flounder; then rest a while and try it again; at last poor Cyrida reached *terra firma*. After harnessing and hitching her to the buck board we drove on the prairie, and Biz found the duck. My boy driversaid this duck was a "dam duck," but they are usually known as "mallards." This experience occurred about sunset as I was, returning to my quarters, and I was obliged to ride at least six miles wet to the skin. I gave the boys at the village an account of my mishaps, but instead of receiving sympathy they laughed at my misfortunes. On the other occasion of getting "sloosed" Cyrida broke some of the harness and one of the shafts to the buck board. I instructed my driver particularly not to mention anything of this second mishap.

The past week I spent at my friend Shipman's, but birds are not plenty in that neighborhood. One is obliged to drive from four to six miles before reaching the prairie. Near the town the land is fenced and under cultivation. Sunday evening Shipman, with two very fleet nags hitched to a light buggy, drove about twelve miles in a northwest direction to Farmer Price's, where we put up for the night, intending to make a full day on Monday at the grouse. That day I bagged twenty-six, Shipman twenty-five; one sandhill crane and about twenty ducks were also killed. We saw six geese and tried to get a shot at them, but to no purpose. If we had not been diverted from the grouse by the other game we could easily have bagged forty grouse each that day. Last year I killed on the 22d of September on that ground forty-two grouse. Shipman's method of approaching cranes is in this wise: when the wind is fresh, with dogs in the wagon, drive down with the wind on to the crane at full speed. The cranes when they rise are obliged to fly against the wind and in your direction. We then fire from the wagon. In this manner we got near enough to kill one dead with No. 6 shot. We got several shots at cranes that day, and would have killed more had our cartridge been loaded with coarser shot. Tuesday we gunned homeward, killing about forty grouse, some snipe, and a few ducks. The remainder of this week I made Shipman's my quarters, having Cyrida and the buck board in service.

I occasionally took a shooting friend along, especially those who had brag dogs. I never boast of my dog, but am proud of my shooting qualities. Relying entirely upon this, my strong hold, I could easily beat any of those fellows about two to one. After shooting at State Centre from the 11th to the 27th inclusive, I was about to pack up and come home when I was persuaded to give them another trial, which I did, and was badly beaten, and that by a base stratagem. Each of them—Shipman and Fairhead—had two bitches. One of these animals was in that peculiar condition to which such creatures are liable two or three times in the course of the year. She was tucked away under the seat, and I knew nothing of the circumstance until we got out of the wagon after driving some ten miles to the hunting ground. Old Biz soon left me. He and that miserable cur got hid away in a corn-field for upward of an hour. I called and whistled, all to no purpose. After I found the rascal he would not hunt any, but leave me and go with Fairhead. I managed to kill eleven, while Fairhead bagged twenty, and Shipman seventeen; so out of forty-eight I got only eleven, and these I "walked up" in the corn. Out of this business there came very near being an unpleasantness, but as Fairhead gave me all the birds, packed them carefully in ice, furnishing ice and otherwise treating me handsomely, I concluded to say nothing more about it. The birds I brought home in splendid condition.

The total of the trip of my own shooting was 209 grouse, 43 snipe, and about 50 ducks. The sandhill crane and some other birds were killed between us. This is the seventh season that I have hunted grouse at State Centre. The first was in 1866. Then there was scarcely a dwelling where now there is a very busy and thriving town. The Northwestern Railway had just opened through the country—a beautiful and rolling prairie, extending as far as the eye can reach. I am confident I saw more chickens in one day in 1866 than I saw during the entire trip of this season, but when chickens are so abundant you do not get a proportionate number of shots. When they are plenty they gather in flocks of often fifty to a hundred, called packs, and you seldom get any more from one of these flocks than you do now from a bunch of, say half a dozen. They are not half as plentiful this season as last, but owing to the heavy crop of grass they lay well to a dog's point.

This is the sixth year I have hunted them over Biz, who is now in the eighth year of his age. He hunts with as much endurance as ever. I hunted him every day but one of this trip except the Sundays. There seems to be no tire to him. He scorns riding in a wagon, even after a week's hunt. Three-quarters at least of all the birds killed were over his points. Some days every bird killed was from his point.

DAVID BROOKS.

SHOOTING ON CAPE COD.

PORTSMOUTH, N. H., October 17th, 1875.

EDITOR FOREST AND STREAM:—

Myself and friend, Mr. James Carroll, with our staunch and faithful dog—Dandy, a fine pointer; Speed, a staunch and good setter, and Bounce, my Laverack and Irish prize winner—started on Monday down the cape, arriving the same evening at Eastham. On Tuesday morning we prepared for grass birds and snipe. After a row of about two miles, we landed on the marshes of Nosset Harbor, a fine marsh of two or three miles square. We had only walked a few yards, when old Dandy brought up stiff, being well backed by Speed and Bounce. Up went a snipe, to be brought down by your humble servant. After bagging several of the same sort, we found good grass bird shooting. It being my first hunt on them, I was surprised to see they were so near a game bird, as I saw them lay to the dogs as well as snipe. They are very fat and well suited for the table. After about four hours' work our bag consisted of thirteen snipe, forty-four grass birds and three yellow legs. On Wednesday the 30th, we shot over the same marsh with about the same luck. On Thursday we went in search of quail, and on Friday we were successful in finding three large coveys, and after breakfast we started for the swamps. Arriving at the edge of the brush and near a log, up went a snipe out of range. I pulled on him, however, and marked him down on a sandhill two hundred yards off. Thinking he must be hit, we went after him, when he got up again, and was nicely brought to bay. Just as Bounce was bringing him in, Dandy and Speed came to a point, and up went about fifty quail, heading for the swamp. Three fine fellows fell to our guns, and we marked the covey down in the grass among some little pines, and in a short time we were among them, and such sport as we had for about two hours cannot be described. After about two hours' shooting it commenced raining very hard, and we were forced to leave the field and start for home, where we counted our bags, and found thirty-five quail and one snipe, making in all about one hundred and thirty birds. After partaking of dinner, we bid good bye to our friends, Mr. and Mrs. Peniman, and boarded the train for Portsmouth, where we arrived in good order, well pleased with our trip down the cape.

QUAIL.

NOTES FROM INDIANA.

VALPARAISO, Ind., October 16th, 1875.

EDITOR FOREST AND STREAM:—

Rumors of war! All along the banks of the Calumet and down the Kankakee the firing has been rapid for days past. No call for reinforcement has yet been issued; but flying squadrons of geese—have been passing all day long, hungering, hastening towards the scene of conflict. Reports have come in from the outposts, but they are not entirely satisfactory; so I am going to rig my light battery of No. 10 C. F. B. L., 4 drachms powder and 1 oz. of No. 6, and hasten to join the fray.

It's a pity, isn't it? The pot hunters are getting the best of the birds; always on the ground days ahead of the flight, they are prepared for

the slaughter—nothing else. They seldom shoot at flying birds, but sneaking, cat like, upon the unsuspecting young flocks, they cut down five, ten and fifteen at a single discharge. Oh, how I hate them! (the pot men, I mean). Well, the ducks have come, but long continued raw rains, sleet and snow has at last driven them south. It seems but a day since the season opened for pinnated grouse, and now it's most gone. Geese have been moving south in great numbers of late, and the Kankakee marsh must be alive with the honk, honk, honk, morning and night.

Messrs. Westcott and Davis, of the Philadelphia Sportsmen's Club, have been shooting with me for a day or two. I very much regret that the chicken shooting was over, practically speaking, for Mr. Westcott seemed anxious to have a day at them. We visited my old stamping grounds, but the birds were wild and did not give us any shots worth mentioning. W. brought one down which got up away to his left, but circled around over him, and he must have dropped him fully ten rods with No. 9 shot at that. We had a good day at snipe, killing another chicken on the way to the marsh. This is the second day at snipe, I don't know how many the gentlemen bagged, but near a hundred. Next week they have arranged a trip to the Kankakee and to the Calumet, and as they are both superb shots, I have no doubt will make fine bags. Eastern gentlemen will always find a hearty welcome, and no pains will be spared to make their trips successful. Yours, W. H. H.

DEER HUNTING IN VIRGINIA.

BELLE FONTE, Nottoway Co., Va., Oct. 23d, 1875.

EDITOR FOREST AND STREAM:—

Captain Fraser and party, including my brother and self, accompanied by seven deer hounds, hunted the Hone & Fraser estates, in Dinwiddie county, last week. First day killed two and started eight; second day, killed none, started four; third day, broke a fine buck's leg, but he swam the Nottoway River and got away; killed none, started three others; fourth day, hunted Col. Tacker's and Mr. Edwin Fraser's plantation, in Brunswick county, joining another party; killed three, all of them being shot by Mr. Frank Jones at two stands. Two deer were killed right and left on the full jump. I regard this as a great field performance, as these deer were hunted and killed in true sportsmanlike manner, none of them being on or near water, but on the full run through pines and oaks. The annual camp deer hunt takes place on the Cabanis estate in November, where the prominent deer hunters of Nottoway, Dinwiddie and Brunswick meet. I start for Memphis, Tenn., to-morrow, to attend the Tennessee State Sportsmen's Convention, as judge of dogs, etc., and to represent your journal. If all accounts are accurate, there will be a meeting of owners of pointers, setters and hounds, also field sportsmen, such as this country has never seen before. However you will soon hear from me.

JNO. M. TAYLOR.

GAME PROTECTION IN NEW JERSEY.

PHILADELPHIA, October, 1875.

EDITOR FOREST AND STREAM:—

In one of the September numbers of your paper I saw a notice (which is taken from the Germantown *Telegraph*) informing all persons who desire to shoot in the six lower counties of New Jersey, that they are obliged to purchase certificates of membership in the West Jersey Game Protective Society, or be liable to arrest and imprisonment. The article concludes with the remark that they (the Germantown *Telegraph*) consider the act of Assembly, from which the West Jersey Game Protective Society derive their charter, unconstitutional, and an outrage on the community. If, Mr. Editor, such a charge as the above had appeared in the Germantown *Telegraph* only, I should not have thought it necessary to answer it; but when published in such a paper as the *FOREST AND STREAM*, which is recognized by all as one of the leading sporting papers of the country, and with no comments to the contrary by you, as to the unjustness of such allegations, I cannot let such remarks pass by unanswered. Those persons who declare our charter unconstitutional, do so on the ground that it distinguishes between the citizens of New Jersey and other States, and prohibits citizens of other States from enjoying the same benefits. As this question is purely a legal one, I do not intend to burden you with a legal argument, but will refer you to the case of *Haney et al vs. Compton*, which is reported, I believe, in 3 Verboom (New Jersey Reports). In that case the constitutionality of the rights of non-resident oystermen, under an act of Legislature, are fully discussed. Under an act of Assembly no non-resident can engage, or be employed, in the oyster trade in the State, under penalty of seizure and confiscation of his boat and tackle. This act is analogous to the act under which we derive our charter, and it has been sustained by the Supreme Court of New Jersey.

It will be found that all cases in which State laws have been held to be unconstitutional, as trenching upon the privileges and immunities of the citizens of the several States, that the State Legislature has attempted to define the way in which individuals may use their property; to define the way in which property may be used in which the State has no interest, and not as in the present case to define the way in which its own—the State's own—property may be used. See also the case of *Corfield vs. Coryell*, 4 Wash. C. C. Rep. 371. For the benefit, therefore, of those who wish to contest this matter, I think it may be safely said that a decision of a Supreme Court of the United States would be necessary for a final disposal of the question. And should any one desire to enter into litigation with us on this point, we are prepared to fight it out to the end. Leaving, therefore, the question of constitutionality to the courts, we come to the second remark of the Germantown *Telegraph*, to wit: That our charter is an outrage on the community. How an outrage on the community? Are we working against the community? Are we trying to exclude the community from joining our Society? Let us, Mr. Editor, look for one moment at our charter, and see what it requires. It requires all non-residents to take out certificates at the cost of five dollars the first year and two dollars every succeeding year, and resident members, by our by-laws, are required to pay three dollars the first year, and two dollars for each succeeding year. The only requirements for membership are the payment of dues, and as no election is necessary, it is not possible to exclude any person from membership on the ground of prejudice or dislike. The funds of the Society are derived from the membership dues, and after defraying all current expenses, the charter of the Society requires the balance of the funds to be expended in the purchase of fish and game. This has been most faithfully adhered to, and last season the Society purchased nine hundred quail and ten pairs of prairie chickens, which was all they were able to obtain so late in the season. This season the Society has already purchased 225 black bass, and have stocked several streams. Arrangements have been made to purchase 200 more fish, 4,000 quail, and 400 prairie chickens. This game and fish is distributed among the different members, over the six counties which are included in our charter, as evenly as possible. In addition to the above, the Society uses every possible means in its power to prevent the shooting of game and fishing out of season.

Now, Mr. Editor, this is what the Society has done, and this is the object for which it was formed. If the Society can only succeed in replenishing each year the stock of game which has been shot out the previous season, and thus giving good shooting for the coming one, it will have accomplished its ends. If this is an outrage on the community, then the sooner we do away with game protective societies the better.

It is to be regretted that a paper like the Germantown *Telegraph*, which professes to take an interest in sporting matters, does not first inquire into the objects and actions of a Society like ours, before condemning it.

H. L. DUNCKLEE'S

PATENT

CAMPING and MINING

STOVE.

PATENTED JUNE 22, 1875.

Outside dimensions, packed, 12x12x20 inches.
Weighing only 25 pounds, very durable, will cook
ten persons, and is especially adapted for camping
trips. The ware consists of 8 qt. kettle, 6 qt. tea
kettle, 2 qt. coffee pot, fry pan, round tin pan, 2
wire pans, dipper, gridiron, tent collar, 8 ft. funnel,
and an oven that will roast 15 pounds beef.

The ware is so constructed that it nests and packs
the oven, and the oven and funnel pack inside the
kettle, as represented in cut 2, leaving room for pack-
ing half a dozen plates, knives, forks, spoons, and
baking cups. Price, complete, \$15.

**TRIAL OF SCOTT & GREENER'S NEW SYSTEM
OF BORING, BY THE EDITOR OF
"THE FIELD," LONDON.**

(See *The Field*, January 30th, 1875.)

"From a comparison of the two tables it will be
seen that with Walker's shot, Messrs. Scott guns
showed a marked superiority over Mr. Greener's,
both in average and in the highest score made. In-
deed, with the left barrel, in his third shot, Mr. Scott
got a selected group pattern of 239 and a penetration
of 37, equalling the highest pattern made by Mr.
Greener, and exceeding the penetration of that par-
ticular shot by eight sheets."

H. C. Squires, No. 1, Courtlandt st.
New York.

THE GREAT London Gun Trial, 1875.

W. W. GREENER begs to inform his numerous
clients in the United States that he has been very suc-
cessful in the above trial, having secured the first
prize, a silver cup, value 40 guineas—class 2 for 12
bores; also winner in class 1 for 8 and 10 bores, and
class 4 for 20 bores. He has won in all the classes for
improved boring, which is upon a different plan to any
other maker, and is far superior in the three most es-
sential points, viz., PATTERN, PENETRATION,
and REGULARITY OF SHOOTING.

Mr. HENRY C. SQUIRES, of No. 1 Cortlandt St.,
New York, is now importing my DOUBLE CLOSE-
SHOOTING GUNS to order, an invoice of which
will be shipped to him on the 1st July, and can be ex-
amined about the 15th. All special orders given to
Mr. Squires will be carefully filled. A full report of
the GREAT TRIAL, showing the marked superiority
of my guns over guns made by Dougal, Pape,
Tolley, and others, will shortly be published, and can
be had on application at No. 1 Cortlandt St.

W. W. GREENER, Champion Gun Maker,

St. Mary's Works, Birmingham, England.

HENRY C. SQUIRES, of No. 1 Cortlandt street,
has just received an invoice of these close-shooting
guns, and from him any information in reference to
the results of the Great Trial can be obtained on ap-
plication.

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the
extreme SIMPLICITY, STRENGTH and DURABIL-
ITY of their New Patent "SIMPLEX" Breech loader
and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two,)
its mechanical soundness so thorough, and the
strength and simplicity of the action so great, that
W. & P. feel sure it will supercede all the complicated
and manifold grips now in use, its one powerful grip
being far stronger than any double, treble or quadruple
grip now used. In this new action LEVER and GRIP
ARE ONE SOLID PIECE OF STEEL and the AN-
GLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on ap-
plication, and orders may be forwarded through any
of the best houses in the States for execution in the
Spring.

Guns guaranteed to make patterns of from 160 to
230 with No. 6 SHOT AT 40 YARDS, as desired.

NO. 25 SOUTH CASTLE STREET,

LIVERPOOL.

aug26-tf

J. D. DOUGALL'S EXPRESS SHOT GUNS.

(Title registered.)

SHOWN by trials at Wimbledon by Editor
of the *Field* to possess the GREATEST PENE-
TRATION and therefore LONGEST RANGE—thus:
Circle, 30 inches; 300 pellets; average, 191; penetra-
tion, 37. The Editor's trial of Greener guns with 340
pellets of same shot and same charge of powder, gave
180, and penetration 30, although there were 40 more pel-
lets in each charge. Should any controversy arise as
to the durability of these new systems, we herewith
warn all beforehand that our system is our own inven-
tion (though founded on the American idea) and is DU-
RABLE, a fact remarked on by the *Field*, that the
guns tried had been in use during last season, and re-
ferences permitted to the owners. Send for Illustrated
Circulars to

59 St. James's Street London.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,

The strongest and cleanest Powder made. Nos. 1
to 7, packed only in sealed 1 lb. canisters. The coarser
sizes especially are recommended to owners of fine
breech-loading guns, giving great penetration with
very slight recoil.

ORANGE DUCKING POWDER,

For water fowl. Very strong and clean. Nos. 1 to
5. Packed in metal kegs of 64 lbs. each, and in canis-
ters of 1 and 5 lbs.

AUDUBON POWDER,

Very quick. For woodcock and quail Nos. 1 to 4.
Packed in metal kegs of 12½ lbs. and 6½ lbs., and in
pound canisters.

ORANGE RIFLE POWDER,

The best for rifles and for all ordinary purposes.
Sizes F.g, FF.g, FFF.g, the last being the finest and
most used. Packed in wood and metal kegs of 25
lbs., 12½ lbs., and 6½ lbs., and in canisters of 1 lb. and
½ pound.

All of the above give high velocities and less resis-
tance than any other brands made.

LAFLIN & RAND POWDER Co.,

21 Park Row, N. Y.

Attractive Route

To the Trout and Grayling Fisheries of Northern Michigan, VIA GRAND RAPIDS AND INDIANA RAILROAD, MACKINAW GRAND RAPIDS AND CINCINNATI SHORT LINE.

The attention of SPORTSMEN and TOURISTS is invited to the many attractions offered by this line, now completed from Richmond, Ind., to Traverse City, on Grand Traverse Bay, and to Petoskey, on Little Traverse Bay. The waters of the Grand Traverse region and the North Woods of Michigan are unsurpassed, if equalled, in the abundance and great variety of the finny tribe. BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING, now attracting the attention of Sportsmen everywhere, is found only in these waters. BLACK BASS, PIKE, PICKEREL, and MASCALONGE are also found in great numbers in the many lakes and lakelets of this territory.

LUXURIOUS SLEEPING AND CHAIR CARS run through from Cincinnati to Traverse City; also PULLMAN PALACE SLEEPERS from Detroit over Michigan Central and Grand Rapids and Indiana road, via Grand Rapids, to Petoskey, with SPLENDID STEAMER making DAILY CONNECTION at latter point for the Island of Mackinaw.

For Tourists' Guide, containing complete and accurate maps, with full information as to Fishing Grounds, transportation facilities, and in short all that could be desired by Sportsmen or Tourists, send to Forest and Stream office, or to the undersigned. Low Round Trip EXCURSION TICKETS good until SEPTEMBER 30th. J. H. PAGE, Gen'l Passenger and Ticket Agent, Grand Rapids, Mich.

July 1

For Florida.

PHILADELPHIA AND SOUTHERN Mail Steamship Company's line to Savannah, Ga., sailing every Saturday, from Pier 22, below Pine street, Delaware River, at 12 o'clock noon, making close connections through to all points South. The line is composed of the steamships JUNIATA and WYOMING. The Wyoming does not carry passengers. The Juniata is a favorite ship with the traveling public, having passenger accommodations of the most superb character. She has recently been refitted and elegantly furnished with everything requisite to the comfort and convenience of passengers.

Families en route for FLORIDA, Georgia, Alabama, and even as far as New Orleans, will find the Savannah route the most desirable for comfort, as well as the most economical. Through trains of the Central Railroad of Georgia, and Atlantic and Gulf Railroad, Florida, leave Savannah every morning and evening. The Florida steamers leave Savannah three days in the week for all points on the coast.

For through passenger tickets and bills of lading to all points in Florida, Georgia, Alabama and Tennessee, apply to WM. L. JAMES, General Agent, 416 South Delaware avenue, Philadelphia.

FOR NEW HAVEN, HARTFORD.

Springfield, White Mountains, Montreal and intermediate points. The new and elegant steamer C. H. Northam leaves Pier No. 25, East River, daily (Sundays excepted) at 3, and Twenty-third street, East River, at 3:15 P. M. A passenger train will be in waiting on the wharf at New Haven and leave for Springfield and way stations on arrival of the boat.

NIGHT LINE—Steamer Elm City leaves New York at 11 P. M., arriving in New Haven in time for the early morning trains. Tickets sold and baggage checked at 944 Broadway, New York, and 4 Court street, Brooklyn. Apply at General Office on the pier, or to RICHARD PECK, General Agent. 11

The Sportsmen's Depot.**JOHN KRIDER,**

SMOKE VANITY FAIR.

It is shaved from the best Natural Leaf, for Meershaum and Cigarettes. Does not make the tongue sore. Liberal sample on receipt of money. Highest award, Vienna, 1873. Send for circular.

WM. S. KIMBALL & CO.,
Rochester, N. Y.

VIENNA, Austria, Nov. 30, 1873.

Messrs. Wm. S. Kimball & Co.:

Sirs—A friend of mine sent me, with a transport of Indian skulls, two pounds "Vanity Fair," which I declare to be the best tobacco I ever smoked. We have very good tobacco in Vienna—Turkish and Hungarian—but Vanity Fair is the King of all, by its aromatic flavor and the right sort of strength. My friend in New York got an appointment in California; by that reason I apply immediately to you, begging you to send me, for the enclosed ten dollars, a supply of Vanity Fair, and send with the next steamer to Germany. If there is a German firm that sells your excellent Vanity Fair, I beg you to enclose me the address. Your respectful servant, Dr. JOSEPH HYRTL, Prof. of Anatomy in the University of Vienna.

It is like your first love—fresh, genial and rapturous. Like that, it fills up all the craving of your soul.

From C. A. WORDEN, Lieut. 7th Inf'y, Fort Ellis, M. T.

I assure you that I never smoked better tobacco than your Vanity Fair.

THE HAZARD POWDER CO., MANUFACTURERS OF GUNPOWDER.

Hazard's "Electric" Powder.
Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of
strength and cleanliness. Packed in square canis-
ters of 1 lb. only.

Hazard's "American Sporting."
Nos. 1 (fine) to 5 (coarse). In 1 lb. canisters and 6 1/2 lb.
kegs. A fine grain, quick and clean, for upland and
prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."
Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters
and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very
clean, shooting remarkably close, and with great
penetration. For field, forest and water shooting
it ranks any other brand, and it is equally service-
able for muzzle or breech loader.

Hazard's "Kentucky Rifle."
FFFG, FFG, and "Sea Shooting" FG, in kegs of 25
12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also
packed in 1 and 1/2 lb. canisters. Burns strong and
moist. The FFG and FFG are favorite brands
for ordinary sporting, and the "Sea Shooting" FG
is the standard Rifle powder of the country.

A Deer Hunt in Washington Territory.

THINKING probably that you would be glad to hear something from one of your readers in this far off portion of the American Union, I have concluded to give you a brief account of a deer hunt in which I had the pleasure of participating.

On the 24th of September last, about one o'clock P. M., our party, consisting of nine persons, among whom were Capt. Burton, U. S. A.; Judge Jacobs, J. J. Hunt, purveyor general of the party; Wychoff, a capital shot; two other veteran hunters, as well as three soldiers of Capt. Burton's command, a leash of nine hounds, left in an open boat the wharf at Port Townsend for Lopez Island, distant across Admiralty Inlet about twenty-five miles. It will be remembered that Lopez Island is one of the islands long in dispute between the United States and Great Britain, and which was finally awarded to the United States by the decision of his majesty, the Emperor of Germany. It lies northeast and parallel with the historic San Juan Island. It is on an average four miles in width, and twenty in length. It is lower than the surrounding islands, is mostly covered with brush and fir and alder timber, but the land is generally fertile, and the climate very mild. There are no wolves, bears, panthers, cougar or other destructive animals on the island. It is the home of the deer, and is the hunter's paradise. There are a few settlers scattered over the island, living in a state of primitive simplicity, most of them having Indian women for wives. Our objective point was one of these settlers named Barlow; but none of the party knew on what portion of the island said Barlow lived. All being pioneers, however, we did not doubt our ability to find Barlow's; therefore, with sails unfurled and a fair breeze, we ploughed through the tide rips that abound in this portion of Admiralty Inlet, and steered towards the southern end of Lopez Island. But alas! about eight miles from our destination the wind failed us, and we were compelled to propel our heavily loaded craft with oars. Late at night we succeeded in making a landing in a small bay at the southern end of the island. The hounds were eager for the fray, and notwithstanding all our efforts, one of them broke away, started a deer close to camp, and the music of his voice, resounded in the woods until long after midnight. Early the next morning the Captain and myself, Mr. Hunt and Wychoff, two and two, started off to find Barlow's. Directing our course northward, we wandered through dense brush, over logs, and under logs, for about an hour, when hearing the sound of a woodman's axe, we directed our course thither, found the chopper, and he put us on a trail leading to Barlow's, about four miles distant. Word was sent to the rest of the party, and we all arrived at the objective point about two o'clock P. M. Mr. Barlow is an old resident of the island. He was formerly a British subject. He has a farm of about one hundred acres. By extending a fence across a narrow neck of land spreading out into three peninsulas, he has enclosed by about eighty rods of fencing full fifteen hundred acres of land. On the northern peninsula, containing about two hundred acres, we turned loose all of our hounds about three o'clock, and in an hour the party had killed three fine deer. This ended the hunt for the day. One noble old buck successfully ran the gauntlet of five hunters armed with Henry rifles, and passed, with tail flying, Barlow's clearing into the woods beyond. The purveyor general, a man in whose vision death was supposed to slumber, the gallant Captain and the crack shot, each got in several shots, but to no purpose. They all declared they would not shoot at that buck again, even if they should find him sleeping on his sylvan couch.

The next morning was foggy and drizzly, and the hunt did not commence until about ten o'clock, when the hounds were turned loose upon the same ground as before. In a short time the woods were wild with their noise. They swung around towards Wychoff; we heard the report of his rifle and we counted one; then to the purveyor

general, and he was out of luck; then to Bates, one of the veteran hunters, and he scored one; then to the gallant Captain, and he got in two shots and counted two; then to your humble servant, and he scored one. There were many more shots, but they failed of their mark. The hunt for the day closed in about two hours, and we all being thirsty, repaired to the camp to take a drink—of water, of course!

The next morning was bright and glorious, and the hunters were early at their stands. Soon the baying of the hounds was heard, and from its deep base and frequency we all knew that they had started an antlered monarch. Round and round he swung, but keeping constantly within the dense brush; eager and more furious became the chase—the whole pack of hounds were bellowing close in his rear. In about three-quarters of an hour they drove him from his brush retreat into the open ground. He passed by two hunters, who fired at him, but he plunged over the bank into the water with the hounds after him, swam about a mile, and reached the shore of another peninsula, and entered the brush again. The fleet-footed Barlow confronted him as he came out of the water, and to the astonishment of all fired and missed. The hounds soon brought him back to the water again, when he boldly struck out across the channel to the San Juan shore. The old veteran, Bates, was on hand with a boat this time, and then commenced a row for life. The old veteran gained at every pull, and half a mile out, or more, came within rifle range. He took his rifle, fired six shots, but missed, finally clogging a cartridge in his gun. He again seized the oars, and pulling alongside of the noble fugitive, seized him by the horns, and ignobly drowned him by holding his head under the water. He brought him in triumph to the shore, and we weighed him; he pulled down two hundred and five pounds. This chase disorganized the hunt for a short time, but late in the afternoon three more were added to the killed. This closed the third day.

The fourth day was to close the hunt, and all were eager to make this their great day. We early took our positions on the southern bank, and along a road leading across the base of a densely wooded peninsula, about a mile south of where we had hunted the previous days. The hounds were taken upon said road and let loose about seven o'clock. In less than ten minutes they gave tongue. Shortly a shot was heard, and one of the veteran hunters counted one. Soon another shot was heard, and the gallant Captain added to his list of laurels a fine barren doe. Another shot, and Wychoff counts another, and so on, until the number of the dead arose to six, as the result of about four hours' hunt in the forenoon. In the afternoon we were reinforced by quite a large party of gentlemen from the revenue cutter Oliver Wolcott, which happened into an adjoining bay on a cruise for smugglers, who abound in this archipelago. The hunt in the afternoon, in which our friends joined, was very exciting, but not as fruitful in results as desired or contemplated. The hounds had three large bucks in the water at the same time, and the firing for fifteen or twenty minutes was very continuous; and yet, Mr. Editor, those noble animals reached the cover of the woods again unscathed. Still, it may be said, in extenuation, that the firing was down a steep bluff, at a running object, and at long range. Nothing but the head of a deer can be seen while he is swimming, and when there is anything of a swell it requires some practice to hit that head with a rifle.

The hounds, chilled with swimming, returned to the woods with but little spirit to force the hunt. Two more were started, however, and both killed, and our jolly friend, the purveyor general, covered himself with glory. In four days we had killed twenty deer, and had at least eighteen hundred pounds of venison. As we were kindly tendered a tow to Port Townsend, we gladly embraced the opportunity, and arrived with our freight at that beautiful town about two o'clock in the night, refreshed, reinvigorated and rejuvenated.

O. J.

PREPARATION.—Parson's daughter (to the Squire's Keeper)—"What are you doing with the pheasants, Muggles?"—Keeper—"Well, Miss, there's a lot o' city gents a coming down with Master to shoot on the 1st, so I'm a takin' a few o' their flight feathers out!"

For Forest and Stream.

A BULL FIGHT IN TEXAS.

I LOVE to sit on the sea-shore in the clear moonlight, and, watching the long waves roll in, listen to the heavy boom of the surf and dream. Many such an hour have I spent on the shores of North Carolina, Florida, and Texas, and above all, in dear old California, lying on the white sand near the water's edge and looking out on old ocean, peopling the beach with memories of bygone days with fair ladies and brave men, many of whom, alas! have long ere this wandered beyond "the shining shore" which bounds the thither world.

But 'tis not always a dream, for many a brave and knightly deed have I witnessed on the smooth sea beach, though as yet unheralded in song or story; and I once was a spectator at as gallant a tourney as was ever fought in the brave old days when the lilies of the Moslem and the war-cry of the Frank rang over the desert, while Christian and infidel strove together for the possession of the Holy Cross and the Sepulchre of our Lord; albeit the combatants were not mail-clad warriors, but used alone the weapons provided by their Maker.

One bright night in Texas, when the moon shone with unrivaled splendor and the soft trade wind had cooled the air after a hot, hot day, when the wavelets of the bay rippled on the shore with a gentle murmur, and the sea birds had gone to their rest, and the laughter and song of the camp had quieted down to the light and regular foot-fall of the sentry as he slowly paced his lonely beat, the Captain and I lighted our pipes, and going a little distance from the camp, sat down on the pure white sand to smoke and talk and dream. Long we sat quietly smoking, with but a word now and then—for silence is golden at such times—when three immense bulls came down from the prairie beyond the bluff to the smooth, level sand of the beach. They came about the same time, but by different paths, some fifty yards apart; nor had we any notice of their coming by hearing them roar while on the prairie. They came in a quiet, determined way, that at once attracted our attention. Voiceless as they seemed while coming down, no sooner were they fairly on the beach than the trio commenced a loud deep roar, which seemed to be the very incarnation of wrath. This was done by all three almost at the same instant—so much so that we could not distinguish which commenced first. At the same time they began pawing up the sand most viciously, and throwing it in showers over their backs with their horns, while ever and anon they would slowly advance toward each other a few steps at a time. They were the biggest brutes that ever I saw, fully as large as buffaloes, but with immense horns, quite six feet from tip to tip (Texan cattle, as is well known, are celebrated for their wide-spreading and long horns.) It was very evident that there was to be a triangular duel, though not precisely like the one in which Mr. Midshipman Easy figured. So the Captain and I picked up our chairs and removed to a shady spot under the bluff whence we could overlook the field and study the maneuvers of the combatants.

The moon was shining so bright that it was almost like day, and the shadows were as sharp cut as in the sunlight. The moonlight of California and Texas is celebrated for its magnificence. Travelers say that of Italy and the Orient pales before it. To give a practical illustration, one capable of being appreciated and understood by all your readers, I will mention that one night in Texas while discussing this subject I proposed as a test the reading of the small print of the New-York Herald, and upon bringing out a copy we found that we could read it with ease. If any of your readers wish to test the force of the illustration let them try the same experiment here. It is probably due to the purity of the atmosphere, for I know that objects on the Texan prairies are visible fully one-third further than at other places, and I noticed the same thing in California.

After about half an hour of sullen roaring and pawing the animals had approached within proper distance, when, giving one last and most terrific roar, they rushed furiously

THE "WHITE TAILS."

at each other, the three heads striking together almost at the same moment. The shock was tremendous, and the crash of the horns could have been heard fully a mile. All three came to their knees, and one rolled quite over; for, the colliding forces not being exactly in equilibrium either as regards degree or direction, the effect was necessarily diverse. The two which struck most squarely were brought to their knees, while the third, who struck at an angle, caught one of his horns, came to his knees, and fell quite over. Instantaneously springing to their feet (it is wonderful how quick these creatures are,) they interlocked horns, and straining and panting, swaying this way and that, struggled over the sand, pressing hither and thither as advantage offered. After quite a while, by common consent, they ceased and withdrew a space, and though still quite close together, commenced pawing the sand and roaring. After this defiance, which lasted perhaps five minutes, they backed off a little distance, and once more, as if at a given signal, rushed toward each other, renewing the battle. About the same result ensued, although there was there was no fall—the same mighty struggling and roaring and straining. It seemed to strike them somehow that the triangular business was inconvenient, for suddenly the largest two appeared to unite their forces and attack the smaller. He was soon made to give ground, and as he did so in an unfortunate moment he exposed his side. Instantaneously the others rushed on him and bore him to the earth, goring him terrifically. He was soon placed *hors du combat*, and lay moaning on his side, his head flat on the ground, and his limbs limp and effortless, the latitude of sudden and total prostration. The others stood looking at him, pawing up the sand and roaring, and every now and then rushing upon their prostrate enemy and goring him furiously while he lay passive and unresisting, only moaning piteously at each savage thrust.

At length they seemed satisfied he could be no further in their way, and, as if by mutual agreement, they ceased their roaring, and walking off about a hundred yards, arranged themselves near the water's edge, where the sand was hard, face to face and some twenty yards apart. Then commenced the most magnificent duel I ever witnessed. The roaring, pawing, and throwing up of sand with the horns was renewed, and we could perceive by the manner in which the combatants shifted their positions that they were generals maneuvering, and that seemingly careless exposures were mere feints. At length, satisfied that each was too wary and skillful for any advantage to be gained, they rushed at each other, their foreheads meeting with a resounding crash. The shock was so tremendous that it brought both to their knees. With horns still locked they sprang to their feet, roaring and pushing, each striving to gain some decided advantage. Then, after a pause, they withdrew a few yards, and the whole was repeated. This was continued for nearly an hour, until finally one of them, being rather quicker than the other, thrust his horn deep in the breast of his antagonist, who uttered a loud bellow of pain. The effect was decidedly evident, for the beast immediately gave way. Quickly retreating, they again rushed at each other; but it was very apparent that our wounded friend was growing weaker. He seemed to give way more easily, and suddenly he turned tail and galloped off, the other rushing after him. He soon overtook him, when again they rushed at each other. The wounded brute was evidently maneuvering to get away, for, after a momentary resistance, he again rushed off. This time the victor pursued but a short distance when he stopped and commenced a triumphal roar, at the same time throwing up the sand. This he continued until his antagonist had reached a considerable distance, when he turned and walked slowly back toward the one first vanquished, roaring as he went. When he came near the prostrate foe he stopped, and as the other seemed to make some feeble efforts to rise, he rushed upon him, goring him again and again. Then he waited, but there was no symptom of resistance, so presently he walked around him two or three times, uttering a low, deep roar, almost a threatening growl. Apparently he was satisfied, for he then turned toward the bluff, and with loud roars of victory galloped to it, and dashing up the steep bank, rushed off across the prairie to his expectant admirers.

We approached the prostrate animal, which was uttering low groans, and found the ground stained with blood on every side, while the sand was plowed up in every direction. The poor fellow seemed utterly exhausted and apparently dying, and we discussed the propriety of putting him out of his misery. My friend was wiser than I, and advised me to do nothing of the kind, else the law would make me pay its value, and, moreover, he thought he might not be injured beyond recovery, though he had evidently lost much blood. Sure enough, when we arose in the morning he was gone. The sentry stated that about an hour before daylight he had, after many efforts, struggled to his feet and slowly staggered up the bluff and across the prairie away. We never saw any of them again. The three had evidently come some miles to have their duel on the beach, for they did not belong to any of the herds in the neighborhood. It was a magnificent display of prowess all through the fight, and it was the only bull fight at which I "assisted," as our Spanish friends say, while I was in Texas.

MONMOUTH.

For Forest and Stream.

"TIP."

HOW I would like to see your broad, savage, good-natured, intelligent face. You had a great many admirable points, Old Tip, and some you hadn't. Tip was a broad-chested, large-headed, half pointer, half coach dog, with tail turned up in about a three-foot curve. I first made his acquaintance in this wise: Lauren Hinsdale, a young farmer, who lived a mile out of the village, came to me one evening in the latter part of June and said, "There are two or three broods of woodcock up in my thorn lot; come up early on the Fourth and I will show them to you."

"But I haven't any dog."

"I've got a dog, and what is more, I will give him to you if you will take him. He is about a year old; can't get him to do anything but chase the chickens and suck eggs; he ought to make a good hunter."

Just at daylight upon the Fourth I drove up to Lauren's house; found him in the back yard washing out his gun, losing every other rag in the bottom of the barrel, and then twisting and twisting with an old rusty wormer to extract it. He had made about two quarts of ink and wasted half of it over his clothes, but it didn't hurt them any. Tip was chained up near by, anxious for freedom. We walked over to the thorn lot—high ground covered with thorn

bushes running down to a brake at the outer edge. This was a favorite place for Fall birds, and also for a breeding ground. Tip didn't know a woodcock from a grasshopper—wouldn't even chase one. He enjoyed the shooting, but he did not help us or interfere with us at all. We found the birds without much trouble, and in the course of an hour and a half I killed twenty-two. Lauren fired twice. He said he "didn't know how it was, but he could hit them better when he was alone." We then went to the house and took breakfast, and then Tip and I drove home. I found that James Seymour, a friend of mine, had given the dog to Hinsdale. The reason he gave him away was because he was such an awful thief; would steal anything and everything he wanted, or rather take it whether anybody was about or not. His mother was one day broiling some steak; as she stepped out a moment Tip stepped in, and when she returned she found Master Tip had pawed the steak off the gridiron on to the floor, and was sitting calmly by waiting for it to cool. Cooked meat or raw meat, milk or pie, or eggs, everything eatable suited him, and a great deal of it. Tip stood by while Seymour was telling me this, looking up in our faces with an air which made me think that perhaps he could explain if he only had a chance. He certainly behaved well with us. I chained him to the bannister of the front stairs the first night and he gnawed off two of the uprights! After that I did not chain him there any more. He wouldn't steal anything if he couldn't get at it, and so we got along together nicely. (My wife says "he would steal off the fourth pantry shelf.") I didn't know she kept anything up there except soap and salt.

Tip enjoyed accompanying me upon what the old ladies called my "docterin'" excursions. He was perfectly fearless; was not afraid of anything or any dog, or any number of dogs. One, two, or three would come out of a farm yard to dispute his passage, and he would pitch straight into them all, and whip them out before they comprehended that hostilities had commenced, and come out gaily with head and tail up, perfectly unconcerned and unruffled. One day a big dog twice his size, with a small dog to do the barking, came up to the further side of a ditch—ten feet of water between. One growl from the big dog, and Tip pounced plump into them. They were so astonished that they went off in a prolonged yelp in directions various. A few weeks this went on and there was a change. Tip was a thoughtful dog. I have no doubt but that he looked at the matter in this way: "It is all very nice to whip out a dozen or two of these miserable curs every day, but nearly every one gives me a taste of his teeth, and with them all I notice that the next morning I am very stiff and sore. Now, a sensible dog will consider whether it pays, and I have made up my mind that it does not. I won't fight any more for fun; I will run away when I can, and when I can't, look out." He acted upon this principle ever after, and Tip was much thought of by all the dogs round about, except two or three whom he was compelled to chew up to their heart's content.

Tip learned to hunt pretty well. He would find and point snipe and woodcock very nicely, seldom flushing a bird, for he was very deliberate in his movements. He was as strong as a horse; would have made a capital dog on prairie chickens. He would dash into the creek for a duck, and when he reached the deepest part would invariably thrash and kick and nearly drown himself, but he never did quite. I kept him for a year and then handed him over to Seymour, his original owner. James kept him a few months, and one day when S. E. J. was in the store he told him that he might have Tip if he wanted him. He had such a habit of jumping through the front windows that he couldn't afford to keep him. S. E. J. said he would take him. Tip, standing by, heard it all, and what did he do but march straight off all alone a quarter of a mile to S. E. J.'s house, jump over the gate, walk into the sitting room, and lie down quietly at Madam's feet. There S. E. J. found him upon his return home. That night he was put in the barn, where he amused himself by gnawing off a second growth hickory spoke in the wheel of the new buggy. But they fed him well, and talked to him, and made much of him in every way, and he never stole any more. Uncounted beefsteaks might have been piled up under his nose and he wouldn't have touched a mouthful. His great failing was a propensity for chasing geese and turkeys and calves. He would take after two or three calves, run them just about off their legs, and then swing to one side with head and tail up with an air that said as plain as could be that he "hadn't seen a calf anywhere in these parts." A flock of geese he would drive ahead as fast as they could waddle and then dash through the flock, looking neither to the right nor left—"hadn't seen a goose." Turkeys would rise and fly; on he would go under them, taking no note of the commotion overhead. Think he liked calves the best. One day S. E. J. and myself were out after spring snipe with him, driving from one piece of ground to another. Tip had been worse than usual among the calves and geese. I told S. E. J. that if there was not a stop put to it soon every farmer would be after us. Said he, "I don't like to have him do so, but how can I help it? If you can, go ahead." Tip soon ran into a flock of geese, scattering them in all directions. S. E. J. called to him but he did not heed until the dispersion was concluded; then he turned to wait for us; we had stopped, and I gave him a charge of No. 8. He came straight in, and never after did he disturb the flat-footed bird; and furthermore, he never forgave me for shooting him. For months after, whenever we met he would growl in a way that would have led any one not well acquainted with him to the conclusion that he would certainly bite the next second. He visited me every day as usual; came up to me to be patted, growling savagely all the time. I understood him, and respected him the more. S. E. J. was his master; "if he thought proper to shoot me, well and good; but it was not for you to do it." When S. E. J. and family left for Minnesota Tip accompanied them to the depot, sat down in the waiting room, bid them a solemn farewell, and when the train had gone he walked straight up to the store of James Seymour, his old master, and took possession. Since then he has taken H. G.'s advice and "gone West," where, I trust, he is happy and makes some one else happy among the prairie chickens.

ALIQUA.

"My young colored friend," said an army chaplain to a young negro, "can you read?" "Yes, sah!" "Glad to hear it," said the chaplain. "Shall I give you a paper?" "Sartin, massa, if you please." "Very good," continued the chaplain. "What paper would you choose, now?" "Well, massa," said the meditating negro, "if you chews, I'll take a paper o' terbacker."

WHEN the leaves are falling, the nights cool and the October moon is full, the lordly bucks begin their nocturnal rambles over their favorite runways and scraping grounds in search of the timid does that hide away from them in the thickest "popples" and willow swamps. A little later in the season the deer will be found running in pairs, and then the still-hunter has but to watch the scraping grounds in openings in the forest, and the "jack" oak ridges which are so common in Minnesota and other States. Early in the Autumn the deer browse in poplar thickets on the outskirts of the prairie or near the settler's clearings, and at such times they lie very close, often jumping from their beds within a few rods of the hunter. As the season advances and the snow falls, the cold North winds drive them into the heavy timber where they browse on hazel bushes and red willow, (kinnikinick,) the inner barks of which the Chippewa, Sioux, Dakota, Arikaree, and other northern Indians smoke clear, and mixed with tobacco. I have often detected the smoke of the red willow in the cabins of many of the settlers on the frontier, whose limited means necessarily make them use economy in everything.

When the twigs of the trees become toughened by the cold, the deer browse on species of the white pines, and visit lumbering camps regularly at night to feed on the twigs of the fallen trees. There are several species of fungi that the "white tails" are very fond of, which grow on the white birch and sugar or rock maple. I have trailed them from swamp to swamp and finally shot them when feeding on fungus, their stomachs being full of the same.

Deer have their desserts, which consist of young wheat and "bagas," Swedish turnips, which are taken from the settler's patch. The acorns of the white oak is the natural dessert of the deer, yet there are many epicureans among them that show a decided preference for the rutabagas. Now for a word to sportsmen. Do not all go to Minnesota. The State is over run with hunters, and has been for three years. Last Winter Todd and Otter-tail counties were overrun with hunters, both red and white. The Chippewa and half-breeds shoot deer for lumbering camps, and for shipping. The settlers lie with guns loaded with buckshot all night in "baga" patches and on "jack" oak ridges, and woe to the unfortunate *ceruus* that leaps the garden fence, or steps out from the shade of the thickly leaved oaks into the moonlight to munch a few acorns.

The Western, or "timber wolves," ran into Minnesota last Winter in large numbers, and I often heard their prolonged howls when going the rounds to my traps, and for several weeks I saw but a few trails of deer near camp, so thoroughly had they been routed by the hunters and wolves. In vain I tramped many miles to lay bait for the wolves, but they would never touch the titbits I left for them in the timber, though on the prairie, fifteen miles from camp, many wolves were poisoned by hunters. Small packs of six or eight would come within twenty feet of my cabin door, where deer, grouse, hares, and small birds were hanging in easy reach, yet they never gained courage to steal the game, but appeased their hunger by eating the bloody snow where game had been dressed.

Minnesota was once the best hunting ground of the Sioux and Chippewa Indians, and when they moved away from certain districts, there were deer enough left for the whites around the beautiful lakes and in the unlimited hard wood timber of the "Gopher" State, yet the hunters have flocked from all quarters until the deer are "cleaned out" from many localities. In the Fall of '73 the country from Avon to the Little Elk River was alive with hunters. Ruffed grouse were killed in thousands early in the season; and the crack-crack—crack-crack of Winchester rifles was heard from all sides at the break of day, as numerous deer were running the gauntlet between lakes and tamarack swamps hotly pursued by dogs. It was no uncommon occurrence to hear the full fifteen shots of the "Winchester," and the seven louder reports of the "Spencer," and after a pause, two or three scattering shots as the hunter had found time to shove a few more cartridges into the empty magazine of his rifle, before the game was out of sight. During moonlight nights the occasional sound—bang of the shot gun, told a sad story for many an old buck taken unawares on his nocturnal parade.

I crossed many bloody trails of deer after the 15th of December, showing plainly that the settlers hunt long after the deer law is up. A few gentlemen in Sauk Centre and vicinity offered a reward for the apprehension of any person found killing deer after December 15th, and put posters in many places, preventing the killing of deer in a great measure, as the settlers were afraid to smuggle them to hotel keepers and butchers after a certain date.

There are deer in Florida, Georgia, Alabama, Colorado, Michigan, the Canadas, and many nearer our homes, and there is no necessity for us all to crowd into Minnesota as we did last Autumn. In the "Gopher State," deer, and a straggling elk, moose, or black bear, is all the game to be had. In Colorado there are antelope, white tailed and mule deer—"black tail deer"—elk, mountain sheep, bears, &c., which can be found within a few day's ride from Denver, and in close vicinage to Fairplay, Oro City, Hamilton, Granite, and many mining towns. In the Autumn there is plenty of game in the Rocky Mountains west of Denver, and in Winter good shooting can be had in the foot hills where game collects from the mountains for winter quarters.

In some localities where deer were numerous four years ago, it is now a rare sight to see a deer's tail going over the bushes, or hear the thud-thud-thud, of their hoofs as they strike the ground when retreating. Never visit one particular locality year after year until the game is exhausted. It is an easy matter to build a winter camp, and by scouring the country game can be found and much territory pleasantly surveyed and many new and interesting places be discovered. There are plenty of good hunting grounds to be found if live hunters will strike out and find them, so let us not kill too much game in one locality and in so doing "kill the goose that lays the golden eggs."

J. H. BATTY.

—The weather has been so anomalous in Great Britain this year that in the middle of April sunstrokes occurred in the north of Scotland, while in the south of England the weather was still wintry.

—The fish-hawk's motto—"I fights mit sea-gull."

Fish Culture.

FISH CULTURE IN PRUSSIA.

A correspondent of *Land and Water* has been visiting Mr. Max v. d. Borne, at the extensive fish hatching establishment of that gentleman at Berneuchen, Prussia, and gives the following as the result of his observations:—

"The breeding of trout in natural waters is much easier and more certain than keeping and feeding them in a confined space, as in the former they seek their own food, particularly if the brook contains various aquatic plants and insects. Trout thrive in ponds as well as in running streams if the bottom is suitable.

Trout fry love shallow brooks with pebbly bottoms. They avoid holes, as there lie the larger fish ready to prey on them. They also prefer a change from the sun's rays to the shady resorts under the overhanging branches, shrubs, and water plants where their food abounds. Mr. v. d. Borne's brook is arranged as follows: The water is taken from the Mietzel, a tributary of the Oder, a stream in which there are no trout, but plenty of pike, perch, pike-perch, burbot, eels, and the usual whitefish. The water flows in a lively manner over sandy and partly clayey ground, in which there are many weeds and insects. The water is led from above a mill belonging to Mr. v. d. B., from whence there is a fall of twelve feet. The brook is 800 feet in length, and has a gradual fall of twelve feet. It is also provided with a number of miniature waterfalls made with boards, in which three-cornered holes are cut out to allow the trout to pass and repass. The bottom of the brook is partly lined with drain tiles, and in some places boards placed on end-stones, which are kept in their places by weights above, below which small pools are created for the use of the fish. The wire-netting at each end is closely woven, so as to prevent other fish entering, or the departure of the trout. Notwithstanding these precautions, small pike fry, burbot, and the large destructive water beetle (*Dytiscus marginalis*) do enter. But by an arrangement above the entrance a key is turned which stops the flow of water, and partly empties the brook.

I was present when this was done, and we caught several small burbot (*Lota vulgaris*), monster frogs, and beetles. Late in the Autumn the outlet of the water is raised two and a half feet, so as to form a miniature lake and good winter quarters. Both sides are planted with trees and shrubs, serving as a protection to the fish as well as a supply of insects which fall from the branches. The fish hatching house itself is built partly under ground, as the aquarium at Hamburg is. The interior of the largest room is 40x40 feet; the other, 20x20 feet. Without detailing all the appliances within, I will merely mention that there are twenty-six stone troughs to accommodate 1,000 fry in each. It certainly is the most extensive establishment of the kind I have seen, and must have cost this enterprising gentleman considerably over a thousand pounds. The result is that the Oder now contains salmon, which a few years since was not the case. One of twelve pounds was caught, and sent to Mr. v. d. B. during my stay at his hospitable mansion, and ate as nice as any of those which find their way to London.

The enemies he has to contend with are otters, herons, kingfishers, sea-eagles, etc.; for instance, from a pond containing 400 large carp, 353 were killed by otters in six weeks. To prevent this destruction, some traps were procured from Henry Lane, Wednesfield, England, which admirably answered their purpose. In the years 1871-74, the following were trapped:—45 otters (including 13 unborn), 2 fish eagles, 187 herons, 120 kingfishers, 40 divers, 178 various ducks, 47 carrion crows and other birds of prey, 4 foxes, and other animals. The otter traps are placed three inches under water at places where the animal enters and leaves the water. When trapped he descends to deep water and there drowns. In Canada they are usually trapped in the paths they make to slide down to the water, the localities of these otter slides being well known to the trappers there. In one heron's stomach, Mr. v. d. Borne's keeper found twelve hand-long carp. Henry Lane's trap for these birds is excellent. A fish is placed on a kind of fork under water, which, when the heron seizes, catches him by the beak. The kingfisher's traps are arranged thus: a narrow board is placed across the brook, and on the centre a square piece of wood, which contains the trap. The kingfishers naturally seat themselves on the trap to look for the small trout and are caught."

Mr. v. d. Borne has recently published a small work on fish-hatching and is now engaged in collecting information from all parts of Germany, Switzerland, Austria and Hungary, preparatory to issuing a book which will be a guide to the fishing tourist in each of these countries, telling them where to fish and the varieties to be caught in each place.

FISH CULTURE IN VIRGINIA.—The *Richmond Whig* says: "We understand that the Fish Commissioners have, during the past few weeks, been engaged in distributing black bass, caught in the Shenandoah, in various streams on this side of the mountain. Beginning with the tributaries of the Occoquan, they have deposited some in the Rappahannock, and its tributaries, the tributaries of the Pamunkey, the North and South Anna, and then the Rivanna, the Rockfish, and the Tye Rivers. They have also deposited about forty in the James at this point, and about the same number in the North River at Lexington. They propose, during the present week, to stock the Appomattox, the Blackwater, the Nottoway, and the Meherrin and New Rivers. They desire, also, as soon as they can, to put some in the Mataponi and in Jackson's River, at Clifton Forge."

"In the upper Roanoke the black bass has been for several years, but the stream being small, they were almost exterminated by seines and traps. A law forbidding the use of traps and seines was in force for two years, and both the bass and red-eye began rapidly to multiply; but the law being very unwisely repealed, the seines and traps again appeared, and the result was that the Commissioners could not find enough bass in the stream to stock the neighboring stream—New River. Seines and traps in small streams are fatal to any permanent increase of fish, and people must make up their minds to that result."

In addition to the waters mentioned above, Mr. John N. Rose, of Lynchburg, in the employ of the Fish Commission of the State, recently left Riverton with 800 young

black bass in cans, furnished by Prof. Baird, which it was his intention to place in the Rivanna, Tye, and James Rivers. The Virginia Commissioners are taking active steps in restocking the waters of the State, and at the recent State Fair held at Richmond they were in attendance to receive suggestions and consult with gentlemen interested in the subject.

FISH CULTURE IN TENNESSEE.—Prominent men in Tennessee are encouraging all in their power the growing interest now taken in fish culture. Hon. Joseph N. Fowler, of Nashville, has written a letter to the *Columbia Herald* on the subject, in which he says:

"Since the first settlement of the country, great changes have taken place in our streams. The removal of timber and the cultivation of the land, have affected the waters and also the fish. Some of our finest food fishes, as the black bass, spawn about the time our Spring freshets bring down from the plowed lands large quantities of earthy matter, which settles on the young spawn in quantities greater than the parent fish can clear off, burying the fish entirely. Animals of kinds which flourish in a state of nature meet with many difficulties in a state of civilization. Our intelligence and care must provide against such injurious consequences as follow changes introduced by us. The people will also sustain a prudent, efficient and judicious system for the propagation of fish.

There are but few States in the Union that enjoy greater advantages, so far as fresh water is considered. The Tennessee is fed from a vast extent of surface by numerous streams furnishing a body of water that would cover hundreds of square miles of land abounding in nourishment for our own fish. To care for this domain and have it devoted to useful purposes is at once the duty of the State. I trust, then, that the next Legislature will make such provisions as the experience of the times and the practice of other States warrant. The results of intelligent care for fish have proved so satisfactory in many of our States that there can be no doubt as its advantage."

Natural History.

THE AUTUMNAL MIGRATION OF BIRDS.

GOING home from my office just before daybreak, these calm October mornings, I sometimes hear overhead faint little calls, so tender and far away that if the ear was not trained to observe them they would never be noticed. These small cries are the notes of delicate birds flying south. It is delightfully mysterious! Where have they come from? and where are they going thus by night, and straight over forest and farm, and city and sea? If we go into the woods we shall find them peopled by a different folk than crowded their arches six months or three months ago. The thrushes, which have made melody all Summer long, have unstrung their harps, and are silently taking their leave. The dainty, satin-slipped ground warblers and wag-tails have left their fern coverts. The scarlet tanagers, that used to glow among the trees like firebrands, have kindled the maples and flown away, taking with them titled orioles and crazy chee-winks. In their place are strangers—fox, and white-throated, and gray-crowned, and tree sparrows; the northern pee-wee; the tiny kinglets and little groups of warblers chattering gaily in subdued tones among themselves. There is a quiet, serene satisfaction expressed in the demeanor of these Autumn visitors altogether different from the exultation and riotous singing of the full-plumaged hosts which return to us in Spring. Yet they are—all except the young birds of the year—the same that we saw when the crisp oak leaves under our feet were unfolding from juicy buds. But in some cases birds which were common in Spring are very rare now, and *vice-versa*; this has come to be a rule with some species that we can count upon, since we have learned that in the Spring they always migrate northward by a route west of the Alleghanies, and return along the coast, or just the opposite.

If you ask why they go north at all, I must tell you that these sparrows and warblers only differ from all other birds in going farther. Every bird moves more or less with the seasons. Crows, for example, are here pretty much all Winter, but not the same individuals; those who built their nests in our woods are now in Virginia, and the ones we see to-day are visitors from Canada. Our Autumn birds went north to find suitable places in which to raise their young. A bird cannot live anywhere, although we have come to think it as free as air. Even the eagle and the frigate bird, roaming over continents and oceans, must have a home wherein to hatch their eggs. The choice of this by any bird depends on several things, but upon one consideration in particular—the chance of getting suitable food for its young. For whatever be the chosen diet of the parents, the chicks must have their tender worms and flies—and an astonishing quantity, too—until they are strong enough to gather their own subsistence and gradually adopt the rougher fare of their parents. If the birds cannot find the necessities of their home life here, and only about one bird in three does, they must go on to the high Catskills or the higher Adirondacks, to the plains about Quebec, or to the wilds of Labrador, to those mysterious mountains south of Hudson's Bay, even to the reedy shores of lakes close under the Arctic circle, that have scarcely time to get free from ice before another Winter freezes them again. No explorer has been to such high latitudes that he has not found birds yet nearer the pole in the Summer time. But the Arctic Summer is a short one, and the adventurous water fowl that have been consorting with the polar bears are easily chased out by Jack Frost. Then two or three families join together for the journey, and some bright morning whirl away from the ice-clad shores buoyed up by a favoring wind. Soon they come upon other friends and

warn them, and that strange longing to travel seizes upon all as this increasing army of messengers sweeps by, and "Up and Away!" is the cry as every wing is stretched toward the south. After a time they move more leisurely, and the hardier Winter birds who don't care for cold weather so long as the tall grasses are not snowed under linger behind, while the old males of all kinds gradually outstrip the females and weaker young, and reach us a little ahead of the rest. Thus the fugitives keep just in advance of Winter, as he also marches southward, flying mostly by night, and by day picking up a bountiful harvest of berries, ripened seeds, larvae and eggs of spiders and beetles and flies, and such insects as they can capture.

By the last of October about all the small, short-winged birds are gone from our woods—some no farther than Cape May, some to the rice fields of Louisiana, some even to the West Indies and Honduras. Then the tardy robins collect in noisy flocks and depart as though they had done us a great favor in staying so long; the few last Spring birds revive their notes for a day, and at night reluctantly drift away, twittering gentle farewells as they go; cawing crows, like huge crayons, draw black lines across the sky; a solitary hawk wheels majestically athwart the lurid November sunset; and we are alone with the snow-birds and the gathering storm.—*Ernest Ingersoll, in The Christian Union.*

—One would hardly think of looking in the composing, or even the editorial rooms, of a New York daily paper for living birds; yet during the last month several birds, migrating at night, have flown in at the windows of *The Tribune* rooms on the top floors of their new building about midnight, and their names have been taken. Thus came a ruby-crowned kinglet (*Regulus calendula*); a golden-crested kinglet (*Regulus satrapa*); a pine-creeping warbler (*Dendroica pinus*); a white-eyed vireo (*Vireo noveboracensis*); two white-throated sparrows (*Zonotrichia albicollis*); a snow bird (*Junco hyemalis*); and last, Wilson's black-cap (*Myio-dioetes pusillius*).

—The facility with which canary birds and linnets have been taught to execute tricks is well known. In India the barga, a species of weaver bird, noted for the skill with which it constructs its retort-shaped nests, so as to escape the depredations of the monkeys, are also taught wonderful feats. On given signals it is said that the birds will feed every lady spectator with a bit of sweetmeat or candy, thus showing a ready discrimination between the sexes. A miniature cannon is also loaded by the birds with coarse grains of gunpowder one by one; the ramrod is skillfully used, and they then take lighted matches procured for them, and apply them to the touch-hole. It is substantiated that a bird has been known to apply the match five or six times on the failure of the cannon to explode, and to remain perched on the gun apparently quite elated by the performance, when the piece finally went off.

EAGLES.—A number of eagles have recently been shot in various parts of Pennsylvania. One shot by John Hadman, in North Coventry, Chester county, had carried off bodily a large lamb and returned the following day after another. When his wing was broken by a shot he fell and was seized by a dog, but he forced his talons entirely around one of the dog's ribs, causing him to howl terribly. The eagle was then killed with clubs. Another, a bald eagle, was killed near Landis Valley, Lancaster county, which measured seven feet three inches from tip to tip of wings. When eagles take to carrying off lambs and young babies, they must of course be killed; but in a few years the typical American bird will be as extinct as the great auk or the dodo.

CHINESE TELESCOPE FISH AND HAIRY TORTOISE.—Mr. Henry Lee, writing to *Land and Water*, says that several notable living curiosities have recently been brought to the Brighton Aquarium. Chief among them were ten individuals of the "telescope fish," just arrived from China, and which are so called from their prominent eyes protruding considerably from each side of the head. The Chinese name of this fish is "Long-tsing-ya." Bloch makes of it a distinct species, which he calls *Cyprinus macrophthalmus*, but it is merely a monstrosity—though a very remarkable one—of the common gold carp (*Carrasius auratus*), and has been cultivated by continuous selection by the Chinese, with the wonderful art they display in breeding these domesticated pets, until the progeny is so disguised that the original form is almost lost. Regarded from the front, it appears to have a broad forehead, large and projecting eyes, and compressed under lip; a countenance, in fact, which reminds one at once of a half strangled pug dog. Mr. Bartlett, of the Zoological Gardens, who many years since had some of them in his possession, compares the skull of the Chinese in breeding and perpetuating these deformities in fish with that of the Chinese in producing, by similar selection, pet dogs with very short noses and large projecting eyes. Goldfish were first reared in China, in A. D. 960. In the year 1129 they abounded, and since 1548 there has been produced at Hang-chow a variety called the "fire fish," from its intensely red color. It is universally admired, and there is not a household where it is not cultivated, in rivalry as to its color, and as a source of profit. Several artificially produced varieties of the goldfish are preserved in the British Museum. Some have the vertebral column deformed, and are hump-backed; in others, the dorsal fin is reduced in size, or to a serrated ray, or is entirely absent. Others again have the caudal fin tri-lobed, or four-lobed. In the specimens just received at Brighton the caudal fin has three lobes, and is elongated in an extraordinary manner. One of them is of the usual bright golden color, two are perfectly white, five gold and white, the other two are of the blackish bronze hue common to the young of the ordinary goldfish. They average about three inches in length.

Mr. John Mesney, of the Imperial Customs, Hankow,

recently arrived from China, has presented to the Aquarium a little tortoise covered with a singular growth on the shell three or four inches long, which he believed to be hair. This erroneous belief is doubtless fostered by the Chinese, who induce Europeans to purchase, as great curiosities, their "hairy tortoises," as some rogues in England sell painted canaries. The so-called "hair" is a filamentous alga, or water weed, which grows on the back of the animal in the pond or tank in which it is kept exposed to the light. The microscope soon showed the character of the filament growth.

We have examined several specimens of the so-called hairy tortoise, and know of no more amusing pet for the aquarium. They are extremely rare, however, even in China. Mr. Edward Cunningham, of Boston, we believe, once brought some to this country. The Japanese produce the peculiar malformation in the upper jaws of their dogs, by breaking their bones when they are puppies.

BLACK COCKATOOS.—The London Zoological Gardens have recently acquired specimens of the great black cockatoo (*Alucroptera albertina*) of New Guinea and the adjacent islands. The entire plumage is slaty black, powdered with the white excretion from the skin that is so abundant in cockatoos, pigeons, and some other birds. The bare, skinny cheeks are of a blood-red color, varying in intensity with the health and condition of the bird. The bill is of immense size and strength; the head very large, possessed of powerful muscles to wield the jaws, and covered with a feathered crest. Than this singular bird perhaps no living animal offers a more striking example of the exact relation that always exists between the structure of an animal and its habits. It is evident that the form of its extraordinary bill alone enables it to live upon a kernel that cannot be obtained by any other bird.

Its favorite food in its native state consists of the kernel of the canary nut, which grows on a lofty forest tree abundant in the islands where the birds are found. These nuts are so excessively hard that it requires a very heavy hammer to break them; but they are readily opened by the bird, which, taking one in its bill and holding it against the notch in the narrow upper mandible by means of the singular, horny-tipped cylindrical tongue, cuts a notch in it by sawing the cutting front edge of the lower mandible from side to side. Thus done, it is enabled to break off a small piece of the hard shell by a strong bite, and then, with the long tip of the upper mandible, it picks out the kernel piecemeal. The tongue itself is very singular, being a bright red cylinder with a horny black tip, and having two roots diverging to each side of the lower jaw. The appearance of the bird is remarkable.

AUSTRALIAN VENOMOUS SNAKES.—A long experience of the effect and cure of snake bites in Australia (the country most infected with poisonous snakes) shows that, in all cases of poisoning by the snakes of that country, injected ammonia affords a perfect cure. The large blood vessel immediately above the bite should be opened and the ammonia forced in. I know an immense number of instances in which ammonia has effected apparently impossible cures. But this may not hold good of the snakes of other lands. It would be difficult to say that all snake poisons are the same substances, or have the identical effects upon the system, and, therefore, it cannot be said that the same substance is a remedy in cases so distinct. The poison of the carpet snake may yield to a cure that would be powerless against that of the terrible *Ophiophagus elaps*. It is certain that the poison of the Australian snakes is less powerful than the Asiatic ones, but they make up an equality by their number. So thickly are they spread over the southern part of the continent that the large sheep farmers there employ natives to destroy them, giving so much a head. In killing them they should be approached sideways and smartly hit with a stick on their back. This is easily broken, and then they are powerless. If they are approached from behind they can rise and bite you as easily as in front. But unless its young are attacked or unless its enemy stands between it and its hole, these snakes seldom attack man.

—The first gull of the season appeared in New York Harbor on Oct. 28th.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, }
NEW YORK, Oct. 31st, 1875. }

Animals received at Central Park Menagerie for the week ending October 30th, 1875:—

One Virginia Deer, *Capreolus Virginianus*. Presented by Miss Lesher.
One White-tailed Porcupine, *Erethizon dorsatus*. Presented by Master Harold H. Miller.

One Hedge Hog, *Erinaceus europaeus*. Presented by Mrs. Katarine Rakock.

One Canary Bird, *Serinus canarius*. Presented by Mrs. John D. Savage.

Woodland, Farm and Garden.

MILITARY GARDENING.—The *London Gardener's Chronicle* refers to the introduction of gardening as one of the pastimes provided for the British soldier in India. Lord Napier, in reporting the results of the experiments of the last year in Bengal, says the soldiers are taking increased interest in the matter, and the regimental gardens not only supply considerable quantities of vegetables to the troops, but also afford healthful recreation for the soldiers, and are attractive places of resort. It is a diversion which deserves encouragement, and we shall be glad to hear that our friends on the outposts are seasoning their rations and adorning their quarters with the products of their own vegetable and flower gardens.

PLANTING BULBS.—Readers of *FOREST AND STREAM* have each year had seasonable hints on the proper care of bulbous plants. The beds should now be prepared and properly enriched with leaf mould or well-rotted stable manure, preserving the lightness and tilth of the soil by

the intermixture of sand. A heavy damp soil is unsuited to bulbs of any kind. A writer in the *New England Farmer* gives the following practical directions for securing a beautiful floral display in the early Spring:—

"Plant large sized hyacinths and tulips from three to four inches in depth, smaller ones at two inches. Crocuses, from one to two inches, according to their size. After planting the bulbs, cover over the beds with dried leaves or loose straw to the depth of three or four inches, and place pieces of board over it to prevent the covering from blowing away. Early in the Spring, take off the leaves or straw, and as soon as the bulbs appear, rake off, with great care, all the debris which may remain upon the beds. There are no flowers which possess more brilliant hues than those comprised in the bulbous tribe, and none which give so gay an air to the garden beds early in the season. Sometimes long before the snow has left us, their tightly shrouded crowns will appear and delight their owner by the first signs of vegetation which the garden displays.

Bulbs of all kinds are now offered by the florists and seedsmen at quite low rates. Those which possess high-sounding names, to be sure, are high-priced, but a dozen unnamed hyacinths or tulips will often give you quite as much satisfaction as the costly ones, and their price is trifling when compared with their rare loveliness. A bed of tulips and hyacinths in early Spring is a possession often coveted by one's neighbors, and now is the time to secure it. Clusters of crocuses and snowdrops, either scattered over the sward, or planted in clusters, among other bulbs, are also a lovely adornment when the face of nature is brown and sear.

COAL ASHES AS A FERTILIZER.—According to the accepted chemical tests of the day we believe it is usually claimed that coal ashes contain no fertilizing elements. An Illinois farmer, writing to the *Country Gentleman* says he has found them a valuable addition to the soil of the garden, and that their influence for good is particularly felt on tomatoes, potatoes, cabbages, and vegetables generally. Our own observation in the cold clay soil of Westchester county confirms the opinion of this Western farmer. The largest corn we saw during the last season was grown on a small plot where the coal ashes had been deposited, and were very freely incorporated in the soil. The writer above referred to adds:—

"In volume five of the *Maison Rustique du XIX Siècle*, printed thirty years ago, I find in the chapter entitled '*Coup d'œil sur le Jardinage en Europe*,' the following paragraph: We encounter on the banks and borders of canals and rivers many boats loaded with coal ashes, which come from Belgium, Antwerp, Ghent, Brussels, and a large number of other cities and towns which send to Holland the excess of their coal ashes, of which a part only is used in the agriculture and horticulture of Belgium. This very exciting fertilizer (*amendment*), when carefully rid of the half-vitrified scorias with which it is always mixed, is, for the gardeners of Holland, a powerful means of forcing active vegetation."

The soil of Holland is very sandy, if not all sand, the earth so saturated with moisture, and the climate so humid, that the use of the watering pot is unknown. Coal ashes have been found of great value in moist and cool situations with sand, and in dry and hot ones without it, and the benefit conferred by them in two such opposite conditions of soil and climate would seem to warrant a trial of them in almost any and all intermediate places. The cost of coal consumed in the United States and the quantity of ashes produced, are almost beyond calculation in sum and quantity, and if agriculture and horticulture find in the latter a powerful fertilizer it will practically result in cheapening food and fuel both.

—At the Georgia State Fair, held recently at Macon, a valuable prize was offered for the fastest walking horse. There were six competitors, a colt belonging to J. E. Lewis of South Carolina, being the winner. This is a feature which should be adopted by all agricultural exhibitions, and is not unworthy of encouragement by turf associations. A fast walker, for the practical uses of the farm or the road, is quite as valuable as a fast trotter.

—The epizootic has been very prevalent this Fall, but the experience gained in 1872 in its preventive and cure has greatly mitigated its severity. It is pretty clearly settled by competent medical authority that epizootic is simply influenza, which, if the animal is judiciously treated is as readily relieved as an ordinary cold. Horses that are properly fed and cared for seldom suffer seriously from it. The best English and American authorities agree that a mixed diet and cleanly and well ventilated stables—in short, such regimen and care as a proper regard for the comfort of the horse require, secure him against all danger from epizootic.

—The Department of Agriculture of the State of Georgia estimate the average cost of raising a bushel of corn in that State at fifty-eight cents; of oats, twenty-nine cents; of cotton, eleven cents. The average cost of raising a horse or mule to three years old is reported at \$60, the number annually foaled is reported at 6,033. There were \$1,100,000 expended this year in buying horses and mules brought into the State.

OUR WOOL PRODUCTION.—The Bulletin of the National Association of Wool Manufacturers publishes a paper by Mr. George Geddes on "Wool Growing in the United States," from which it appears that since 1860 the product has trebled, while it is an admitted fact that our growers have the best variety of sheep for the production of wool for clothing purposes. While the industry has developed to remarkable extent the possibilities before it are great. The plains of the trans-Mississippi States and of the Pacific coast afford a fine field for it, and there exists the opportunity for the production of fine wools, equal to those of Australia and New Zealand, and superior to those of South America. Mr. Geddes thinks that these plains will eventually become the source of the world's supply of fine wools.

PROFIT FROM LOW-PRICED GRAPES.—It is probable that the time for "fancy" prices and enormous profits in grape growing has gone by. The culture has extended so rapidly that we shall never again see entire crops marketed at fifteen to twenty cents per pound, and the fortunate grower reap a profit of \$1,200 to \$1,500 per acre. The grape is so easily grown that such prices cannot be maintained, and lovers of this fruit may reasonably expect a supply at rates low enough for the consumer, but giving a fair profit to the producer. The great secret of success is in selecting varieties that are early enough to always ripen a crop and are always hardy enough to withstand our severe Winter. Aside from our old stand-by, the Concord, we can safely recommend the Salem, Delaware and Rogers 43 and 4. Any one of these can be produced by the acre, at a cost not exceeding two cents per pound, and sold and marketed at good profit at five cents. A friend of ours, residing near Rochester, sold and marketed Isabella grapes for four cents per pound, and cleared considerably more than \$100 per acre over all expense of cultivation and interest on value of the land. The only difficulty he experienced was that occasionally his crop would not ripen, and had to be sold at about two cents per pound for making vinegar. Even then it paid expenses and as much profit as most farm crops. With varieties like Salem and others we have named above, there need be no difficulty in ripening a crop every year.—*Babylon Signal*.

—The art of baking an apple well, is to bake it in a moderate heat without breaking the skin. It is confining the steam—holding the moisture—while baking, that reduces the apple to the proper delicious consistency. Different apples—according to the thickness of the skin, require a longer or shorter time to bake, but three to five hours are about the extremes, sweet apples requiring more time than sour ones.

—Some idea of the magnitude of the trapping interest may be gained from the sales of traps annually by the Oneida Community, who make a specialty of selling traps as well as of using them. Their sales of traps, in 1874, of all sizes, from those large enough for the grizzlies of the Rocky Mountains, down to the most diminutive rat traps, amounted to \$92,431.23.

—The rapid spread of the foot and mouth disease in Great Britain, and the ravages committed can be somewhat appreciated by considering the number of cases. For the quarter ending October 16th, these numbered as follows:—In Somersetshire, 83,000; in Cheshire, 50,000; in Dorsetshire, 48,000; in Gloucestershire, 44,000; in Oxfordshire, 39,000; in Warwickshire, 33,000; in Norfolk, 31,000; in Cumberland, 32,000. Throughout England and Wales there were for the same time over 500,000 cases. The money damage is estimated at \$1,000,000.

—The farmers of Linn, Hardin, Grundy and Marshall counties (Iowa) are building a railroad. It is called the Farmers' Union Railroad. Its starting point is Lisbon. Twenty miles are graded. The rails are of Michigan maple, which will be used until the road earns the iron. It is of the narrow gauge, and will cost, ready for business, a little over \$4,000. Farmers along the line have laid out towns at the stations, and donated lots to the company which will sell for enough to pay for the road.

—The Louisiana orange crop this year is larger than that of any previous year.

The Kennel.

DOGS IN ENGLAND AND THE NOTTINGHAM DOG SHOW.

The following letter from our valued correspondent, "Viatores," will be read with pleasure by all who are interested in the importation of fine dogs from England:—

NORTHAMPTON, England, Oct. 4, 1875.

EDITOR *FOREST AND STREAM*:—

On September 30th we visited Mr. Wm. Wardlaw Reid's kennel at Peckham Rye, six miles from London. Owing to failing eyesight, Mr. Reid sold most of his fine kennel at Aldrich's last July, among which were his celebrated Laverack setters Sam, and Jess, full sister to Sam. Although Mr. Reid has given up shooting to any great extent and disposed of most of his kennel, he still has the wish that is in every true sportsman's heart, viz., that of owning one or two brace of good dogs, and if he has parted with Sam he has some young ones of his get as well as a few fine brood bitches. Mr. R. goes in for the Laveracks, and has bred his three-quarter and full-blooded bitches of that strain to such dogs as Mr. Pilkington's Dash, Mr. Laverack's Blue Prince, by Pride of the Border, and his own Sam. He does not object to a slight outcross of good setter blood, and when he cannot get them pure Laverack, likes them at least three-quarters. He still keeps a few dogs in training, and as these were in the country, and we did not see them, we can only speak of Clytie, black and white Laverack bitch, two years and three months old, by Pilkington's Dash, out of Mr. Reid's Jess; Jess full sister to Sam. She is a very handsome bitch, and her orange and white brother Brathay is about as handsome a setter as we ever saw; he was sold at auction last July for sixteen guineas, which was "dog cheap." Flash, an orange and white bitch, three years and a half old, by Mr. Brierley's Fred, out of Mr. Reid's Jess, is a three quarters bred Laverack, and very fine looking. This bitch was bid in at the sale at Aldrich's for ten guineas, Mr. R. thinking she is worth much more, if only to use her to breed from. If she had been in a little better condition to stand a long sea voyage we would have purchased her for a friend, but as she had not fully recovered from weaning a large litter of puppies, we were afraid to risk her on the high seas. However, there is a possibility of her seeing your country before Spring.

We next saw a brace of black and white ticked, or more correctly speaking, blue dog pups four months old, by Mr. Laverack's Blue Prince, out of Mr. Reid's Flirt; Flirt by Mr. Reid's Sam, out of May, which latter he sold to Mr. Henbelle, of Philadelphia, for fifty guineas. These puppies were seven eighths Laverack, and were very fine looking. A brace of black, white and tan bitch puppies, same age as the above, were next shown. They were by Mr. Reid's Sam, out of his Joy. Joy is of the celebrated Wemyss Castle breed. For looks we liked these as well as any young dogs we have seen in England. Mr. Reid has a famous breed of Dandy Dinmots. The puppies we saw were very handsome, and his stock dog Nip is a winner at Crystal Palace and other shows.

NOTTINGHAM DOG SHOW, OCT. 2, 4, 5, AND 6.—This show was very fine in every respect but one, and that was the one we went so far to see, viz., the pointer and setter entries. Of the pointers there were eighteen entries of dogs and bitches, large and small classes, but with the exception of three or four they were a poor lot, and we could have given them ten points and a beating had they been entered in any dog show in America, averaging the points in each lot. The bitches were better than the dogs, though there wasn't one that could have held her own against Mr. Waddell's old lemon and white Dream.

The setters were not much better in way of entries, and in the two classes for Irish reds there were but four shown, and poor ones at that.

Both the winners were without pedigrees, and one of them was very bright in color, with much white, and the only thing we saw that could have induced the judges to give him a prize was his great size. A fifteen months old dog was by long odds the best looking:

The black and tan setters were better. There were thirteen in all, and all of them were remarkably good. We have never seen a better lot together, and it must have given the judges considerable trouble to award the prizes. We think, however, they sacrificed one or two points in favor of color, for there was a dog that to our eye was perfect in everything except his tan markings, which were a trifle too dark.

In the English class there were only nine entered, and some of them were sorry looking enough. Mr. W. F. Bayly's were all good. He showed two first rate Laveracks, and his orange and white dog Dash, by Grouse, out of Lard, took first prize. This dog is a very fine one, but terribly "throaty." His Pert, a black and white ticked bitch with a very Laverack look, took first in her class. Zephyr, a white dog with black and tan markings, was another good one. This dog was entered without a pedigree, and for sale at \$20. He was not a Laverack, but in looks was like "Mohawk's" Field Trial bitch Kirby.

In the spaniel classes there was a fair show, there being thirty-eight in all, which included three Irish water spaniels and five water ones other Irish. Some of the clumbers were beautiful, and are the dogs we should breed in America for ruffed grouse, woodcock, and all covert shooting. We never remember of seeing a full blooded dog of that breed at home, but there are some good spaniels of Norfolk and Sussex blood bred there, and a New Jersey breeder has, we believe, a fine strain of black and tan cockers. Strange to say, none of that color were at this show. We believe that Mr. Jenkins, of Baltimore, has the only pure clumbers in America. We saw some fine dachshunds, and the show of fox terriers was wonderful, there being no less than 130 of those useful and beautiful little creatures.

In class No. 20, for other hounds, there was but one entry, a large, wiry-coated dog, and we should think this breed would be a useful animal in America to run foxes on the snow in some of the Northern States. Baring the setter and fox hound classes the show was a great success. There being 640 dogs entered in the different classes. As many sportsmen with their setters are shooting on the moors, and that cub hunting has just commenced, it is not to be wondered at that the classes for these dogs were not better filled—in fact, in that for fox hounds there was not a single entry.

We have yet to see the Russian setter that so much has been written about, though we have seen a dog that answers the description of that breed, and that is the griffon. These dogs we first saw in Paris at the Jardin d'Acclimatation, and a half bred one, the other half being setter, was very like the picture "Stonehenge" gives in his book on "The Dog" of a "Russian setter with English cross." The griffon is much used on the Continent for sporting purposes, being very staid, staunch, requiring but little breaking, and, as a general thing, is a good retriever. They are usually of a dirty liver color, though we have seen some with white marks, as well as one or two that were tawny gray, or rather dull red-black, with dirty white underneath. They are as shaggy as a poodle, their size being that of a good-sized setter, the half breeds, when crossed with setter or fox hound, being somewhat larger. These dogs are used sometimes to cross with the fox hound, the issue making a large and wiry-haired animal, not unlike the otter hound. They are also crossed with the French beagles, and, we are told, make excellent dogs for driving rabbits to the gun. Yours truly, V.L.A.T.O.R.E.S.

IMPORTED SETTERS AND POINTERS.

EDITOR FOREST AND STREAM:—

Setters and pointers broken abroad and brought to this country have proved inferior as a rule to our best breeds, when tested with them at once in the field, as well as against animals that were imported when young and trained on American game. The English greatly surpass us in the breeding of fine stock of every description, and there is no doubt that the blood imported to this country in the past two or three years has improved, and will further greatly benefit our stock of American field dogs; but I am convinced that foreign setters and pointers, broken on their native birds, cannot compete with our own trained dogs on our species of game, owing to the difference in the cover in which they would be hunted and the dissimilarity of the game of the two countries.

In answer to a letter, Mr. Ed. Laverack, who is doubtless the best breeder of setters living, expresses himself as being of the same opinion, and I have taken the liberty of quoting that portion of his favor to me: "I consider you are quite right in procuring a young dog, from nine to twelve months old, and to break him on American ground and the game found there. I feel certain that American dogs, accustomed to your game and the nature of your country and the variety of scrub or ground, would beat our English dogs until they were accustomed to hunt and find your different species of game. I have ever found that all dogs require to be accustomed to the nature of ground and game. An English dog, accustomed to range wide and fast on Scotch and English moors, would be too fast and not range close enough for quail, snipe, etc., and, unless used to cover or brush, would have to be educated, that is, used to the ground and game. Nevertheless, well bred English dogs, when broken at your game in your country, would quite equal, if not surpass, American dogs. The great value of my pure breed is, they never knock up, and can last daily for weeks, and are good on all kinds of game when accustomed to it." Again, in a second letter to me, Mr. Laverack reiterates his opinion: "I quite agree with you as to having the young dogs broken on your American game."

Thus far all importation of English dogs have been those of broken, and I may say aged, setters and pointers, which will be better suited for stock purposes than for the field. I have given these extracts from Mr. Laverack's letters to the readers of FOREST AND STREAM, trusting they may be valuable to them in importing animals from abroad. HOMO.

BRITTANY POINTERS.

BOSTON, Oct. 30, 1875.

EDITOR FOREST AND STREAM:—

The little extract from "Wild Sports in Brittany," which appeared in your paper of October 28th, attracted my attention at once, recalling, as it did, a conversation long since with a fine old sportsman now passed on. A gentleman of elegant leisure and a collieomaniac, his experience in field sports covered nearly every part of the globe. I recollect well (being, as they say, a dog man,) his praises of the Brittany pointer as the very best dog for general shooting within his ken—of fine nose, staunch, enduring, facing the roughest cover, and withal a capital water dog. Are not these dogs the very fel ows for American sportsmen, and worthy the attention of our importers and breeders? How can we get the genuine simon pure, and of whom? Can your Leipsic friend, Fr. von Invernois, give us any information, or possibly Col. Waring may have heard something of them, as his charming "Farmers' Vacation" papers in Scribner's indicate his late travels in their region? I have no personal knowledge that the gallant Colonel would even look at a dog, but a lover of good horses and fine cattle usually has an eye for a good dog, and I hope he may have met some sportsmen there who can put us in the right track.

UNDER GRIP.

[Fr. von Invernois may be able to furnish us with information regarding Brittany pointers, or some of our English or French correspondents may confer the same favor. If Col. Waring has as good an eye for a dog as he has for a cow—vide his capital description of the cattle on the Island of Jersey—his observations would be both valuable and interesting. We agree with our correspondent that a tough, rough and ready dog of the kind described would be admirably adapted for this country.—ED.]

ARECA NUT AS A CURE FOR WORMS.—A correspondent writes us from Fort Scott, Kan., under date of October 25th, as follows:—

"I administered one of the areca nut powders (thirty grains) to my Gordon setter Billy to-day noon, and in two hours he passed several pieces of a well-defined tape worm. Dr. O. A. Ingalls submitted it to microscopic examination and discovered both the head and tail. The Doctor was greatly surprised at the quick action of the powder, and started off immediately to find some man with tape worms so he could dope him with areca nut. S."

ANOTHER CURE FOR WORMS.—The remedy mentioned below is well worth a trial, but we have found the areca nut to be so successful that we now prescribe it in preference to anything else:—

BRIGHTON, Penn., October 26th, 1875.

EDITOR FOREST AND STREAM:—

Seeing a great many inquiries in your valuable paper asking a cure for worms in dogs, I would give you a very simple remedy which I have used with success, namely, common washing soap dissolved in their food, or cut in small cakes and put in a piece of meat. S. S.

KENNEL PRODUCE.—At the kennel of A. C. Waddell, Esq., at Newton, N. J., Fanny, one of the finest pointer bitches in the country, whelped on the 29th ult. The litter comprised seven puppies, viz., five dogs and two gyps, sired by old Phil, who is too well known to require further mention.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

Black Bass, *micropterus salmoides*, *micropterus nigricans*.
Striped Bass *Roccus lineatus*. Bluefish, *temnodon solitator*.

[Under the head of "Game and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

FISH IN MARKET.—A bountiful supply of fish and prices kept within moderation is a blessing to the people. Such is the condition which we have to report this week, and although the variety is not so great as before the close season for trout commenced and the Spanish mackerel left for Florida, still the benches present a fine appearance. The cousins German to the last named fish, the common mackerel, appeared in immense quantities off Newport harbor last week; the catch is estimated at three quarters of a million fish. The quality is called No. 1. and very fat. Some found their way to this market, but the larger proportion were salted; the price is from 10 to 20 cents each, according to size. Striped bass are being caught in Rhode Island; price 15 to 20 cents. Smelts (green) are still coming from Maine, and in larger quantities, the price having fallen to 20 cents. It is rather remarkable that bluefish should linger so long on our coast, and their presence may possibly foretell a mild Winter; they have been caught recently in immense numbers between Barnegat and Cape May; price 12 to 15 cents. Salmon, (frozen), bring 50 cents per pound; weakfish, very few in numbers and caught in nets in this vicinity, 15 cents; white perch, 18 cents; Spanish mackerel, (frozen), 50 cents; frost fish, (tomcods), 8 cents; halibut, 18 cents; haddock, 8 cents; codfish, 8 to 10 cents; blackfish, 8 cents; flounders, 10 cents; eels, 12 to 18 cents; lobsters, from the eastward, 10 cents; sheepshead, (frozen), 25 cents. Fresh sheepshead, however, are being also received, coming from New Orleans in refrigerators on the steamers. Red snappers are brought in the same way, and sell for 20 cents per pound. Scallops are worth \$1.25 per gallon. Soft clams, 40 to 60 cents per 100; whitefish, 18 cents; salmon trout, 20 cents; pompano, (frozen), \$1. per pound; pickerel, 15 cents; yellow perch, 12 cents; hard shell crabs, 50 cents per dozen; frog's legs, from Canada, 50 cents per pound. Green turtle, from Key West, 20 cents per pound; terrapin, \$12. per dozen; the latter are brought from Norfolk and Savannah.

—Our correspondent, Edgerton Browne, of Ninety-second street, East River, who is well known to our better class of anglers, and thoroughly informed on all fishing matters in the vicinity of Hell Gate, states that there has been very fine bass fishing in the Gate for the last few days. Mr. Dorrity caught five fish weighing 40½ pounds; Mr. Galway four, 17 pounds; Mr. Davis four, 15 pounds; Mr. Heine three, 15 pounds; Mr. Clark one, 7 pounds, and himself one, 16½ pounds, and one five pounds. Mr. Foley caught a good fish; weight not given.

—Striped bass fishing is said to be good about Watch Hill and Montauk.

—Gil Ward, one of the Ward brothers, noted as a famous oarsman, recently captured, at Cornwall, N. Y., a shark some three feet in length, the first ever captured in the Hudson so far north. The fish lay upon the surface, evidently affected by the fresh water, and was dispatched with an oar.

—Dr. Lavvie, in charge of the Fisheries Protection Service in the Gulf of St. Lawrence, informs the Fisheries Department at Ottawa, that, contrary to the experiences of previous years, great abundance of codfish prevailed at the Magdalen Islands, and herring and mackerel were struck in large quantities on the 13th ult. Eighteen American vessels were anchored in Pleasant Bay, and about a hundred vessels were taking mackerel among the islands. Fishing from vessels is not as good as the inshore fishing. The American schooners averaged about 250 barrels each, which represents from \$200,000 to \$250,000.

LARGE SCHOOL OF MACKEREL.—The fleet of steamers engaged in Fall fishing for menhaden (mossbunkers) for sup-

plying the oil and fertilizing factories, were somewhat astonished when off Newport on Thursday last at finding themselves in an immense school of mackerel. The *Newport News* says:—

"The fabulous amount of mackerel secured yesterday off the cliffs and beach is the principal topic of conversation. The immense amount of about 125,000 mackerel was seined yesterday in our waters by sixteen steamers and a number of smaller fishing craft. The fish average 150 to the barrel. Peter Lee shipped 13,500 to New York by last night's steamer, which was delayed nearly an hour by taking them on board, and 12,000 to Boston. The whole catch was worth, in round numbers, \$6,000. Men were at work all night getting the fish ready for the Providence and Boston markets. All yesterday the cliffs were lined with ladies and gentlemen, catching mackerel by the slower but more interesting method of the hook and line. As many as fifty people were fishing from the forty stens, and people had to take care not to get on other people's hooks instead of their own."

Mackerel have also appeared in large quantities in Fisher's Island Sound, where at least a hundred boats are engaged in the fishery. Last year the mackerel fishing was very poor, but this season it has been exceptionally good.

CONNECTICUT—*New Haven*, Oct. 27th.—Blackfish have been very abundant for the last two weeks. For the first time in many years hake have come into this harbor, and last week they were in the Sound in large numbers—handsome fish, weighing from one to three pounds. On Friday a party fishing on "New Reef," off Branford, caught a large number, the first of the season. But the best day's sport yet recorded was on Saturday, when Dr. W. H. Thomson, of New Haven; M. S. Crosby, of Waterbury; and J. C. Kinney, of Hartford, in company with Eli Hills and Capt. Ward, with the yacht Niagara, caught in two hours a bushel and a half of hake by actual measurement.—*Courant*.

—A muscalonge was caught at Cromwell, Conn., one day last week. This fish is very rarely found in any waters but the St. Lawrence and the great lakes.

THE FISHERIES.—There have been 82 arrivals of the fleet the past week, as follows: 1 from off shore, mackereling, 19 from the Banks, 13 from Georges, and 9 from the Bay of St. Lawrence. The receipts are—1,355,000 lbs. of Bank codfish; 259,000 lbs. Georges codfish; 432,000 lbs. of Bank halibut; 106,000 lbs. Georges halibut; 1,700 barrels Bay mackerel, and 3,075 barrels shore mackerel. Many of the shore mackerel catchers are about hauling up.—*Cape Ann Advertiser*, Oct. 29th.

SEA AND BAY FISHING IN CALIFORNIA—WONDERS OF THE DEEP.

IT is not the mere hooking of fish that brings delight, although to a thorough angler this and the playing of them in their game struggles to escape and elude the fisherman's skill, constitute a large portion of the sport, but either the quiet, pleasing or exciting scenery, as the case may be, is a charm. The free wind beating upon the cheeks, the glad waters sparkling and singing in the sunshine, the dancing waves, the rugged and romantic rocks, the exhilarating sail or row; if on a river or lake, the shade of trees, the song of the birds, and here in California even in our mild Winter season, just after the welcome rains, the verdure of the newly Spring grass and budding of some of the small wild flowers, are some of the most delightful sources of enjoyment. At the time when you have rigid Winter at the East we have plenty of enjoyable fishing in San Francisco Bay, and in the Pacific Ocean, especially in the bay in the Winter months, we have had for these two years good bait fishing for young salmon or grilse, besides other kinds of angling which I will presently give you some idea of.

Speaking of scenery while fishing, there are but few anglers who do not love the poetry of nature during their sport—they indeed live in the midst of it, and if they read Izaak Walton's great and fascinating work, they must love poetry for his sake. Here there is the poetry of angling—in the quiet enjoyment of beautiful natural scenes and the delightful repose it produces for the contemplative mind. The most pleasing passages in good old Izaak's book are those in which he leaves his rod to angle for itself, and for the fishes to hook themselves if they will, throws himself down under the shadow of the trees on the grass, and converses of what he sees around him. "There was a good and contented and gentle spirit," as a good writer declares, "in the interesting old man, a soul at peace with itself, a mind ever at ease," and these form the very life of his pages, and make them ever fresh and young. In one part of the "Complete Angler," his great work, it is mentioned that he and his companion, Venator, seek shelter while a shower of rain falls; they watched the drops from the leaves of the trees dotting the stream, and a rainbow appeared, which caused the old angler to repeat some beautiful lines on the rainbow, by Vaughn, beginning with:—

"Still young and fine! but what is still in view
We slight as old and soiled, though fresh and new;
How bright wert thou when the first ravished eye
Thy vivid colored arch did first descry;
Which, with intente looks, watch'd every hour
For thy new light, and trembled at each shower."

This reminds me that one day last April, while fishing for tom-cods I beheld after one of our mild Spring-like showers over the bay, one of those glorious bows of the most brilliant and distinct colors, spanning the whole heavens, without any other object to interfere with our ravished vision, and, on account of its strong and dazzlingly bright colors, forming a double arch.

But to resume the subject of fishing—of all our out-door sports, I think, angling is the pleasantest, (of course this is merely an individual opinion); but this may so prove to me because I have for so many years (being now seventy-three) most earnestly entered into this amusement, and acquired of course, by continued observation and practice, a tolerable skill and successful experience in it. If one is

weary there is generally a pleasant bank to sit down upon; the clear ocean, bay, lake or river to look over, the fresh breeze blowing about one's face; the graceful flight of the sea gulls and other water fowl, as well as land birds, to watch and observe; in short, nearly all the attractive luxuries to be found together that throw such a charm around open-air amusements.

But now let me cease from sentiment and romance, and begin to talk a little about the fish and other matters connected with this recreation here, and something of their natural history—the latter a study which is at least interesting to some minds.

One of the most common of the fish on our coast, and indeed on many shores in most parts of the world, are a species of the *percidæ*, both the sea and river perch. The sea perch, by some here called porgies or surf fish, are very plentiful. On the coast of New England they are termed cunners or nippers—the latter name is obviously derived from their nipping bite. In New York, I believe, the cunner is termed the "bergall," a Dutch name, and is known also by its Indian name, "chogset." At Boston it is described as the "blue perch." Their general color is black, mixed with brown, with faint transverse bars of an uncertain dusky hue. The largest exhibit a light orange tint throughout the whole body, with the head and gill-covers of a chocolate color, mixed with light blue, and with blue fins and general bronze coloring in some lights. Like all the perch tribe, on the back is a stiff fin with spines. They are caught most plentifully near rocky shores; they take almost any bait. It is a tolerably good and sweet pan fish, but they should be eaten as fresh as possible, as their flesh is very soft.

The perch, which inhabit chiefly the rivers, abound much, also, in some parts of our bay; they are white with blotches of a dirty black on their sides. The quality of their flesh is much better than that of the sea perch. They are found but in small numbers on the ocean coast; they run about two pounds in weight. We have most years an abundance of smelts in our bay and all along the southern coast, especially in the Summer months. They are considered generally to belong to the salmon family. Their average length is ten inches, although I have seen specimens occasionally as long as eighteen inches and weighing two pounds. They are angled for from the wharves with long rods, the bait or hooks about one to two feet from the surface of the water. They are rather dry in their quality of meat, but are much liked by some persons as a breakfast fish. They come up the bay in immense schools in Summer, and are very voracious and afford great amusement to women and children anglers from the piers.

We have a fish called the rock-cod or rock-fish—another species of the perch family. There is a numerous variety of them of several colors—brown, black, and bright red. They are taken in plenty wherever the bottom is rocky. They weigh from half a pound to twenty or thirty pounds. You fish as deeply as possible for them, and they are almost omnivorous in their appetites, taking all sorts of worms, flesh and small fish. Their meat is white, and good in flavor and firmness. At Fort Point, near the Golden Gate, where I sometimes fish, there is a large sea-wall, at the end of which the rolling waves from the Pacific break with great force. In the eddy formed by these billows, the bottom of which is very rocky, I often catch some fine sea trout and bass. The first is a fish of a dark greenish black color, spotted on its sides with red. Its form is rather long, like the trout family. They are very game and lively, and are a good fish for the table. But the sea bass is much better. This fish is nearly as silvery as the salmon, which it much resembles. It is not plentiful in the bay, but is numerous in Monterey Bay, 200 miles south of this.

We have had for three years the rather small tom-cod in the bay, which is a great acquisition for the fishermen, both professional and amateur. It is one of the best in the market; its flesh is white, very tender, sweet and delicate. Most persons fish for it with hand lines, but I use a rod and take about as many with it as any one else.

Of course we have many more valuable fish than I have named. We have many oceanic wonders and curiosities, too, such as medusæ, sea-squalls, jelly fish, or sea nettles, (some of them a foot in diameter), star fish, painted shrimps, sea-balloons, spider crabs, and other marvels too numerous to mention.

E. J. HOOPER.

FIGHTING FOR AN EEL.—A fight between two eagles occurred at Masonboro Sound a few days ago. A large number of persons were at the different landings along the sound at the time, when their attention was attracted to the combatants by a piercing cry, often repeated at short intervals. The birds were each of the bald eagle species, and when first observed were about two hundred yards above the Banks channel.

One of the birds held pendant from his talons an enormous eel, which the other bird was endeavoring to gain possession of. The bird possessing the eel was taken at a great disadvantage, as it required the use of his talons to hold his prey, which left him but his beak with which to ward off the assaults of his foe. The attacking bird, realizing his advantage, swooped upon his enemy, tearing the feathers and flesh from the back and breast of his opponent. Long and fierce the struggle waged. Each of the birds was of enormous size, yet one of them, taken at so great a disadvantage, at last perceived that resistance was in vain, and, after one despairing wail, released its prey.

As the eel descended, and had nearly reached the water, the triumphant bird, with victorious cry, swooped upon it, and firmly closing it in his talons bore it way to the distant sand shoals. The struggle lasted about fifteen minutes.—*Wilmington Star.*

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HIGH WATER FOR THE WEEK.

Nov. 10.	8 40	5 25	4 40

MOHAWK AND DAUNTLESS.—In our last issue we could only summarize the result of the race between these yachts; there were many points involved which make it worthy of a more extended notice. The Mohawk is the largest centre-board yacht ever built; the Dauntless is one of the largest and finest specimens of a keel schooner ever constructed for pleasure purposes in this country. The race, therefore, was to be a test of keel vs. centre-board, and the results were directly opposed to those expected by yachtsmen, the conclusion of the race being so close as to leave the main question unsettled. It was anticipated that in going to windward the greater draught of the Dauntless would give her a better hold on the water, and that before the wind the huge centre-board of the Mohawk being mostly out of the water would so lessen the resistance as to give her the advantage in speed. On the contrary, however, the Mohawk proved the abler vessel in going to windward, and passing her antagonist, was the first to round the buoy. We think, however, that this result hardly decides the question of the superior ability of the centre-board vessel in going to windward. It was observed that the Dauntless labored heavily, and appeared to sail better on one tack than on the other, and that her mainmast set badly. It must also be remembered that the Dauntless has been out of commission for a year or more, and was only fitted out, and that somewhat hurriedly, for this race, whereas the Mohawk has had the benefit of a season's racing, and was in thorough order for the event. The Dauntless, also, on the run home, split her fore gaff, tearing the foretop-sail, and rendering that and the foresail almost valueless, and yet she fairly beat the Mohawk before the wind. It is to be regretted that the sailing directions were misunderstood by those on board the Mohawk, and that in finishing the race she did not pass the light ship "close aboard," as ordered. The finish would have been much more exciting, and not decided by an error. As for the advantages of a centre-board over a keel vessel when of the largest class we do not consider them sustained. In a very large yacht a few feet more or less of draught can make but little difference, and even if a little speed is gained the advantage is more than counteracted by the loss of cabin room. The liability to spring a leak in the trunk when in a heavy sea-way, or of accident to the centre-board itself, should be considered. Our first large centre-board schooners were built for the lumber trade, and to enable them to navigate the shallow waters of the Southern rivers. We remember an instance that occurred some years ago when one of these vessels was discovered at sea in an almost helpless condition. In crossing a bar her board had taken the bottom, and on the voyage had broken in two and become fastened athwartships, the iron band twisting but not breaking, and holding the broken part in this position, acting almost as an anchor, or at all events as a very respectable drag. For small yachts, where quickness in stays is an essential there can be no question as to the advantages of the centre-board.

THE DAUNTLESS AND RESOLUTE.—The last race of the season was finished on Thursday, and the years' yachting brought to a termination by the match between these two fine yachts. It was another trial also between keel and centre-board, although a leading wind both ways prevented the match from being more than a trial of speed between the two vessels, and no occasion offered for bringing out qualities which may be especially claimed for either mode of construction. The Dauntless, with the consent of Mr. Hatch, had taken on board several tons more of ballast, and there can be no question as to her advantage in point of fitness over her trim on the day of the race with the Mohawk. There was none of the dragging or unequal sailing which was so perceptible on the latter occasion, and she made the round trip of 220 miles in eighteen hours and a half, the quickest on record over this course.

The start was made from Stapleton, Staten Island, on Wednesday evening, the Dauntless crossing the imaginary line between the yacht Vindex and the club house at 5:27:10 and the Resolute at 5:35:33. The wind was from the west, blowing the eight knot breeze stipulated for in the agreement. As the darkness set in soon after the start the yachts remained invisible to each other until the conclusion of the race. From the reports of guests on board of each both yachts must have been sailing splendidly, the Dauntless logging from thirteen to fourteen knots per hour. Barnegat was abeam at 9:30, and as the Resolute reports the same bearings at 9:47, the yachts must have been very close together at this time. At 2:45 A. M. the Dauntless rounded the lightship on Five Fathom Bank, and the Resolute at 3:57 turned the same mark, having lost about an hour and ten minutes. The same breeze held on the homeward run, the Dauntless passing the winning point, the Sandy Hook Lightship, at 11:55:25. The Resolute was off Barnegat at 9:30 in the morning, and when off Long Branch, the Dauntless being seen beating up from the lightship, it was known that the race was lost, and the yacht was kept along the beach. The Dauntless anchored off Stapleton at 3:29:25, and the Resolute at 3:50, although had the latter rounded the lightship she would have been much later.

—The yacht Nautilus slipped her moorings in Newark Bay, near Bayonne, Wednesday morning. She was driven by the wind against the Newark Bay bridge with such violence that her bow was stove in, and she filled with water and sunk.

ROWING ON THE HARLEM.—The rain storm of Saturday interfered with what promised to be a very interesting race between Mr. Julien Kennedy of Yale College, winner of the single scull race at Saratoga last year, and Mr. Wilbur Bacon. The New York Rowing Club was to have held its annual regatta at the same time, and a portion of the programme was carried out. Messrs. Wm. G. Scott and Frank Ellison contested for the Leland medal, and the latter, the present holder, retains the trophy. A six-oared

gig race was also rowed by the following crews: W. R. S. Stewart, bow; T. R. Green, J. A. McKinn, J. T. Van Rensselaer, R. B. Harshorne, E. C. Cruger, stroke; C. Frothingham, coxswain, and J. O'S. Madan, bow; L. C. Ogden, Jr., Julien Kennedy, G. W. Wise, G. L. Rives, F. Appleton, stroke; E. A. Drake, coxswain. The first named were the winners. Other races were rowed, but no official time was taken on account of the rain.

ROWING IN WASHINGTON.—A four-oared shell race, three miles straightaway, between crews of the Nassau Club, of this city, and the Analostans, of Washington, was rowed on Thursday last on the Potomac. The race was the most closely contested of any ever rowed on this water, and was witnessed by thousands of enthusiastic spectators. The crews were composed as follows:—*Nassaus*—Stroke, John Gunster; No. 3, G. T. Floyd Jones; No. 2, Lindsey Watson; bow, Robert Reynolds. Average weight, 148½ pounds. *Analostan*—Stroke, O. L. Prescott; No. 3, E. Cumberland; No. 2, S. Burns; bow, C. A. Brown. Average weight, 155 pounds. On the word being given to go the Nassaus caught the water first and gained a slight lead. Their opponents, however, quickly drew even, and for two miles the boats were side by side, when the Nassaus drew ahead and took a lead, which, in spite of repeated spurts on the part of the Analostan crew, they maintained to the winning stakeboat. Time, for the Nassaus, 20m. 52s.; for the Analostans, 20m. 58s.

RIBBLESS BOATS.—Sail boats, for coast and river fishing, "built up" without ribs, are very popular in Massachusetts Bay, on account of their speed, lightness, cheapness, and ease of construction. They are so easily and quickly made that Eastern fishermen are becoming independent of the boatbuilders, and each man builds his own boat at his leisure. To make one, the only material needed are good clear pine boards, each the whole length of the intended boat, a few pounds of small nails (galvanized,) and the material for the stem, keel, and stern post. The boards are run through a saw mill and cut into strips about an inch and a half wide, and out of these the boat is built up according to working models. These models are merely patterns of wood that give the outside of a half section of the boat. They give the shape of the boat at every foot of her length, and are formed from some existing boat or drawn from a scale designed by some competent boat-builder. The keel, stern post and stem are set up and secured together firmly, and then to the keel two strips are fitted horizontally, one on each side, and having been planed down at each end to fit the model, holes are bored through them, and they are securely nailed to the keel. Over each is laid another strip, and with the plane and shave it is fitted to them in such a way as to conform to the shape of the boat, and then each is nailed down as before. In this simple manner the work proceeds. As the strips are nailed one over the other, they are bent to conform to the shape of the boat, and beveled to give the sides the right form.

A single day's practice in fitting the strips to the shape of the boat will enable a good carpenter to do the work with neatness and dispatch, and any person skillful with plane and hammer could in time turn boat-builder. When the sides rise to the gunwale, a broader and thicker strip of oak or ash is laid over all, to act as a fender and gunwale. During the whole process, the strips are kept heavily painted with white lead, and, when all is finished, we have a ribless shell, showing no nails except at the top, and exactly conforming on the outside and in to the model. To give lateral strength, shorter pieces of the strips are built up from the keel inside, and carefully fitted to the sides. The seats are placed over these, and then decks, storeroom and cabin may be added as desired. Boats made in this way are very light and buoyant, and, being smooth on the outside, are good sailers. In case of injury, they are easily repaired by cutting out the broken place and inserting new strips, secured by backing on the inside. In practical use, such boats are found to be swift, dry and safe. They make good sea boats, and are said to resist injury with ease. In sailing they demand plenty of ballast, to compensate for their lightness. Their cheapness and ease of construction are rapidly bringing them into favor, as the cost is about one-third less than by the ordinary method. Two men with the materials in hand can easily make a boat 18x6 in sixteen days.—*Scribner's.*

The Colleges.

YALE.—The annual Fall festival of the Yale Athletic Association was held at Hamilton Park, New Haven, on the 27th inst. The track was heavy, owing to the previous night's rain, yet many of the performances were far above mediocrity. The sports commenced with putting the shot (16 lbs.) T. H. Linsley, '76, S. S. S., 32 ft. 5 in.; F. W. Vaille, '76, 30 ft. 10½ in.; N. H. Strong, '76, 28 ft. 10 in.; 3.

One Hundred Yards Dash.—First Heat—W. J. Wakeman, '76, 1; F. W. Vaille, '76, 2; E. M. Andrews, S. S. S., 3. Time, 11s. Second Heat—D. Trumbull, '76, 1; J. F. Keaton, '77, 2. Time, 11½s. Third Heat—F. W. Brown, '78, S. S. S., 1; J. H. Hammond, '76, S. S. S., 2; C. E. Anthony, '76, 3. Time, 11½s. Final Heat—W. J. Wakeman, '76, 1; D. Trumbull, '76, 2; F. W. Brown, '78, S. S. S., 3. Wakeman ran very fast, and won by two yards in 10½s.

One Mile Walk.—B. Maurice, '77, 1; M. H. Phelps, '76, 2; J. B. Crenshaw, '76, law, 3. Maurice took the lead, and was never headed. Time, Maurice, 8m. 13s.; Phelps, 8m. 21s.

Running High Jump.—A. M. Gale, '78, S. S. S., 5 ft. 3 in.; O. D. Thompson, '79, 5 ft. 2 in.; W. A. Surrie, '76, 4 ft. 9 in.; 3. The struggle was close between Gale and Thompson; the latter weighed 190 pounds.

Half-mile Run.—D. H. Kellogg, '76, 1; W. J. Wakeman, '76, 2. Time, 2m. 10s.

Standing Long Jump.—O. D. Thompson, '79, 11 ft. 1½ in.; A. M. Gale, '77, S. S. S., 11 ft. 1 in.; D. B. Cushman, '76, 10 ft. 7½ in.; 3.

Three-mile Run.—A. H. Ely, '76, 1; L. L. Clapp, '76, 2; T. A. Vernon, S. S. S., 3. Ely held a commanding lead throughout, and won by 200 yards. Time, Ely's first mile, 5m. 54s.; second mile, 12m. 27s.; three miles, 18m. 39s.; Clapp, 19m. 27s.; Vernon, 19m. 29s. The latter entered the race without practice, and was not provided with suitable shoes.

Hand Race, 120 Yards, Ten Flights.—W. J. Wakeman, '76, 1; D. Trumbull, '76, 2; O. D. Thompson, '79, 3. Time, 19½s.

Senior Scull Race, 440 Yards.—G. Creighton Webb, 1; N. H. Strong, 2; W. T. Strong, 3. Fifteen or twenty started.

the number being divided and running opposite ways of track. Time, 57s.

Dash of Four Hundred and Forty Yards—W. A. Durrie, '76, 1; W. H. Backus, '77, S. S. S., 2; N. H. Strong, '76, 3. Durrie won by thirty yards. Time, 58s.

One Mile Run—D. H. Kellogg, '76, 1; A. H. Ely, '76, 2; T. A. Vernon, '76, S. S. S., 3. Kellogg won by 100 yards. Time, 5m. 20s.

Throwing the Base Ball—C. H. Morgan, 327 ft., 1; W. V. Downer, 320 ft., 2; C. M. Dawes, 316 ft. 3 in., 3. There was a strong cross wind, which prevented the competitors throwing up to their best form.

Referee and judge of walking, James Watson, New York. Starters, W. P. Watts, New York; G. C. Webb, Yale College.

HARVARD.—The annual Fall regatta of Harvard College took place on the 30th ult. The weather was unfavorable and the water quite rough. In the six-oared race, two miles, Holyoke won in 13m. 31s., Holworthy second, in 13m. 50s. Holyoke also won the four-oared race in 15m. 8s., Holworthy second, in 15m. 9s. Loring won the single scull race in 16m. 49s.

HARVARD AND TUFT'S FOOT BALL.—The second of the series of games between these colleges was played on Tuesday last, resulting in a victory for Harvard. As the games are now even, great interest centres upon the third and final one, which will probably be played at Cambridge during the Fall. The game played is the Rugby, somewhat modified, and has not been used before in the United States, although adopted by the McGill's of Montreal, skill and agility taking the place of brute strength.

PRINCETON—FALL REGATTA BUMPING RACES.—The need of a series of class races has long been felt in the college, but though spoken of often by many, this year has witnessed the first race. Early last Spring a movement was made toward this end, but the interests of the University crew clashed with those of separate class organizations, and the project was postponed until this Fall. A straightaway race being out of the question upon our narrow canal, it was decided to adopt the English style of bumping races. Wednesday last witnessed the first day's rowing, and to-day the last. We subjoin a brief account:—

First Day.—'76 got away to a very poor start, not hearing the words, "Are you ready?" '77 got away rapidly, closely followed by '78 and '79 in order. At the end of the first quarter '78 bumped '77. The other two crews rowed on to the finish, '76 being in the lead. After the race '77 claimed a foul start, alleging that their steering apparatus was broken within the first ten strokes. After considerable discussion the referee allowed the foul, declaring that '78 had made no bump under the existing circumstances, and that the boats must start on the second day in the same order. '76 pulled in moderately good form. The best rowing and steering on this day was done by '78, Thurston, their bow oar, was performing his part well.

Second Day.—'76 and '78, dissatisfied with the decision of the referee in regard to '77, refused to row. They contended that the rudder of '77's shell was not broken until after the first ten strokes. '77 and '79, therefore, were the only crews to start; '79, however, followed the example of '77 on the preceding day and broke their rudder. A foul start was again declared. '76 and '78, wishing to row again, the judges decided that the race should be rowed in heats, '76 and '78 pulling together, and after them '77 and '79.

Third Day.—Considerable excitement had been caused by the results of the two preceding days; and when '76 and '78 appeared, they were greeted with enthusiastic cheers by their respective classes. A good start was effected, and the two crews leaped from their positions simultaneously. '78, by very splendid rowing, succeeded, in spite of Mr. Parmley's fine stroke, and Mr. Taylor's good steering, in bumping '76 before half the course had been gone over. '79 was not so successful with '77, the two crews coming in about the same distance apart as at the start, with a slight shade in '77's favor. '79's crew showed fine material, and Mr. Presbrey's stroke was good. '77, however, profited by the experience of a winning race at Saratoga, and were too fast for their opponents to catch.

Fourth Day.—It now remained for '77 and '78 to row the deciding heat. The weather was a great drawback, but the crews were at their places at the given time. The start was good, and both crews pulled in fine form and at a high speed. '78 gained considerably on '77, both crews putting in a lively spurt on the last quarter. The Sophs, however, did not succeed in bumping the doughty Juniors, and so the cup presented by Messrs. Drayton, Alexander & McCook, was handed over to Captain Nicoll, who will probably hang it up beside the flags brought home from Saratoga in the Summer of '74. Below is a roll of the crews and judges:—

'76.—J. H. Taylor, Phila., bow; F. H. Markoe, N. Y., No. 2; F. A. Marquand, N. Y., No. 3; W. B. Van Lennep, Great Barrington, Mass., No. 4; J. M. Mann, Princeton, No. 5; G. D. Parmley, N. Y., stroke and captain. George Goldie, umpire.

'77.—C. Green, Iowa, bow; J. Halsted, N. J., No. 2; J. Campbell, Washington, D. C., No. 3; W. Williamson, Illinois, No. 4; John J. J. Michigan, No. 5; Benjamin Nicoll, N. Y., stroke and captain. J. M. Cross, umpire.

'78.—J. C. Thurston, N. Y., bow; J. H. Hess, Md., No. 2; J. McFarland, Va., No. 3; E. J. Van Lennep, Mass., No. 4 and captain; D. Stewart, Md., No. 5; H. Stevenson, N. Y., stroke. A. Marquand, umpire.

'79.—H. Williamson, N. J., bow; H. Rankin, N. Y., No. 2; F. Larkin, N. Y., No. 3; E. Roessle, Washington, D. C., No. 4 and captain; J. Gillman, N. Y., No. 5; F. Presbrey, Washington, D. C., stroke. Jos. Dulles, umpire. Col. S. W. Stockton, referee.

SUMMARY.

Class regatta, Princeton College, Oct. 27th-30th, 1875: Class crew, '77, 1; Class crew, '78, 2; Class crew, '76, 3; Class crew, '79, 4.

LOUNGER.

MAGAZINES.

Scribner's.—Probably the most important feature of the November issue of this magazine is the commencement of Mr. Bret Harte's new serial, "Gabriel Conroy." The opening chapters, which indicate a story of unusual interest, and which may be said to be in Mr. Harte's best style—or, rather, in his usual style—appear to be founded upon the melancholy incidents connected with the loss of the Donner party of emigrants while en route to California many years ago. The story, however, cannot yet be outlined, the hero—or at least he from whom the story takes its title—but just appearing. The leading illustrated articles in this issue are "William and Mary College," "India and

its Native Princes," and "The Curiosities of Longevity," the latter producing some rather startling statements, if not facts, which are opposed to the recent assertion of a well known savant that centenarians are myths. The miscellaneous sketches of Scribner's are all good, and the number calculated to sustain its high reputation as a magazine.

St. Nicholas.—We miss Miss Alcott in the current number of this charming magazine. Mr. Trowbridge, however, has not deserted his little friends, who were so much pleased with "The Young Surveyor," and is contributing a series entitled the "Bass Cove Sketches," which are quite as entertaining. Mr. Noah Brooks, of the *Times*, commences a serial entitled "The Boy Emigrants," which promises to be very interesting. Mr. Brooks tells a story in a simple yet attractive manner, and his long experience on the Pacific coast must have furnished him with an exhaustless fund from which to draw the materials of sketches similar to the one under mention. The engravings and cuts in St. Nicholas are always good, and the whole number is one of unusual interest. We are promised, however, in the issue for December, something quite out of the common. Our little friends will find both instruction and pleasure from the perusal of St. Nicholas.

The Popular Science Monthly.—Under the able direction of Prof. E. L. Youmans, is the most attractive of scientific periodicals. The current number opens with a very able paper by Ely Van de Worker, M. D., on "The Relations of Women to Crime," followed by an illustrated article on "Hydroids," from the pen of Mrs. S. B. Herrick. Hydroids are those beautiful and delicate plant-like forms, living on the border line, which unite the animal and vegetable world, and are brought from the bed of the ocean by dredge or trawl. "The Origin and Development of Engineering" is ably explained by Sir John Hawkshaw, F. R. S.; another illustrated paper is that on "Insectivorous Plants," by E. R. Leland, and the medical profession is still further represented by Dr. B. W. Richardson's remarkable article on "Induced Disease from the Influence of Passion," and "Suicide in Large Cities," by Allan McLane Hamilton, M. D. The miscellany contains a number of short articles of current interest in the scientific world.

Lippincott's Magazine for November presents an unusually attractive table of contents, embracing several entertaining illustrated articles and the continuation of two serial stories. Mr. Sidney Lanier tells us of St. Augustine in April, and accompanies his sketch with illustrations of the quaint old Spanish town, and a description of the Indians now confined in Fort Marion as prisoners of the Government. Another account of Indians is given in the article entitled "Qualla," which describes a mountain region of North Carolina almost inaccessible, and inhabited by a nearly forgotten tribe, who are living in abject poverty and misery. "Summer Days at Vichy" is a pleasant and readable description of this famous watering place and the mingled crowd of health and pleasure seekers to be found there during the season. There are many other entertaining sketches, and the usual "Gossip" and able reviews of current literature.

The Galaxy.—The November issue of this popular literary periodical contains the continuation of Mr. Justin McCarthy's story, "Dear Lady Disdain," and the conclusion—rather a sad one—of Mrs. Annie Edwards' novel, "Leah, a Woman of Fashion." An unusual number of short sketches is a feature of the number under notice, the most notable of which are "The Battle of Chickamanga," by William Farrar Smith, and "Nannette Schiller," by Mary A. E. Wager. Mr. Richard Grant White continues to split straws in his windmill crusade against the present mode of writing and speaking the English language, and contends, in reply to the *World* criticism, that if he did write "2 gills one pint," he knew better. Heterophemy is the awful word used as a title for the reply.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

TAME INDIAN.—If "Tame Indian" will send his address to "Top Snap," lock box 39, Cazenovia, N. Y., he will write him about gun.

R. J. K., Philadelphia.—Where can I procure a small metallic pump to fasten on the side of the well of a 16-foot yacht? Ans. From W. & B. Douglas, No. 85 and 87 John street, this city.

BEVIN, East Hampton.—Does powder grow better or worse with age? At what age does the change take place? Ans. Powder certainly deteriorates with age. The time the change takes place depends entirely upon how and where it is kept.

J. B., New York.—A correspondent informs us that the business of William Moore & Co., the senior of which firm we reported as defunct, is still being carried on in London, at No. 43 Old Bond street, under the style of Wm. Moore & Grey.

BLACK, Columbia, Pa.—Will you please tell me where I can get a setter dog broken, and how much they would charge for doing it; also, how I can send a dog to the place? Ans. Write to Lewis R. Morris, Campbell's Station, Guernsey county, Ohio.

SPORTSMAN, Franklin, Wis.—Will you be kind enough to give me, in the next issue of your interesting paper, the name of some prominent game dealer to whom I could ship wild ducks and other game. Ans. Messrs. E. & A. Robbins, Fulton Market, New York.

ED., Harrisburg, Pa.—Can you give me any information in regard to S. Thornton as a maker of breech loaders? I have a ten gauge gun bearing that name, imported by Low & Garlick, of your city. Ans. Know of no such maker, and are inclined to think the gun is of German manufacture.

T. C. F., Huntingdon, Pa.—I have a very nice spaniel bitch whose eyes become inflamed after hunting and discharge a disagreeable, nauseous matter for a few days. She then appears to get better and discharges very little. Can you favor me with a prescription to relieve her? Ans. See answer to "Augustine" in this column.

F. C., New Haven.—Does Captain Bogardus pull both triggers with his first finger or not? There has been a great deal of discussion on this subject, and it interests a great many. Ans. The champion uses one finger for both triggers. The illustrations in his last book, "Trip to England," show his mode of holding the gun and shooting very accurately.

R. A., New York.—Can you inform me whether there is good shooting in the neighborhood of Dover Plains, N. Y.? I would like to go to a place for about a week's good sport, and do not care to take a journey for nothing. Ans. Know nothing positively about Dover Plains. Understand there is a fair ruffed grouse and woodcock shooting.

F. D., Philadelphia.—1. I have a valuable Pape breech loader, the stock of which has not sufficient bend to suit me. Can I in any way have it made more crooked? 2. Can I for \$100 get a better English gun than any \$75 American; if so, where? Ans. 1. Yes, your gunsmith can have it done for you; if not, address us. 2. Yes, decidedly better; of any importer.

J. J. P., Bellefontaine.—In answer to Crook you say, "Try a drop of glue on top of wad; it will do away with both creaser and reamer." Please give mode of application, as a drop on top of wad is very indefinite. Ans. Have a bottle of Spaulding's prepared glue by you when loading paper shells; pass the brush around the edge of the shot wad after it is in the shell; enough glue will adhere to hold it fast.

W. T., Hamilton, Mo.—Do you think the gun by which enclosed target was made choke bored? What is meant by 30-inch circle; thirty inches in circumference or diameter? Do you consider enclosed a good target? Ans. Cannot tell without seeing the gun. The target, which appears to have 104 pellets in a 10-inch circle, is equal to any made by choke bores. The usual targets are thirty inches in diameter.

W. H. S., Philadelphia.—1. Where can Belmont's oil be obtained? Can it be bought in Philadelphia, and in what quantities do they sell it? 2. Is a Springfield army rifle considered a good shooter? Ans. 1. John Kluder, corner Second and Walnut streets may keep it; if not, you can get it of H. C. Squires, No. 1 Courtland street, this city; it is sold by the bottle. 2. Some of the Springfield rifles shoot remarkably well.

G. W. M., Augusta.—Please inform me what kind of a gun is best and safest for boys from twelve to fifteen years of age to practice with to become good shots. Is not an air gun good to begin with? If so, whose make would you recommend, what is the price, and where can I obtain it? Ans. An air gun we would consider dangerous. A breech loading rifle of 22 calibre would be the best to commence with, but even then it should be done under the supervision of some experienced and careful person.

T. J. A. F., Helena, M. T.—1st. Please inform me what size wire cartridge to use in a No. 12 Parker shell? 2d. What No. of shot would you recommend for ducks and geese? 3d. How can I break a young dog from biting birds when retrieving? 4th. What make of breech loading shot guns draws the cartridge out the farthest? Ans. 1st. No. 12. 2d. No. 4 for ducks and No. 1 for geese. 3d. Run wires sharpened at both ends through a bird, and compel your dog to retrieve a few times. 4th. Little, if any difference.

A. J. D., Philadelphia.—I have an English pointer pup six months old. I wish you would answer me through your paper whether it is proper to cut a dog's tail or not; also which is the best book on dog breaking? Ans. If your pup's tail promises to be very long we think it would be best to shorten it a little, but some tails are naturally of the proper length. The operation should be performed in the case of a pointer when the pup is very young, say four or five weeks old, so as not to show a blunt end. "Dinks, Hutchinson and Mayhaw on the Dog" is the best. We can send you a copy, price \$3.

BILLY BREECH, New York.—Some time ago I wrote to you asking where to go pigeon shooting, to which you so kindly replied. Unforeseen business prevented me leaving town, so I must again trouble you for information. Where do you advise me to go for good sport? How is Pike county, Penn., or Sag Harbor, L. I? I prefer wild pigeon, grouse, or quail shooting. If possible, give me the address of some parties to whom I can go for minute particulars. Ans. Pike county is an excellent locality. Go to Milford, via Port Jervis, on Erie railroad. Find "Bub" Wells for information.

H. A., Perrineville, N. J.—I have two fine thoroughbred bitches; one is a setter, the other a pointer; both had pups recently; the setter had eight, the pointer only one. As the pointer is a good mother I have placed four of the setter pups upon her. Now, I want to know if the hair upon the setter pups will be shortened by sucking the pointer bitch? Ans. We are inclined to think it will, as it is well known that when an American baby is nursed by an Irish nurse the child ever afterward speaks with a brogue, is very fond of potatoes, and uses a shillalah skillfully.

STANSTAD, Montreal.—I have a fine deer hound nearly two years old that had the distemper last Spring; he seems to be partly paralyzed in his hind parts, and when standing his head is shaking or nodding. I have had him out several times this Fall and he is worse after each chase. What can I do for him? Ans. Try the following remedy:—Sulphate of zinc, three grains; extract of gentian, three grains. Mix and form a bolus. To be given three times a day. It frequently happens that dogs afflicted as yours is with chorea, are also afflicted with worms. If they are suspected you must expel them before any remedy for chorea will relieve him.

W. W. A., Philadelphia.—I have been thinking for a year past of getting up a boat for duck shooting; it is in the form of a lifeboat and sneak boat combined, worked by a screw under water, and that can be immersed to the gunwale at pleasure. Is it unlawful to use such a boat or not? 2d. Can you inform me where I can purchase a light second hand skiff 12 to 16 feet in length, square stern preferred, with or without centre board? Ans. There is no law to prevent the use of any such boat on the Delaware River. Stephen Roberts, Nos. 368 and 373 South street, this city, may have such a boat on hand.

POINTER, Lancaster, Pa.—I have been contemplating the purchase of a new good breech loading shot gun. Will you please answer the following questions:—1st. Is there any choice between a P. Webley & Son and W. & C. Scott & Son? 2d. Should a 10 bore gun be 28 or 30 inches in the barrel? 3d. What would be the price of Scott's "Western Gun," 10 bore, 9 pounds in weight? 4th. How will the "Pioneer," by J. & W. Tolley, compare with the "Western"? 5th. What is the price of Bussey's gyro pigeon and trap and 100 birds? Ans. 1st. We should prefer the Scott. 2d. 30 inches. 3d. \$125, gold. 4th. The "Western" is the highest priced. 5th. \$25.

J. N. A., New York.—I have seen arca nut mentioned several times in your paper as being a good medicine for worms in dogs. I would like to know where it can be procured and how it is to be used. I have been in the habit of washing my dog, a spitz, once a week, and using common brown laundry soap. Would the soap cause his hair to fall out all the time, as it does? What soap is the best for the purpose? Ans. The arca nut we consider the best known remedy for worms in dogs, and we can supply you with some with directions for its use. It is very probable that such frequent washings of your dog with common soap would cause his hair to fall off. The use of castile soap would be better; but we can see no necessity for washing a dog so frequently if he is properly fed and cared for.

SUBSCRIBER, Boonton, N. J.—1. Will you be so kind as to tell me where, if at all, the Oriental powder is made, or where can I get some? 2. Do you know of a gunmaker named J. Foxall, Birmingham, and what is his reputation? 3. Are the new conical base Hart's shells better than the Orcutt, or capped base, that require the nipples in the caps? 4. Which is the best rifle for general sporting at under 500 yards? Ans. 1. Of Oriental Powder Company, No. 12 Broad street, Boston. 2. There is such a gunmaker in Birmingham, but we have never seen his guns. 3. They are totally different in construction, the first named having a conical chamber, similar to that in the improved muzzle loaders. Hart also makes the Orcutt shell. 4. We cannot designate any particular rifle as the best.

H. B. S., Chestnut Hill, Mass.—1. Please give me the exact address of some person who has wild rice for sale, as I wish to get some to plant. Richard Valentine, whose address you gave me, has not replied as yet. 2. Where can I get a strong pair of light snow shoes, and at what price? 3. Do you know of any one who has a Remington sporting rifle for sale, either 44, 45, or 46 calibre, and what price does he ask for it? Are the 45-100 rim fire cartridges still made. Ans. 1. Henry Meriam, Harwood, Ontario, Canada; state that the rice is required for seed. 2. Address Eaton & Co., No. 102 Nassau street. 3d. Know of no second hand gun. The 45 rim fire cartridges are still made.

AUGUSTINE, Pittsburgh, Penn.—I have to come to you for advice again about my pointer. His eyes are troubling him very much, a thick, heavy mucous discharge coming from them, which is increased when working him. He has no signs of distemper, eats well, and seems to feel well enough all but his eyes. They are pretty bad, or I should not trouble you. His age is three years. I wish also to ask your opinion regarding my setter pup. Several parties, among them some who claim to be good judges of dogs, have told me his tail should be cut off about two inches; that it will improve his ranging and endurance. He is five months old, or nearly so, and being a very high breed, and a beautiful pup, I do not wish to do anything about it without the opinion of an expert. So I come to you. I am of the opinion that nature regulates things pretty well, even to a dog's tail. Please state how the operation is to be performed, if necessary. Ans. Try this remedy: Nitrate of silver, one grain; water, one ounce. The proper manner of applying this preparation is with a large sized camel's hair brush. Pour a little of the liquid into a saucer, saturate the brush with the liquid, pull the lids gently asunder, being careful not to frighten your pointer with any exhibition of haste or violence, then, having the eye exposed, draw the brush quickly across it, and the business is done. Do not think of cutting your pup's tail until he attains his growth, and then an expert can see how much, if any, should be taken off. A setter's or pointer's tail, to be symmetrical, should reach just about the second joint of the hind leg, but bunglers frequently disfigure their dogs in docking them. The operation should always be done by an expert.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCUCLATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[Post Office Box 2832.]
127 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, NOVEMBER 4, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE COMING WEEK.

THURSDAY, November 4th.—Trotting at Washington, D. C. Rifle. FOREST AND STREAM Badge, at Conlin's, 920 Broadway. Pigeon Shooting Tournament, Paris, Ill.

FRIDAY, November 5th.—Trotting at Washington, D. C.

SATURDAY, November 6.—Racing at Jerome Park. American Rifle Association, at Glen Drake. Exhibition at Wood's Gymnasium.

TUESDAY, November 9.—Wrestling, Miller and Christol.

WOODCOCK ON TOAST.—A bunch of very rare visitors flew in at our office door on Friday last, in the shape of some fine woodcock, for which we are indebted to our friend, Mr. John H. Thomson, of New Bedford, Mass. The birds were in excellent condition, and although as a rule not in favor of having long bills presented to us, we will liquidate all of this description as fast as they appear.

MR. W. R. PAPE.—We had the pleasure of a call a few days since from this eminent English gunmaker. Mr. Pape's visit to this country is more one of pleasure than of business. He is now sojourning with some friends in Ohio, enjoying duck shooting. Mr. Pape is of the opinion that the question of the advantage of the choke bore system for general shooting has by no means been determined, and as many guns are ordered bored on the old plan as on the new. It will be remembered that the prize cup was awarded to this gentleman as the original inventor (in 1859) of choke boring.

—MR. E. G. BLACKFORD has been appointed agent in this city for the United States Fish Commission, and has been supplied with blanks to be distributed among fish dealers, the object being, when these are filled out to obtain accurate statistics of the fish business of New York. Mr. B. has already shown much public spirit in obtaining for preservation and classification all the specimens of rare fish which find their way into our waters, and his endeavors in the cause of science are fully recognized and appreciated by those in authority at Washington.

FOREST AND STREAM AT THE CENTENNIAL.

IN an adjoining column will be found the circulars issued from the Smithsonian Institute and the United States Commission of Fish and Fisheries, showing how it is proposed to illustrate the animal and fishery resources of this country at the approaching Centennial International Exhibition. The supervision and the labor of collecting the material for the special departments designated as section 3 in each circular, has been placed under the charge and management of this paper. The sections referred to are as follows:—

FISHERIES.

(3.) The apparatus which may be enumerated as used in pursuing, capturing, and utilizing the various species consists: first, of special clothing for the protection of the wearer, such as waterproofs, boots, hats, gloves, etc.; second, of the different kinds of canoes, skiffs, birches, boats, and rafts, with their oars, paddles, or poles, and other devices for pursuit and capture, or for transportation of the articles, as smacks, merchantmen, etc.; third, of bows and arrows, spears, harpoons, lines, hooks, floats, sinkers, reels, rods, artificial flies and baits, nets of all kinds, traps, pounds, dredges, trawls, rakes, etc. The apparatus for the preparation and utilization of these products will consist of models of smoke houses, salting establishments, fish flakes for drying fish, factories for the manufacture of fish or other oils, fertilizers, etc.

ANIMALS.

(3.) Under the head of apparatus for capture will be included: first, special articles of dress or of clothing for the better accomplishment of pursuit or capture of the various animals; second, the means of approach, such as boats, sledges, snow shoes, etc.; third, the various modes of attack and capture in the way of traps, decoys, lariats, bows and arrows, lances, harpoons, guns and rifles, both muzzle and breech loading, pistols, knives, etc. This division will also embrace the various forms of powder flasks, shot belts, cartridge cases, caps, primers, etc. Of the boats the smaller kinds, and especially the so-called portable boats, may be of the ordinary size; of the larger ones models will be best adapted to the purpose.

In fact, everything in the way of appliance which in any manner forms a portion of the outfit of the hunter, the trapper, or the fisherman. It is our desire to make this department as thorough and complete in detail as possible, and with this view we would solicit from our friends contributions of any articles included in the above lists, and of many others not mentioned therein. For instance, there have been of late many improvements in shot guns, loading implements, cartridge belts, etc. We should like all of these, and also camp equipage of every description, models of yachts, pictures of celebrated dogs, hunting scenes, etc. All articles embraced under the above heads, whether old relics or new inventions, useful or ornamental, will find welcome and a place. We shall make it our duty to see that every contributor obtains due credit for the article he exhibits, and when desired they will be returned.

We ask from our readers a generous and enthusiastic co-operation, that the sportsman's share in the great Centennial shall be worthy of the country. Our extensive correspondence has already furnished interesting and valuable contributions to the general display, and we are promised a large assortment of articles. We would request an early response from those who desire to exhibit, that the necessary details as to arrangement etc., can be prepared. Our proposed camp is exciting much interest and promises to be a feature of the exhibition. Articles can be sent to us at our expense.

We would also call attention to the other sections of the circulars, as deserving the notice of all owners of collections of Natural History, etc., who can assist greatly by their personal contributions.

AN INVITATION.

WE have been, in our time, the recipients of many a kind invitation. We have been asked to fish and hunt, to exercise what little skill and cunning we might possess on almost every beast, fish, or bird that inhabits land or water, forest or stream. Noted Shekarees have begged us to hasten to India and polish off a tiger or so in the jungle, and we have been cordially pressed to come and take a rogue elephant as he charged. But to-day we have received a letter from a German gentleman, a leading sporting authority, who asks us to Gorachthal near Tamsieg, in the Duchy of Salzburg, in Austria. There, over an expanse of 25,000 acres, we are to hunt the lordly stag and the bounding roe-buck. Nay, more than that. If such noble game did not suffice, we are to be tempted with chamois hunting. Salzburg lies in the midst of an Austrian Switzerland, and is the loveliest and most picturesque country on earth. Chamois hunting! That means crags to be climbed, cliffs to be scaled, and break-neck passes to be threaded. It means to scan the chamois from afar, a faint, black moving speck on the mountain side; to breathe the purest, sweetest, the most exhilarating air; to see ranging far above and beyond the snow-capped mountains; to discern below the feathery water falls and silver streams, and to listen to the music of the tinkling cow bells, from the herds pasturing in the emerald green valleys. It recalls the rifle in one hand, the stout iron-pronged alpin stock in the other, a game bag thrown over the shoulder, and how one's heart was in one's mouth all the time, until the game was down, and then the cheers, the *vivas*, as they rang reverberating in loud echoes from peak to peak, and next the cups of kirchwasser drained to bold chamois hunters, and to gallant Yagers all over the world.

This is what Herr von Ivernois, the editor of that well-known journal, *Der Waidmann*, writes us. "If you will come and visit me, I warrant good shooting. We have stags, roe-bucks, and chamois. There is also good trout fishing. There are 25,000 acres of land, and no one has the privilege of hunting there but myself, or such guests as I may invite." Gorach! That must be truly a German hunting elysium.

HOW TO CHOOSE A RIFLE.

WE have chosen this title for our little essay, as it is just what it purports to be, a general answer to the numerous questions received by us every week upon this subject. There are so many kinds of rifles now in the market that persons are puzzled which to choose. Without recommending any particular maker, we will point out certain general principles which, if remembered and acted upon, will help very much in choosing. It is certainly much easier to do this now than it would have been a few years since. The race has been won by breech loaders, as against muzzle loaders; and by the central fire cartridges, capable of being reloaded several times, as against the rim fire cartridge. We shall not stop to discuss either of these points, but go on at once to our subject.

All rifles divide themselves into two great classes—long range and short range. Long range rifles are used as military weapons for arming infantry, and as sporting weapons for hunting cariboo, deer, antelopes, and other such timid game as will not allow of near approach. Short range rifles are used as military weapons for arming cavalry, and for general sporting purposes. The division between the two may be taken at 200 yards. Rifles for match shooting may be used at both ranges; but, from the natural desire of all of us to accomplish the most difficult feats, they are generally held to mean long range weapons.

The first rule we shall lay down is this: It is necessary to decide whether you want a rifle for long or for short range. You can select either, or both, but not both in the same rifle. One will not do the work of the other. A knowledge of this will save much annoyance and some money. We will first consider the requisites of a short range rifle, and how they are to be attained in practice. 1. The first requisite is, that you shall be able to hit any mark small enough to be seen over what are technically called "hunting sights," with an off-hand shot from the shoulder. Greater accuracy than this is not needed. Such a rifle ought to shoot close enough to place a majority of any number of shots within the following sized targets:—2-inch ring up to 50 yards distance; 4-in. do. 100 yards; 6-inch do; 150 yards, and 8-inch do. 200 yards. A good off-hand shot can do this and fire very quickly, and his gun ought to be able to shoot as close as he can hold it.

2. The next requisite is, that the trajectory of the ball should be so flat within the above ranges, or, in other words, its velocity so great, that the rifleman should not be obliged to depend on an elevating back sight, raised to distances before ascertained, but should be able by merely drawing a coarser bead the farther off he is to hit his mark. There is no military or long range rifle that will do this. The best example of a weapon that could do it was the old muzzle loading, long barreled Kentucky rifle. In this essential requisite of a hunting rifle we have not improved upon the weapon of our grandfathers, but have, for certain reasons, fallen behind it.

3. The third requisite is, that the ball should have sufficient impinging surface to give a severe shock to and stun the game fired at. This requires a large calibre for small game.

The sportsman will have no difficulty in finding a number of different rifles in the market, which will answer the first requisite of accuracy within the conditions above laid down. We will say no more on this point, except to suggest that he ought to insist upon his rifle doing as well as that at least; better would be of little use. When we come to the second point, and try to get a rifle that does not require the use of an elevating back sight above 150, or even 100 yards, we shall not find it easily. The reason of this is, that military rifles, which are long range, are so fashioned that makers of so-called sporting rifles follow the proportions of powder and projectile, and the rate of twist best suited for long range, but quite unsuitable for short range. For long range we want as small a bore as possible, as long a projectile as possible, and a very quick twist, to give enough velocity of rotation to keep the elongated projectile end foremost, and as much powder as the small bore will burn. The result is a moderate initial velocity; but owing to the small surface exposed to the resistance of the air, the momentum of the heavy projectile, a very long range.

Now, for a short range rifle we require the very opposite of all this. We want as large a calibre as possible, so as to make a big hole in our game; as large a charge of powder as possible, to give a high velocity, without which we cannot have a low trajectory. This also requires a short projectile, to diminish the friction on the grooves, and a short projectile requires a slow twist. The length of the rifle barrel must be shorter, which also diminishes friction. To reduce these proportions to practice, we find that the Creedmoor long range rifle and its ammunition have the following proportions: Weight of rifle, 10 lbs.; weight of projectile, 550 grs. (ratio 1-6) weight of powder, 90 grs.; twist, 1 in 20 inches; calibre, .44 100; length of ball, 1 6-10 inches, length of barrel, 30 inches. A short range rifle, suited for deer, bears, buffalo, etc., should have the following: Weight of rifle, 9 lbs.; weight of projectile, 320 grs. (ratio 1-4); weight of powder, 80; twist, 1 in 48 inches; calibre, .55-100; length of projectile, 3 inches; length of barrel, 24 inches. For smaller game, such as turkeys, a calibre of .35-100 will answer, and the length or weight of ball, charge of powder, etc., will be reduced in proportion.

The difference in the practical operation of the two rifles will be this: With the long range weapon, if you have your range within a very few yards, and elevate your back

sight accordingly, you can make accurate shooting at all ranges. But if you misjudge your distance at all, or even if you know it and have not time to elevate your back sight to its proper height, you will certainly either shoot over or under your game. With a short range rifle proportioned as we have described, the drop of the ball, owing to its great velocity, is so little, there is absolutely no judging of distance required. Whether you are at 25, 50, 75 or 100 yards, all you have to do is to draw a little coarser bead the farther off your game is. Practice will soon show you how much. Your ball should not deviate more than a couple of inches above or below, and this does not exceed the limit of accuracy heretofore laid down.

The faults of modern American breech loading rifles intended for sporting use are: 1st—not large or heavy enough projectile to make a disabling wound on an animal as large as an old buck deer. 2d—not enough velocity of ball, owing to too little powder being used, and too great friction resulting from an unnecessarily quick twist. The muzzle loading hunting rifles that were made twenty or thirty years since avoided the second of these faults. Their calibre was smaller than we should now use; but the reason was, that in those days a hunter had to prepare his own ammunition, and he liked to make it go as far as possible. There is one other point that deserves mention. Shall we choose a single loading rifle, or a repeater, that carries a magazine of cartridges? Now, it is very clear that there are many advantages in a repeater, like the Winchester or the new Evans rifle, and the only question is, whether there are any disadvantages, due to the greater complication of the weapon, sufficient to counterbalance the admitted advantages. Time and use will alone show this. If we had to encounter a grizzly bear, an Indian tiger, or an African lion, we should prefer a weapon carrying at least an ounce ball and 90 grains of powder. After we had put three or four of these into him, we think we would stop; but we should hate to try it with a small projectile and light charge of powder.

RIFLE TYPES—NO. III.

The Country Gunsmith at Creedmoor.—Yes Sir, from Cantauwipsit. Made and built rifles all my life, as did my father before me. Me and Bill Simmons—you must have heard of him, Capting Simmons, the best shots in eighteen counties, harring me—well, Bill and me, we took shots this Summer at a loose stone on top of Bald Eagle Hill, and blazed away at that stone with this here piece. How fur? No telling how fur it was; a doosed sight further than them targets. How many yards? You have got me there, Mister—we didn't measure it, because you see we was in the dry bed of the branch and shooting up hill, and it would have been a tough climb to the top of Bald Eagle after every shot. Mebbe it was as much as 300 rod—some fellows in the township allowed it was 400, but it haint never been measured. No sir, we don't load that way. We go in for old-fashioned muzzle loaders, and aint partickler to a grain of powder, if powder is plenty. Kiver your ball over good with the powder, that's our rule, and a leetle more nor less don't make no matter, providing the ammunition is dry, and your piece will hold it; and there is nary a gun I kin make that won't stand all you kin pour into her. No sir, we don't stock our rifles like birding guns. We want something that fits snug into a man's shoulder. Ef a man aint hardy and tough, and wants to shoot a rifle, and is afeerd of his collar bone being shook—well, he had better not try to be an expeert. There aint no use of being so nice as you fellows make out, with a surveying party's tools and instruments hitched on up and down the barl. Mebbe, after awhile, you will be having some kind of a machine dummy, with a measuring chain, running ahead every time afore you fire, staking off the ground to an inch. I see some of you kind of clerking over your shooting, and keeping a regular set of books, just like single and double entry. No sir, them kind of things wouldn't suit the boys around Cantauwipsit. By the time it would take to do all that figuring over your gun, the deer would be in the next county. This here weapon was made by me—lock, stock and barl. There aint nary a screw, nor a bit of wood, brass, iron, nor steel about her as was'n't turned out by me; and you bet she will shoot. You pint her on a turkey, and you will see. Mebbe she wouldn't work good on that furthest target, which is the longest thousand yards I ever see. We aint well surveyed around my part of the country, and don't have no mile stones, and don't make a practice of shooting from one mile stone to the next one. Anyhow, this is style of gun suits us around Cantauwipsit, and is all the boys require." The native gunsmith exhibits his rifle, which is more than a clever bit of work; in fact it is a miracle of skill, when one takes into consideration how it was made—at a village smithy in the back woods, with the simplest and most primitive tools. The arm is well balanced, and is a most effective weapon at one hundred yards; but beyond that is not reliable. Generally it has a stock cut at the butt in the shape of a crescent, set round with a knife edge rim of metal. With a heavy load the recoil almost cuts the arm off. Thirty years ago the country rifle was a good arm, but to-day it must be classed among the arquebusses and matchlocks of olden times.

FISH CULTURE IN CANADA.—Mr. Wilmot, the Government Inspector of Fish Culture, is at Windsor superintending the introduction of the machinery necessary to put into operation the whitefish breeding establishment at Petite Cote, near Sandwich.

EDWARD LAVERACK.

WE present to our readers in this issue an excellent likeness of Mr. Edward Laverack, who is probably the best known, oldest, and most successful breeder of the English setter that the world has ever seen. He was born in the North of England in the last year of the last century and is consequently at the present time seventy-six years of age. Mr. Laverack is of the fine old school of English sportsmen, having been for half a hundred years on the moors and stubbles what Sir Tatton Sykes was on the racing turf, or Squire Osbaldiston in the saddle behind the hounds. From his eighteenth year Mr. Laverack has been a field sportsman, and from his twentieth, a careful and observant breeder of setters. Untiring attention and shrewd and clever inter-breeding of his favorite strain have made him so famous during the past thirty-five years that English sportsmen have attached his name as a mark of distinction to all dogs of this blood; and he now enjoys as one fruit of his labors the rare satisfaction of seeing in the last volume of the Kennel Club Stud Book, the name of Laverack recorded in the pedigrees of the great majority of the winning English setters.

A brief synopsis of the records of this class in the club calendar will show both the high repute attained by his dogs of the full blood, and the successes of those breeders who have wisely united his blood with that of their own kennels.

The total number of setters in this class is 70, of which 65 are of recorded pedigrees. Of those, 17 only have no trace of the Laverack blood, while 33 claim that strain in their stock, and the remaining 15 are pure Laveracks without a cross. Of the Laveracks of the full blood, 6 were sired by his celebrated champion prize winner, Old Blue Dash, and 5 by Dash's son, Pride of the Border, now owned in this country.

It would appear from these statistics that for the successful breeding of the English setter, as shown in the stud book, the chances are 48 to 23, or about two to one in favor of those possessing the Laverack blood. And this without disparagement to the beautiful and highly successful dogs of the Mount Loftus Kennels; of Viscount Downes; of Major Cowen's, Blaydon Burn; of Mr. P. Murphy's, Castleknock, Ireland, and of other strains, whose fame the calendar records.

Here, in America, the pure Laveracks and those of the part blood have already attained honorable distinction, although, owing to their scarcity, but few specimens of either have been exhibited.

To return to the original of our picture. Mr. Laverack is in appearance a hale, hearty gentleman; not tall, but erect, vigorous and wiry. In temperament and disposition, as might be supposed, he is nervo-sanguine, active and energetic. That for several months in each year he pursues his favorite sport over his shootings, in Ross shire, Scotland, is sufficient evidence of great physical vigor and sportsmanlike pluck at his advanced age. His home—Broughall Cottage, at Whitechurch, in Shropshire—is a model of neat and cosy retirement, and good old-fashioned comfort; and his kennels—the casket containing the jewels of his life-long gain and guard—are the perfection of propriety and canine convenience. Blessed with good health and fine spirits, Edward Laverack bids fair to enjoy for many more years the honors so justly his due, and the best wishes of all true sportsmen who appreciate and admire the perfection of the setter.

SHOOTING QUARTERS.—There is scarcely an issue of our paper that does not contain, in the column of Answers to Correspondents, a number of inquiries regarding localities where shooting can be had. Now, there are very many sportsmen who would be only too glad to make their headquarters at some quiet farm house in the neighborhood of the ground over which they expected to shoot. In many instances a city sportsman at a country hotel is a source of intense interest to all the small boys and idlers in the place, to the great annoyance frequently of the guest. At a farm or private boarding house all this is avoided. However, whether hotel or farm house, it is always desirable to know something in advance of the quarters at which one is to put up. We shall feel obliged for any information regarding such in districts where shooting is to be had.

INTERNATIONAL EXHIBITION, 1876.

Board on Behalf of United States Executive Departments—National Museum, Smithsonian Institution—Collections to Illustrate the Fishery Resources of the United States.

The Smithsonian Institution and the United States Commission of Fish and Fisheries desire to secure as complete a collection as possible to illustrate the fisheries of the United States, or its resources as derived from the sea, the lakes, and the rivers, for the International Exhibition to be held in Philadelphia in the Centennial year 1876. This will form a part of the Governmental display, to be held in accordance with an act of Congress of March 3d, 1875, and an Executive Order of March 5th, 1875.

As stated, the object of this collection is to illustrate, in the fullest manner, the resources of the United States derivable from the waters, and it will embrace: first, an exhibition of the objects themselves, living, in refrigerators on ice, stuffed, dried, or in alcohol, as also photographic representations, and plaster casts colored from nature; second, the products derived from the various species, either in their crude state or modified, together with their applications in the arts or in trade; third, the apparatus by which these objects are pursued, captured, killed, and utilized; and fourth, the means by which the same are multiplied by natural and artificial methods, or maintained in a healthy living state.

(1.) The forms more particularly to be illustrated are: first, the seals, whales, porpoises, etc., as furnishing skins, hides, oil, teeth, and bone; second, the aquatic reptiles, such as the various turtles, frogs, alligators, etc.; third, the fishes in their different varieties; fourth, the marine invertebrates, or shell fish, crabs, lobsters, corals, sponges, etc.; fifth, the algae or sea weeds, and other marine products not of an animal nature.

(2.) Among the applications of objects may be mentioned: first, various preparations of flesh and roes, as dried, salted, smoked, pickled, canned, etc.; second, oils, spermaceti, etc.; third, gelatine, isinglass, glue, leather, shell, whalebone, teeth, and other parts of the animal in their crude condition, their stages of manufacture, their final condition, and their simpler and more special employments; fourth, the different manures derived from the inhabitants of the waters, and the applications of the sea weeds and other vegetable or mineral articles.

(3.) The apparatus which may be enumerated as used in pursuing, capturing, and utilizing the various species consists: first, of special clothing for the protection of the wearer, such as waterproofs, boots, hats, gloves, etc.; second, of the different kinds of canoes, skiffs, birches, boats, and rafts, with their oars, paddles, or poles, and other devices for pursuit and capture, or for transportation of the articles, as smacks, merchantmen, etc.; third, of bows and arrows, spears, harpoons, lines, hooks, floats, sinkers, reels, rods, artificial flies and baits, nets of all kinds, traps, pounds, dredges, trawls, rakes, etc.

The apparatus for the preparation and utilization of these products will consist of models of smoke houses, salting establishments, fish flakes for drying fish, factories for the manufacture of fish or other oils, fertilizers, etc.

(4.) The display under the fourth division will consist: first, of plans of piscicultural establishments, models of hatching houses, models of, or real, hatching troughs, boxes, trays, screens, and whatever is used in the United States for the artificial hatching of aquatic animals; second, illustrations of fish ways and ladders; third, the various devices for transporting live fishes and other aquatic animals and their eggs; fourth, those by which such animals are kept living in a healthy condition for the market, for amusement, and for study; fifth, ice houses and refrigerators for preserving them in a fresh state for food; sixth, the special apparatus used by the naturalist for collecting living animals, as dredges, trawls, sieves, etc., and also the thermometers, water bottles, logs, sounding lines, and other articles for collateral physical research.

All articles contributed toward this collection will be duly credited to the donors both on the labels in the Exhibition and in the published reports and catalogues.

Where the objects themselves are too large for transportation or convenient exhibition, models may be substituted as far as procurable.

After they have served their purpose at the International Exhibition the collection will be transferred to Washington and form part of the permanent exhibition of the National Museum, where, as in Philadelphia, due credit will be given to the contributors.

The articles intended for this exhibition may be sent by mail or express; or, if of large bulk, by railroad. The expense of transportation will be paid on receipt in Washington, to which place they should be forwarded, addressed to the Smithsonian Institution, and marked "International Exhibition, 1876," and with the name and address of sender.

Bulky objects, in some cases, to form the subject of special arrangement, should be sent direct to the Government building at Philadelphia.

JOSEPH HENRY,
Secretary Smithsonian Institution.
SPENCER F. BAIRD,
U. S. Commissioner of Fish and Fisheries.

Animal Resources of the United States.

The Smithsonian Institution is at present engaged in making a collection to illustrate the resources of the United States as derived from the animal kingdom, and to this end invites the co-operation of all who may have it in their power to render any aid in the undertaking. This will form part of the governmental display to be made in accordance with the act of Congress of March 3d, 1875, and the executive order of March 5th, 1875.

The general object of this exhibition is to show: First, specimens of all the animals of the United States which are hunted or collected for any economical purpose whatever; second, the products derived from the various species, both in their crude and their applied or manufactured condition; third, the apparatus or devices by means of which, directly or indirectly, these objects are pursued, captured, and utilized by sportsmen, hunters, trappers, and others.

(1.) Under the first head will be included: First, specimens living, or preserved entire, as far as they can be obtained and conveniently exhibited; second, skins of mammals, birds, reptiles, etc., stuffed and mounted, or otherwise arranged; third, skeletons; fourth, restorations of extinct forms; fifth, plaster casts of the objects, colored from nature; and sixth, an exhibition of particular parts, such as skulls, horns, teeth, shell, feathers, etc.

(2.) Among the animal products to be displayed will be included: First, a series of dressed furs, showing all the different grades of quality, dependent on locality, season, or other condition (this will also include skins of birds used as articles of clothing); second, preparations of skins and hides for leather, buckskin, etc.; third, any preparations of bristles, hoofs, horns, bones, etc.; fourth, some simple or primary applications of the products to domestic purposes or the arts, as articles of dress, ornament, etc., there to be exhibited both in their intermediate stages of manufacture and as furnished to the trade; fifth, food preparations, whether dried, smoked, pickled, canned, etc.; and sixth, any other objects not included in the above divisions.

(3.) Under the head of apparatus for capture will be included: First, special articles of dress or of clothing for the better accomplishment of pursuit or capture of the various animals; second, the means of approach, such as boats, sledges, snow shoes, etc.; third, the various modes of attack and capture in the way of traps, decoys, lures, bows and arrows, lances, harpoons, guns and rifles, both muzzle and breech loading, pistols, knives, etc. This division will also embrace the various forms of powder flasks, shot belts, cartridge cases, caps, primers, etc. Of the boats the smaller kinds, and especially the so-called portable boats, may be of the ordinary size; of the larger ones models will be best adapted to the purpose.

For the purpose of rendering this exhibition complete and strictly national in its character, the Smithsonian Institution invites donations of the above mentioned objects from manufacturers and dealers, and communications concerning them, with the guarantee that full credit shall

be given to all contributors on the labels of the articles and in the catalogues and publications of the Exhibition.

After the collection referred to has served its purposes at the International Exhibition, it will be transported to Washington and form a part of the permanent display of the National Museum, in charge of the Smithsonian Institution, where, as in Philadelphia, proper acknowledgments will be made to all who have aided in rendering it complete.

The more expensive articles will be received as a loan, should they be deemed important to the Exhibition, to be afterwards returned; but it is expected that, as far as possible, all specimens will be presented, so that they may form part of the permanent display at Washington.

Specimens may be sent by express or mail; or, if in large bulk, by railroad conveyance. Their transportation will be paid on receipt in Washington, to which place they should be forwarded, addressed to the Smithsonian Institution, and marked "International Exhibition, 1876," and with the name and address of sender.

JOSEPH HENRY,
Secretary Smithsonian Institution.

GAME PROTECTION.

We are constantly in receipt of complaints to the effect that in localities where game would otherwise be abundant the birds are completely destroyed by snaring and trapping. In Massachusetts, during a certain season, trapping or netting is permitted on one's own premises, a section of the law which, we trust, will soon be abrogated. The most flagrant violation of the law in this State is the one referred to in the letter which we publish below:—

SUMMIT LAKE HOUSE, Orange county, N. Y., Oct. 29, 1875.

EDITOR FOREST AND STREAM:—

I send you herewith a paragraph cut from the New York *Commercial Advertiser*, which must excite the indignation of all true sportsmen, and should arouse them to enforce a law which now seems a dead letter. Unquestionably birds will soon be a thing of the past in many localities if these wretched game sneak thieves are permitted to go "unwhipped of justice." In this part of the country, some ten miles distant from West Point, the place mentioned in the paragraph, great havoc has been made among the partridges this season by trapping with the figure 4 "dead falls." Two hundred dozen seem an extraordinary number, but a very probable success in an unfrequented district with such a wholesale method as the horse hair snare.

It is reported that two men were caught in *flagrante delicto* at Cedar Lake, and are now in jail at Haverstraw, but it remains to be seen whether the punishment that the law specifies, and which they so richly deserve, will be inflicted. It scarcely speaks well for a respectable paper to publish such a transaction in terms of commendation. That such a wretch should be dubbed a Nimrod! What a base application of a mighty name! As well applaud the adroit pickpocket, the expert cracksmen, and offer a premium to all the petty rascalities from which communities suffer. But this was probably written through ignorance. Sportsmen have too long stood idly by and seen themselves robbed of their privileges. Steps cannot be taken too soon to prevent the rapid extermination of the game of the country by the cunning devices of these Nimrods. Yours, etc.,

ELISHA STOCKBRIDGE.

The paragraph referred to is as follows:

GRAND SPORT IN THE HIGHLANDS.—An experienced Nimrod hailing from these parts, has been spending the last few days in the Highlands, back of West Point, catching partridges, or "pheasants," as they are called out West, and he has extraordinary luck. He sets snares made of horse hair in the runways of these birds, and occasionally revisiting them with a bag, takes out as many birds as he can well carry. Many a luckless rabbit gets caught in the same way, but is thrown out as not worth bringing to market. For want of better occupation, the sportsman referred to sends his birds to the neighboring towns and to Washington Market, often putting forty or fifty pairs in a single lot. He says his receipts from this source average \$7 a day, not to speak of a comfortable subsistence obtained on the spot. His captures already number a few hundred dozen. Partridges are reported more plenty back of West Point than before for many years.

WILKESBARRE, PENN., October 26th 1875.

EDITOR FOREST AND STREAM:—

Luzerne county, Penn., has organized a sportsmen's club for the preservation of game and fish, to be known as "The Luzerne County Sportsmen's Association," and held their first regular meeting October 25th, 1875, when they adopted their constitution and by-laws. At this, our first meeting there were thirty names signed to the constitution, and we confidently anticipate at our next meeting to more than double this number. The officers elected were—President, H. H. Derr; Vice President, William B. Mann; Clerk, Ben. F. Dorrance; Treasurer, S. Ayres; Counsel, Gen. W. H. McCartney; Directors, Dr. J. B. Crawford, H. C. Gates, Col. H. A. Laycock, C. Leonard, W. J. Harvey, W. L. Loomis, George H. Parrish, Jno. Lanning, A. Miller, J. M. Courtright. Our object in making this a county association is to draw in as members farmers, lumbermen and others residing in the county and among the mountains, where people are in the habit of trapping pheasants, quail, and other small game, and, when a clear case can be made against them, to prosecute them to the full extent of the law.

No estimate can be placed upon the great good that can be accomplished in the direction aimed at. Clubs that will enlist the sympathy and co-operation of farmers and mountain men are greatly needed. Much missionary work remains to be done among these classes.

SHREWSBURY, October 30th, 1875.

EDITOR FOREST AND STREAM:—

I am sorry to record a violation of our game law in the killing of a pair of quail by one of our residents, who, before he cast his lot among us, signed his name to an article he wrote, and which was published in one of the leading sporting papers—"That I am to be a permanent resident of Red Bank in a short time, and if any violations of our game laws come under my notice they will be strictly dealt with, or my name is not —." It is not a pleasant task to complain of those with whom your relations have always been friendly, but when a man makes such professions as the above, and carries a gun with him during the close season when he takes out his dog (that he has owned and shot over a year ago) to try on quail, and shoots them, I believe it to be a duty to report the fact, and am more than half of the opinion that it is false delicacy in not mentioning his name. This is the only case of violation I am aware of, and that in a section where there is but little, if any, appreciation of sport for sport's sake; but on the contrary, it may be said it is the headquarters of market shooters and pot hunters. However, to give credit where credit is due, the close season is well observed, and poaching discountenanced.

CHECK COOD.

GENTLEMEN POT HUNTERS.—The Easton *Free Press* complains that men of intelligence, position, and means living in that place and professing to be sportsmen, have been shooting quail before the expiration of the close season, and adds that there are enough sportsmen interested in the maintenance of the game laws to bring these vandals to judgment. They should certainly be made examples of,

and doubtless would be, if evidence could be brought against them. Justice should be swift, and in this instance no mercy should temper it, as, if the laws are broken by men of position, others in humbler spheres of life will find in it an excuse for like violation. That all the pot hunters do not escape, is shown from the instance narrated below, which we find in the *Germantown Telegraph*:—

"It was two men, ominously named Samuel Hunter and James McKill, who loaded their little guns, and meandered out on Friday to play sad havoc with the feathery tribe. It was at Torresdale, within the limits of this city, where they banded away at robins and sparrows. It was six, the number of birds they had bagged, when Daniel Snyder had them arrested for violating the game laws. They contributed \$34.50 to the State, being about five dollars for each bird, and the costs, and left with their high priced game in their garments."

TENNESSEE STATE SPORTSMEN'S ASSOCIATION.—We had hoped in this issue to have given our readers the result of the Field Trials held last week at Memphis, but up to the time of going to press a full report had not reached us. The pigeon shooting on the 25th and 26th resulted as follows:—

In the first match, for a purse of \$1,000, \$20 entrance, 50 to fill, or pro rata class shooting, ten single birds, \$350 to the first, \$250 to the second, \$175 to the third, \$125 to the fourth, \$100 to the fifth, there were 34 entries. F. J. South, of Frankfort, Ky.; S. S. Terrill and W. R. Wilcox, of Chicago, made clean scores, but in shooting off, South won first money; Dr. D. D. Saunders, of Memphis, won second money. Charles Leland, of Memphis, and F. J. Perkins, of Franklin, Tenn., divided the third money, after tying each other twice. Horace McNeely won the fourth, and H. C. Pierce, of St. Louis, the fifth.

The second match, for a purse of \$500, in which there were 33 entries, concluded thus. K. V. Pearson, of Mississippi; F. J. South, of Ky.; J. H. Acklin, Dr. D. D. Saunders, of Memphis; H. W. Sherman, of Wis.; and G. D. Hunter, of Elkhart, Ill., made clean scores.

In the shooting on the second day, for a purse of \$500, continued from the day before, the first money was won by J. H. Acklin, the second by Horace McGeely (both of Memphis), the third by S. H. Terrill, the fourth by J. F. Welch, (both of Chicago), and the fifth by Charles Leland, of Memphis.

In the match for a purse of \$1,000, \$20 entrance, and 50 to fill, or pro rata, there were 36 entries. The first money was won by J. H. Acklin, of Memphis; the second by H. N. Sherman, of Wisconsin; the third by T. J. South, of Ky.; the fourth by Church, of Ky.; and the fifth by Clinker, of Ill. The sweepstakes were also won by Sherman.

In the bench show of field dogs, premiums were awarded as follows: English setters, best dog, 1st, to L. Smith, of Canada, dog Leicester; second, J. H. Whitman, Chicago, dog Grouse. Best bitch, T. H. Smith's Victress; best pup, J. H. Whitman's Count. Gordon setter, best dog, Edmund R. Gill, of N. Y., Rip. Best bitch, Dr. Thornton, of Lexington, Ky., Mot. Best pup, T. M. Horsfall, of Ark Rock, Irish. Setters, best dog, Arnold Burger, of Maysville, Ky., Rufus. Best bitch, J. H. Whitman, of Chicago, Gypsy. Sweepstake, L. H. Smith's Paris. Pointers, J. M. Taylor took first and second for best dog; Chas. Miller, of Memphis, Fanny, as best bitch, and Arthur Gibson, of Memphis, Socks, as best pup.

FLORIDA.—Rev. E. Vanslycke and Mr. Thomas Cumming, of Stamford, Conn., sailed on Saturday last for Jacksonville, Fla. They travel for health and recreation, having taken with them the yacht *Starile*, purchased expressly for sailing in Florida waters. It is their intention to navigate with her the Upper St. Johns River to Lake Harney and Salt Lake, and Indian and Halifax Rivers, from Mosquito Inlet to Jupiter Inlet, and the Everglades. The *Starile*—which is enrolled in the Atlantic Yacht Club, of Brooklyn, and carries their flag—measures 25 feet in length, 6 feet beam, and draws 6 inches of water in ballast, and is thoroughly fitted out for yachting and camp life in Florida. She was dispatched on Wednesday fortnight by schooner for Jacksonville. We hope to lay before our readers the results of the trip.

The Rifle.

NATIONAL GUARD MATCH FOR THE NEVADA BADGE.—*Creedmoor, Friday, Oct. 29th*—This trophy was given by the National Guard of Virginia City, Nevada, to be shot for by the National Guard of the State of New York. The badge is a splendid one, made of gold, silver and platinum, and is valued at \$1,000. Conditions, open to companies of the National Guard State of New York; not less than 46 members in each company to shoot, and as many above that number as the commander may see fit to bring into the field; no competitor to shoot who is not an active member of the competing company; distances, 200 and 500 yards; five scoring and two sighting shots at each range; position, standing at 200, and any without artificial rest at 500 yards; weapon, the regulation arm used by the State National Guard, the winning company to hold the badge for one year; the records of the company to be made public through the press; the company making the best average shooting to be the winner.

Col. Wingate superintended the shooting. There were but five entries of companies for the match. These were: Co. I, Seventh Regiment; Captain Casey in command; Co. H, Seventh Regiment, Lieut. Nicolls; Co. A, Seventy-third Regiment, Captain Storey; Co. G, Forty-eighth Regiment, (Oswego) Captain Curtiss, and Captain Perry's company of the Forty-eighth (Brooklyn) Regiment. We give the scores as far as completed:—

I Company, Seventh Regiment—Forty-six men; total number of points made, 866; average points per man, 18 38-46; average points per shot, 1.882. H Company, Seventh

Regiment—Forty-six men; total number of points, 830; average points per man, 18 2-46; average points per shot, 1.804. Captain Perry's company, Forty-seventh Regiment—Forty-six men; total number of points, 718; average points per man, 15 28-46; average points per shot, 1.560. A Company, Twenty-third Regiment—Forty-one men; total number of points, 664; average points per man, 16 8-41; average points per shot, 1.619.

The highest individual scores in each company are:—Sergeant LeBoutillier, H Company, Seventh Regiment, 41; C. A. Coffin, Twenty-third Regiment, 34; Private A. Dominick, I Company, Seventh Regiment, 36; Private S. E. Condan, Forty-seventh Regiment, 36.

The telegraph reported the shooting of Co. A, Forty-eighth Regiment as giving the unprecedented average of 27 9-10! As 866 was made by Company I, Seventh Regiment, who are by no means what are called in the classic language of the range, "duffers," the 1,233 claimed by the Oswego regiment, or a beat of 417 points, is indeed remarkable. It is an average of 27 9-10 per man. Evidently the Forty-eighth of Oswego have improved since they shot at Creedmoor some few weeks ago. Perhaps the telegraph operators may be in error. If there are no mistakes, however, we should only be too glad to herald the triumph of the Forty-eighth.

CONLIN'S.—The first competition for the handsome cup presented by the *Turf, Field and Farm*, was shot at Conlin's Gallery, No. 930 Broadway, on Thursday evening last. The conditions were the same as those under which the FOREST AND STREAM Badges are shot for, viz: 110 feet, 10 shots each at Wimbledon targets, reduced to correspond with those used at the 200 yards range, the prizes being so divided as to give even the less skillful shots a chance to win one. Each shooter is provided with a score card, which contains also a miniature representation of the target made. The following are the scores:—

Name.	Score.	Name.	Score.
Robert Faber, (1st cup).....	41	Thomas Lloyd.....	35
W. B. Farwell.....	40	J. B. Blydenburg.....	31
T. C. Noone.....	39	J. O. Wright.....	34

A. Hofstatter.....	35	C. E. Prescott.....	16
H. D. Blydenburg.....	35	L. A. Ludwig.....	16

The FOREST AND STREAM Badges will be shot for on Thursday, Nov. 4th, and the *Turf, Field and Farm* Cups on the following Thursday—Nov. 11th.

AMERICAN RIFLE ASSOCIATION.—The new range of this association was opened on Wednesday. Glendrake is situated about a mile from the Pelhamville railroad depot, in Westchester county, some fifteen miles from New York. Two third-class targets were in use on Wednesday. The feature in Wednesdays proceedings was a review and inspection of the Twenty-seventh Regiment (infantry) of the Seventh Brigade, Fifth Division, N. G. S. N. Y., after which the President Col. J. T. Underhill, and Capt. J. W. Woodward proceeded to the 200 yard firing point, and formally opened the range, Col. Underhill making a centre, Capt. Woodward scoring a bullseye. The first match was for a badge to best score of any member of 27th Regiment. Seven shots at 200 and 500 yards; won by Capt. McGowan, Co. K., in a score 24, 14, making a total of 38.

On Thursday the second day's meeting took place. The first contest was a subscription match. The winners were—Lieut. Hofele, 20 points; John Gorham, 18; H. Fisher, 16. The prizes in the subscription match at 500 yards were won by H. Fisher, 23; Lieut. Hofele, 18; John Gorham, 18. The Ladies Match was won by A. W. Peck, on a score of 22; G. O. Starr took the second prize with 17 points, and Capt. E. Cardoze came in third on a score of 10 points.

On Saturday, in the very worst weather, the last day's shooting at Glen Drake range took place. The Peyster, All-comers and Subscription matches were contested for. New Wimbledon targets were used with Creedmoor disks. The following are the winning scores; distance in all the matches, 300 yards; position, standing:—

DE PEYSTER BADGE.	
Lieut. J. A. Geo.....	4 4 3 4 0 4 4.....23
ALL COMERS MATCH.	
J. L. Price.....	4 3 4 3 4 4 3.....25

The targets in use were of canvas, worked upon the same plan as they are at Wimbledon, but simplified a good deal. Their merits were displayed to good advantage on Saturday when the matches were carried on in spite of a driving rain. The more the rain beat upon them the whiter they looked. At Creedmoor the whitewash would have been washed off the iron target. Another new feature upon the range was the telegraph; it worked admirably, messages were sent over the wires, when necessary, saving much trouble and time. It is the first which has ever been used on any range. It was erected by Lieut. Geo. H. Thompson. Mr. E. W. Starr was Chief Telegrapher, and his assistants were Messrs. Rich and Underhill, of Thompson's Manhattan Telegraph Institute.

On Saturday next the second competition for the Remington Sewing Machine takes place, and also a match for

a rifle presented by Mr. H. Fisher, of 290 Broadway; contests at 200 and 500 yards.

—Boston is calling for a rifle organization. A correspondent to the *Boston Journal*, urging the founding of a rifle club, says:—

"Undoubtedly as a means of recreation nothing is destined to be more popular for some time to come than target practice, and competitions will be as many and rifle between rival clubs as the base ball contests have been heretofore. Hereafter, however, base ball will be a thing of the past, and rifle clubs will spring into existence all over the country, thus constituting strictly a new feature in the field of sports."

RHODE ISLAND RIFLE ASSOCIATION—What Cheer Range.—In our last issue we gave a description of the opening of this range, the matches continuing while we were going to press. On Tuesday, Oct. 27th, the team match took place. This event was a notable one, as it was the first time in the United States that any home teams, apart from those selected from military organizations, had competed. Three teams were in attendance. In very good taste, in order to make the chances more equal, supplementary members of the American team shot with the New England team. The match opened on Tuesday, and was concluded on Wednesday, with the following results:—

AMERICAN TEAM.				
Name.	600 yds.	800 yds.	1000 yds.	Total.
W. B. Farwell.....	33	35	17	85
A. V. Canfield.....	33	33	17	83
L. C. Bruce.....	32	30	11	76
Henry Fulton.....	30	24	5	69
G. W. Yale.....	26	28	11	65
R. C. Coleman.....	29	20	—	49
Aggregate.....				430
Total at 600 yards.....				183
Total at 800 yards.....				180
Total at 1,000 yards.....				67

NEW ENGLAND TEAM.				
Name.	600 yds.	800 yds.	1000 yds.	Total.
T. H. Grey.....	32	33	27	92
H. S. Jewell.....	30	35	18	83
F. Hyde, Captain.....	29	30	17	76
H. P. Blake.....	23	20	17	60

Total at 800 yards.....				149
Total at 1,000 yards.....				51

The prizes were awarded as follows:—

First Prize—Henry T. Brown prize, sterling silver ice pitcher and goblets, to the American team. Score, 430 out of a possible 595.
Second Prize—Long Range Creedmoor Rifle, valued at \$150, to the New England team. Score, 409 out of a possible 630.
Third Prize—For highest individual aggregate score, a gold watch valued at \$150, to T. H. Grey, of the New England team. Score, 92 out of a possible 105.
Fourth Prize—For second highest individual aggregate score, long range rifle, valued at \$125, to W. B. Farwell, of the American team. Score, 85 out of a possible 105.
Fifth Prize—For the third highest individual aggregate score, field glass, valued at \$50, to H. S. Jewell, of the New England team. Score, 83 out of a possible 105.
Sixth Prize—For highest individual score at 1,000 yards, champion Rhode Island Rifle Association badge for 1875, valued at \$75, to T. H. Grey, of New England team. Score, 27 out of a possible 35.
Seventh Prize—For highest individual score at 800 yards, breech loading sporting gun, valued at \$50, to H. S. Jewell, of the New England team. Mr. Jewell and W. B. Farwell, of the American team, each made 35 out of a possible 35, and in shooting off Mr. Jewell scored five, and Mr. Farwell only three.
Eighth Prize—For highest individual score at 600 yards, a silver trophy valued at \$30, to W. B. Farwell, of the American team. Score, 33 out of a possible 35.
Ninth Prize—For largest number of successive bullseyes, rifle ammunition satchel, equipped, value \$20, to W. B. Farwell, who made ten—three at 600 yards and seven at 800 yards, consecutively.
Tenth Prize—For largest number of successive centres, Colt's revolver, to Henry Fulton, of the American team, who made three consecutively.

In the Individual Long Range Match the following are the scores:—

Name.	800 yds.	1000 yds.	Total.
H. S. Jewell.....	43	43	77
W. B. Farwell.....	43	32	75
G. W. Yale.....	43	23	66
T. H. Grey.....	37	28	65
H. P. Blake.....	32	25	57
A. V. Canfield, Jr.....	32	23	55
T. Hyde.....	42	8	50
R. S. Grey.....	33	11	46
Henry Fulton.....	41	—	41
L. C. Bruce.....	36	—	36

The prizes in this match were awarded as follows:—

First—For highest aggregate score, a clock, valued at \$50, to H. S. Jewell.
Second—A field glass, valued at \$35, to W. B. Farwell.
Third—A life membership in Rhode Island Rifle Association, to G. W. Yale.
Fourth—Cash, one third receipts for entries in the match, to T. H. Grey.
Fifth—Annual membership in Rhode Island Rifle Association, to H. P. Blake.
Sixth—Same to A. V. Canfield, Jr.
Seventh—Same to F. Hyde.

For the New England Match for teams of eight, the Prescott Post, First Light Infantry, Wesson and First Light Infantry amateur teams contested. Conditions, seven shots at 300 and 600 yards. The following were the results:—

Prescott Team—Peabody-Martini rifle.....	232
First Light Infantry—Sharps.....	223
Wesson—Various rifles.....	133
First Light Infantry—Springfield.....	87

In the afternoon of Wednesday the Consolation Match resulted as follows: At 200 yards the highest scores were as follows: C. E. Roffee, 22, out of a possible 25; A. L. Sweet, 19; E. H. Brower, 17. In an improvised match at 800 yards, T. M. Jordan scored 19, out of a possible 25, and George H. Clark, 16. J. A. Monroe and A. L. Sweet scored 13 each.

The American team was treated in a most hospitable way by the gentlemen of the R. I. R. A., and by the citizens of Providence, and a grand entertainment was par-

ticipated in. The What Cheer Range has already taken a high position in rifle shooting in the United States.

—Washington is agitating the rifle question, and talks of a team to contest at the Centennial.

—The rifle range at East Syracuse, for the use of the Sixth Division, N. G. S. N. Y., promises to be one of the best.

THE COLUMBIA RIFLE ASSOCIATION.—This Association held their second annual festival at their grounds, Steinbrenner's Park, Guttenberg, N. J., the first two days of last week. The shooting was at 200 yards, off-hand. The following is the result:—

Target of Honor—open only to members, three shots at the ring target; the inner ring counts 25, and is one inch in diameter; all others three quarters of an inch; possible score, 75.

Prize.	Name.	Rings.	Prize.	Name.	Rings.

The most bullseyes (4 inches in diameter) were by Wm. Hayes, of Newark, with 21; the next by Jac. Heintz, with 20, and the third by C. Heintz and T. Tragger, each 17.

SCHUETZEN PARK, October 23th, 1875.

EDITOR FOREST AND STREAM:—The shooting match between the New York Schuetzen Corps, Capt. George Aery, and the Jersey Schuetzen Corps, Capt. W. F. Schumann, came off to day under the most favorable auspices. Each corps had to furnish a team of twenty members, each man to fire ten shots at the ring target; twenty-five equal rings, each ring one inch wide. Therefore, the possible score of each was 5 000. The New Yorkers won with a score of 3 287, leaving the Jersey men at 3 237. Each corps has now won the medal, for which they have shot twice; but they will have to shoot for it three more years, until it is decided whose property it shall be. After the shooting was over there was a fine collation served, and speeches were made by President H. D. Basch, Captains Aery and Schumann, and others. Another shoot will be held in November.

WHITNEYVILLE ARMORY AMATEUR CLUB.—Last week this club had their practice at the Whitney range, using the Whitneyville musket. The shooting was remarkably good, as may be seen by the scores, which we append:—

Name.	200 yds.	500 yds.	Total.

Wm. Scharf.....	17	11	28
F. Doerschuck.....	15	17	32

THE INTER-STATE RIFLE MATCH AT PLEASANT LAKE, IND.—On the 27th inst. a rifle match took place at Pleasant Lake, Ind., between the Fort Wayne Rifle Club, of Fort Wayne, Ind., the Jackson Rifle Club, of Jackson, Mich., and the Chicago Rifle Club, of Chicago, Ill., for the championship of the three States named. Prize a silver ice pitcher, value \$50. The ranges were 200 and 500 yards, five scoring shots at 200 yards, seven scoring at 500 yards; rifle, any; rules of the N. R. A. The weather was very unfavorable in the forenoon, the wind blowing almost a gale, but towards night brightened up and wind nearly calmed down. Owing to the Fort Wayne team not being on the ground until late in the day, by reason of the cars being behind time, the match was delayed until nearly one o'clock; consequently it was dark before the 500 yard match could be finished. It was therefore declared unfinished, and will be again shot under the same conditions at 500 yards, at Jackson, Mich., on November 10th. The following are the scores: Jackson team of six men—at 200 yards, 84; at 500 yards, 73; total, 157; Remington rifle. Ft. Wayne team—at 200 yards, 70; at 500 yards, 78; total, 148. Chicago team—at 200 yards, 84; at 500 yards, 56; total, 140.

—The matches of the Albert Rifle Association were held at Galt, Canada, Oct. 26th. The first prize was won by Sergeant Rosenberger, with a score of 51 points; second by H. J. Jaffray, with 50 points. Ranges, 200, 300, and 500 yards; five shots at each. The match between Galt and Walkerton was won by Walkerton by 24 points. Score: Galt, 407; Walkerton, 431; majority for Walkerton, 24. Thirteen men on a side, each firing on their own ranges. The weather was very disagreeable for firing.

THE RIFLE IN GEORGIA.

SAVANNAH, Ga., October 23d, 1875.

EDITOR FOREST AND STREAM:—The managers of the Georgia State Fair having offered a purse of \$300 to be competed for by rifle teams throughout the State, and two of \$100 each, open to all comers, at a meeting of the Georgia Game Association it was decided to send a team to Macon to contest for these prizes, and the following gentlemen were selected to represent that body, viz:—Messrs. J. P. White, captain; John G. Butler, John R. Hamlet, George E. Alden, Wm. A. King, Wm. C. Nichols, E. C. Swain, George S. Herbert, and George W. Hussey, alternate. The Savannah Rifle Association had also decided to send a team, and which was composed of Messrs.

J. W. McAlpin, captain; George Allen, D. McAlpin, A. L. Reese, J. W. Schley, W. C. Vincent, R. H. Anderson, and B. B. Ferrill, with Frank Winters as alternate. The morning of the 19th found both teams in Macon. It did fair to be a lovely day, and at nine o'clock the different teams assembled at the armory of the Macon volunteers at the call of J. L. Hardeman, the President of the Macon Rifle Association. General R. H. Anderson, President of the Savannah Rifle Association, was unanimously chosen chairman, and Captain Wilberforce Daniel, President of the Richmond Rifle Club of Augusta, as Secretary. Twelve teams were present, as follows: Columbus Guards, Captain Shepherd, Columbus; Baldwin Blues, Captain Walker, Milledgeville; Savannah Rifle Association, Captain McAlpin, Savannah; Macon Volunteers, Captain Wyllie, Macon; Georgia Game Association, Captain J. P. White, Savannah; Macon Rifle Association, Capt. in O'Gorman, Macon; Floyd Rifles, Captain Sparks, Macon; Company B, of Macon volunteers, Captain Jones, Macon; Washington Rifles, Captain Northington, Sandersville; Richmond Rifle Club, Captain Bolter, Augusta, and the Quitman Guards, Captain Chambers, Forsyth. Twelve numbers were then placed in a hat, and these were drawn by the captains of the respective teams for choice of position. It was decided that each team should complete its shooting at each range, and that all shooting should cease at three o'clock, in order that all the teams should have equal advantage of light. Such teams as were not able to shoot under this decision were to shoot the following day. George B. Pritchard, of Savannah, W. W. Carnes, of Macon, and J. J. Bradford, of Columbus, were then selected as referees by the captains of the different teams, and to them all questions were to be submitted. The shooting was conducted under the regulations of the N. R. A. The contest began about half past ten o'clock, the Columbus Guards opening the ball, and at five o'clock, when the firing ceased, the following teams had completed their shooting, with scores as follows:—

Names.	300 yds.	200 yds.	Total.
Columbus Guards.....	56	98	154
Baldwin Blues.....	60	98	158
Savannah Rifle Association.....	53	111	164
Macon Volunteers.....	51	84	135
Macon Rifle Association.....	86	92	178
Georgia Game Association.....	47	101	148

The highest individual score was that of Mr. George H. Plant, of the Macon Rifle Association, who scored 30, the next highest being that of Mr. Robert Wayne, of the Georgia Game Association, and who shot for E. C. Swain, he making 29. The contest ended about three o'clock when the remaining six teams scored as follows:—

Names.	300 yds.	200 yds.	Total.
Floyd Rifles, Macon.....	88	31	119
Washington Rifles.....	53	94	146
Macon Guards.....	47	81	128
Richmond Rifle Club.....	64	89	153
Company B, Macon Volunteers.....	48	73	121
Quitman Guards.....	26	82	108

Mr. J. D. Rooks, of the Richmond Rifle Club, made the highest score during this part of the contest, scoring 30 points at the two ranges. The prize of \$300 having been won by the Savannah Rifle Association, the next in order was the \$100 prize, open to all comers, distance, 100 yards. For this purse some forty entries were made, and Mr. J. D. Rooks, of the Richmond Rifle Club of Augusta, was the fortunate winner. His score was 78 out of a possible 90. He was closely pushed by Mr. Northington, of the Washington Rifles, and Mr. Davis, of the Floyd Rifles, who scored 73 each, and Mr. J. R. Hamlet, of the Georgia Game Association who scored 71. But little interest seemed to be manifested in the contest for the second purse of \$100, distance, 200 yards, there being but twenty five entries. Mr. A. L. Reese, of the Savannah Rifle Association, won the prize by a score of 78 out of a possible 90.

A game association is much needed in Macon, and if one is not soon organized the game thereabouts will soon become extinct. One gentleman told me that during the whole of the past summer parties had not only been bringing quail into town for sale, but a large quantity of their eggs; that no one took any steps to have it prevented, and that the birds had not the ghost of a chance for protection. There are many very fine shots in Macon, but good dogs are as scarce as hen's teeth.

GEORGIA.

Game Bag and Gun.

GAME IN SEASON IN NOVEMBER.

Moose, <i>Alce Americus</i> .	Woodcock, <i>Philohela minor</i> .
Elk or Wapiti, <i>Cervus Canadensis</i> .	Plovers, <i>Charadrius</i> .
Red Deer, <i>Cervus Virginianus</i> .	Willetts, <i>Synhimantia semipalmata</i> .
Caribou, <i>Rangifer caribou</i> .	Snipe, <i>Gallinago</i> , Curlews, and Bay Hares, <i>Lepus</i> .
Squirrels, <i>Sciurus</i> .	Birds, <i>Sceloporus</i> .
Wild Turkey, <i>Meleagris gallopavo</i> .	Sandpipers, <i>Tringa</i> .
Ruffed Grouse, <i>Bonasa umbellus</i> .	Red or Rice Birds, <i>Dolichonyx oryzivorus</i> .
Pinnated Grouse, <i>Caprimulgus cupido</i> .	Wild Ducks, <i>Anas</i> .
Quail, <i>Ortyx Virginianus</i> .	

GAME IN MARKET.—The colder weather is bringing the game along in greater abundance. Connecticut certainly is the banner State, as far as game is concerned, this season, the quantity received from there probably exceeding that from all the other Eastern and the Middle States combined. The ruffed grouse are mostly from there, and are larger, finer birds than those received from elsewhere; price \$1 per pair. Pinnated grouse (prairie chickens) are more abundant; price \$1 per pair. Quail are very scarce, the weather not yet permitting their being brought from the West; prices have advanced to \$4 and \$4.50 per dozen, and the birds not very fine at that. Woodcock are more abundant, and it would seem as though the late frosts had sent the flight along; they sell for 75 cents per pair. English snipe still scarce at \$3 per dozen. The first Chesapeake ducks were expected this week. Western and Long Island birds are worth as follows: Canvas backs, \$3 to \$2.50; red-heads and mallards, \$1.25 to \$1.50; widg. on and broad bills, 50 to 75 cents; black ducks and teal, 75 cents to \$1; wild geese, \$1 to \$1.25 each; reed birds, \$1.25 per dozen. Venison is abundant, the present supply coming mostly from Michigan; price 25 cents per pound. Stall fed wild pigeons, \$2.50 per dozen; there are no flight wild pigeons in market.

—The St. Louis *Republican* speaks of a Mr. Vie, of that city, who recently killed 106 blackbirds at one shot, and says:—

"The shot is probably the greatest on record. The number of birds was actually picked up, and Mr. Vie will be pleased to cite to doubters the gentlemen who witnessed the shot, and were not more astonished than he at the result. It is estimated that at least one bird was secured for every single shot in the gun—and not much of a day for shooting either."

Our contemporary is wrong, as there are a number of sportsmen who can vie with the St. Louis sportsman, and have killed with one discharge of their guns an equal or greater number of birds—not black birds, but ox-eyes, or some of the small varieties of snipe that are sometimes

seen in myriads on the sea shore. Our contemporary will also allow us to correct him regarding a bird having been killed for every shot in the gun. Supposing that Mr. Vie's gun was loaded with only one ounce of No. 9 shot, the charge would contain 596 pellets of the shot manufactured by the Chicago Shot Tower Company. Of No. 8 shot there would have been 434 pellets, or about four for each bird.

MASSACHUSETTS—Salem, Oct. 30th.—Woodcock, quail and partridge are now in good order; snipe grounds are splendid, but birds scarce; geese are flying, and a few brant are about. A nice bunch of grass birds were sent to a gentleman in this city from Scarborough, Me., and Rowley gunners report some of their best shooting on shore birds the past week; so shore birds are not all gone, as I last week stated. Weather the past three days easterly and dry, later, raining hard, wind southeast. I should say that politics are now more thought of in Massachusetts than birds. There is considerable discussion just now about chilled shot, and the arguments seem to be in its favor. **TEAL.**

Cohasset, Nov. 1st.—For the past week the shooting has been very fine. Brant and geese have been quite plenty for so early in the season, and quite a number have been shot. Plover not all gone yet, and the smelt fishing still holds good. **S. K., Jr.**

New Bedford, Oct. 27.—I am glad to report the shooting season now in its zenith in this region. Quail, partridges (grouse) and woodcock are plenty. Shore birds scarce. Sea fowl afford good shooting at the islands across the bay. **CONCHA.**

CONNECTICUT.—Duck shooting along Long Island Sound and the inlets from it is remarkably successful. Most of the birds, however, are coots, with an occasional black back, and now and then a broad bill duck. They are said to be of very rank flavor as a general thing.

RHODE ISLAND—Newport, Nov. 1.—Our shooting season is at its height. We have coot shooting from three points and in boats within one hour's ride from the city; black duck, widgeon, etc., two hours' sail up the bay; a good show of Wilson snipe and "winters." A party came down the bay from a three days' cruise, and the yacht was somewhat crowded with black ducks, coots, sheldrakes, and one stranger—a mallard—the only one seen this way for years. **SHOT.**

NEW YORK—Syracuse, Oct. 27th.—Ducks have made their appearance on Onondaga Lake in quite large numbers for this vicinity, but there are about five shooters to every duck. Hundreds of poachers with wap nets are said to infest Oneida Lake, undisturbed by the sportsmen's clubs, that ought to bring them to punishment. **SENECA.**

NEW JERSEY—Forked River, Nov. 1st.—Quail shooting opened to day under the most favorable auspices. They are very plenty and easily got at, and good bags are the order of the day. Ducks are plenty and gunning very good. Some few geese and a number of brant have made their appearance. Black duck and widgeon are plenty on the meadows, and can be killed in the ponds over decoys any stormy day in goodly numbers. Mr. Frame has closed the Carman House, and may be found at the LaFayette House, where he will take good care of sportsmen visiting this place.

PENNSYLVANIA—Humburg, (Berks county) Pa., Nov. 1st.—Game of all kinds is scarce; cotton tails are mainly caught from under corn shocks by farmer boys. Reading market was stocked with a fair supply of rabbits of an inferior quality—small and lean. Birds are extraordinarily scarce, and but few flocks are seen; wild pigeons, turkeys, pheasants, etc., have been shot, but owing to the great number of sportsmen on the mountains, they have no opportunity to settle down on a tree or the ground. As soon as they give any evidence of coming, sportsmen are on the territory selected for landing. **PERE NIXON.**

CANVAS BACKS ON THE LEHIGH.—A number of canvas backs have recently been shot at Chain Dam, on the Lehigh, near Easton, the first ever known in that vicinity. Other ducks are plentiful in the same locality.

FLORIDA—St. Augustine, Oct. 24.—A party of five gentlemen returned from a few days' hunt south of this city recently, bringing with them as the result of their trip one bear, seventeen deer, three raccoons, and quantities of quail, snipe, and ducks. Four rattlesnakes, one measuring 7½ feet, and several moccasins, were also killed. A very auspicious commencement of the hunting season, although we would rather dispense with the "snakes" in ours.

—Mr. William M. Bulger, an Indiana correspondent, who for thirty five years has been noted in his locality as a deer hunter, says of the English Williams & Powell gun, concerning which frequent inquiry is made:—

"I had one sent me from London for trial with three barrels in one stock, it being a No. 1 double barrel shot gun, No. 12 bore, with a 44 calibre rifle barrel placed in one of the shot barrels, and it proves to be one of the finest shooting guns I ever fired; cost me here \$120. I have been sporting with a rifle more or less ever since I was twelve years old. I am now sixty-two, consequently ought to know something about the good qualities of the rifle. I wonder that some of your sporting correspondents have never mentioned the qualities of this gun."

MINNESOTA—White Beaver Lake, Oct. 13.—This lake is situated in Ramsay county, and has a circumference of about thirty miles. There are three large hotels and a number of private boarding houses; cost of board from \$1.50 to \$3.50 per day. Bald Eagle is a meeting place for trains from four different directions, viz.: St. Paul, Duluth, Minneapolis, and Stillwater. The L. S. and M. R. R. runs daily seven trains from St. Paul, three from Stillwater, and four from Duluth, and the M. and St. Louis Road three from Minneapolis. The game in the vicinity comprises prairie chickens, ruffed grouse, quail, pigeons, foxes, and deer, and in the lake are pike, pickerel, salmon (wall-eyed pike), bass, etc.

—A man in Greenville, Tenn., has captured twenty-seven hawks by setting a steel trap upon the dead limb of a tree upon which they have been in the habit of alighting.

—Wild game is abundant in the vicinity of Fort Sanders, Col. Six soldiers went out the other day and killed seven elk, eight black tailed deer, and half a dozen antelope.

A pigeon match was shot near Montreal last week for a gold medal valued at \$75, there being eighteen competitors. Capt. Esdaile, Vice President of the Quebec Rifle Association, was the winner, bringing down five birds in fine style.

PIGEON SHOOTING AT PORT RICHMOND.

PORT RICHMOND, October 26, 1875.

EDITOR FOREST AND STREAM:—

I enclose you scores of a shoot for a "Joseph Clabrough's" muzzle loading shot gun, which came off last Thursday at Sea View Park, Staten Island, and was won by a celebrated rifle shot. Match at ten birds each, Staten Island Shooting Association rules to govern, twenty chances at \$5; value of gun, \$100.

Mr. H. carried the gun to Newark, N. J.

I am sorry to have to advise you of a very serious accident that befel Mr. Clarence M. Johnson, the efficient secretary of the association, and which at one time was thought would cause his death. A week ago last Thursday, while out shooting wild pigeons, he was shot in the back, just below the nape of the neck, by the discharge of his friend's gun. He was sitting or squatting down at the time, and the whole charge entered his back, tearing away his coat, vest, and carrying portions of the same, together with the two wads, into his back. The gun was only some five feet away, and contained 3 drachms Lightning powder and 14 ounces of No. 9 shot. He was picked up for dead, but after returning to consciousness walked to a friend's, and having procured a hard spring wagon sat on the seat and rode a distance of four miles. Dr. Rogerson, the ex-president of the club, attended his wounds, and it is expected, should he have no drawback, that he will be out in the course of two weeks. It is astonishing how fast his flesh healed, but his ever buoyant spirit has done wonders in his case. I trust it will be a lesson to many to use more care in handling their guns. Mr. J. has always been known as one of the most careful gunners we have among us, and it has caused considerable indignation to have him shot through carelessness. **A. B. C.**

We are much grieved at hearing of the accident which has befallen Mr. Johnson, and rejoice at the prospect of his speedy recovery.—Ed.

SHOOTING AT TWIN LAKES, CT.

TWIN LAKES, Conn., October 18th, 1875.

EDITOR FOREST AND STREAM:—

The ducking season has opened with a splash, on these otherwise placid waters. While I write—Monday P. M.—a barrow load of red heads, shell drakes, black ducks and coots have been wheel'd past my window, the net gun of a couple of guns that have been blazing away since morning, and it is now about dinner time. There are eighteen of them, ten shot by E. Sherman Pease and eight by Wm. Miles, Jr., both residents on the lake shore. The same parties have done good shooting on the Housatonic and the coots and small ponds along its shores, where wild rice and ducks and geese do abound; and, by the way, there is to be an effort made to plant the margins of the "Twins," Mount Riga, and other of our mountain lakes with this favorite duck forage, and from which a great increase of migratory aquatic may be expected some day. Partridge (grouse) shooting has been unusually good this season, and a few woodcock may yet be found in their usual haunts. Quail are not numerous, and real sportsmen will spare what few berries are found in the hope of better chances by and by; and, by the way, the owners of the Bashbish region, Messrs. Arthur and Malcolm Douglass, turned out some thirty brace of these choice birds a year ago in their well sheltered dell, and already the pleasant call for "bob white" may be heard at the charming Summer house that has sprung up like magic (with grapes, conservatories, etc.) not far from the picturesque "Falls" that artists so love to make turn (if not a mill wheel) an honest penny. The Douglasses have also let loose a number of deer in their spacious woods, and now, if they will liberate a few turkeys to gobble up and down the more than Adirondack wilderness of this Taconic range, the hundreds of Summer boarders that frequent its high altitude will have at least something to look at besides farm houses and poultry pens. **J. J. P.**

CHOKE BORES AND CHILLED SHOT.

BOSTON, October 23d, 1875.

EDITOR FOREST AND STREAM:—

I have had the privilege this Fall of using both—the first I condemn, but the second I think a great improvement. A man armed with a choke bore trying to shoot snipe, quail, partridges, or any bird hard to hit will, nine times out of ten, miss single ones unless he be a champion shot. For such only are choke bores of any service for field shooting. And I would say to any one thinking of buying such a gun to first try it. When they return they won't want it, or will wait, as they will be cheap. I think it nonsense to talk about close shooting breech loaders when it is almost impossible to make old gunners give up their muzzle loaders for breech loaders for the only reason that the latter shoot too closely. All that the majority of sportsmen want is a breech loader which will shoot as well as their old guns, with the advantage of being breech loading. No more is expected. I, for one, never expect to get a gun to shoot any better than my old Greener muzzle loader, although I have a breech loader which shoots as well, though made by another maker. It has been rebored to shoot more openly, the same as the old gun, and no one can tell by targets made which gun did the work, and it does not tear a board all to pieces at thirty yards, and miss entirely at ten or fifteen; for how many men can shoot a bird on the wing with a rifle ball. I saw a duck killed by a choke bore gun at fifteen yards that had a hole as big as your finger right through him. I would like to see a company of twenty men at a pigeon shoot, twenty one yards rise, all having something up, and see how many would shoot choke bores from choice. The English chilled shot is one eighth smaller than the American, is so hard that it can be driven into a board with a hammer without flattening, and will give the same penetration ten yards farther than the American; it will not lead the barrel at all, and will go more evenly and make a better target than can possibly be made with the American. With a ten pound gun, five drachms powder, and one ounce No. 5 shot I can kill ducks at eighty yards, which is good enough. **S. K., Jr.**

Rational Pastimes.

BASE BALL—THE PROFESSIONAL ARENA.

—Though the amateur class of the fraternity will continue their play through November up to Thanksgiving Day—the regular closing day of the base ball season—the professional season for 1875 terminated on Saturday, October 30th, the last game of the season, as was the first, being marked by a victory for the noted Red Stockings of Boston, a club which for the fourth time in succession bore off the emblem of the season's championship, and this by a record of honorably earned victories unprecedented in the history of the Professional Base Ball Association, as will

be seen by the appended table giving the number of games played, victories won, and defeats sustained this season, exclusive of forfeited games:—

	Athletic.	Hartford.	St. Louis.	Philadelphia.	Chicago.	Mutual.	New Haven.	Red Stocking.	Washington.	Centennial.	Atlantic.	Western.	Total.
Games won.	8	9	7	6	8	10	5	1	5	5	6	1	71
Games lost.	2	1	2	0	2	0	1	0	0	0	0	0	8

The Bostons lost two exhibition games at Troy, thus making ten defeats for the entire season against over seventy victories—a record unequalled in the history of the championship contests.

—The close of the professional championship season leaves the regular contestants, whose games will be counted by the Championship Committee, occupying the following relative positions:—

	Boston.	Athletic.	Hartford.	St. Louis.	Philadelphia.	Chicago.	Mutual.	Games Won.
Boston.	8	9	7	6	8	10	5	48
Athletic.	2	1	2	0	2	0	1	32
Hartford.	1	4	5	4	6	8	2	28
St. Louis.	0	2	1	5	5	5	2	26
Philadelphia.	0	2	4	5	3	7	2	20
Chicago.	2	1	4	5	3	3	3	18
Mutual.	0	3	2	0	5	3	1	13
Games Lost.	7	19	27	28	31	36	37	155

The above table does not include forfeited games, two of which are claimed by the Bostons with Philadelphia, two by Athletic with St. Louis, and one by Boston with St. Louis.

By the above record it will be seen that the Boston Club leads by sixteen games; the Athletics lead the Hartfords for second position by four games, and the Hartfords the St. Louis for third place by two games.

—The record of the best played games in the professional arena for October is as follows:—

October 19—Chicago vs. Athletic, at Philadelphia, (8 innings).....	1 to 1
October 2—Boston vs. Hartford, at Boston.....	3 to 2
October 1—Mutual vs. Athletic, at Philadelphia.....	4 to 2
October 22—St. Louis vs. Mutual, at Brooklyn, (10 innings).....	4 to 3
October 8—St. Louis vs. Chicago, at St. Louis.....	4 to 3
October 18—Hartford vs. St. Louis, at Hartford.....	5 to 0
October 25—Hartford vs. Chicago, at Hartford.....	5 to 3
October 29—Mutual vs. St. Louis, at Brooklyn.....	5 to 5
October 15—Athletic vs. Chicago, at Philadelphia.....	6 to 2
October 23—St. Louis vs. Mutual, at Brooklyn.....	6 to 2
October 4—Mutual vs. Boston, at Troy, (exhibition).....	6 to 3
October 7—St. Louis vs. Chicago, at St. Louis.....	6 to 4
October 9—Chicago vs. St. Louis, at St. Louis, (exhibition).....	7 to 1
October 19—Boston vs. Hartford, at Hartford.....	7 to 3
October 5—Athletic vs. Hartford, at Philadelphia.....	7 to 4
October 30—Boston vs. Hartford, at Boston.....	7 to 4
October 7—Boston vs. Philadelphia, at Philadelphia.....	8 to 7
October 13—Athletic vs. Hartford, at Hartford.....	8 to 7
October 27—Hartford vs. Chicago, at Hartford.....	9 to 2
October 28—Athletic vs. St. Louis, at Philadelphia.....	9 to 2
October 23—Philadelphia vs. Athletic, at Cincinnati.....	9 to 2
October 6—Cincinnati vs. St. Louis, at Cincinnati.....	9 to 7
October 29—Hartford vs. Boston, at Hartford, (7 innings).....	8 to 8

—The games played since our last issue were as follows:—

October 25—Hartford vs. Chicago, at Hartford.....	5 to 3
October 25—Philadelphia vs. St. Louis, at Philadelphia.....	17 to 2
October 26—Hartford vs. Chicago, at Hartford.....	9 to 2
October 26—Philadelphia vs. Athletic, at Philadelphia, (exhibition).....	8 to 4
October 27—Hartford vs. Chicago, at Hartford.....	17 to 6
October 28—Boston vs. New Haven, at New Haven.....	10 to 7
October 28—Athletic vs. St. Louis, at Philadelphia.....	9 to 3
October 29—Hartford vs. Boston, at Hartford, (7 innings).....	9 to 8
October 29—Mutual vs. St. Louis, at Brooklyn, (7 innings).....	5 to 5
October 30—Boston vs. Hartford, at Boston.....	7 to 4

THE AMATEUR ARENA.

There can never be any champion amateur nine of the United States, for the simple reason that in order to attain such supremacy as would be necessary to give a clear title a club would have to incur such expenses as none but a professional organization could very well defray. But there can readily be amateur champion clubs of towns, cities, and counties of States, and perhaps of a single State, under certain circumstances. Thus far the close of November leaves the Chelsea Club the amateur champions of Brooklyn and Long Island, and the Flyaways the champions of New York city, the Staten Island Club being champions of Richmond county, and the Paterson Club of Northern New Jersey, if not of the whole State. Of Western New York, the Stars of Syracuse are the champions, while in the Eastern States the Live Oaks of Lynn and the Lowell club divide the honors. The champion of the legitimate amateur clubs in the metropolis is the old Knickerbocker Club, the only existing organization of the kind in the State.

—The following is the record of the best amateur games played since our last:—

October 19—Concord vs. Chelsea, at Brooklyn.....	9 to 8
October 21—Taunton vs. Live Oak, at Taunton.....	8 to 6
October 17—Stocks vs. Red Stockings, at St. Louis.....	7 to 5
October 16—Downer vs. Meller, at Pittsburg.....	6 to 2
October 16—Red Caps vs. Clipper, at Winona, Minn.....	8 to 7
October 22—Hartford vs. Yale, at Hartford.....	9 to 4
October 23—Standard vs. Buckeye, at Wheeling, Va.....	8 to 3
October 23—La Belle vs. Standard, at Wheeling, Va., (5 innings).....	3 to 0
October 23—Franklin vs. Bluff City, at Elgin, Ill., (7 innings).....	7 to 3
October 19—Live Oak vs. Lowell, at Lynn.....	7 to 6
October 21—Downer vs. Sewickley, at Alleghany.....	8 to 4
October 18—Lowell vs. Live Oak, at Lowell.....	1 to 0
October 19—Randolph vs. Olympic, at Dover, N. J.....	5 to 4
October 20—Philadelphia vs. Quickstep, at Wilmington.....	9 to 3
October 22—Quickstep vs. Flyaway, at Wilmington.....	8 to 4
October 23—Bates College vs. Bowdoin, at Brunswick.....	8 to 4

—The finest amateur game of the season, and the best on record, was that played at Lowell, Mass., on Oct. 18, the score of which was as follows:—

	R.	1b.	P.	O.	A.	E.		R.	1b.	P.	O.	A.	E.
LOWELL.													
Pike, 1 f.....	0	0	0	0	0	0	Shattuck, r. f.....	0	0	0	0	0	0

Umpire, Otis Tilden, Brockton.						Time, 1h. 30m.							

—At the Waco, Texas, fair, recently, R. A. Ford rode sixty miles in two hours and forty-nine minutes, the fastest time on record by five minutes. After dismounting for ty two horses, he made his last mile in two minutes and seventeen seconds. He rode common Texan horses.

BICYCLING.—Mr. James M. Mason recently rode from Highland, Ohio, to London, in Madison county of the same State, and return, in eleven hours and forty minutes, the distance being ninety-nine miles. This time included several stoppages, which, being deducted, made the actual riding time nine hours and five minutes, or within a fraction of eleven miles an hour. This performance is certainly the best of which we have record in this country, where, after the novelty of its introduction had worn off, the interest rapidly died out. In England, however, it has taken firm hold as an athletic pastime, and the speed obtained by amateurs as well as professionals is really remarkable. A mile in three minutes, or four miles in fourteen minutes, are by no means uncommon performances, while the English papers speak of ten to twelve miles an hour as only fair road riding. Long trips, extending sometimes for days and among several counties, are taken by members of the numerous English clubs, apparently with much enjoyment. Last Winter a performer attempted to run against a trotting horse ridden by Dan Mace, in Barnum's Hippodrome, the bicyclist making the circuit of the inner ring while the horse went around the outer circle. The bicycle, however, was very badly beaten. Mr. Mason's performance, although perhaps it would not be considered remarkable across the water, is really a very excellent one, and stamps him as an athlete of the first order.

A PLEA FOR THE CURS.—A member of Grange No. 550 writes in defense of curs and against the dog law being put in force in his section. He says: "The devilish coons are tearing down my corn and my neighbors', and we are bound to keep more than one cur, or the corn will 'scatterlophisticate' all over the equanimity of the forest."

Our Readers

are heartily advised to send ten cents for a specimen copy of the
Illustrated Household Magazine,

FOR FALL SHOOTING ADDRESS J. W. Kinsey, Barnegat Post Office, N. J. To insure good gunners, write one week in advance. Oct 14

For Florida.

PHILADELPHIA AND SOUTHERN Mail Steamship Company's line to Savannah, Ga., sailing every Saturday, from Pier 23, below Pine street, Delaware River, at 12 o'clock noon, making close connections through to all points South. The line is composed of the steamships JUNIATA and WYOMING. The Wyoming does not carry passengers. The Juniata is a favorite ship with the traveling public, having passenger accommodations of the most superb character. She has recently been refitted and elegantly furnished with everything requisite to the comfort and convenience of passengers.

Families en route for FLORIDA, Georgia, Alabama, and even as far as New Orleans, will find the Savannah route the most desirable for comfort, as well as the most economical. Through trains of the Central Railroad of Georgia and Atlantic and Gulf Railroad, Florida, leave Savannah every morning and evening. The Florida steamers leave Savannah three days in the week for all points on the coast.

For through passenger tickets and bills of lading to all points in Florida, Georgia, Alabama and Tennessee, apply to Wm. L. JAMES, General Agent, 416 South Delaware avenue, Philadelphia.

FOR NEW HAVEN, HARTFORD, Springfield, White Mountains, Montreal and intermediate points. The new and elegant steamer C. H. Northam leaves Pier No. 25, East River, daily (Sundays excepted) at 3, and Twenty-third street, East River, at 3:15 P. M. A passenger train will be in waiting on the wharf at New Haven and leave for Springfield and way stations on arrival of the boat.

NIGHT LINE—Steamer Elm City leaves New York at 11 P. M., arriving in New Haven in time for the early morning trains. Tickets sold and baggage checked at 944 Broadway, New York, and 4 Court street, Brooklyn. Apply at General Office on the pier, or to RICHARD PECK, General Agent. 1f

SENT EXPLANATORY CIRCULAR how \$10 TO \$500 invested in stock Privileges has paid and will pay Large Profits. Railroad Stocks, Bonds and Gold bought on Margins. Interest Six Per Cent. allowed on deposits subject to sight draft. \$10 to \$500.

Backwater & Co., Bankers and Brokers, No. 10 Wall Street, New York.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER, The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER, For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 6 1/2 lbs. each, and in canisters of 1 and 5 lbs.

AUDUBON POWDER, Very quick. For woodcock and quail Nos. 1 to 4. Packed in metal kegs of 12 1/2 lbs. and 6 1/2 lbs., and in pound canisters.

ORANGE RIFLE POWDER, The best for rifles and for all ordinary purposes. Sizes F.g, FF.g, FFF.g, the last being the finest and most used. Packed in wood and metal kegs of 25 lbs., 12 1/2 lbs., and 6 1/2 lbs., and in canisters of 1 lb. and 1/2 pound.

All of the above give high velocities and less residue than any other brands made.

LAFLIN & RAND POWDER CO., 21 Park Row, N. Y. (OPPOSITE ASTOR HOUSE.)

DITTMAR POWDER
MANUFACTURING CO.

MY NEW IMPROVED POWDER can now be loaded from an ordinary powder flask; grains hard. Use it now like Black Powder. No fear of overloading. Burns slow now. No fouling of the gun. Little or no smoke. Little or no recoil. Not very loud report. Less heating of the barrel in rapid firing. Good penetration and good pattern. Safe to keep, as it does not explode if set on fire except well confined. Shells furnished loaded with powder only, if desired. None genuine without my signature on the can. CARL DITTMAR, NEPONSET, MASS.

ENGLISH
SPORTING GUNPOWDER.

H. C. Squires, No. 1, Courtlandt st.

New York.

THE GREAT
London Gun Trial,
1875.

W. W. GREENER begs to inform his numerous clients in the United States that he has been very successful in the above trial, having secured the first prize, a silver cup, value 40 guineas—class 2 for 12 bores; also winner in class 1 for 8 and 10 bores, and class 4 for 20 bores. He has won in all the classes for improved boring, which is upon a different plan to any other maker, and is far superior in the three most essential points, viz., PATTERN, PENETRATION, and REGULARITY OF SHOOTING.

Mr. HENRY C. SQUIRES, of No. 1 Courtlandt St., New York, is now importing my DOUBLE CLOSE SHOOTING GUNS to order, an invoice of which will be shipped to him on the 1st July, and can be examined about the 15th. All special orders given to Mr. Squires will be carefully filled. A full report of the GREAT TRIAL, showing the marked superiority of my guns over guns made by Dongal, Pape, Tolley, and others, will shortly be published, and can be had on application at No. 1 Courtlandt St.

W. W. GREENER, Champion Gun Maker,

St. Mary's Works, Birmingham, England.

HENRY C. SQUIRES of No. 1 Courtlandt street, has just received an invoice of these close-shooting guns, and from him any information in reference to the results of the Great Trial can be obtained on application

Breech Loaders.

W. & C. SCOTT & SONS.

Winners of the "Turf, Field and Farm" Gun Trials.

(See issue October 31, 1873.)

In which competition the committees have awarded our guns, First and Second for POINTS OF MERIT OF ACTION, MATERIALS, PROPORTION, AND SHOOTING QUALITIES combined, in all the four classes.

THE PREMIER GUN.

W. & C. SCOTT & SON call attention to their very FINEST weapon, combining all their recent improvements, marked on the rib between their name and London address the brand—"THE PREMIER QUALITY."

Medium and fine guns bear full name and address, and plain guns full name and "London" only.

Each gun is numbered and the actions are stamped with name and trade mark.

W. & C. SCOTT & SON, sole makers of the Patent Top Lever, solid, Double Locking Bolt Breech Loader, bearing the full name of the firm. W. & C. SCOTT & SON caution sportsmen against imitations of their patent and name. Guns bearing the name abbreviated, or with different initials, are not genuine.

TRIAL OF SCOTT & GREENER'S NEW SYSTEM OF BORING, BY THE EDITOR OF "THE FIELD," LONDON.

(See The Field, January 30th, 1875.)

"From a comparison of the two tables it will be seen that with Walker's shot, Messrs. Scott's guns showed a marked superiority over Mr. Greener's, both in average and in the highest score made. Indeed, with the left barrel, in his third shot, Mr. Scott got a selected group pattern of 239 and a penetration of 37, equalling the highest pattern made by Mr. Greener, and exceeding the penetration of that particular shot by eight sheets."

WHOLESALE.

Oct 1-6m

J. D. DOUGALL'S

EXPRESS SHOT GUNS.

(Title registered.)

SHOWN by trials at Wimbledon by Editor of the Field to possess the GREATEST PENETRATION and therefore LONGEST RANGE—thus: Circle, 20 inches; 300 pellets; average, 191; penetration, 37. The Editor's trial of Greener guns with 340 pellets of same shot, and same charge of powder, gave 180, and penetration 80, although there were 40 more pellets in each charge. Should any controversy arise as to the durability of these new systems, we herewith warn all, beforehand that our system is our own invention (though founded on the American idea) and is DURABLE, a fact remarked on by the Field, that the guns tried had been in use during last season, and references permitted to the owners. Send for Illustrated Circulars to

59 St. James's Street London.

W. W. GREENER'S

DOUBLE CLOSE SHOOTING GUNS. Winner of the Silver Cup, value 40 guineas, at the Great London Field Trial 1875, beating 23 competitors with 68 guns, also winning in all the other classes for the Improved System of Boring. These guns will kill from 80 to 100 yards, loaded with large shot, and will shoot well with small shot with a less powder charge than guns bored upon the old system. For report of the Gun Trial apply to Messrs. McLaren, Williams & Co., Agents, St. Louis, U. S. A. Address

72 ST. JAMES STREET, LONDON.

WILLIAMS & POWELL,

Gun and Rifle Manufacturers,

Call the attention of the Sportsmen of America to the extreme SIMPLICITY, STRENGTH and DURABILITY of their New Patent "SIMPLEX" Breech loader and INDEPENDENT EXTRACTOR.

The parts in this new action are so few (only two), its mechanical soundness so thorough, and the strength and simplicity of the action so great, that W. & P. feel sure it will supersede all the complicated and manifold grips now in use, its one powerful grip being far stronger than any double, treble or quadruple grip now used. In this new action LEVER and GRIP ARE ONE SOLID PIECE OF STEEL and the ANGLE of the BODY is left in its ENTIRE STRENGTH.

Drawings of action and extractor will be sent on application, and orders may be forwarded through any of the best houses in the States for execution in the Spring.

Guns guaranteed to make patterns of from 160 to 230 with No. 6 SHOT AT 40 YARDS, as desired.

NO. 25 SOUTH CASTLE STREET, LIVERPOOL.

THE HAZARD POWDER CO., MANUFACTURERS OF GUNPOWDER.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting it ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12 1/2, and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER. GOVERNMENT CANNON AND MUSKET POWDER. ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office.

Trouting Among the White Hills.

WARE that an idea prevails among the disciples of Isaac Walton that trout fishing among the White Hills of New Hampshire has become a thing of the past, and that one might expect to be more successful in a search after the stereotyped needle hid in the hay stack than in attempting to take trout from the waters that empty into the Connecticut from that State, many of your readers may therefore be not a little surprised to learn that in the clear, sparkling waters of the Granite State there are now just as good fish as ever were there caught. So with your consent, Mr. Editor, I propose giving you a few leaves from my diary expressive of my experience during a visit to that section.

It was on the afternoon of a beautiful day in August that your correspondent found himself at the Fabyan House, situated at the terminus of the Boston, Connecticut, and Montreal Railroad, where, after partaking of a hearty supper, I approached some of the attaches of the house and sounded them as to the probability of finding trout in the neighborhood. Just as I expected, nothing could be gleaned from men whose only idea of the pleasures of life was derived from the acquisition of dollars and cents, and who never once had experienced the electric thrill such as is felt when a two pounder takes the dropper. Retiring for the night, I was soon in dreamland, and while having some good fishing there, was suddenly disturbed by a rap at the door, accompanied by "six o'clock, sir." Donning my fishing rig and shouldering my Mitchell rod, I was soon plodding along the road in the direction of the upper falls of the Ammonoosuc, distant about two miles. The morning was a fine one—the clear, fresh, crisp air seemed to quicken every muscle with a new vigor, and after a brisk walk of half an hour I reached my destination. Seating myself on a large boulder by the side of the stream, I took a look at the situation. The view was a grand one, and would have gladdened the heart of an artist. Away to the left old Mount Washington reared his lofty head far up into cloudland, while on either side stood others of no mean elevation, all serving to separate, as it were, the valley from the outside world, while long stretches of rolling woodland, far extended, bounded the view, and seemed to tone down its general effect. Guide book writers are pleased to designate the stream as the "beautiful Ammonoosuc." If not the most beautiful, it is at least the most rapid stream in New Hampshire, descending, as it does, upwards of five thousand feet in its comparatively short course from its head waters to its junction with the Connecticut River. It is formed by the union of two brooks, named from the mountains in which they respectively take their rise, viz: Mount Jefferson and Mount Clay. It runs smoothly along for several miles until reaching a spot where the contraction of its rocky banks giving it additional impetus, it rushes madly along and dashes over a fall of some twenty feet, widening out into a pool, the deep dark waters and circling eddies of which would satisfy the craving of the most fastidious fisherman. Surely, thought I, there must be trout, if any are in the stream. Adjusting my rod, I put on a brown hen's tail fly, with a red hackle for a dropper, and prepared for my first cast. Cast after cast were made with all the skill I could command, without any signs of fish. After chipping every inch of surface in the pool, I concluded that my speckled friends had gone to attend a convention further down stream, and, fisherman like, decided to make one more cast before following them. Changing the brown hen for an ibis, I threw under the falls and drew across to the till water beneath an overhanging rock. A roll, a quick nod, a responsive turn of the wrist, and I had him. As he felt the hook he straightway led off for the other side of the pool, where an old stump, lying half in and half out of the water, offered him a safe haven. Ah! how he pulled. Now old rod, victor in many a well-waged fight, be true; bend, but do not break. Steady, give it to him gingerly, so! Foiled in his first dash for liberty, he darted

to the bottom and there lay sulking in six feet of water. A steady strain brought him to his senses, and after one or two frantic attempts to free himself he gave up the fight—another victim of misplaced confidence. Nobly had he fought, and it was with no little satisfaction that I dropped a pound and a half trout into my creel. Picking my way down stream, I meantime kept adding to my string, till having secured seventy-six very good average trout I shouldered my rod and bent my steps homeward, very well pleased with the day's sport.

Jefferson Brook was my next objective point; accordingly, on the next afternoon, mounted upon the box of one of the mountain stages, I was soon bowling along behind a six horse team in the direction of the base of Mount Washington. A pleasant drive of six miles brought me to Marshfield, where, nestling under the shadows of Mount Washington, stands the Marshfield House, offering accommodation for man and beast. Here I proceeded to make myself comfortable for the night, intending to take an early start the next morning. Long before the sun's rays had dispelled the mists that hung upon the mountains I breakfasted, and in company with my genial host, who volunteered to put me on the path that crossed the brook, we started out. Our route lay up the track of the Mount Washington Railway for half a mile, whence we struck off on to Mount Clay, and after a short walk came upon an old bridle path that had in former years served as an approach to the summit. Here my guide bade me adieu, with the remark that the path was just a little bit blind, but he guessed I could find the brook if I kept my eye peeled. Profiting by his advice, I pushed on through the thick woods for an hour or more, when the dull, sullen murmur of the brook broke upon my ear. Standing on its bank, a single glance satisfied me that whatever fish were taken from its waters must be taken with something other than a fly. Now I know some fishermen who would have given that brook the go-by, because to fish it with a fly was simply out of the question. Not being troubled with any such scruples, I had provided myself with a supply of bait before starting, and rigging up a short line, with an inviting worm upon a Sproat bent hook, I introduced it to the favorable notice of the denizens of Jefferson Brook. Oh, but it was lively work! There was hardly an inch of water that did not cover a trout. Pool after pool yielded up its finny inhabitants, and several times I took as many as twenty trout from a single hole. The fun grew hotter and hotter, without any sign of abatement, but the lengthening shadows warned me that if I intended to get out of the bush before dark it was now time to make the start. Emptying my creel upon a mossy bank, I found that my catch had yielded me just two hundred and thirty-seven fish. I think I hear you say—ah! yes; all very well; minnows, of course. On the contrary, they were a handsome mess of trout, many of them running up to ten inches in length. Compelled to travel down the brook in order to get out, the thick woods on either side precluding all hope of a passage, so much good ground was passed over that I decided to give that brook another call.

Seven o'clock next morning found me on the road, it being my intention to strike the brook at its mouth and fish up to where I had left off on the previous day. I was soon at work, but something was evidently wrong, for, though fishing very carefully, not a single fin did I see. On I went, however, clambering up the brook, when suddenly they commenced to bite. From that time I had my hands full. "Trout to the right of me, trout to the left of me, trout right in front of me, bit and were captured." Finally, from sheer inability to creel any more, I was forced to reel up and quit. On reaching home I found my catch was within one of that of the previous day, making a total of four hundred and seventy-three fish for the two days.

I might go on and tell you how, with a brother fisherman, we took some eighty fish from a mill pond under the shadow of the Fabyan House, four of which weighed a pound apiece, but desiring, with your permission, to give you some account of a camping trip, I hasten on. On my return to the Fabyan I found a marked degree of excite-

ment prevalent in consequence of the circulation of certain marvelous stories respecting the number and weight of trout to be obtained from certain ponds situated in the woods about sixty miles distant from our headquarters. These ponds were said to be connected with each other by a stream which rose in the mountains, by which they were fed, and which also served to discharge them into the Connecticut. The reports were set forth with so much of particularity and apparent truthfulness that a small but enthusiastic party was formed on the spot in order to visit them, and, by personal inspection, to test their quality and productiveness. Our arrangements were speedily completed, and on the morning of the 27th of August last our party set out, and in due season arrived at Northumberland, a station on the Grand Trunk Railroad, where we were to meet our guide. Here we turned our backs on the iron horse, and took our places on a buck board wagon, that was to take us some miles further on our way. Our guide, who rejoices in the name of Ethan Allen Crawford, and is a grandson of the famous pioneer of the same name who first carried civilization into the White Mountain region, took the ribbons, and as he sat in front, mounted on an empty box, stark, stalwart, six feet, and the very personification of cheery good humor, we had every reason to congratulate ourselves upon having secured so valuable an addition to our party. We found him to be a most enthusiastic fisherman, and having lived in the neighborhood all his life he knew every inch of water in the region. Not a pond or stream did we pass but that he entertained us with piscatorial reminiscences respecting how, in days gone by, he had filled his basket from this or that spot. A ride of five miles brought us to a log shanty in the edge of the woods, which Ethan said was as far as wheels could carry us, and that we must trust to our legs the rest of the way. This shanty was occupied by Otis Pike, whom our shouts soon brought to the door. He and Ethan being old comrades in many a fishing scrape, we at once received a hearty welcome, and preparations for dinner were soon under way. Having satisfied the inner man, we lit our pipes and calmly entertained ourselves by watching Ethan's arrangements for the tramp. Approaching the wagon, he pulled from among the boxes that had served us for seats two smaller ones fitted with straps, so that they might be slung as knapsacks, into which he packed our provisions and cooking utensils. He then turned his attention to us, and, subjecting us to a close scrutiny, insisted upon our leaving everything behind save our rods and the clothes we stood in, remarking, with a quiet smile, that we had about ten miles of the hardest kind of traveling before us ere we might expect to see camp. Slinging one of the packs on his own back, and the other on that of his friend Pike, whom he had persuaded to accompany us, he gave the word, forward! Grasping our poles, all fell in, and soon lost sight of everything except the thick woods by which we were surrounded. The trail lay along the spur of a mountain, and followed for some distance a good sized stream, that served as the outlet to the ponds toward which we were journeying. Toiling along, we reached a bridge where Ethan ordered a halt for rest, and informed us, as he unslung his pack, we had come half way, but somewhat dampened our ardor by intimating that the worst part of the road was yet before us. We found his words only too true, the trail leading us through windfalls, over fallen trees, and into holes of every shape and size, till we were almost ready to give up. Encouraged, however, by our cheerful and indefatigable leader, we pressed on, and at nine o'clock in the evening arrived at camp, having walked the last two miles by birch bark torch light. Pike soon had a rousing fire ablaze, and while he was preparing supper we were studying the surroundings. The shanty, as Ethan called it, proved to be a very good log house, situated on a knoll near the edge of the water, commanding a view of the pond from shore to shore, and though built by a party of loggers several years ago was still in a good state of preservation, and promised a safe and comfortable shelter against the weather. Pike's summons to supper having put a stop to our observations, we were soon busy discussing the merits of salt pork and coffee. Having sat

isfied our appetites, we turned to the fragrant weed, and while watching the curl from our briar roots waxed eloquent over the scenes of auld lang syne. Quiet finally prevailed as one after another, stretching himself on the hemlock boughs, surrendered to "nature's sweet restorer." In this condition, and while unable to speak for themselves, let me make you acquainted with the occupants of Camp Butler. That one with his feet turned towards the fire and head resting on his arm, is Mr. I., a prominent "limb of the law" from Cleveland, Ohio, and a genial, warm-hearted gentleman he is. He is the wit of the party, and his sallies and puns largely contribute to the cheerfulness of our camp. This one, with his head resting on an old meal bag, his pants stuck into a pair of well-worn boots, and his body twisted into the shape of a figure four, is Mr. B., of Boston, another disciple of Blackstone, and learned in the law. He is the best fisherman of the party, as well as a great authority on euchre. His opinions are never appealed from, and when he decides that the right bower, if well played, would always take a trick, the whole bench concurs. That bundle of shawls contains Charley F., a good fellow, who knows how to cook a trout as well as capture him. Your correspondent completes the party, respecting whom modesty compels me to remain silent. We were astir at daybreak, and performed our morning ablutions in the ice cold water of a neighboring brook, while honest Pike busied himself in preparing our morning meal. It was ready on our return, and such as it was, was soon discussed, when, with our tackle prepared, we set out for the scene of operations. Arrived at the pond we divided into two parties, and embarking on rafts which had been prepared by the friendly hands of some former visitors, pushed out into midwater. Mr. I. had brought a new and untried split bamboo rod, the qualities of which he was anxious to put to the test, so to him, therefore, was accorded the courtesy of the first cast. Anchoring near some lily pads, while his comrade, Mr. B., was skirmishing with a worm, he made the first cast accordingly. Straight out went the line, delivering the fly with the lightness of a snowflake. Again and again he threw, handling the long line with consummate skill, his light bamboo responding to every motion. The next cast brought up a fish, which seized the tail fly, splashed, and went down with it. Now then my genial friend, from the way in which that tip crosses the butt you have hooked an old stager, and unless you keep him well in hand you will have to score a lost fish. It's a clear field, and no favors for you, my beauty, though all in vain are your mad efforts to escape. Yielding to the steel-like spring of the tough bamboo which met him at every turn, he was at length brought alongside and landed on the raft, where he pulled the scale down to two and a half pounds, and raised our hopes of a good day's sport accordingly. We were destined to be disappointed, however, for every effort to entice another of them from his lair proved futile. Crestfallen and discouraged, we reluctantly reeled up and poled ashore, where, in mournful tones, we lamented the uncertainty of trout fishing. In the afternoon two of us resolved to try the little pond adjoining the large one, and in company with Ethan we headed for that point. Poling out to nearly the centre of the pond, we drove the pole into the mud and commenced operations, meeting with no better success than that of the morning; so after exhausting the resources of our fly books we came to the conclusion that there were no trout there, and that we were the victims of a misrepresentation. Our deliberations were suddenly interrupted by an exclamation from Mr. I. "Hallo, M., there's a rise." Sure enough, a trout had risen, seized a fly, and disappeared. Our expiring hopes were raised, and we were soon busily engaged in quest of our prey. Our flies, however, were evidently unsuited to their tastes, for though we carefully fished every inch of surface in the pond we failed to tempt a single rise. Resorting at last to a large blue jay fly, which had on many occasions stood me in good stead in my pursuit of bass, I cast out upon a lily pad, and gently dropped it thence into the water, when instantly an angry rush, a plunge, and a quick tightening of my line assured me that a good fish was fast to my light tackle. Away he dashed, the line cutting through the water like a knife till, wearied by his struggles to escape, he concluded to come in out of the wet. From the earnest way in which he battled for liberty, I had mentally put him down at two pounds, and was correspondingly disappointed to find that he slightly exceeded a pound only. They were now rising rapidly, so dropping my last captive into the creel I cast and hooked another good one. The water now seemed alive with them. Furnishing my friend I. with a fly similar to my own, we caught a fish at nearly every throw, keeping at it until darkness put an end to our sport, when we poled ashore and found ourselves in possession of a very handsome catch, running from a quarter of a pound to a pound. Lighting his birch bark torch Ethan struck off for camp, where we arrived about nine o'clock, sufficiently fatigued and ready for supper.

The next day being Sunday we quietly remained in camp. The following morning found us early astir, and under a due sense of responsibility as regarded the coming results of the day, which was to be our last in camp, much anxiety being felt to make such an addition to our string as would enable us to meet our friends at headquarters with a sufficient demonstration of our success and skill. Mr. I. and myself decided to fish the little pond, while Ethan and Mr. B. were to go to another which had not as yet been visited. We arrived at our pond at six o'clock, pushed out, and commenced business. The trout rose handsomely, and for two hours we had some glorious sport, till suddenly they stopped for good, and terminated our success.

Returning to camp we rested in the shade, took a pull at our briars, and anxiously awaited the arrival of our comrades, who shortly emerged from the woods.

"What luck, boys?"

"Good; see here!"

When, opening their baskets, they exhibited the finest mess of brook trout I had ever seen. There were just forty-two fish, the smallest weighing half a pound and the largest, of which there were two, weighing two pounds and a half each. As I looked at the fish I resolved to have a look at the pond whence they were taken. Accordingly, during the afternoon, accompanied by Ethan, we made the start. Arriving at its shore, I remarked to Ethan, as I looked out upon a shallow sheet of water, covered with pond lilies, "there are no trout in there, I know."

"Now don't be in a hurry," said he, "just wait a little," and while poling away from shore he quietly worked the raft out to the pond, where I noticed a clear spot about twenty feet in circumference. "Do you see that hole?"

said Ethan; "well that's a spring hole; it is about eight feet deep, and right there, and nowhere else, we took those big trout you saw this morning. Keep quiet now, and I'll move up a little bit closer."

As I stood on the edge of the raft, rod poised, ready to make a cast when the proper moment should arrive, I must confess I felt just a little bit excited. Reaching the desired spot, my line was soon in the air, and shooting out straight before me delivered the fly in the centre of the hole. A furious dash, one flash of his silvery sides, and away he went for the pads; once in them there was little hope for me. Giving him the butt, I succeeded in turning him, and soon had him alongside, where Ethan landed him, weighing two pounds, upon the raft. One after another of the beauties did we take till, having secured seventeen, we concluded that, as the night was fast approaching, and we had a two miles' tramp through the woods ere camp could be reached, we had better start.

We struck camp the next morning, and turned our faces homeward, whence, in addition to what was consumed by six hungry fishermen, we carried ninety-four as handsome brook trout as the most enthusiastic fisherman could wish to see. They ran from a quarter of a pound to two pounds and a half, and were duly displayed and admired at headquarters.

Good bye, old camp; long will the happy moment passed under your roof live in my memory; and you, old guide, may your shadow never grow less, but, like the sturdy pines among which you make your home, long may you wave. To you, my genial western friend across the rugged head of old Mount Washington, under the shadow of which we have passed so many pleasant hours, I waft my regards.

I have thus, Mr. Editor, endeavored to demonstrate the fact that not only are brook trout still abundant in the White Hills, but also that many may be taken which weigh over half a pound.

J. G. M.

For Forest and Stream.

CAPE BRETON.

I HAD fancied, and I suppose others fancy, that Cape Breton is a desolate sort of place, inhabited by the waifs and strays of mankind, who earn a precarious living on the coast by cod fishing, and in the interior by no one knows what; that ice and snow are the portion of the inhabitants for eight months of the year, while the balance is divided about equally between fog and fine weather. However true this may be of the seasons, the impression one forms of the people does not suggest any great struggle in the fight for existence. In traveling from Hawkesbury, in the Gut of Canso, to Fort Hood; from there to the Margaree Forks; thence to Baddeck and back again, by the Bras d'or Lakes to the place of starting, one traverses a country in some places thickly settled, but all apparently well settled by a race of men physically the superior of any other on the face of this continent. They are chiefly of Highland Scotch descent, with a sprinkling of French Canadians, and as a matter of course nearly all Roman Catholics in their religious belief. The accommodations in the way of inns in the villages we passed through were of the poorest and dirtiest description, the only really decent place we came across being the Bras d'or Hotel at Baddeck. There was nothing Frenchy, however, about this establishment, as the name might imply, nor was it again Highland Scotch in its internal economy. It lay somewhere between these opposite poles, being kept by a Mr. Crowder, of English and Irish descent, and we found it a clean, comfortable, country hotel. The Cape Bretoners seem to be very prolific in the propagation of their species. No immigration is wanted here; only give them time and they will compass the same ends themselves. Nothing under ten children is considered a large family, and those who fall short of this generally consider it necessary to explain the unusual circumstance. The meadow lands lying along the rivers, called "intervals," produce large quantities of tolerably good hay, and this seems to be the favorite crop of the people. Scarcely any grain is raised, the long Winters being doubtless partly the cause of this; but I suspect the people themselves, like their Highland progenitors, are not specially industrious. Women constantly may be seen harrowing the fields and doing other unfeminine work, as in the Lowlands of Scotland; but unlike that country, their husbands are probably looking at them out of the kitchen windows. The hay crop, requiring little labor, suits exactly the genius of the people and the exigencies of the seasons. When patiently waiting in the Spring of the year for the grass to grow, a certain portion of the inhabitants devote themselves to making as much money as possible in conveying benighted passengers across country, in what are called "Extras"—an appropriate term for the extortionate charges demanded from strangers unacquainted with the proper rates, which vary according to the appearance and necessities of the passengers carried; and as stages on many of the routes are, like angel's visits, few and far between, the necessities of many are urgent enough. The breed of small horses on the island, though remarkable for their "staying" qualities, are certainly a forlorn, ragged lot of quadrupeds. They scuttle along, however, at a great pace, drawing loads that look absurdly out of proportion to the drawers. The rudimentary education of these equines has been sadly neglected. They put bits in their horses' mouths; but in obedience to the rein the little animals do not turn about their whole bodies. They simply turn their heads round, the bodies pursuing the even tenor of their way. It is only after a prolonged pull at the rein, and after describing a mighty circle that the heels consent at last to follow the head! Of cattle, the country seems well supplied, and of a very fair breed; but the representative hog is a curiosity indeed. It is a parti-colored animal, with long legs and nose to match, but withal admirably adapted for subsisting operations in a thickly wooded country. The tail (unlike the more civilized pig) is a prominent feature, of sufficient dimensions to supply the entire youth of the country with whistles. When cooked, he richly deserves Johnson's scornful criticism of certain viands, "Ill bred, ill fed, ill cured, ill cooked."

Bituminous coal of excellent quality is supposed to underlie the entire country, and their plaster quarries are numerous and of considerable prospective value. At present the coal mines are in a sadly depressed state, and will probably remain so as long as the Americans prefer dear fuel to cheap. The sale of liquor is proscribed on the island; but this is a law that the inhabitants don't feel themselves bound to respect.

"The cock may crow, the day may daw,
But they will have their barley bree."

Smuggling, too, is carried on with a good deal of zest by some of the people, but occasionally a custom officer pounces down upon some contraband rum and seizes the same in Her Majesty's name, which the inhabitants not infrequently recover in their own during the following night; a case of this kind occurred during our visit to the Margaree.

In regard to salmon fishing, the Margaree River is considered the best in Cape Breton; but there are doubtless many smaller streams on both shores of the island where good sport might be had. The banks of the river are quite open and clear of trees, and there are few rocks or impediments of any kind to prevent one fishing it with the greatest ease. The owners of the pools up and down the river, within a mile or so of the forks, are in the habit of renting their rights to certain fishermen, and unless one engages these pools many months in advance, a trip to the river for salmon fishing would probably result in unmitigated disappointment. When, however, the river is full of fish, I understand there are some good pools up the northeast branch, which the owners have not yet learned to charge for, and in which good sport can be had under certain conditions of the river. For trout fishing, the Middle and Baddeck Rivers are first rate, and for sea trout I had excellent sport at tide water in the Margaree, killing many ranging in weight from one to three pounds. On our road to Baddeck, in one of the afore-mentioned "extras," we were highly amused at the difference of opinions expressed by the people we met on the road, in regard to the fishing in these two rivers. Men living on the banks of the river all their lives were positive there were no fish in them; others living miles away swore they had killed them three pounds in weight, and of unprecedented length! Those living on Middle River highly recommended the Baddeck for sport, and those on the Baddeck extolled the praises of the other; and so it went on till we put up our rods and tested the matter for ourselves. I confess I pity the strangers who have to rely upon the peasantry of this country for their information in regard to things piscatory. They will probably exclaim in their haste, "all men are liars," but if they have the good fortune to make the acquaintance, as we did, of the Rev. I. I. Chisholm, whose parish is at tide water in the Margaree, they will find one bright and shining exception to the rule, for certainly a more courteous, hospitable, Christian gentleman it has never been my fortune to meet. Wherever we went we found his name a passport to the hearts of the people (for he is very much beloved by them all), besides being a gentleman well posted up in regard to the people and places, rivers and streams throughout that portion of Nova Scotia. All the rivers being late the past season, we were amongst the number of unfortunates who had to return home minus any fish. But I received a letter some time ago from my faithful camp servant, Patrick Tompkins, according to promise, giving me a list of fish killed after I left, which I give you below. I may state in conclusion that said Tompkins owns one very good pool in the river, besides having certain proprietary rights over two others, and anyone wishing to fish there next season might find it to their advantage to correspond with him. The take was as follows: Col. C., 25; Capt. B., 19; Mr. T., 51; Col. R., 3; Col. G., 9; others, 20.

For Forest and Stream.

MOOSE HUNTING IN NEW BRUNSWICK.

BEING a close season here for moose until September 17th, 1876, I started for the headwaters of Tracadie, N. B., for September calling. I did not arrive at the river until the 17th. Then, through a heavy cold rain, proceeded over six miles of a passage road to my old camp and found everything all right, but not a dry match to start a fire with. After trying until I was half choked with smoke to start one by friction, I gave it up as hopeless. I then cut the short end of a cartridge, poured part of the powder from it on my dish-cloth and folded it up loosely; then holding the gun close to it, I pulled the trigger and the result was a fire, and a hot cup of coffee, some broiled partridge, (which I shot coming in) and a good warming up. Hugh then started for home with the horses, leaving me alone. Such a lonesome, weary night, but warm and comfortable, hoping against hope that the wind would die away so I could have the morning's calling at least. Up at four o'clock, and a mile away on the Big Meadow, only to find it blowing a strong breeze—so an end to calling for that day at least. I did not mean to be idle, as there was a first-class chance to track. So finding a fresh one in the meadow, I worked it up for about an hour and a half, feeling more and more certain as it grew hotter that it was "the big one." I had tried for more than once before, but with poor success. I once or twice got a glimpse as he was going out of sight. Coming nearer every minute it was necessary to be very cautious, always leaving it going to the lee; move on for about one hundred yards, take it up, then lee again, always watching the turns, until it made a sudden right angle. On looking up quickly I could just distinguish through the alders the outline of a large moose's head, sixty-five yards away. He must have heard me, as he was still listening, looking over me and to one side. I dared not move, but watched the ears for full three minutes, waiting for him to turn. Directly the ears were slightly moved forward, then the great head swung round, but not until it was full side to did I bring the gun up. Catching a quick glimpse on a line with the ear, but slightly forward of it, I fired. A mighty spring upwards and with a great crash, down he went on his back. I ran quickly forward in time to see him spring to his feet, stagger around, moaning pitifully, then down, up again, and down again for the last time. I went back to camp for the axe, and for the next two hours I had hard work, being all alone, dressing it. He was in splendid condition, and weighed about one thousand pounds, having a handsome set of antlers, four feet from prong to prong. I have since mounted it, and it is a perfect beauty, as all admit who see it. I went out for Hugh and the horses, and it took all the next day to get the moose out, when I returned to camp for Monday's calling.

Sunday morning was a perfect one for calling, but I concluded to let it alone and visit a camp four miles away to see if there were any signs near it. When a mile from camp, I heard a buck rub his horns about one and a half miles up the meadow. Then I wished I had my caller, but I left it at camp, not intending to use it. So I put my hand to my mouth and did my best to give the sound, and with good success, as I could hear the young buck when

he made the rush down towards me. I knew he was making good time by the noise, so I went slightly to the lee and about fifty yards forward to meet him. He came up to within fifteen yards of me, when I fired for his neck bone. Going up to the spot, there lay a handsome five-year old (but with small horns) dead enough. Bad work for Sunday; but consider the temptation, and besides, the work of hauling that fellow out atoned for it.

I have called two others up in this month, but lost them both by my carelessness. One morning I saw a fine buck standing on my camp road, within two hundred yards of the camp, but my gun was where I could not reach it without starting him, so I had to watch him out of sight. Yet I would not change my old hunting grounds in Cumberland, N. S., for this one, as I consider they are much better.

I use only a Purdey top lever, double barrel shot gun, No. 12, and for timber shooting it is superior to any rifle, owing to the quickness with which you can take aim. I knocked the big fellow's brains out with a round ball at sixty-five yards; also, last Winter, shot one through the heart at one hundred and five yards.

ELK.

Cumberland, N. S., Oct. 25th, 1875.

Fish Culture.

MASSACHUSETTS ANGLERS' ASSOCIATION.—A very interesting meeting of the association was held on Wednesday evening, 3d inst. at their rooms in Boston, President Ordway in the chair. Several new names were presented for membership, and some of the most prominent gentlemen in the State were admitted. Benj. P. Ware, Esq., addressed the members on the subject of deep sea fishing, trawling, &c., showing by figures what a great amount of devastation was constantly going on on our coasts by such means, and also that he had not changed his opinion since his last address to the association, but his convictions had been strengthened by letters received from fishermen at Marblehead, Gloucester, Provincetown and other places that the wholesale practice of trawling must be legislated upon by getting wholesome laws passed. Walter M. Brackett, Esq., gave a pleasing and instructive epitome of his Summer trip in Canada and Maine, and the meeting was one of great interest to all.

BLACK BASS FOR NEW JERSEY.—The Hamilton (N. J.) Item, records the arrival of two hundred black bass for the lake near that place. They were furnished to the New Jersey Game Protective Society by Mr. M. P. Pierce, of Ninonah, N. J., who is making the supply of this fish for stocking purposes, a business. The demand on him is so great that he employs over thirty men and boys, fishing for bass on the Upper Delaware, and cannot fill his orders.

FISH CULTURE IN VIRGINIA.—We have repeatedly spoken of the laudable efforts now being made to propagate good fish throughout Virginia, and to instruct at educational institutes and otherwise, the people of the State in the science of aquaculture. Of these efforts our valued correspondent, John Williamson, writes:—

"Dr. Graham Elzey paid us a visit about the time of our county fair, and we tried the bass on Goose Creek with but slight success—six or seven fish in all. He is evidently the right man in the right place, collecting information about the denizens of all our streams, and making arrangements for stocking our waters with suitable fish. He is personally acquainted with our best rivers, being a native of this section (the east), educated at Lexington, in the middle of the State, and now residing in Blacksburg, in the southwestern part of the Old Dominion. Some large bass were exhibited at the county fair. The trout hatched last year were not shown for want of water, and because their owner was sick. Some of them are growing finely, although they have not been fed, and are in a contracted area."

FISH CULTURE IN CANADA.

AT Newcastle, a short distance from Toronto, is located the building in which fish culture operations are being carried on by Mr. S. Wilmot, on behalf of the Dominion government. Wilmot Creek, on which the building is located, forms a natural inlet of the sheltered bend of the lake between Bond Head and Darlington. The stream flows over a gravelly bed through the major portion of the distance from its fountain head, ten miles away, and from this fact, and the purity and rapidity of the waters, it is admirably adapted for the formation of spawning beds. In early times it was famous for salmon, as indeed were many of the neighboring streams. Only a few stragglers remained when, in 1866, Mr. Wilmot entered upon his self-appointed task of replenishing the stream by artificial methods of breeding. His efforts have been crowned with success. Salmon may now be seen by hundreds in the creek.

During the spawning season no less than one hundred and ten spawning beds can be seen within a distance of half a mile, and each bed representing the work of from four to six salmon. To prevent the destruction of the eggs thus deposited, it is proposed to erect a small building for receiving the fish at a point lower down on the stream. Such salmon as pass up the stream to the breeding houses enter the reception house on account of the main stream being blocked. They are there distributed into compartments according to sex, and remain until they become mature, when they are removed to the breeding room. Half a dozen fish are placed in a box through which a constant stream of fresh water passes. The operator then takes a female, and by gently pressing the abdomen the eggs flow from the vent into a receptacle. This fish is immediately liberated through a small aperture in the corner of the building, and passes down into a pond below. A male fish is next operated on in a similar manner, the melt being deposited in the same receptacle, which is shaken, and impregnation is the result. The eggs are then measured out, so as to place four thousand on each tray, which is a small wooden frame-work, covered on the bottom side with fine wire cloth or perforated zinc. These trays are laid in troughs, through which there is a constant flow of water,

through filtering screens, fed from a water tight tank. Here the eggs lie unmolested until April, when they will hatch. Seven hundred thousand eggs are now undergoing the process of incubation in this establishment.

In this process the accidents attendant upon the natural mode of propagation are avoided. The ova is a choice tid-bit for other fish; immense quantities are destroyed by the ice which forms to the bed of the creek in Winter, and the swift stream where the salmon loves to form its bed carries away many more. All these dangers being avoided in the artificial process, Mr. Wilmot succeeds in hatching from seventy to eighty per cent. of the eggs, while by the natural mode it would not exceed four or five per cent. Each fish, as it leaves the building after being stripped, is marked, a puncture being made in the tail—one for each year—and salmon have visited the establishment with three perforations in their tails. The article in the *Toronto Globe*, from which we gather this information, states that the one thousand salmon which have ascended the Wilmot stream within the past two weeks were all reared at the establishment, none being found in the adjacent streams except when placed there.

One of the ponds connected with the establishment contains upwards of five hundred fish, ranging from four to sixteen pounds in weight. These do not, however, represent the largest class which enter the stream, for, by reason of the shallow water, they remain below the breeding house and deposit their eggs in the main stream. Many of the fish to be seen in the creek and pond are, like old soldiers, covered with wounds and scars. These were received in their labors when forming breeding beds, by which the whole channel has been changed. The fish, when they desire to spawn, turn up the gravel with their noses at a point where the water is swiftest, and by writhing their bodies, aided by the current, they scoop out large holes, into which they drop their ova. Large and heavy stones are thus displaced, the eggs being deposited as they are turned over. Many fish have lost large portions of their noses in these efforts, and injured their sides.

The eggs now deposited in the government breeding establishment will hatch in April, when the young fish will be distributed in different streams throughout the Dominion, though not as liberally as in former years, the eggs having acquired a commercial value. In past years the United States government has been a large purchaser at the rate of \$40 per thousand, but the present policy of the Canadians is to retain the eggs for their own rivers. And indeed, it is questionable whether our government, with the bountiful supply obtained this year from California, would care to be a purchaser. A portion of these California eggs were presented to the Dominion Fisheries Department by Prof. Baird, and are now in the breeding house far advanced in incubation, the embryo fry being readily seen in all of them. This is the second attempt to hatch the California salmon at this establishment, that of last year having been entirely successful, although it is claimed that the Canadian fish are superior in richness and delicacy.

Mr. Wilmot is about opening an institution for the breeding of whitefish at Sandwich, on Detroit River, and hopes to have it in such a state of advancement as to be able to lay down many millions of eggs during this season, its capacity being fifty million. At the breeding house on Saguenay River a large number of salmon eggs have been laid down. The establishments at Gaspé and on the Restigouche and Miramichi rivers have not yet been reported on; it is feared that on account of the freshets which have prevailed in those districts much difficulty will have been experienced in procuring the eggs to stock them. A new establishment has been erected this season on the Sackville River, near Halifax, and has been stocked. The government contemplated also erecting a similar building in Prince Edward Island, but it was found impossible to erect it during this season. All these establishments are under the supervision of Mr. Wilmot, who, taking up this science as a labor of love, has prosecuted it with commendable zeal, and accomplished valuable results. The present government have entered into it with considerable spirit, and made increased grants towards improving by this artificial means to supply the better classes of fish in our streams and lakes.

CAN DEPLETED STREAMS BE RE-STOCKED?

ROCHESTER, N. Y., Nov. 5th, 1875.

EDITOR FOREST AND STREAM:—

In answer to your inquiries as to how I know our depleted trout streams can be stocked again and be made a success, I will explain. In the year 1871 Charles Upton, a banker in this place, bought a small, played out trout stream about one mile long. I put 4,000 young brook trout one inch long in the stream. During the Summer of 1872 the creek was alive with yearling trout. In 1873 Mr. Upton commenced fishing for them. He would go out at 3 P. M., after bank hours, and his take would be from 50 to 100 during the afternoon, and in 1874 his take would be from 20 to 60 three year old trout, and in 1875 his take was from 5 to 19. A good many of the 1875 take were pound fish. Care should be taken in putting young trout in trout streams, and to not put in any more than there is food for. They feed on all kinds of small animalculæ and larvæ of small flies. I have just returned from the lower end of Lake Ontario. I have had great success in gathering salmon trout spawn. I shall have some millions to distribute next Spring. Yours,

SETH GREEN.

SOME RARE FISHES.—Mr. Blackford recently received in a box of halibut from Gloucester a fine specimen of a very rare Greenland fish allied to the cod family, and known as *Macrurus rupestris*. Its peculiarities are a very large head, pointed scales like armor, and an enormous and soggy-looking eye. The fish was sent to Prof. Baird, who expressed himself much pleased with it, as it is the first one of the species he has ever seen. At the same time another rare fish—the American angler, or *Cophius Americanus*—was forwarded to the Smithsonian Institute. This fish was seen floating on the water at Pier No. 20, and Mr. Blackford, being apprized of the fact, went to the spot, and hooking it in the gills, brought it ashore.

Natural History.

HOW SNAKES OBTAIN THEIR FOOD.

A CORRESPONDENT, writing from Philadelphia, states that hearing a disturbance in the grass, he investigated it, and discovered that a snake fifteen or twenty inches long had the hind legs of a large sized frog in its mouth, while the frog was making desperate efforts to escape. He says, "What I wish to know is, how that snake intended to derive any benefit from his prisoner? It would have been impossible for him to have swallowed the frog whole, and he could not bite off the animal's legs."

In the assertion that the snake could not swallow the frog, our correspondent reckons without his host. A snake's powers of deglutition are almost unlimited, and the whole anatomy of the head and throat has reference to this habit of eating their prey whole, for it is true that they have no teeth with which to bite or chew their food. All the bones of the skull, except those which enclose the brain, are joined together loosely, so as to be capable of expansion. This is particularly the case with the lower jaw, the two branches of which are not united by a connection of bone, but by elastic ligaments; and the quadrate and squamosal bones, through which the lower jaw is attached on either side to the skull, are also slightly movable and allow a wide separation of the mandibles from each other, and from the base of the skull. All of these arrangements allow of an immense distension of the throat, and the muscular construction of the gullet or œsophagus is such as to admit of the passage into the stomach of anything which can get through the gate-way of the jaws.

The usual fare of our smaller snakes consists of frogs, toads, and field mice, with the larger insects. They capture these animals by means of stealth, and rarely seem to pursue a frog or mouse that avoids their first spring. The hind legs of a frog would naturally be seized first by a snake and held by the minute hooked teeth which stud the roof of the mouth, all pointing backward, until the frog, exhausted by its efforts, had become quiet, when the snake would pour out a copious flow of saliva, and slowly, by repeated efforts force the huge mouthful down his throat. The tongue, which is devoid of organs of taste, helps in this operation. His meal safely swallowed, the snake lies quietly down to digest it, becoming almost torpid meanwhile. It used to be thought that serpents ate but once a year, and at a particular season, but we now know better. They seek food whenever hungry, except during the season of hibernation.

The strange thing about it is, that not only might the snake which our correspondent saw have swallowed his frog whole, but that the frog might have lived through it, if liberated from his Jonah-like prison without much delay. Prof. Alpheus Hyatt, of Cambridge, Mass., once found a striped snake which had recently enjoyed a meal as indicated by a large bunch near the centre of its body. He teased the snake until the reptile seemed to become sick, and the "bunch" was observed to move towards the head. "In a few moments more a live frog was seen trying to get out of the snake's mouth, which, after a hard trial and a good many jerks and kicks, it succeeded in doing, and jumped off, highly delighted at making its escape." And Mr. Cooke, editor of *Science Gossip*, tells how he saw a live frog liberated from the stomach of a snake which had been killed soon after swallowing it.

With these facts before us, why should we doubt what so many maintain, that young snakes are taken into the throat of their mother for protection, and come forth again when the danger is past. But, as Mr. Putman says, "one might easily believe, that, if the old snake should take the young into her throat in a moment of danger, she might afterwards, on being pressed with hunger, be strongly tempted to work them down a little farther and provide herself with a good dinner, especially as snakes are known to feed on smaller ones." But this opens questions which we cannot at present discuss.

—A writer in the *London Science Gossip* relates his experience with a sparrow which his servant girl nursed and fed until it grew to full stature. It was finally placed in the garden, where it remained until another sparrow, apparently of its own age, enticed it away to a more natural condition of sparrow life; but not so far away as that it forgot its early friends, whom it frequently visited, and continued to recognize with signs of affection. If the nurse was in the garden, the grateful little creature would fly to her, perch upon her head or shoulder, and was perfectly at home with all the household. At breakfast, dinner or supper time it did not fail to tap at the window with its beak until it was opened, when it would fly to its loved nurse and partake of its usual feed from her mouth. This happy intercourse has been continued for three or four years, during which the sparrow has raised three or four broods, on which occasions food has been left for it upon the window, so as to be at all times accessible for supplies to the rising generation. Once the number of its visits to the food was no less than two hundred and thirty-six in one day.

—A correspondent who is about to take a long trip, writes to ask whether he can preserve birds for stuffing upon his return to Philadelphia. The only proper way, or rather the best way, is to skin and stuff the birds day by day as they are collected, after which they can be mounted. But if birds and mammals are injected, by means of a glass syringe, with a small quantity of carbolic

acid at the mouth and vent, it will prevent decomposition from taking place immediately. After injecting, the mouth and vent should be plugged to prevent the acid staining the feathers. Birds injected this way for three successive days will keep fresh for a long time, and if kept dry, may afterwards be skinned. The acid must be used with extreme care; and the time spent in this process might much better be applied in becoming expert in taxidermy.

—An American sportsman writing from Bremen, Germany, says that the best street in the city, includes, so to speak, an old water course, the banks of which are clothed with well clipped greensward, flowering plants or shrubbery carefully kept. In this water various kinds of wild ducks are found perfectly tamed, coming to call, almost taking bread crumbs out of your hand. Among them are some old acquaintances, the green winged teal, bald-pates, red-heads, sprig-tails, broad-bills and butter-balls. Some wing feathers are frequently pulled out of both wings, but more out of one than the other, so as not to mar the beauty as in cropping one wing. Nineteen species are thus domesticated, eleven of which breed there.

—A correspondent in East Hampton, Conn., who, last August, wrote to us about a rattlesnake in confinement which remained as irascible and deadly as when first taken from its den, now tells us that the snake died a few weeks after that date.

—A taxidermist in Paw Paw, Mich., is preparing a case of the birds of that State for exhibition at the Centennial.

THE MAMMALS OF THE BLACK HILLS

DURING the Summer of 1874 a military reconnoissance of the Black Hills was made by Col. Wm. Ludlow, Chief Engineer of the Department of Dakota, an elegant report of which has just been issued from the Government presses. The topographical and geological information therein given is of great value, but of most interest at present are the reports upon the mammals and birds of these unexplored regions, which are written by Mr. George Bird Grinnell, of New Haven. The expedition started in June from Fort Abe Lincoln, crossed to the Belle Fourche, where the Black Hills were entered and completely traversed. The return march was made from Custer Park to Bear Butte, and thence across the plains to Fort Lincoln, where they arrived on August 30th. There is only time now for a brief review of the list of mammals, which comprises thirty-four species, leaving the ornithology of the Report for another day.

The cougar, wild cat (*Lynx rufus*), Canada lynx (*Lynx Canadensis*) gray wolf, and coyote, are put down as common in the Black Hills. The kit-fox, or skiff (*Vulpes velox*) is abundant on the plains. It is not considered very fleet of foot, well trained hounds having caught it in a fourth of the distance required to overtake a jackass rabbit. The mink, otter and badger are abundant on the rivers flowing into the Missouri, and squirrels, gophers, woodchucks and muskrats are common on the plains. The beaver builds its dams in all the streams. Indications of many grizzly bears were seen and a few shot. No evidence of great ferocity was manifested by them, and they always ran, unless too badly wounded to do so. The author says that the swiftness of the grizzly is considerable, and in a rough country it can easily run away from a slow horse, while it requires a pretty good animal to catch it, even on the prairie. Thirty miles east of the Little Missouri was the most easterly point at which this bear was noticed. But few elk were seen, but there was every indication of their presence in large numbers. There is much variation in the horns of this species, which is thought to be largely due to injuries received when young. The extremities are apt to be very much flattened, and in two instances noted, the basal prong, instead of projecting forward and downward, turned outward and downward, and then inward and up again, so as to bring the point of the snag immediately under the animal's throat. A few red deer were seen near the Missouri River, but in the Black Hills this species was replaced by the white-tailed (*Cervus leucurus*), which were very numerous. The mule deer (*Cervus macrotis*) was also abundant. The prong-horned antelope afforded fine sport after getting away from the vicinity of Fort Lincoln. "The antelope," to quote the text, "is regarded by hunters as the most difficult to kill of any animal found on the prairie, or in the mountains. In proportion to its size it is more tenacious of life than the grizzly bear, and from its astonishing speed it is often enabled to escape, even after having received a wound that would have brought a deer or an elk immediately to the ground."

—The voyagers in the Pandora report having encountered the most lovely May weather for several days in the latter part of August in Peel Strait, and found a colony of gulls secure in their isolation on the face of rocks where the vegetation formed an extensive green patch down to high water mark.

—Speaking of the use Natural History is to Geology in determining changes in the earth's surface which have left no geological record, Mr. Wallace says with reference to the Malay Archipelago, "It is certainly a wonderful and unexpected fact, that an accurate knowledge of the distribution of birds and insects should enable us to map out lands and continents which disappeared beneath the ocean long before the earliest traditions of the human race."

—A writer in *Land and Water* speaking of Australian snakes says:—"In its fiercest rage if a snake's eye meets the eye of a man it is instantly calmed; no magnetic exertion is required; a man has simply to keep his eye on the snake and it is entirely at his mercy. Snake charming is extremely easy with Australian snakes." It would be very interesting to see how far this is true of American serpents.

A TRANSATLANTIC PIGEON POST.—Experiments are now in progress in England, in training a variety of carrier pigeon indigenous to Iceland, the object being to establish, is possible, a pigeon transatlantic mail between the United States and England. The bird is of great docility, intelligence, and spirit, and is naturally ocean-homing. Its speed is over 150 miles per hour, and it is said to be able to return to its habitation from any part of the world. Should the present efforts to educate the birds prove successful, next Summer will find an almost daily ocean mail in practical operation, as it is believed that the flight from continent to continent can easily be accomplished between sunrise in one hemisphere and sunset in the other. The records which we have of the vigor of endurance of flight displayed by these birds, are such as to make believe this will be possible. A pair of these birds brought dispatches from Paris to a lonely part of Kent, within ten miles of London, in one and a half hours. Press carrier pigeons took the dispatches on to the city, the whole distance from Paris to London by actual parcel mode of conveyance being done within one and a half hours. Yarrell mentions carrier pigeons that flew from Rhuen to Ghent, 150 miles, in the same time, but this speed is surpassed by our wild pigeons, which have been shot in New York before the wild rice they had picked in Georgia had been digested. Pigeons were used in transmitting to Baltimore the result of the recent races at Pimlico. The four birds used were very young, having been bred last Spring, with no training whatever. At the end of each race a small tag was attached to the bird's leg by means of a slender silver wire, having on it the name of the winning horse, the time made, and the time the pigeon was tossed. The birds took a direct line to the city, and were out of sight in from fifteen to thirty seconds after being set free. The first bird made the distance from Pimlico, five miles, in 9½ minutes; the second bird arrived in 11½ minutes; the third bird making the distance in 9½ minutes; and the fourth bird arrived in 8½ minutes. A contest between the fanciers of Baltimore will probably come off next January, and it is said that the Poultry Association will pay especial attention to the cultivation of carrier pigeons.

FARMING OSTRICHES FOR THEIR FEATHERS.—The experiment of farming ostriches for the purpose of securing a regular and abundant supply of their valuable feathers is being tried in the vicinity of the Cape of Good Hope, where the ostrich is native, and where land of the right sort can be obtained to any extent. A large extent of suitable bush land is fenced in, over which the birds roam peaceably enough in ordinary times, but in the breeding season the pairs select and occupy one of the several small camps laid out for the purpose. The birds are very fierce and savage at this period, but at all other times are as tame as a flock of sheep. They assemble to be fed at bugle call, though the feeders have to be careful of any loose articles there may be about, for the ostriches snap up and swallow immediately any such trifles as tobacco pipes, knives, spoons, coins, &c., and make attempts to wrench off buttons from clothing. The plucking of the birds is a dangerous operation. They are enticed by the bugle call into a small inclosure, where they are packed as closely as possible to prevent them from administering those terrible kicks which are delivered with a force sufficient to break a man's thigh. The plumage of the farmed ostrich is stated to be abundant in quantity and superior in quality, and the yield from a well-stocked and carefully tended farm returns a large profit on the whole outlay.

—Prof. Richard Owen writes to *The Colonist*, (London,) with reference to a correspondent's notice of the discovery of remains of the moa—one of the gigantic fossil birds of New Zealand—in the North Island, where they were supposed not previously to have been found; to say that all the series of bones which have passed through his hands, and which are described in Vol. III of the Transactions of the Zoological Society, came from the North Island, as did also the remains of the dinornis which he also described. "Since that date," says Prof. Owen, "most of the evidences of the great extinct wingless or flightless birds of New Zealand which have reached me have been from the South Island, and I need not add with what interest I should compare those which have been recently and abundantly discovered in the North Island. I have no idea that this strange group of birds is any longer in existence, notwithstanding all the stories of the natives and others. If any be alive they will probably be found in the middle island, which may be almost said to be uninhabited, except on the coast."

The following are recent arrivals at the Philadelphia Zoological Garden:—

GARDEN OF THE ZOOLOGICAL SOCIETY,
FAIRMOUNT PARK, PHILADELPHIA, NOV. 8th, 1875. }
Three gray Foxes, *Vulpes Virginianus*. Presented by Mr. John Baird, of Philadelphia.
One black Squirrel, *Sciurus Carolinensis*. Presented by Master John E. Sulger, of Philadelphia.
One red-tailed Hawk, *Buteo borealis*. Presented by "Kind Hands."
One common Boa, *Boa constrictor*. Presented by Mr. E. F. Moelling of Philadelphia.
One young prong-horn Antelope, *Antilocapra Americana*, and one red-tailed Hawk, *Buteo borealis*. Presented by Lieut. Emmet Crawford, Third U. S. Cavalry.
One young prong-horn Antelope, *A. Americana*. Presented by Capt. Deane Monahan, Third U. S. Cavalry.
One night Heron, *Nyctiardea gardeni*. Presented by Mr. William H. Brooks, of Philadelphia.
One checkered Tortoise, *Emys picta*. Presented by Mr. John Pear-sall, of Philadelphia.
One golden Eagle, *Aquila Canadensis*. Presented by Mr. George W. Bush, of Philadelphia.
One great horned Owl, *Bubo Virginianus*. Presented by Mr. M. M. McNeil, of Huntingdon, Pa.
One screech Owl, *Scops asio*. Presented by Mr. B. M. Taylor, of Philadelphia.
One Loon, *Colymbus torquatus*. Presented by Mr. Ed. S. Aschom of Riddlesberg, Pa.
One young black Bear, *Ursus Americanus*. Presented by Mr. Harthy Howard, of Pittsburg, Pa.
One Menopoma, *Menopoma alleghaniense*. Presented by Mr. Andrew Fredricks, of Philadelphia.
One Llama, *Lama peruana*. Still born at the Gardens.
Two American Rheas, *Rhea Americana*. Purchased.
One Mocking Bird, *Mimus polyglottus*. Presented by Mrs. S. R. Marge, of Philadelphia.

Woodland, Farm and Garden.

THE EFFECT OF FORESTS ON RAIN-FALL.

THIS subject is attracting much attention, both in this country and Europe, and the weight of observation and of scientific evidence has seemed to demonstrate the utility of forests in promoting atmospheric moisture, and consequently the fall of rain. But on this subject, as well as on the diagnoses of human diseases, "the doctors differ," and we find ourselves confronted by opposite theories, each apparently supported by existing facts. For instance, "Walker's Statistical Atlas" states that the rainfall in the forest regions of Maine and Minnesota precisely identical with that of the prairies extending west of Chicago, which are almost treeless. Also, that the heavy timber district of Northern Michigan has the same rainfall as Southern Minnesota, which is in the same latitude, and almost treeless.

On the other hand, Prof. Stockbridge asserts that on our Atlantic seaboard the annual rainfall is forty-four inches, in Western New York forty-two inches, in Ohio from thirty-eight to thirty-nine inches, in Iowa thirty inches, on the plains only fifteen inches, and still further West only two inches, and in these instances the maximum and minimum of rain and of forest correspond. Prof. Stockbridge thus seeks to demonstrate that while climate is in part the result of forests, it is also true that forests are the result of climate, and are more dense near the seaboard and large bodies of water than further inland. The Desert of Sahara, he must admit, forms an exception to this general condition, or law, of nature, for there the barren plain extends to the ocean.

Whatever the effects of forests upon the rainfall, or of moisture upon the production of forests, it is a fact demonstrated by the commonest observation that our streams diminish in volume as the country contiguous to them is denuded of trees. How far this is owing to the increased amount of rain absorbed by a soil subjected to cultivation, which otherwise flows off on the surface to swell the volume of streams, is an interesting subject of observation.

KEEPING FRUIT IN RUSSIA.—Fruit is kept in Russia by being packed in creosotized lime. The lime is slaked in water in which a little creosote has been dissolved, and is allowed to fall to powder. The latter is spread over the bottom of a deal box to about one inch in thickness. A sheet of paper is laid above, and then the fruit. Over the fruit is another sheet of paper, then more lime, and so on until the box is full, when a little finely powdered charcoal is packed in the corners and the lid tightly closed. Fruit thus enclosed will, it is said, remain good for a year. We have constantly at this season these new and successful ways of preserving fruit; but they seldom are worth anything, and if otherwise, who wants an apple or pear in June or July?

—Our cooks, and—we grieve to say it—our housewives also, seem totally oblivious to the fact that the whitest flour has little or no nutriment in it save starch; no albuminoids for the muscles, no phosphorus for the brain, or mineral matter for the bones. These elements are chiefly bolted out of the ground wheat to secure the white starchy compound, which only makes fat and heat. Can nothing be done to disseminate the simplest principles of chemistry—principles so closely allied to the preservation of health—among those who prepare our food?

GOOD SUGGESTIONS.—Dr. William Horne, U. S. A., delivered a lecture at a fair in Wisconsin recently on the care of horses, in which he urged the importance of light, ventilation, and cleanliness in stables. Light, he urged, should never come through windows glaring in front of the horse, but should be in his rear. So, too, in stopping a horse in cold, windy weather, he should always be allowed to stand tail to the wind. This protects the centre of circulation from the severest effects of the cold, and the vehicle helps also to break its force.

GERMAN METHOD OF PRESERVING WOOD.—The following method is used in Germany for the preservation of wood: Mix forty parts chalks, fifty resin, four linseed oil, melting them together in an iron pot; then add one part of native oxide of copper and afterward one part of sulphuric acid. Apply with a brush. When dry this varnish is as hard as a stone.

—To prevent the destruction of insects on house plants, a strong solution of soap suds, with a few drops of carbolic acid, is very effectual. A very simple and quite effective preventive, also, is to bake the earth in which plants are to be potted, subjecting it to such a degree of heat as to destroy the eggs of all insects.

—Apples should be kept in a temperature as uniform and as free from air currents as possible. If they could be kept at thirty-two degrees they would not decay in a year. They keep longer in barrels than on open shelves, and still longer if wrapped separately in paper.

—A party of over one hundred persons from Minnesota, chiefly farmers and their families, arrived in Tallahassee, Fla., a few days ago. They propose to purchase lands and make Florida their home.

—Potatoes are abundant in the West, as well as in the Northern States. In Wisconsin they sell for fifteen cents a bushel.

The Kennel.

TENNESSEE STATE SPORTSMEN'S ASSOCIATION.

[FROM OUR SPECIAL CORRESPONDENT.]

MEMPHIS, Tenn., October 30th, 1875.

Your special correspondent, after a break down on the Blue Ridge Mountains of Virginia, arrived here, and proceeded to the Peabody Hotel, the headquarters of the Tennessee State Sportsmen's Association. The first gentleman I chanced to meet was Capt. Dick Lightburne, who, I believe, has done more for the noble companion of man—the dog—than anyone else in the State. With the co-operation of the writer, Capt. Lightburne drafted the rules and laws by which the Tennessee State Sportsmen's Association, in field trials, is now governed.

The Tennessee State Sportsmen's Association, practically organized for the protection of game in the State, is more of a pigeon shooting society than an association for game protection, and we could wish that it would follow in the footsteps of the Ohio State Association, which, on the 8th of June last, during their meeting at Cleveland, eliminated from their proceedings everything relating to pigeon shooting. We visited Hernando Park, near Memphis, and found there assembled some of the most prominent sportsmen of the United States, among them as delegates from the Chicago Gun Club. We also met delegates from St. Louis, Mo.; Cleveland, Ohio; Boston, Mass.; Louisville, Ky.; Nashville, Tenn.; New York, Brooklyn, and from other cities. All of the trap shooting was made from H & T plunge traps; most of the birds were wild pigeons, and, as a rule, were top-drivers. The quartering birds were generally killed, but we noticed, even with the immense loads of powder (some using 8 drachms), a great many birds were missed, the wind being in favor of the birds. Most of the prominent gun manufactories had their representatives present, among whom we noticed W. W. Greener's agent (Mr. Williams, of St. Louis), who extended to all gentlemen sportsmen a handsome reception at the Peabody Hotel, where he exhibited a superb battery of breech loading guns. Mr. Williams is the only agent for this English firm in the country, whose guns have proved so successful in England.

There were as many as 6,000 wild pigeons furnished for shooting, which were supplied by Mr. Martin, of Chicago. Among the prominent amateur pigeon shots present were the old Chicago boys mentioned often in your journal; also Mr. Acklen, of Louisiana, the great snipe shot, Williams' and Alleys, of Tennessee, and gentlemen from Wisconsin, and other Northwestern States.

[Our limited space compels us to omit the details of the pigeon matches, the results of which were announced in our last issue.—ED.]

THE BENCH SHOW.

The exhibition of sportsmen's dogs was acknowledged by all present to be perhaps the best display ever held in America. We noticed that the prominent colors were white, with orange, lemon and blue ticks.

How shall I begin to give you the different classifications and almost perfect strains of the setters on exhibition? I will start with the field trial breed. The most perfect beauty in the show was Paris, owned by Mr. Smith, of Ontario, Canada. Although not awarded the first premium, owing to the change of judges, yet still we state here that Paris, with Dan, Dora, Rake, and the far-famed Laverack, took the first prize in the champion class. These are, perhaps, the purest setters of their class in America. In the Irish class we noticed Mr. Burges' grand dog, Rufus. As a sire the excellence of his get will have yet to be determined. He has great power forward, a fine quarter, chest, and a better coat and feather are seldom seen. His quarters are long—perhaps a little too narrow in loin. His sire, French's Shot, was always a successful getter, going back as far as the Plunkets, Everleighs and others. Old Rufus, with his grand body, lost the first prize because his mother was not capable of heading him. I must notice just here among native dogs, Count and Grouse, owned by Mr. Whitman, of Chicago, who has always been so liberal to gentlemen sportsmen and anglers as a railroad man. These dogs are not pedigreed as stock blues, but, in my estimation, among the pure white and lemon Beltons, such a yearling puppy as Count is seldom seen in a show of sportsmen's dogs anywhere. He took my fancy, although master and dog were both unknown to me. The dog reminds me a good deal of Mr. Brooks' dog, Bismarck, of Philadelphia. The native stock undoubtedly showed the improvement due to recent importations. It is all very well to laugh over what is called blue blood; but when it comes to practical facts, the native and English blood has achieved wonders. We are not speaking of individual trained dogs for snipe, quail, etc. But give us a good English performer, and when mated to a handsome native dog their progeny will be excellent.

The show of pointers, although numerous, was, in my opinion, second class. The most noticeable dog without doubt, although awarded only second premium by the judges, was Capt. Lightburne's chestnut pointer Sandy. His head was almost perfect, reminding me of Garth's Drake, now owned by Mr. Price, of Bala, Wales. I noticed especially his shoulders. They were narrow at the blades, with fine muscle. His feet were only fair, and neck a little too throaty; the only bad fault was in his stern. The fine-looking black and whites belonging to Major Taylor, of Kentucky, were a little too snaky, though the feet, legs, loins, and stifles were about middling. The fox hound class were undoubtedly the best dogs of the show, except the setter class. Mr. J. W. Alley, of Memphis, entered some lovely animals, black and tans, with a touch of the tawny on their backs and arms, reminding me of the dogs of the Wheatley Kennel. I paid particular attention in this class to a pup crossed with the native stock by a recent importation.

I will now give you the entries and prizes. There were 76 entries in all, of the canine race:—

CLASS I.—English Setters.—Premium, a silver goblet of the value of \$35; 14 entries—Leicester, 1st premium,

owned by Smith, of Canada. Grouse, 2d, owned by Whitman, of Chicago.

Bitches—8 entries—Vivress, 1st, owned by Smith, of Canada; Maud, 2d, owned by Bryson, of Tenn.

Puppies—7 entries—Count, 1st, owned by Whitman, of Chicago; Shot 2d, owned by France, of Tenn.

CLASS II—Gordon Setters.—9 entries, Rip, 1st, owned by Orgill, of New York; Don 2d, owned by France, of Tenn. Bitches—No entries.

Puppies—Mab 1st, owned by Thornton, of Ky.

CLASS III—Red Irish Setters.—3 entries, Rufus, 1st, owned by Berges, of Ky.; Harry 2d, owned by Nicholson, of Tenn.

Bitches—2 entries, Gypsey 1st, owned by Whitman, of Chicago; Friend, 2d, owned by Burges, of Ky.

Puppies—No entries.

CLASS IV—Champion setter on exhibition, Paris, 1st, owned by Smith, of Canada.

CLASS V—Pointers.—20 entries, Duke, 1st, owned by Taylor, of Ky.; Sandy, 2d, owned by Lightburne, of Tenn.

Bitches—Fanny, 1st, owned by Miller; May 2d, owned by Dr. Saunders, of Tennessee.

Puppies—No Name, 1st, owned by Gibson, of Tenn.; Joe 2d, owned by Howe, of Tenn.

Extra Class Pointers.—5 entries, 1st prize to Duke, owned by Taylor, of Ky.

Extra Class Setter Puppies.—Grouse, 1st, owned by Whitman, of Chicago.

CLASS VI—Fox Hounds.—8 entries, all owned by J. W. Alley, of Tenn. His dogs Frank, Tom and King, and bitches Flora and Kate, and a puppy bitch were well worthy the premiums. There was no competition.

THE FIELD TRIALS.

MEMPHIS, Tenn., October 30th, 1875.

The second annual meeting of the Tennessee Field Trials for dogs on quail, came off October 29th and 30th, on the plantations of Cols. Townsend, Mosby and Brooks, situated about fifteen miles from this city, the former gentleman having extended the courtesies of his house to the sportsmen present on the field. The farms had been specially preserved for this occasion, and many birds laid down which were purchased two years ago in Arkansas, so as nothing could mar the success of the trials on account of the scarcity of birds.

It may be noticed here that Mr. P. H. Bryson, the President of the Association, and Mr. Wheatley, the Secretary, have really labored very hard to bring these tests of merit in dogs in the field over game to something like success, although I scarcely think they received the support they deserved from the public, nor from their own members. The entries were by no means so numerous as expected, and the small patronage received was, I presume, owing to the great expense one has to incur in bringing dogs and guns such long distances from the North and Northwest. The rules, regulations and points governing these trials were arranged and published by the writer—your former Field Editor—in FOREST AND STREAM some two years ago. The handling and working of the dogs was, with the exception of Mr. Horsfall, nothing to speak of. Although repeatedly requested to act as judge, I found it impossible to kill the quail over single points with one barrel at the same time—in other words, to take notes and give a fair impartial report to the public, and at the same time do justice to the different owners of the animals. Dr. Rowe's dogs failed to arrive. His breaker, having to lay over at St. Louis, had the misfortune to lose Ban-shiee by a dog thief. The breaker being so long delayed, and the dogs fatigued by 1,500 miles of travel, were evidently unfit to enter the stakes. It is a pity that the grand dog Rufus, owned by Arnold Burges, is a stock dog, as he would do well in the field.

The performances of the dogs in the different stakes, although the weather was dead against them the first day, were such as to lead one to suppose that there was only one breaker in America. His system I like, although perhaps a little too slow at times. The careful, masterly style in which he handled Romp and Rake, in the brace stakes, would have easily given him an extra prize for amateur workers, which ought to have been awarded to him by the association. The judges in this stake were greatly in error. Admitting, as I do, Tom to be the best dog, although unbroken for a field trial, yet his companion, May, was frequently weak in his backing, trained miserably, good style and pace, nose inferior, handled and worked with no judgment, but by a gentleman. The flag was thrown up for Tom and May, while Romp and Rake, barring their pace being slow, and rather of the woodcock order of workers, were simply perfect. I had never seen one of the dogs or owners before this visit to Memphis, so these remarks may be called impartial. In the All-aged Stakes, Tom beat everything easily. He could have given Harry twenty points and beaten him, but as he had nothing to show against, he was not called on. Harry is perhaps one of the best field sportsman's dogs I ever saw. When points of merit are to be judged, he must be worked by a professional. The puppies, Maud and Paris, were entered, and worked in all the stakes, and when the time came for the All-aged Stakes they were, as a matter of course, completely tired out.

The Tennessee Brace Stakes for Setters and Pointers, Dogs and Bitches Champion Brace of America, for a purse of \$500 cash and a Silver Cup, value \$150, given by the Turf, Field and Farm, the absolute winning brace to take Cup and \$150, the rest of the money pro-rated.

Mr. P. H. Bryson's black and white Maud, Mr. Smith's, of Ontario, Canada, field trial breed, Paris; Mr. Williams' blue Beltons Romp and Rake; Mr. Wheatley's Campbell breed, Tom and May; Mr. D. Bryson's native breed, Lee and Mab, making four entries. Judges—Luther Adams, of Boston; W. W. Sterling, of St. Louis, Mo. Maud and Paris went down, ranging over the first cornfield, but failed to find; continued hunting down wind, then entered some weeds in another cornfield. Maud found first, Paris backing, sitting on her haunches. Maud again a little too close; flushed in sedge. Paris flushed; Maud, gently working, made a false point: Paris points, Maud backing. Paris retrieves in good shape. The weather now was sultry.

Maud and Paris, both flushing, were taken up. Romp and Rake flush for Romp in corn, and well done; the little rascal, Rake, made a beautiful point, Romp backing, the bird retrieved by Rake. Romp and Rake now beat the ground honestly but slowly, and were taken up. Tom and May were put down, both going off in grand style, dashing through a cotton field, and at the bottom of a little ravine Tom pointed. The birds were flushed and killed, and then retrieved by Tom. Tom then pointed a running bird in thick, close sedge grass, which was retrieved by May. Tom following down a steep ravine, May pointing pretty well, Tom backing, both dropping to shot fairly, as the birds were killed. May retrieved in good style. This continued with more or less success for half an hour. Both are good rangers, and hunt in a masterly manner, but are not thoroughly broken. Mab and Lee were now cast off, up wind, crossing the railroad track. Lee flushed a large bevy. Mab found them and stood. Lee, coming up to back, flushed. Lee and Mab made five successive flushes, three scarcely penal in my opinion. Mab again flushed, with her nose right on a bird; both taken up. Now comes the prettiest performance of the day. Romp and Rake, the two little beauties, worked cautiously over the line of a cotton field, running over the edge of a wheat stubble, and entered a garden patch. Here Mr. Horsfall showed his working the dogs to perfection. Romp and Rake made six successive points, each sought dead, found and retrieved also six times in grand style. Tom and May were put down again, both dogs finding and backing after a speedy range. Maud and Paris, after ranging through some hog weeds, Paris made a beautiful point, both dropping to wing and shot. Evening was now coming on, and all of us returned home, gladdened with the excellence of the sport. The following were the winners and points awarded: Tom and May were the winners, 77 points; Romp and Rake, second, 74 points; Maud and Paris, third, 72 points; Lee and Mab nowhere, with 53 points.

Setter and Pointer Puppy Stakes, under eighteen months, for championship of America. Purse \$300 cash and a beautiful Cup, value \$150, given by *Rod and Gun*. The Cup and \$150 in cash becomes the absolute property of the winner, the rest of the money pro-rated.

Entries—Mr. L. H. Smith's, of Strathroy, Canada, field trial dog, Paris, against Mr. Luther Adams', of Boston, field trial dog, Duke. Mr. P. H. Bryson's, of Memphis, field trial bitch, Maud, against Major Taylor's, of Kentucky, field trial bitch, Blanche. Paris and Duke cast off first. They beat out a stubble field in a masterly manner; failing to find, they quartered a cornfield. Passing through this they entered a sedge field, and on coming up by a cotton patch, Duke made a very short point, which he soon left. Paris, on running up, made a staunch point, but failed to find, as they were running birds, evidently showing that they had passed through the fence into heavy cover. They then beat several fields, not being able to find birds. Paris was first to find a bevy of birds, which he pointed very staunchly in a cornfield, which Duke did not back. On the birds being marked up by Mr. Smith, who handled his own dogs, Paris retrieved his birds in good style. Paris then made a point in a cotton patch; Duke, refusing to back, stole his point from him, and as no birds were flushed, it was evident they were standing scent. After a little more work at this place, the judges ordered them up. The two sisters, Maud and Blanche, were the next put down in a patch of sedge grass, in which was a scattered bevy of birds, where they did some very pretty work, pointing and backing each other, Maud retrieving in good style. As birds were plentiful, the judges soon ordered them up, the flag being raised for Maud. Paris and Duke were then ordered down again, both doing beautiful work, each dog seeming to feel that it was his duty to back the other. Paris was now instructed to back Duke; he finding, Paris backing. They were then ordered up.

The following were the winners and points awarded: Maud, first, 93; Paris, second, 86; Duke, third, 74; Blanche, fourth, 71.

SATURDAY, Oct. 30th.—The Open Stakes; free for All-aged Setters and Pointers, for the championship of America. Purse \$500 and a magnificent piece of Silver Plate, valued at \$150, given by FOREST AND STREAM, \$250 cash and Cup to the winner; rest of the money pro-rated.

P. H. Bryson's, of Memphis, Maud against Mr. Wheatley's, of Memphis, Ida. Mr. Nicholson's, of Memphis, Harry, against Mr. Campbell's Tom. Mr. Smith's of Canada, Paris to run a bye. Maud and Ida were put down and cast off in some heavy sedge grass. Ida flushing, lost her chance; Maud also flushing up wind. After this Maud behaved better; found in a large cotton field and retrieved well. The dogs were at length taken up. Tom and Harry were then unloosed. Tom went off at full speed in grand style, and pointed an immense bevy of quail, the handler killing three birds, which Tom retrieved, Harry finding and pointing first this time, and drawing carefully on his birds—bird killed, Harry pointing dead. This he did three times successfully. Paris and Ida were now put down to show a few of their actions to the judges. In pace and style, and dropping to shot, Paris was by far the better dog. Ida and Tom started, but were objected to by Mr. Bryson, on account of their having been broken together. Ida was taken up and Tom was cast off by himself to see his dropping to shot. He failed to do it, but dropped to hand. Paris was then put down against Tom, Tom, as usual, doing the wide ranging, Paris the closest. Tom found in a cornfield—Paris, after being called up, backing. Tom retrieved, and again found a single bird. Maud and Paris were now put down, and after a long trial, were taken up.

The following are the winners and points awarded: Tom, the FOREST AND STREAM set and purse, 92 points; Harry, second, 71 points; Maud, third, 67 points; Ida, 65 points; Paris, 65 points.

This concluded the meeting.

While we are speaking of dogs and shooting, we must not omit the handsome silver ware on exhibition at the store of Messrs. Bird & Co., consisting of a magnificent silver goblet, mounted with gold, valued at \$150, which was presented by the *Turf, Field and Farm*. We also notice a magnificent water set, consisting of pitcher, goblets, and bowl, and engraved with a most beautiful picture of a dog. This was, as you know, donated by the FOREST AND STREAM. There was a large goblet, 21 inches in height, presented by the *Rod and Gun*, and last, but not least, 16 goblets given by the Tenn. S. S. A., valued at \$35 each. We omit mention of winners here, as you will see them elsewhere.

The banquet, given jointly by the proprietors of the Peabody Hotel and members of the Tennessee State Sports-

men's Association, in the dining rooms of the house, was a superb affair. There were present some 320 sportsmen's delegates from all parts of the country, among whom we noticed Mr. Sterling, of Cincinnati; Mr. Acklen, of Louisiana; Dr. R. Young, your correspondent from Mississippi; Dr. Rowe, of New York, and the editors of the local press, the editors of the *Empire State*, the *Rod and Gun*, the *Chicago Field*, the representative of the FOREST AND STREAM, and a large number of other gentlemen interested in the protection of game. The chair was occupied by Mr. P. Bryson, President of the Tennessee State Sportsmen's Association, who opened the banquet by a few well chosen words. Mr. Acklen, of Louisiana, replied. The rooms were handsomely decorated, many toasts were drank, and the evening passed off with the greatest good feeling and eclat.

Our correspondent summarizes the result of the recent gathering at Memphis as follows:—

We have to congratulate the members and friends of the Tennessee State Sportsmen's Association upon the fair and upright manner in which the late meeting at Memphis was conducted. We would at the same time suggest that more co-operation and greater assistance to one another is necessary on the part of the citizens of the State, and especially the sportsmen of Memphis, in fact the whole army of those interested in the dog and gun, in order to bring such multifarious and difficult details to a final success. For such laborious duties to devolve solely on two or three gentlemen, is too much to expect, and we would suggest that the next exhibition of sporting dogs, or pigeon tourney that takes place in the United States (which will most probably be held in Chicago) should demand the support and interested consideration of every owner of a dog and gun in the country. Gentlemen, it is not because you do not own a dog nor can make it convenient to be present, that your co-operation and good will is not sought after. A suggestion, however small and apparently of little utility, will always be acceptable to Executive Committees of sportsmen's clubs. The judges of field trials, Luther Adams, Esq., of Boston, and W. W. Stirling, Esq., of St Louis, although we believe for the first time holding that unenviable and onerous position, completed their arduous and difficult duties to the satisfaction of all owners of entries. There are many slight alterations in judging and points, which may at a future time be made with advantage.

We propose during the coming Winter from time to time to give such additional information as we may gather from our numerous friends, both at home and abroad. We would also call attention at once as to the points in judging on the show bench, as conducted at this exhibition. They are two numerous, and some are wholly unnecessary. The head, neck, shoulders, legs, loins, and stern are quite sufficient to judge by. If the original programme had been carried out at this meeting, each and all the judges would have had to write down on paper some 10,000 figures in order to arrive at the maximum merits of the animals. Supposing the entries to have been 200, some 22,000 (?) figures would have been noted. This is too much to expect from any judge, and will have to be curtailed.

The animals on the whole, both on the show bench (which was cleanliness itself) and in the field trials deserve praise; in the former for the general sleekness of coat and physique, and the latter for the manner in which they were handled. However, we can not say so much for their training. Taking into consideration that these exhibitions of sporting dogs are comparatively new in this country, and that this was only the second field trial ever held here, we think we take up things pretty fast, and trust in one or two years to hold our own against any other country. We wish to impress upon owners of dogs and trainers that they must begin with their pupil puppies at an earlier age, teaching them their A. B. B. in field breaking, where there are positively no birds, and with care, consideration, and firmness these youngsters will be able to spell D. O. G. on birds in a much shorter time than if left to their own careless will and way until they are yearlings.

The exhibition of prizes, comprising plate and articles of vertu, drew together quite a large number of citizens and visitors interested in the success of the meeting. The sporting journals of the United States behaved nobly, as their contributions of plate were very costly, and what with the cash prizes offered by the Association made up a very handsome aggregate.

We have now a very pleasant task to perform in thanking the President, P. H. Bryson, Esq., and the Secretary, M. A. Wheatley, Esq., for the many courtesies and necessary information extended to us. The proprietors of the Peabody House will also accept our grateful thanks for their handsome and elegant banquet, where they received the sportsmen of America as their guests in the proper acceptance of the latter word.

The names of the following gentlemen sportsmen who gave their time and experience to the welfare and praiseworthy success of this convention, as a labor of love, will hereafter be handed down in the future history of the dog and gun in the sporting annals of America: Mr. Whitman, of Chicago; Mr. Smith, of Strathroy, Ontario, Canada; Mr. Acklen, of Louisiana; Dr. Rowe, of New York; Mr. Luther Adams, Boston; Mr. Arnold Burgess, of Kentucky; Mr. W. W. Stirling, of St. Louis; Mr. Campbell, of Tennessee; Mr. Horsfall, of Memphis; Major Taylor, of Kentucky; Mr. Nicholson, of Memphis; Mr. S. H. Terrill, of Chicago; Captain Lightburn, of Memphis; Mr. Orgill, of New York; Mr. Williams, of Tennessee; Mr. J. W. Alley, of foxhound notoriety, of Tennessee, and several other prominent gentlemen.

—A full-blooded English setter belonging to Thomas W. Lane of the United States postal-car service, while hunting at West Roxbury, Mass., last week, brought to his master a large pocketbook, containing \$425 in currency and some valuable papers, belonging to Mr. Langley of Cambridgeport. The dog now wears a \$30 silver collar as a reward for his sagacity.—Moral: teach your dogs to retrieve pocketbooks, only be careful that no one puts cayenne pepper in them.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

Striped Bass, *Roccus lineatus*. Weakfish, *Cynoscion regalis*.
SOUTHERN WATERS.
Pompano, *Trachinotus carolinus*. Grouper, *Epinephelus nigritus*,
Drum (two species.) Family *Scia*. Trout (black bass), *Centropomus*
nida.
Kingfish, *Menticirrhus nebulosus*. Striped Bass or Rockfish, *Roccus*
lineatus.
Sea Bass, *Sciaenops ocellatus*.
Sheepshead, *Archosargus probato-* Tailorfish, *Pomatomus saltatrix*.
cephalus. Black bass, *Micropterus salmoides*;
Snapper, *Lutjanus caxus*. *M. nigricans*.

[Under the head of "Game and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

FISH IN MARKET.—Our quotations show no material change from last week's prices, and the supply of most varieties continues abundant. Striped bass are more scarce than they should be at this season, those in market coming from Long Island, where they are caught in the surf. Smelts of very fine quality, indeed unusually large, are being received from Maine, price 25 cents. Blue fish, which last week were being caught in quantities off Cape May, have suddenly disappeared and the smacks have followed them to the North Carolina coast; those now in hand are the remains of the last catch, and sell for 12½ cents per pound. Frozen salmon bring 50 cents; mackerel from Provincetown, Mass., from 10 to 25 cents each, according to size; white perch, 18 cents; yellow do., 12 cents per pound. Spanish mackerel, (frozen), 50 cents; tom cods, 8 cents; halibut, 20 cents; haddock, 8 cents; codfish, 10 cents; pollock, 8 cents; blackfish, 10 cents; flounders, 10 cents; eels, 18 cents; sturgeon, 12 cents; sheepshead, (frozen), 25 cents; whitefish, very fine, weighing as high as nine pounds, 18 cents; pickerel, 18 cents; salmon trout, 20 cents; pompano, (frozen), \$1.; green turtle 20 cents, terrapin, \$12. per dozen; scollops, \$1. per gallon; soft clams, 40 to 60 cents per 100; hard crabs, \$5. per 100.

FISH AND OYSTERS IN THE NORTH RIVER.—For some weeks past large numbers of bass of fair size have been taken along the river front in the upper part of the city, and the fishing is said to have been better than for many years previous. This increase is said to be due mainly to the efforts of the Yonkers Sportsmen's Club in preserving the oyster beds, which furnish the natural food for the fish. Oysters are also being planted, and if they can be secured from the depredations of foreign oystermen a very important branch of industry will be revived in that vicinity, and a means of livelihood provided for many.

—A week or two ago Capt. John Krider, the well-known egg-ologist, gunner, and fisherman, of Philadelphia, accompanied by the two Williams, surnamed Brooks and Young, and Charley Thomas, went down the Delaware to the favorite fishing grounds at Betterton, and in two days caught four barrels of perch, weighing from a pound to a pound and a half apiece. Uncle John swears this is a fact, and we know that he wouldn't tell a fib for one barrel. These successful disciples of Walton fished with rod and reel, using hard crabs and worms for bait. One inducement for them to go to Betterton, aside from its being a good fishing ground, was the cosy farm house kept by Mrs. E. Price, who can accommodate at least forty such thoroughbreds. Uncle Thad Norris goes there, and so does friend De Moyne, and such like. Betterton can be reached by Ericsson boat at Chestnut wharf, and we understand the sport is good there now.

—Our correspondent, J. W., at Leesburg, Va., under date of November 6th states that the bass fishing on the Potomac has lately been very fine—no small fish taken, and fair strings as to number. Goose Creek furnishes smaller fish, but nearly the same number to the rod or line. They seem to have dropped back into deep water, and the minnow is the surest lure. A few were taken with the fly, but all small.

Bass fishing, however, may be said to be practically over for the season in all high latitudes. Those who are disinclined to hang up their rods must go to Florida, where the sport throughout the Winter will be unequalled.

—A. B. Shipley & Sons, of Philadelphia, have just received an importation of six large logs of greenheart wood, of the fine quality suitable for rods. This information may be acceptable to many of our rod makers, professional and amateur.

—A correspondent mentions that the common ailantus tree, in grain, etc., is very much like the lancewood used for tips to rods, and asks if it is ever applied to that purpose. We have never heard of its being put to any such use. We have cut down a great many, old and young, but have been too disgusted with its odor to examine it with a view to utilizing its wood. It is a succulent, pithy growth, and, we should suppose, wholly unsuited for rods.

THE FISHERIES.—There have been 35 arrivals of the fleet the past week, as follows: 12 from off-shore mackereling, 10 from Georges, 5 from the Banks, and 8 from the Bay of St. Lawrence. The amount of fish landed is 6,700 pounds of Georges halibut; 110,000 pounds Bank halibut; 128,000 pounds of Georges cod; 295,000 pounds of Bank cod; 1,545 barrels of Bay mackerel; 1,500 barrels of shore mackerel. Most of the Bay fleet are on their way home, with small fares, and it is estimated that they will not land in the aggregate over 6,000 barrels.—*Cape Ann Advertiser*, Nov. 5th.

—The *New Nation* says: Messrs. Collier & Hicks, fishermen of Long Point, Canada, captured in their gill net, on Tuesday night last, a sturgeon over six feet long and weigh-

ing nearly one hundred and twenty pounds. It had to be allowed the net three times before it was got into the boat. After being hauled in it floundered so as to endanger the craft, and was with no little difficulty kept in.

ANGLING IN PRUSSIA.—In our last issue we printed, under the head of Fish Culture, a description of a visit made by a correspondent of *Land and Water* to Berneuchen, the residence of Mr. Max v. d. Borne, the eminent fishcultivist, of Prussia. The same writer describes fishing in the Berneuchen, Berlichen and Dobberphaler (they must fish with floats there) Lakes, as follows:—

"During my sojourn, at the latter end of August last, with Mr. Max v. d. Borne, I fished the River Meitzel, which traverses his estate, and caught many jack, carp, perch, bream, etc. They seemed to be abundant, and did not require any skill in their capture. In the trout brook were a fine lot of trout, some up to a pound in weight. My friend asked me several times to throw a fly over them, but knowing the trouble he has had in rearing the same, I thought it a sin to try, as I am sure it must be a pleasure to his friends to see these handsome fish disporting themselves in their element. Mr. v. d. Borne feeds these trout with maggots. He has a covered square box, fixed on to long, outstretched legs, which is placed in the water at the head of the brook. This box is pierced with holes at the bottom, and in it a dead heron, from which the maggots are continually falling through the apertures, and which the trout seem to know, for I saw a shoal of the largest in close attendance.

From Desenow Lake, close to Berneuchen, we caught several jack and perch, but did not succeed with pike-perch; they are considered a crafty fish, yet are taken occasionally on eel lines. You must not expect to catch any very large fish in these Magdeburg Lakes, because they are netted and the largest removed. The North Germans are great fish eaters, and are tied to fresh water species, because, with the exception of an occasional salmon, they never see salt water fish, except in a cured state.

About thirty miles from Berneuchen is a pretty town called Berlinchen, which has a large lake close by. The drive to this place is mostly through fir forests belonging to the State; about half way we halted at the residence of Mr. v. d. Borne's brother, who is Oberförster of that district. Here we were pressed to stay and enjoy some wild deer and wild boar stalking, which I should have enjoyed very much if I had come prepared. We, however, left in the afternoon for Berlinchen, where we were met by the postmaster of the town, who is considered a great fisherman there. This lake is netted several times a week, yet is very prolific. The centre contains a submerged mountain, and is so very deep that there is no chance of the fishermen who rent the fishery ever catching all the big ones. We rowed to the declivity of the submerged mountain and commenced. Mr. v. d. Borne being supplied with Farlow's best tackle, we soon caught a nice lot of fish. The postmaster had a long wand or pole, about twenty feet in length, no winch or running line, but a strong cord the same length as the rod, and about a foot of six twisted horse hairs, with a very large hook for the bottom, and a big cork for a float. The baits we used were soft crayfish; these crustaceans are about double the size we see them in London; the whole of the shelled tail is put on one hook, and the body on another; and notwithstanding the very coarse tackle, the postmaster caught several large perch and roach, my opinion is that the large bait is so tempting, "like the Turkish bonds," that the fish overlook the dangerous attachment, and are caught. A yacht near us contained a lady and gentleman. They had five rods out. The most laughable thing is to see all these long poles with their tops resting and lying about a foot deep in the water. The small fish nibble away at the baits a long time, but when a larger comes and the floats walk away, the angler simply strikes and lifts the fish into the punt. At first I tried a usual roach line and a small piece of crayfish, and caught no end of small ones. Afterwards Mr. v. d. Borne and I used a float-ledge with two hooks each, and the large crayfish bait. Our fine tackle soon put the extinguisher on the other boats, for when we left off we had caught seven fish each to the others' one. The following morning we were joined by Herr von Klitzing, one of the largest landed proprietors in Magdeburg. This gentleman had English tackle, and was my partner for the day. He had taken care to bring an excellent lunch of cold partridge, etc., and some excellent wines, and altogether was a most agreeable, charming companion. He caught the largest roach, which must have weighed about two pounds, and I had a rudd to match. Mr. v. d. Borne was with the postmaster in another punt, and both were doing well, Mr. v. d. Borne pulling the perch out two at a time. We were going on so successfully, when a storm arose, and although we stood the rain out for over an hour, the drenching made us retire; and it never left off all day, which was a sore disappointment to all. Mr. v. d. Borne's coachman drove us that evening to one of the country seats belonging to Herr von Sydow, who owns a lake close by, called Dobborphaler Lake. This gentleman was away with his family on one of his estates among the hills, but had sent his servant with a carriage full of good things for our delectation. We slept there that night, and the following day attempted to fish for pike-perch, with which this lake abounds; but a hurricane drove us off the water, and completely spoiled our sport, and so we returned to Berneuchen again and fished the Desenow Lake once more; before my departure to Stettin and Berlin. I regret now that I did not stay another week, for such angling is not to be met with every day."

VENOMOUS SERPENTS OF THE WEST INDIES.—Poisonous serpents are very unequally distributed in the West India islands. Cuba, fortunately, has none; St. Domingo few or none; Jamaica none; while the Windward Islands, off to the southeast, do not fare so well. In Martinique the dreaded *fer de lance* (lance of iron), or rat-tailed snake, originally introduced from Venezuela and the region of the Orinoco, to destroy the rats in the sugar cane fields, has multiplied at such a rate as to become a public pest, an ever present source of danger to all who visit the cane fields, or go on foot into almost any place outside of St. Pierre, or even into the pleasant botanical grounds of that chief town of the island. In the island of St. Lucia, south of Martinique, it is still worse; there, the abundance of venomous snakes of all kinds is such as to make it dangerous to every one who visits the interior of the island, and a premium is now given for snake's heads with a view to their extermination.

The Colleges.

HARVARD.—The Fall meeting of the Harvard Athletic Association took place on last Saturday afternoon at Jarvis Field, Cambridge, in the presence of 2,000 spectators. The mile race was won by C. James of '79 in 5m. 2½s.; the mile walk by Taylor of '77 in 7m. 33½s.; the running high jump by Hubbard of '78, five feet one inch; the 100 yards dash by Thayer of '78 in 11s.; the half mile by Lowell of '77 in 2m. 10s.; the quarter mile race by Conant of '79 in 59½s.; the hurdle race, 120 yards, over ten hurdles by Thayer of '78 in 20½s.

It is said that at a meeting recently of the Harvard V. B. C., it was decided to propose to the Yale crew, that Harvard and Yale have a race at Saratoga next Summer, "all by themselves." If Yale accepts the invitation the aquatic duel will probably come off the day before or the day after the annual University race.

UNION.—The athletic sports of this college were held on the 2d instant. The first event, a hundred yards dash, was won by W. A. Holman, '77, in 10½s. Next on the programme was throwing the heavy hammer, which J. E. Bold, '78, won, throwing the hammer 83ft. 4in. For the one-quarter mile race but two men appeared—T. D. Frear, '75, beating his opponent by 15ft. in 62s. The running high jump was won by A. B. Moorhouse, '78, who jumped 4ft. 6in. J. B. Maguire, '79, carried away the prize for the mile walk, in 8m. 28s. Four men in the one-mile race, Blain, '79, winning in 5m. 45s. Throwing the base-ball brought out five aspirants for the prizes: Holman, '77, winning, however, by throwing 294ft. 10 in. Holmes, '79, a non-competing, threw it 301 ft., and was awarded a testimonial by President Potter. P. Jenkins, '77, jumped 16ft. 10 in., thereby winning the prize for the running long jump, Moorhouse second, clearing 16ft. 4½ in. Vaulting with a pole had three entries, Colcock, '77, winning, clearing 7ft. 9in. The three-mile run was a dead heat between T. D. Frear, '76, and C. Vedder, '79. Time, 21m. 16s. A first and second prize were awarded in each contest in the shape of silver medals, varying in size.

PRINCETON.—The Princeton University foot ball twenty will play a match game here next Saturday with the twenty of Columbia College.

—In a game of foot ball between the second eleven of Bates and Tufts Colleges, at Lewiston, Me., on Saturday last, the Tufts College eleven won.

BOOKS RECEIVED.

MANUAL OF RIFLE PRACTICE: Including Suggestions for Practice at Long Range for the Formation and Management of Rifle Associations. By Col. Geo. W. Wingate, General Inspector of Rifle Practice N. G. S. N. Y. Fifth edition, entirely revised. New York: W. C. & F. P. Church. 1875.

Undoubtedly the best books are written by those having the most thorough acquaintance with the subject to be treated. This assertion at the first glance may seem to partake of the nature of a platitude. But should ever the private history of book-making be known it would surprise the general reader to learn how much sheer manufacture and ordinary job work enters into the compilation of certain volumes, and more especially those called into existence to meet a sudden demand for information on a new topic. Rifle practice in the United States may be cited as precisely one of these novel subjects, which has attracted very great attention of late. From all parts of the country there comes reports of the foundation of rifle associations and the opening of new ranges. It might then have been supposed that, according to the rules of demand and supply, the literary market would have been flooded with a mass of commonplace books devoted to rifle practice. For a wonder this has not been the case. The only reason we can deduce for this is that at the very commencement of the rifle movement Col. Geo. W. Wingate wrote and published his *Manual for Rifle Practice*, a work so exhaustive in character, showing such familiarity with the rifle, and so fully covering the whole ground, that since its appearance there has never been even felt the want for any other book on this particular subject. In fact, the *Manual* covered the whole field, and there was no room for another. Anticipating with no small amount of foresight the development of rifle practice in the United States, the author may be truly said to have thoroughly identified himself with the *renaissance* of the rifle, and accordingly wherever a rifle is shot at a range the *Manual* is the text book. In fact, so familiar has the name become that we no longer say "according to Hoyle" but "according to Wingate." We have before us the fifth edition of Col. Wingate's *Manual*, entirely revised. The volume is a neat and handy one, clear in print, and fully illustrated. In the preface the author states:—"When this work was originally prepared, few, if any Americans, had any practical experience upon the subjects of which it treated, and the author was compelled to rely mainly upon foreign publications for everything outside of his own limited experience as an individual. Since then the establishment of Creedmoor and the regular instruction of the National Guard of the State of New York in rifle practice have resulted in developing a degree of skill fully equal to anything that is known elsewhere, and culminating in the triumph of an American team over the victors of Wimbledon in two international matches by scores unparalleled in any similar competitions." Very rightly Col. Wingate has paid special attention to the use and practice of the rifle for military purposes, and by means of the *Manual* the duties of the officer, of the inspector, and regimental commanders can be thoroughly acquired. Every detail necessary to instruct the soldier in the use of his weapon can be found in the book, as the preliminary drill of the soldier in the army, with all the steps to be employed, in order to convert the raw recruit into the expert marksman. It is strange that even to-day, when State aid is asked for by military organizations for the establishment of rifle ranges, it should be withheld. It is only on the range that our militia can be taught the use of their arms. For every shot fired at Creedmoor by the amateur a thousand are fired by the national guardsman. Ranges are, of course, the sources of much rational amusement and health-giving exercise, but military practice is the foundation on which they must stand—all private match shooting is subsidiary. The larger portion of the *Manual* devoted to this special work—the training of the soldier, will help to dispense all false conceptions in regard to the utility of ranges and the specified purposes for which they are intended. Every day the *FOREST AND STREAM* is in receipt of questions of various character—how rifle associations are to be founded, how their laws are arranged, and how ranges are to be laid out. Every one of these important topics are discussed *in extenso* in the work under review. You can find all about it, even how a scoring card should be printed, with the rules and regulations governing matches. The author himself having been most prominent in founding the N. R. A., and having located and planned Creedmoor and given personal attention to the construction of the targets, butts, mantlets, and screens, is thoroughly at home in all such topics. When we come to the practical portion of the book, as to the absolute shooting, the field use of the rifle, how a gun is to be loaded, what weight of powder or ball is to be employed, what are the positions to be taken, with all the facts regarding elevations, trajectories, allowances for wind, effects of thermometrical or barometrical disturbances,

the various kinds of sights, how a rifle is to be dismounted or put together or cleaned, we find the *Manual* thorough in every detail. In fact, within the compass of some 290 pages the *Manual* is encyclopedic in character, for nothing which can have any bearing, scientific or practical, on the subject of rifle shooting has escaped the diligence of the author. The "suggestions to marksmen," including instructions to individual riflemen and to teams, cannot fail to bring out expert shooting. As has been before remarked by us, rifle shooting differing from other manly sports, must be founded upon a certain basis of theoretical acquirements. To become an adroit marksman sound books must be read and good rifles fired. The rifles have been in existence for some time, and now the book is found.

For ourselves, Col. Wingate's *Manual* has for the last two years been our book of reference, and as we know of no other which equals it, we most unhesitatingly recommend the fifth edition of the work to all military organizations and riflemen in general throughout the country as being the most useful and comprehensive volume yet published on rifle practice.

The "Travelers' Official Guide for November is at hand, with its usual amount of handsome maps and carefully compiled information. The editor is also Secretary of the Convention of Railway General Managers and General Superintendents which meets twice a year to arrange the time for through trains, and in this edition the schedule is published which takes effect on November 21st. Travelers who propose commencing their journeys about that time will find this work an invaluable aid in laying out their routes. Price 50 cents per copy; \$4 per year. The National Railway Publication Company, of Philadelphia, the publishers of the above named *Guide*, are also issuing a pocket edition of the same called *Official Time Tables*, at the low price of 25 cents per copy. With its description of towns, giving population, hotels, telegraph stations, etc., the numerous small railway maps, and the handsome colored general railway map bound with it, make it an invaluable handbook for the traveler.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

READER, Albany.—Can procure a cloth target 4x6 by writing to Post Office Box 26, Taunton, Mass.

W. W., New Haven.—Will it hurt the shooting of a gun to shoot balls or buckshot from it? Ans. No.

ANKETEL, New Carlisle, Canada.—We have received to-day from the printer the first specimen copies of our "Camp Life in Florida," and can fill your order by the time it reaches us.

APOLOGISTIC.—Apology is due to several valued correspondents for neglect in replying to their favors during the absence of our chief editor. Prompt attention is pledged henceforth.

F. J. P., Ellenville, Ulster county.—Will you please tell me through your columns where I could get iron targets and bullet moulds? Ans. From any of the gun dealers advertising in our columns.

J. L. B., New York.—Will you please inform me where I can get some good quail or partridge shooting within two and a half or three hours' ride of New York? Ans. Address A. J. Hayler, Tenally, N. J.

G. H. S., New York.—Please tell me are J. Hollis & Son, London, considered good gunmakers? 2d. Is New Dorp, Staten Island, a good place for ducks? Ans. 1st. Hollis & Sons are good gunmakers. 2d. No.

J. C. B., Secretary A. R. R.—Can a strap be used in any way in shooting according to the rules of the N. R. A.? Ans. The use of the strap would be decidedly contrary to the rules of the National Rifle Association, and would not be allowed.

S. S., Cazenovia, N. Y.—The maker of the gun I wrote you about is Chas. Daly. It has top snap, extension rib, double bolt at bottom in lump, and two bolts in extension rib, making it one of the stoutest fastened there is. Both barrels are No. 10 gauge.

W. S. S., Boston, Mass.—Will you kind enough to send me some of the area nut, with instructions, as you are doing to some of your correspondents? My setter pup has worms. Ans. Have sent you some area nut by mail, with directions for its use.

D. M. S., Rogers, West Va.—Where can I get a single barrel breech loading choke bore shot gun? Are they to be had of American manufacture? Ans. You can purchase an American or foreign made single barreled breech loader from the gun dealers advertising in our columns, who will have it choke bored for you.

DEAD SHOT, Philadelphia.—Do you know of any responsible gunmaker who alters Colt's army or navy revolvers into cartridge revolvers? What would be the cost, and would they be satisfactory after it was done? Ans. Address Geo. Hayden, No. 143 Fulton street, New York.

J. F., Xenia.—I have a breech loader marked Dean on the locks. Can you inform me whether Dean has any standing as a gunmaker? Ans. Dean & Sons are first-class gunmakers. But guns made by other and indifferent makers often have the name of good makers engraved upon them.

CANYAS BACK.—Are Mr. Glahn's gyro pigeons in market yet? What are they selling for? When will "Camp Life in Florida" be out? Ans. The new birds to be used with the old gyro are manufactured, but we have not seen the gyro itself. "Camp Life in Florida" will be ready next week, and can be had at this office.

TREMONT, Boston.—Will you have the kindness to inform me through the columns of your valuable paper as to the reputation and merits of the breech loading guns made by J. P. Clabrough & Bro., London? How do they rank as compared with Scotts? Are they on the list of London gunmakers? Ans. They are on the list of gunmakers of London, and rank favorably.

J. B. M., Brooklyn.—Would you recommend the Palisades (on the Hudson) for gunning? or will you please advise me where to go on Long Island to get robins? Ans. You would find very little game near the Palisades, and in New Jersey and other States there is a law against shooting robins and other insectivorous birds. We know of no place on Long Island where they abound.

G. G. H. Jr., New York.—1st. What is the best place for duck shooting the Chesapeake during January? 2d. What ducks are to be found at that place at that time? 3d. What weight gun would you advise me to use? Ans. Have de Grace is a good place for duck shooting generally, but January is too late in the season for good sport. The guns used for shooting on Chesapeake Bay rarely weigh less than 12 pounds.

R. B. B., Sparta, Ga.—Where can I get targets for testing the distribution and penetration of breech loading shot guns, and the price per dozen? 2d. How will I remedy the fault of my too close shooting gun? Ans. 1st. We think there are no such targets as you need in this city, but any of the gun dealers advertising in our columns will procure them for you. 2d. Any practical gun maker can remedy the difficulty.

SUBSCRIBER, New York.—1st. Please tell me what is considered a first class pattern as to spread and penetration of one ounce of Nos. 6 and 8 shot at 30 yards, 30-inch circle? 2d. Where may targets by which penetration can be ascertained be obtained? Ans. Half the load of shot in a 30 inch circle at forty yards is a good pattern. For pads to ascertain penetration address J. & W. Tolley, No. 29 Maiden Lane, or H. C. Squires, No. 1 Courtland street, New York.

CONSTANT READER.—I have a No. 12 Scott gun, called the "Western Gun," price \$140. I never held a closer and stronger shooting gun to my shoulder; it does not recoil; the charge is three drachms of Orange medium sized duck powder and 1½ oz. shot. At 32 paces I put 11 out of 14 buckshot into the bottom of a bucket and through an inch of pine behind it. If anything, it shot too close and strong for grouse. It killed a loon with No. 4 shot from a boat.—W. C. W.

J. C. K., New York.—Am using Hart's metallic shells in a No. 12 breech loader, and find that the discharge of one barrel loosens the wad, or drives it from the other, although I use over the shot a No. 10 Ely's pink edged, which is the thickest length of the shell will permit. Is there no way of preventing this? Ans. We know of no other means. Perhaps some of our readers can suggest a remedy, or perhaps you are using a heavier load of powder than necessary.

BLUE JAY, New Hamburg.—Will you be kind enough to inform me whether there is any statute (among the State game laws) forbidding the shooting of partridges in any part or parts of Sullivan county, N. Y.? I am told by some that you are not allowed to shoot partridges in Sullivan county for five years; others say it is not so, and as I usually resort to Sullivan county every Fall to shoot partridges I would like to know how the law is on the subject. Ans. No such clause in the game laws.

AXE, Portsmouth, N. H.—Will you in your next issue give me the address of your correspondent "Al Fresco," so I can communicate directly with him regarding what points to go for quail, snipe and duck shooting, making Jacksonville my headquarters, and what distances from there to arrange for? Ans. Dr. Chas. J. Kenworthy, or "Al Fresco," resides at Jacksonville, Fla. All the information you require, gathered in great part by this gentleman, is published in "Camp Life in Florida," the first numbers of which will come from the press next week, and can be had at this office. Price \$1.50.

READER, Brockville, Ontario.—1st. Do you know if Remington's \$75 gun, 12 bore 30 inch barrel 8½ pounds weight, will shoot 4 drachms powder and 1½ ounces shot with good results and little recoil, or would 3½ drachms do better? 2d. Can you tell me how it is that their 12 bore guns weigh more than their 10 bore? Ans. 1st. Four drachms of powder and 1½ ounces shot is frequently used in such guns; 3½ drachms would give less recoil, and for ordinary use would be sufficient. 2d. The 12 and 10 gauge Remington gun barrels are made alike, and in order to make the 10 gauge the 12 gauge is bored out, which, of course, reduces the weight below that of the 12.

W. N., New Haven.—1st. Is there such a gunmaker in London as Manton? 2d. What charge would you recommend for a muzzle loading gun 28-inch barrel 13 bore, weight 7½ pounds, for upland shooting, and is it heavy enough for ducks; if so, what charge shall I use? 3d. What is the best book on trap shooting? Ans. 1st. The famous gunmaker Manton has been dead many years. Guns with his name engraved upon them are frequently met with, but not made by him. 2d. Use from 2½ to 3 drachms of powder, 1½ ounces shot for upland shooting. Your gun is too light for duck shooting. 3d. "The Trap Shooter's Referee," price 50 cents.

A. C. J., Philadelphia.—I am going West to reside permanently, and would like advice in the purchase of a shot gun. Would you recommend a \$45 Remington breech loader or a \$50 muzzle loading gun; the latter is all I feel able to pay. What make would you advise? Where I am going there is no place to purchase breech loading ammunition. Which gun would shoot the strongest and capable of standing the heaviest charge. Would an English gun be better than an American? Ans. A \$45 breech loader will probably give you satisfaction. An English breech loader would cost you more. By using metallic shells you would have no difficulty in the way of loading. Good judges differ as to which is the best gun.

J. B. V., Fall River.—As a constant reader of your valuable paper I wish to trouble you for the recipe of a preparation for the coating of gun locks and gun barrels to prevent their rusting when in contact with salt water. I have used a waterproofing which I prepared from a recipe, but which proved too sticky upon applying. Ans. A thin coating of shellac dissolved in alcohol is excellent; also a coating of best copal varnish, first heating the barrels to the temperature of boiling water, not any hotter, or they may be injured; let them remain hot for half an hour and then rub them with a soft rag. The barrels will show no sign of the varnish. Belmont oil is prepared for the purpose, and can be had at gun stores.

VAL, Nashville, Tenn.—1st. I shoot a No. 12, 8 lb. W. & C. Scott & Sons' breech loading gun, and am desirous of obtaining a set of choke bore barrels that can be used with same stock. You would greatly oblige me by stating where the same could be had, and about how much would be the cost. 2d. I have an Irish setter pup six months old which is extremely timid, although she is petted and much fondled with. Am afraid to take her into the field, for I think she will "break on the first fire." What's to be done? Ans. 1st. There are several gunmakers in this city who can fit a first-class pair of choke bored barrels to your gun; by sending it to us we can see that it is properly done. The charge is from \$25 to \$55. 2d. Nothing but time and gentle handling will bring your pup around all right.

C. M. T., Erie.—Will you oblige me by answering the following questions through the columns of your valuable paper:—1st. Is a Scott & Sons' breech loader 12 bore, 32-inch barrels, 7½ pounds weight, too light for general shooting? 2d. Will such a gun burn four drachms of powder? 3d. What is the proper test to ascertain the amount of powder a gun will burn? 4th. What is the best method of keeping wads down on shot in paper shells, by use of crimper or creaser, or by using wads a size larger than shell? 5th. Will two pink edged wads on powder make the gun recoil more than using one only? Ans. No; but we prefer 30-inch barrels. 2d. Yes; but for ordinary upland shooting 3½ drachms of powder is enough. 3d. We know of no certain test, but any skillful shooter can soon ascertain the proper load for his gun. He should shoot just as much powder as his shoulder will comfortably bear. 4th. Crimping, or Hall's creaser, answer well, but we frequently use a little mullage to keep the wad in its place, and find it answers the purpose. Some use Spaulding's glue and approve of it. 5th. Two wads on the powder causes more recoil than one, yet the gun shoots harder for it.

D. F. E., Pond Eddy.—In what respect are moccasins better than ordinary boots besides being softer and easier to the feet? Could a rattlesnake inflict a wound through them easier than ordinary leather? Are they waterproof, and what is the best boot for Florida use? 2d. What is the best large (very large) hook for fish weighing twenty and thirty pounds? 3d. In changing your powder from fine, say No. 5 Orange Lightning to the coarsest No. 7, do you use the same number of drachms or more; also in changing from the lightning to the ducking? 4th. Can I obtain Kay's concentrated cartridges yet; when will they be for sale? 5th. What is the lowest priced Greener muzzle loader? 6th. I can only find about 86 shot of No. 6 in my shot pouch of one-ounce measurement. Ans. 1st. We should prefer long thigh boots, with moccasins perhaps for camp wear. Those of porpoise leather are the best. 2d. Either a knobbed O'Shaughnessy, Nos. 10-0, 9-0, 8-0, 7-0, 6-0, or Virginia 3-0, 2-0, 1-0. 3d. Increase the measure slightly in changing from fine to coarse powder. 4th. The Kay's concentrator is now for sale by gun dealers. 5th. About \$75 new. 6th. Your pouch must be wrong; there should be over 200.

W. M., Greenburgh, N. Y.—1st. Where is the best place in Westchester county, N. Y., for a day's duck shooting or snipe shooting? If none in that county, where in the immediate vicinity of New York could I go and return the same day? I reside in Greenburgh, twenty miles from New York city, on the line of the New York Central and Hudson River Railroad. 2d. Is there any way to prevent or help a gun from scattering shot (muzzle loader, 12 bore, 30 inch barrel), without it being re-bored? 3d. What would be the proper charge and No. of shot for ducking and quail shooting with such a gun? 4th. Where can I obtain the different rules for pigeon shooting, and if the New York Society for the Protection of Game will send me a list of the close seasons in this State? Ans. 1st. At the Embough, or Rodgers' Island, near Catskill, we are informed, there is good duck shooting; possibly a few snipe on the marshes in the same vicinity. 2d. Try different charges of powder and shot at targets. 3d. For ducks, 3½ drachms powder, 1½ ounce No. 4 shot; for quail, 3 drachms powder and 1 ounce No. 8 shot. 4th. Write to Chas. Snyder, No. 149 Chambers street, for "Fur, Fin and Feather" and "Trap Shooter's Referee," for game laws and rules for trap shooting; price of both 80 cents.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOCTRINATION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[Post Office Box 2832.]
127 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, NOVEMBER 11, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.
CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

INTERNATIONAL ASSOCIATION FOR PROTECTING GAME AND FISH.

THIS is merely a temporary organization of scientific men and others, numbering some 250 persons, whose sole object is to devise and prepare, upon purely scientific data, a suitable law for the propagation and preservation of the creatures that populate our woods and waters. It has the approval and direct support of the Smithsonian and other leading academies of science, and there can be no doubt that upon the information and aid directly available it will be successful in its objects. It should not be confounded with the National Sportsmen's Association, which, although interested in, and laboring for, the same objects, is a permanent organization composed of delegates annually elected to its conventions from the local clubs of the several States recognizing its jurisdiction, and operating through them to disseminate a healthy opinion as to the necessity of game laws and the protection of game.

A meeting of the International Association, first named, was held in New York last Spring at the Cooper Institute, and this was followed by a meeting of the Executive Committee on the 22d of October just past. An adjourned meeting of this body will now be held on the 19th of this month of November at the Hall of the College of Physicians, Locust and Thirteenth streets, Philadelphia, at which an influential attendance is pledged. The presence of any member of the association is earnestly invited. The direct object of this meeting is to perfect the committees on Nomenclature, Habits of Species, etc.

After the locality for holding the meeting was designated, the following courteous invitation was extended to the association by the Philadelphia Sportsmen's Club, through its President, Bernard A. Hoopes, Esq.:

PHILADELPHIA, Pa., November 5th, 1875.

CHARLES HALLOCK, Esq., Secretary International Association.

DEAR SIR:—It was announced that the meeting of the "International" was adjourned to meet in this city on the 19th inst.

I would beg leave to say that the Philadelphia Sportsmen's Club tenders their rooms and assistance for the objects of the meeting, and will feel honored by the acceptance of our efforts.

Very respectfully, B. A. HOOPES, President.

This courtesy and recognition of the objects of the society were duly acknowledged by the Secretary. We are authorized to state that any gentleman interested is most cordially invited to attend the meeting.

PIGEON SHOOTING.

THIS is not the first occasion on which we have advocated the abolition of pigeon shooting at the meetings of sportsmen's associations; and we would say to the members of the numerous clubs now forming for the protection of fish and game, that the ostensible objects of their organization will be much better served if the shooting of pigeons is not made the all important portion of their meetings, and allowed to entirely override the real objects of confederation. In discussing the question we are disposed to leave out the humanitarian view entirely, and put it upon the broad ground of expediency; that the much needed preservation of fish and game may not be forced to disappear before the opportunity of attaining reputation as a skillful pigeon shot, or acquiring a trophy of one's prowess.

We are glad that the National Association decided to hold their deliberations aloof from pigeon shooting tournaments hereafter. At the last meeting of the Ohio State Association the more important business of the occasion was transacted without the usual accompaniment of a *feu de joie*. Local associations are also beginning to see the necessity of prompt measures to prevent the rapid decrease in the supply of game, and in abandoning their pigeon shooting are enabled to give due attention to the main objects of their organizations. The Yonkers Sportsmen's Club, one of the most energetic associations in the country, has divided, and that portion of the members comprising those who are opposed to pigeon shooting as an adjunct to their institution, have formed themselves into a new club, with the title of the Yonkers Game and Fish Protection Society. The list of officers are as follows: Dr. Charles W. Torrey, president; G. Livingston Morse, vice president; H. T. Keyser, secretary; James Ackerman, treasurer; Alanson J. Prime, counsel; Frederick Shonnard, Hyatt L. Garrison, Ralph E. Prime, Dr. G. B. Balch, Isaac D. Cole, N. F. Rowe, J. A. Sniffen, J. G. P. Holden, W. F. H. Getty, and W. W. Wilson, executive committee.

There can be no question but that pigeon shooting—particularly where the matches are shot under the auspices of an organized club, or game protective society—has a tendency to increase the number of pot-hunters and lessen the true instinct of the sportsman, who would otherwise have willingly walked and worked for his shots. There is not the feeling of elation or satisfaction after a pigeon match, even if one is successful, as there is after a good day's tramp in wood or stubble, with pockets filled and the performances of a well broken dog to expatiate upon. It is said that trap shooting is good practice, and that proficiency at it indicates also skill in the field. We are inclined to doubt the latter statement, at least, and believe that many superior shots at the trap would be quite at a loss in general field shooting.

That trap shooting in England is on the decline there can be no doubt, and the leading clubs are witnessing a rapid falling off. Royalty across the water sets the fashion in most everything, and pigeon shooting is to be no longer fashionable. The Prince of Wales and all the princes of the royal family have withdrawn from the Hurlingham Club, and the sport is to be tabooed in the British Army. It is said that some of the officers stationed at Aldershot, who recently engaged in matches, were severely rebuked. An officer of high rank, in writing to a leading London paper, says: "Officers of the Army, of all people in the world, ought not to patronize so debased an amusement—if amusement it can be called—especially after the very praiseworthy conduct of the heir to the throne." This seems like strong language, but perhaps the writer had in mind the Hurlingham rules, which permitted the shooter, if he missed with his first barrel, to kill his bird when on the ground with his second. If the word debasing can be used at all, it certainly must apply to this potting at birds while on the ground, and nothing, we should imagine, would so soon destroy the truer and better instinct of a sportsman.

We have no royalty, however, in this country, and pigeon shooting matches will probably continue until the millennium, Mr. Bergh's efforts to the contrary notwithstanding. We merely wish to enter our protest against trap shooting being made the leading object in the formation of sportsmen's associations. We have done the same before, and are glad to see that our efforts are bearing good fruit. If the members of the various organizations throughout the country—and particularly the State Associations—cannot be brought together to take measures to secure the enforcing of the game laws, without the inducement of trap shooting, we had better abandon our game and take to preserving pigeons for our own potting.

—The exodus to Florida has begun somewhat earlier this season than usual, and many of our subscribers have already departed, among them, G. M. Fairchild, of Quebec; and Fred. A. Ober, known as Fred. Beverly, who conducted our Okeechobee expedition. Geo. A. Boardman, the naturalist of Calais, will go next month, and so will Greene Smith, son of the late lamented Garrett Smith, Esq., with Hiram P. Wilson as his traveling companion. Almost the only business done now by our dealers in fishing tackle is in putting up orders for parties about visiting Florida. Dropping into Messrs. Conroy, Blissett, and Malison's, and Messrs. J. B. Crook & Co.'s on Fulton street, we found them packing large orders. For general fishing, heavy bass tackle appears to be the best, and the larger sized O'Shaughnessy and Virginia hooks—say from 10-0 to 6-0 of the former and 3-0 to 1-0 of the latter. A good large

reel, with 150 to 200 yards of line, and above all, plenty of sinkers. Some sportsmen are ordering as many as four dozen, the largest weighing four ounces. Sportsmen say they can not find a stone in Florida large enough to anchor a decoy with, which is true as to many localities.

Any of our readers who may desire the services of a skipper for coastwise voyaging, are referred to Capt. Wm. I. Bennet, of Sarasota, Manatee Co., who has an eleven ton schooner yacht accommodating a dozen persons, which, with two men to sail her, and a small boat, he will furnish at \$8 per day. He will meet them at Cedar Keys or Key West upon proper notification given him. This worthy skipper piloted our Florida Commissioner, "Al Fresco," to Charlotte Harbor last Winter, and is recommended by him.

AMERICAN AMMUNITION.

WE are in receipt of several communications on the subject of ammunition of American manufacture, in which the writers contend that the shells for breech loading guns made in this country are equal, or nearly so, to the imported. These letters are apparently called forth by our statement in a late issue to the effect that a friend with whom we recently shot, and who used American shells, had at least fifty per cent. of missfires. Of course our remark was not intended to lead to the inference that all persons using these shells had this per centage of missfires, nor was it made in favor of the imported article, but simply as an appeal to American manufacturers to give us every article of a sportsman's outfit of a quality equal to that of the imported goods, thereby relieving our pockets of the extra cost. We are very glad that our remarks have called forth these letters, and we print such as are not anonymous with pleasure, in hopes that the subject may be further ventilated. Mr. Hayden appears to lay much stress upon the pattern and penetration made with the native ammunition. We should be induced to give some of the credit to the gun. The best of our powder we believe to equal the English. As for the shells, notwithstanding the fact that so many gentlemen, whose names are signed to the communications below, have fired such a number without a missfire, we are still inclined to think that their experience is not that of all sportsmen. In fact, for them to have used so many shells of any manufacture without a missfire is a little remarkable, and if the superiority of the Bridgeport shell can be substantiated, we will herald the good news to the extent of our ability. It will be borne in mind that we mentioned no particular make of shell, and we will also add that the gun with which the missfires occurred had rebounding locks, and complaints have already been made in these columns that missfires were more frequent in guns fitted with these locks than with those on the old style. The caps, however, were fairly and deeply indented. We shall be glad to hear further from our readers on this very important subject:—

JACKSONVILLE, Ill., Nov. 1, 1875.

EDITOR FOREST AND STREAM:—

In your issue of Oct. 23 I notice a communication from your Boston correspondent, "Under Grip," also your foot note in relation to American ammunition. On the 24th of September, in company with the field editor of the *Turf, Field and Farm* and a dozen or more of prominent New York and New Jersey sportsmen, I witnessed a trial with American ammunition that is good enough for me. With 3½ drachms of Ladin & Rand's No. 6 powder and 1½ ounces Le Roy No. 7 shot, Bridgeport paper shells, distance 40 yards, six shots from each barrel, 166½ pattern (30-inch circle) and thirty two sheets penetration was made; average of the twelve shots. I have one of these penetration pads, 9½ by 11½ inches, forty sheets heavy wrapping paper, weight 17½ ounces; four shots are sent through this pad of forty-one sheets, including the pattern sheet. What better ammunition is wanted than this. The English pad, same size and number of sheets, weigh scant, 16 ounces. The gun making the above record is a ordinary field gun made by E. C. Green, of Cheltenham, England, 12 gauge 30-inch barrels, weight 7½ pounds; has been in use over a year. In regard to paper shells, I have been using the Bridgeport paper shells, sometimes nearly a 100 a day. I have never had one to miss fire. I append the testimony of a few of our best sportsmen who use the Bridgeport shell for trap and field shooting.

Yours very truly,

GEORGE HAYDEN.

JACKSONVILLE, Ill., Nov. 1, 1875.

We the undersigned, using the American paper shells made by the Union Metallic Cartridge Co., Bridgeport, certify that we have never known one to miss fire.

Alfred Hayden, George Rippon, Richardson Vasey, Wm. G. Russell, C. H. Baker, K. Blackburn, Robert Ranson, R. R. Chambers, Chas. Henry, John Ranson, Wm. Benson, Chas. O. Sperry, D. M. Simmons, O. D. Fitzsimmons.

JACKSONVILLE, Ill., Nov. 1, 1875.

EDITOR FOREST AND STREAM:—

While on a visit here to my brother sportsmen the subject of the merits of the Bridgeport and Ely's imported shells was fairly discussed. I, together with numerous sportsmen, both East and West, whom I have conversed with upon the subject, practical not theoretical sportsmen, claim the Bridgeport shell equal to any imported excepting Ely's gas tight shell, which costs fully one-third more.

EUGENE H. SHORB.

A FOX HUNT.—It is now said that the fox hunt recently alluded to will really come off in about a fortnight. The vicinity of Hackensack is the location fixed upon for the "meet", and if a "real live" fox cannot be found, a "bag-man" will be in real live. Even a red herring is sometimes used for a drag, and if none of the showmen will lend a fox, this mode of procuring a scent might be resorted to. We are informed that it is to be only an "invitation hunt," but that the general public will kindly be permitted to look on and see the noble horsemen "negotiate" their fences. Seriously speaking, if this meet is successful and a regular club is organized, one good effect from it will be to popularize riding. The number of good horsemen, in this section of the country at least, is a standing disgrace, and a little rough riding across country will do more to familiarize our young men with this healthful recreation than all of Mr. Dickel's and other riding master's efforts combined. We might in time see something of a field in a gentleman's race at Jerome Park, and ultimately arrive at the point where an American gentleman would undertake to ride a steeple-chase.

GAME PROTECTION.

NEW YORK SOCIETY FOR THE PROTECTION OF GAME.—This Association held its first monthly meeting of this present season on Monday evening, at the house of the President, Mr. Royal Phelps, about forty members being present. The President called the meeting to order at 9 o'clock, taking his seat in the magnificent chair made of bucks' horns and fawn skins, which used to be filled by honorable Presidents of this Society in those years when its deliberations were held in a club room, and not at private residences as now. When the social character of the organization was modified, the late lamented Secretary, Mr. Hays, the artist, became its custodian. His widow has now requested the Society to take charge of the old relic, and it accordingly resumes its time honored functions—honored no less now than then by the gentleman who has for successive years efficiently and courteously discharged the office of President.

The Secretary read a great mass of correspondence from all parts of America and Europe containing many flattering testimonials to the valuable services performed by the Association in protecting game, and requesting information for localities in which new protective clubs are about to be formed.

In the course of his remarks the President said that the Committee on Amendments to the Game Law had decided to recommend the prohibition of killing quail during October, thus reducing the open season for killing this bird to November and December. The committee were anxious to know what were the wishes of the people of this State, outside of the city, and in the Western States, in regard to the time for selling venison in the city of New York. It is now allowed to be sold in September, October, November, December, and January, and while the Association disclaimed any intention of going outside of the city to see that the laws are enforced, it has been determined to spare no effort to see them faithfully executed in the city.

Deer can only be killed in this State under the present law during September, October, and November, and in Suffolk county only during the first fifteen days of November, under a penalty of \$50 for each deer. December and January have been thought to be sufficient additional time for getting the deer to market, and disposing of them, but if the people in the localities where the deer are killed want a longer or shorter time this Association would be glad to hear from them. As the law now stands in this State, the open season for killing quail is from Oct. 1 to Jan. 1; partridges and prairie chickens from Sept. 1 to Jan. 1, except in Suffolk county, where it commences Oct. 1; woodcock from July 4 to Feb. 1; trout from March 15 to Sept. 15. But dealers are allowed all of January and February to dispose of their stock of quail, partridges, and prairie chickens, provided they prove that such birds or game were killed within the period provided by this act, or were killed outside of the limits of this State at some place where the law did not prohibit such killing. After a lengthened discussion the matter was laid over until next meeting, when final action will be taken.

The President said that there were pending in the courts three suits brought by the Association for having trout, and twelve for having game out of season, all of which, now that the courts have resumed business, would be pushed to trial.

On motion the club unanimously appropriated \$2,000 to be made use of by the Executive Committee in rewarding and paying detectives and lawyers during the present season. The President announced in appropriate terms, the death of an old and valued member of the Association, Mr. Ogden Haggerty.

On motion, three practical sportsmen were added to the Committee on Game Laws, to report at the next meeting of the Association. After the transaction of some routine business, the meeting adjourned, and the members repaired to the supper-room, where Mr. Phelps' usual hospitality was partaken of. This influential association now numbers seventy-seven active, and four honorary members. The initiation fee is \$50 and the annual dues \$10.

THE LUZERNE COUNTY SPORTSMEN'S CLUB.—This club has been distinguishing itself by vigorous action in the way of prosecuting offenders. Our contemporary, *Turf, Field and Farm*, thus speaks of it:—

"This vigorous young organization, which now numbers fifty members, held its third meeting on the 1st of November. The Club, before it was three weeks in existence, prosecuted and convicted a greedy pot-hunter, Samuel Edwards by name, of a violation of the game laws, and he was mulcted in the sum of thirty-six dollars for snaring ruffed grouse. He has already destroyed two hundred birds this season. The following are the officers of the Luzerne County Sportsmen's Club: President, H. H. Derr; Vice President, W. B. Mann; Counsel, W. H. McCartney; Clerk, B. F. Dorrance; Treasurer, S. Ayres, Jr.; Directors, Dr. Crawford, H. C. Gates, G. C. Parrish, W. I. Harry, W. D. Loomis, Charles Leonard, A. Miller, J. Lanning, H. A. Laycock and J. M. Courtright. We like to register the names of such earnest brethren of the rod and gun, and would rather give them credit for the conviction of one such poaching fellow as Samuel Edwards than for having made a miraculous score on tame pigeons sprung from a trap."

SPORTSMAN'S CLUB.—A number of prominent citizens of Uniontown, Fayette county, Penn., have organized themselves into a sportsman's club, for the purpose of insuring a better observance of the laws for the protection of fish and game. The officers appointed are as follows: President, Gen. S. M. Baily; Secretary, A. D. Boyd; Treasurer, R. H. Lindsay. On motion, it was resolved that R. H. Lindsay, Z. B. Springer, C. H. Beall, S. M. Baily, and Thomas Hadden be a committee to prepare a constitution and by-laws. The name of this organization is "The Sportsman's Club of Fayette county," and acceptable persons in the various townships of the county are solicited to become members.

VIRGINIA ASSOCIATION FOR THE PROTECTION OF FISH AND GAME.—A meeting of the citizens of Virginia, repre-

senting different parts of the State, having for its object the organization of an association to promote the multiplication of fish and game in this Commonwealth, was held at Richmond recently. Col. J. L. Eubank was called to the chair, and Mr. John Græme elected Secretary. The Chairman appointed Dr. Robertson of Lynchburg, Col. W. Perkins of Buckingham, and Major Alex. A. Little of Fredericksburg, a Committee on Permanent Organization. The Committee on Permanent Organization recommended the election of the following officers: President, Alexander Moseley; Vice President, Dr. M. G. Elzey, Blacksburg; Dr. W. B. Robertson, Lynchburg; Capt. J. Warner Lewis, Brunswick county. Secretary and Treasurer, Peyton Johnston, of Richmond. Executive Committee, Dr. Richards, of King William; Hon W. W. Crump, of Richmond; and Marshall Parks, of Norfolk. A committee was appointed to prepare and report a constitution and by-laws for the government of the Association.

A Virginia correspondent writes:—

"We hope to get a good law from our Legislature, preventing the killing or taking game out of season by any one, (even owners of land or water) thus protecting animals at their breeding seasons. The Norfolk Game Protective Association has issued circulars invoking united action on the part of naturalists, farmers, sportsmen, and good citizens generally. Interest in healthy sport, in fish culture, game preservation and such subjects, is increasing in this State and is largely due to the efforts of our leading sporting journals. If I was't already a good union man, I'd ask to be let in at the Centennial, just to see "Section, No. 3" in the Animal and Fishery Department, under supervision of FOREST AND STREAM."

—People in Louisiana are awakening to the necessity and importance of game protection as even the splendid sporting facilities of that State will soon become depleted if wanton pot-hunters are allowed to shoot everything that flies, in and out of season. The *Louisiana State Register* says:—

"A few hours spent in the passage of such a game law as was drafted by the sportsmen's meeting last Winter, will accomplish more for the benefit of the country than twice as many weeks spent in amending the Constitution and creating new parishes and other follies."

A WARNING TO POT FISHERMEN.—We confess to a very great amount of satisfaction upon hearing of the punishment of violators of the game and fish laws. It is rarely, however, that we can record such a just retribution as has fallen upon the men in California who attempted to net a trout stream. If that California justice could only hold court for awhile on Long Island, the prospect of a total extermination of trout from private as well as public waters would be considerably less. The case alluded to is thus described in the *San Francisco Evening Bulletin*:—

"J. M. Waite, deputy sheriff of Marin county, reports to the fish commissioners that a few weeks since he found two men trapping trout with nets on Paper Mill Creek, in that county. They set their nets and then frightened the fish into them. He learned that this had been continued for some time, and that they had been taking from twenty to thirty pounds daily, which they had forwarded to San Rafael for sale. After much trouble he succeeded in arresting the offenders and capturing their nets. They were brought to trial before Justice Hughes, and although they made every effort to escape they were finally convicted and fined \$50 each, which they refused to pay, and were sent to prison, and now are serving out a term in default of payment. Too much credit cannot be awarded Mr. Waite for his energy and perseverance in procuring this conviction. The fish commissioners have written him a letter thanking him for his energetic efforts to prevent the violation of the law. If the county officers of other counties would exhibit some of Mr. Waite's energy in making arrests for violation of the game and fish laws, they would be doing the public a great service."

While we can record the above instance of punishment for one violation of the law, another equally pernicious is being carried on with impunity under the very eyes of the entire population of San Francisco. We allude to the illegal traffic in salmon. Even salmon roe are exposed for sale in the markets there during the close season. If measures are not taken, and at once, to stop this destruction, the magnificent salmon rivers of the Pacific coast will in a few years be as depleted as those of Maine. We would earnestly call the attention of California sportsmen to the following extract from the *San Francisco Daily Evening Post*, and ask them to join in some effort looking to a remedy:—

"ILLEGAL TRAFFIC IN SALMON.—The barefaced manner in which fresh salmon is being sold right and left by fish-dealers during the close season has been a subject for universal comment. There is a section in the Code providing against this illegal traffic, and we have fish commissioners whose special duty it is to see that the law is strictly enforced; and yet, in open defiance of this law, the markets teem with forbidden fruit, and of late dealers expose it for sale above board on their counters, and even give its price to commercial reporters for the benefit of the readers of their respective journals. All the reputable fish dealers have done their utmost to see that the law was obeyed, but unscrupulous parties have taken away their custom so much that they are now forced to sell the article to preserve patronage. A protective society was even formed, and rewards were offered for the apprehension of all persons engaged in the traffic; but after several had been arrested, tried and acquitted of the charge, the matter became monotonous, the society disbanded, and the honest fish dealers fell into the vice of their less scrupulous neighbors. The numerous canneries situated on the Columbia River have just as much right to take, kill, and preserve salmon in the close season as the fishermen and dealers in this vicinity, and should this policy be carried out the consequence would be that one of the greatest enterprises on the Pacific Coast would soon dwindle into nothing. It is certainly evident that should the present looseness of law be continued next season the canners will catch the fever, and wholesale slaughter will prevail all the year round."

RIFLE TYPES—NO. V.

The Critic at the Range.—"Twenty years ago, when my sight was good," he will tell you, "I used to make bullseyes on bullseyes." To-day it is highly problematical whether he could even hit the embankment which backs the targets. In fact, no one has ever yet seen him fire a rifle, though he has quite an armory of weapons at home. He is very fond of handling other men's guns, and looks them over critically, descending gravely about their mechanism, and is even bold enough to suggest improvements. You would be very much mistaken if you imagined you could not learn something from him. He keeps elevations, effects of wind, barometrical and theometrical influences in rifle practice well in his head, and can tell you to a minute how many degrees of elevation Colonel Bodine used when he fired his last shot at Dollymount. He has at his finger's ends all those dry formula which belong to the science of rifle shooting. He contributes to all the journals devoted to this favorite subject, and though dry at times, many a bit of good sound information has been imparted by him to the public. Of course he has a pet theory of his own in regard to twist and projectiles, which he ventilates on all occasions. It is rather abstract in character. In fact no one ever did comprehend it, and even the most willing of his hearers are in doubt as to whether he quite understands it himself. He by no means belongs to the old school of rifle shooting, but adopts eagerly the most advanced theories. He will tell you that "before long we will be shooting, sir, at 1,500 yards and at smaller targets, and will smile at our crude attempts of to-day." He is to be found at all the principal matches, and has apparently the mission of propagating rifle shooting in the United States. Young men laugh at him behind his back, and call him a "bore" (perhaps in a rifle sense), yet the best shots consult him at times, in regard to theory and mechanical improvements. "That was tried," we heard him say to a noted marksman, who had some idea of a new sight, "in 1872, at Wimbledon. Mr. Ross shot with it and it did not work well. Next time I see you I will give you a copy of my notes about that sight." We all had to laugh heartily at the critic the other day, when he consented to keep a score. He made an awful mess of it, mixing up the shooters, marking outers for inners, and centres for bullseyes, apparently in utter ignorance of the signals. Like the slur cast on the critic who discussed learnedly the comparative degree of excellence, as displayed in a three-legged stool, but who could not for his life make one, our friend theoretically might have been superb, but practically he was insignificant.

SIEGE OF PARIS.—Any of our readers who have not already seen this marvelous dramatic painting should avail themselves of the earliest opportunity. The Frenchman who only thought of Niagara Falls as a grand water power, would admire this creation for the immensity of its canvas if not for its artistic merit. It can be seen at the Coliseum.

—J. Dwight Francis, Esq., of the Pontusac Woolen Mills, Pittsfield, Mass., informs us that his four year old buck has just killed his old doe, wherefor he sent him to his long home. He adds: "He was the best buck I ever saw in confinement, and weighed 200 pounds."

—Any one wishing to communicate with Mr. Pape, the celebrated English gunmaker, who is now absent from the city, may address him at the Occidental Hotel, corner Bowery and Broom street, New York.

—We shall be glad to mail our paper for any specified time to any of our correspondents or subscribers visiting Florida the coming season.

The Rifle.

THE CROUCH BULLSEYE BADGE.—Saturday last was a pleasant day at the Creedmoor range; moderately cool, but the wind blew in a most curious manner, veering round from all parts of the compass sometimes at the same time. Besides the handsome character of the Crouch badge, a great deal of keen rivalry has been felt to become its possessor. The present competition was the fifth one, and the history of the bullseye badge heretofore may be briefly given as follows:—

When won.	Winner.	Score.	Bullseyes.
July 3.....	L. Geiger.....	174	18
Aug. 7.....	L. Geiger.....	176	18
Sept. 4.....	A. V. Canfield, Jr.....	183	23
Oct. 9.....	A. V. Canfield, Jr.....	170	19

Conditions—Open only to members of the Amateur Rifle Club, excluding those who have participated in any international team match. Distances, 800, 900, and 1,000 yards. Fifteen shots at each range. Badge to become the property of the contestant who shall win it three times. Entrance fee, \$1. Scores as follows:—

Name.	800 yds.	900 yds.	1000 yds.	Total.
L. Geiger.....	63	55	61	179
F. Hyde.....	68	51	57	176
W. B. Farwell.....	57	58	50	175
L. Webber.....	70	53	39	172
A. V. Canfield.....	66	62	27	155
J. Hennion, Jr.....	63	46	25	134
J. S. Conlin.....	41	41	49	131
H. Fisher.....	59	47	30	136

Record on the bullseye total—L. Geiger, 22; F. Hyde, 22; W. B. Farwell, 21; L. Webber, 21; A. V. Canfield, Jr., 15; A. J. Hennion, Jr., 13; J. S. Conlin, 12; H. Fisher, 9. Messrs. Geiger and Hyde having tied with twenty-two bullseyes each, though Mr. Geiger had made a total higher

score than Mr. Hyde, according to the rules, as imposed by the donor, Mr. Crouch, who was to carry off the prize was still undecided. It was determined that the two contestants should shoot for a bullseye at 1,000 yards. Mr. Hyde led off, making a centre, followed by Mr. Geiger, who, with a good bull, was adjudged the undisputed winner of the trophy. So ended a series of contests which, thanks to Mr. George Crouch, have developed a great deal of interest among the riflemen. We trust that some badge of precisely the same character will be put up for competition next season. If we are not too high or lofty, even some second trophy might be awarded to the marksman making the most centres.

FOREST AND STREAM BADGE.—The third contest for this trophy, on Thursday, November 4th, was the most interesting yet held at Conlin's gallery. The conditions were: 10 shots, 110 feet, off hand, Wimbledon rules, miniature 200 yards target reduced in proportion for distance. A score and diagram card was given to every competitor.

Name	Score.	Total.
W. B. Farwell (first badge).....	4 4 5 5 3 5 5 5 5	45

J. Wright.....	3 4 0 3 5 2 3 3 0	24

STOCK EXCHANGE RIFLEMEN.—Long range or short range, long or short, bulls and so on, must be familiar to the members of the Exchange. We report, then, a match held early last week at Coney Island, distance 200, 400, and 600 yards, five shots at each range, with the following results:—

Name.	200 yds.	400 yds.	600 yds.	Total.
McCabe.....	13	20	13	51
Gordon.....	16	19	10	45

Two other contestants, their balls having barely touched the margin of the target, were nowhere. The prize was a silver cup.

MORSEMERIE.—The fourth competition for the club rifle took place on Friday last, and the totals at both ranges show much improvement in the scores. The highest yet made in any match at 200 yards has been 41; but in the last competition five members have each gone beyond it. The following are the scores:—

Name.	200 yds.	500 yds.	Total.
Smyth.....	40*	49	89
Shonnard.....	37	45	82
Morse.....	40	40	80
Garrison.....	39	40	79
Underhill.....	40	30	70
Quinn.....	39†	20	69

*Handicapping 3 points. †Handicapping 5 points.

Four others completed their scores on Wednesday, as the darkness prevented the match from being brought to a successful issue on the appointed day.

The Frost medal, the second competition, was shot for on Wednesday, and the following are the best scores:—

Shonnard.....	4 5 4 3 5 5 5 4 5 5 5 4 5—69
Smyth.....	5 5 4 3 4 5 5 5 5 5 5 4 4—69
Jocelyn.....	0 4 4 4 4 4 5 4 5 5 5 5 4—61
Garrison.....	4 5 4 3 4 4 4 4 5 2 5 4 4 3 5—61

A new match will be shot for on each Friday, in place of the one for the club rifle, and to distinguish it from that it has been called the Marksman's Match. The prize will be a rifle, similar in all respects to the one now being shot for, but under different conditions. It will be open to those only who have no long range rifle. The distances are the same—200 and 500 yards, with two sighting and seven scoring shots. The prize has to be won three times before it becomes the property of the winner. Entrance, fee, fifty cents.

A new feature on the range is the telegraph communicating with the butts, which was used on Wednesday in the match for the Frost Medal. A bell is placed in each butt, and the marker is required to remain within until it rings. So quickly is the whole thing done that the marker is effacing the shot mark before the shooter has time to rise from his position.

Four challenges, we hear, are pending for team matches. Poughkeepsie, Mount Vernon, Irvington, and the Scottish-American Rifle Club. The challenge of the Yonkers Rifle Association, to shoot for the citizen's trophy, has been accepted by the Hudson River Rifle Association of Poughkeepsie, Colonel Bodine, President, and the day has been fixed for Friday, November 19th, at ten o'clock.

GLEN DRAKE.—Saturday, Nov. 1st.—The second competition for the Remington Sewing Machine, took place today; the highest scores were as follows:

A. W. Peck.....	22	Colonel Underhill.....	15
H. E. King.....	20	Captain E. Cardoza.....	14
G. O. Starr.....	19	Captain J. W. Coburn.....	13
Robert Grocers.....	15		

Saturday next practice and subscription matches. Challenges from the Scottish-American Rifle Club, and from

the Yonkers Rifle Club, were received and referred to the executive committee. Extensive preparations are being made for Thanksgiving day. Co. G, 71st regiment Infantry, and Co. B, 27th regiment Infantry, N. G. S. N. Y., will visit the grounds.

The American Rifle Association of Westchester county will celebrate Thanksgiving Day. Company G, of the Seventy-first Regiment, N. G., under Captain Webber, will participate in the shooting matches to take place at Glen Drake, Pelhamville. At Mount Vernon the company will be received by Company B, of the Twenty-seventh Regiment, and escorted through the principal streets of the village and thence to Glen Drake, where the DePeyster badge will be contested for, and several other prizes. An old fashioned turkey shoot and a pigeon match are spoken of as a part of the diversions of the occasion.

THE RIFLE IN MONTANA.—On October 1st a match was shot at Helena, Montana, between a team of four from Deer Lodge and one of four from Helena, for a \$180 silver cup and the championship of the Territory, distance 1,000 yards, position any, without artificial rest, ten shots each, old Creedmoor target, (square bullseye.)

DEER LODGE—SHARPS' CREEDMOOR RIFLE.

Thos. Stuart.....	28	H. McKinstry.....	21
Granville Stuart.....	24		
R. Anderson.....	23	Total.....	96

HELENA—SHARPS' SPORTING RIFLE.

John Rogers.....	23	W. F. Wheeler.....	17
Thos. H. Clark.....	20		
O. Allen.....	19	Total.....	78

Deer Lodge winning by 18 points. Target unfavorably placed towards the sun, and much obscured by clouds of dust at times. This was the first long range match ever shot in Montana.

The next day, October 2d, another match was shot on the fair grounds at Helena between the Deer Lodge four and another Helena team, for a Sharps Creedmoor No. 1 rifle, offered as a prize by the fair association; distance 500 yards, old style Creedmoor third class target (bullseye, two feet square), position any, without artificial rest, fifteen shots each man.

DEER LODGE—SHARPS' SPORTING RIFLE.

Thos. Stuart.....	56	R. Anderson.....	49
H. McKinstry.....	53		
Granville Stuart.....	51	Total.....	209

HELENA—SHARPS' CREEDMOOR RIFLE.

Wm. B. Judd.....	52	H. Hewins.....	44
Samuel T. Hauser.....	51		
Thos. H. Clark.....	49	Total.....	196

Deer Lodge winning by 13 points. Weather very unfavorable, raining most of the time, with strong wind, veering once and a half around the compass during the match.

SAN FRANCISCO.—On October 30th, an interesting match took place at Harbor View. We append the scores:—

AT 200 YARDS—WIMBLEDON TARGET.

A. F. Klose.....	24	A. H. Heutz.....	22
S. N. Morris.....	23	C. P. LeBreton.....	22
C. Burgans.....	23	P. H. McElhenny.....	22
A. Blawyer.....	23	Wm. Wright.....	21
L. P. Peck.....	22	M. Doane.....	21

AT 150 YARDS.

C. Burgans.....	34	M. Doane.....	31
C. P. LeBreton.....	34	A. F. Klose.....	30
S. N. Morris.....	33	E. C. Snook.....	29

This was followed by a team match between the Unions and Nationals. Five men on a side; five shots each. The Nationals made 93, the Unions 99. The winning team only lacking one point of making 80 per cent., made remarkably good shooting.

RIFLE ENGAGEMENTS FOR NOVEMBER.—Saturday, November 13th, at three P. M., *Turf, Field and Farm* badge. Saturday, November 20th, at 11 A. M., Luther badge. November 13th and 27th, Seventh Regiment shells. November 20th, Seventh Regiment Rifles, challenge badge. The Morrison medal, Scottish-American Rifle Club, on each Wednesday throughout the month. On Thanksgiving Day, November 25th, the special match of the Scottish-American Rifle Club will be held. The Hepburn match will probably be shot on the 27th.

THE RIFLE IN PRINCETON.—Princeton, N. J., Nov. 8th.—The Secretary of the Long Branch Amateur Rifle and Pigeon Club, of which I am a member, informs me of several new by-laws, of which I give you the substance. The rifle shooting will hereafter be governed by the laws of the N. R. A. Club. Matches will take place every Saturday, instead of every ten days, as heretofore; members not able to be present will be allowed substitutes by paying a fine, said substitutes to be chosen by lot from those present. The champion badge of the club having been won by George Hoey, the next prize will be a handsome bronze setter, which must be held through three successive matches. A fine new 500 yard target has been presented to the club by Mr. Wm. Hoey, and will be set up this week.

LOUNGER.

RAHWAY RIFLE CLUB.—A club has been formed at Rahway, N. J., with the following gentlemen as officers: President, Hon. B. A. Vail; Vice President, George M. Hard; Secretary, Nelson Carpenter; Treasurer, J. W. Martin. Their range is 1,000 yards in length, and the roll comprises thirty members. The range is within five minute's walk of Scott Avenue Depot, in Rahway.

TWENTY-SECOND REGIMENT RECEPTION.—The drill season was formerly opened by this regiment with a dress parade and concert at the armory in Fourteenth street on Tuesday evening. A large number of invitations were issued, and the galleries and reserved seats on the floor were filled with spectators. The regiment being formed on three sides of a square, the command was turned over by Adjutant Waydell to Lieut.-Col. Campe. The dress parade was gone through with in a very creditable manner.

the execution of the different manoeuvres eliciting frequent applause. After the parade, Mr. Gilmore assembled his orchestra in the middle of the room, and a choice selection of promenade music was performed.

—On Friday last the Seventy-ninth Regiment Rifle Club presented Captain Joseph Ross, the captain of their team, with a handsome snuff box as a token of their appreciation for his services.

SWISS RIFLE SHOOTING.

EDITOR FOREST AND STREAM:—

In No. 10, Vol. V., issue of October 15th, you say "it seems that the Swiss are getting uneasy in regard to their rifle laurels," etc. The writer of this thinks himself a better authority than your informant. There was no team shooting at all at Stuttgart. Each shooter shot for himself individually. The first four goblets were won by four Swiss. To get a goblet each one had to make 180 points, equal to about 120 bullseyes at Creedmoor; and the marksmen who made those 180 points were, first, Mr. H. Kuecht, of St. Gall, who made them in forty minutes; second, Mr. Elwers, of St. Gall, who made them in forty-six minutes; third, Mr. Schupp, of Etlikon, another Swiss shot, who made it in one hour and two minutes. The Swiss shooters took half of all the prizes which were offered, and therefore I do not think they feel very uneasy. In fact, their confidence is so great that some of them will most probably cross the ocean next year and compete with the well-known American team. I will give you, as soon as possible, the details of the shooting festival at Stuttgart, by which it will be seen that in six days over a million of shots had been fired at the targets. How long would it take to accomplish the same thing at Creedmoor under the present arrangements and regulations? Your authority states "that the German soldiers have to fire about 300 cartridges each year," but he does not mention that in Switzerland each shooter, and there are thousands of them, fires from two to three thousand shots each year.

[We have to thank our correspondent for a correction. Our information was derived from a leading English authority in regard to the Stuttgart shooting. We are only too glad to learn that the most famous marksmen of the world have not lost their cunning. Any Swiss riflemen coming to this country would be warmly welcomed. Would our correspondent kindly give us distances, weight of rifle, of ball, charge of powder, and character of sights used by the Columbia Association?—Ed.]

RIFLE SHOOTING AT FORT WAYNE.

FORT WAYNE, Ind., Oct. 28, 1875.

EDITOR FOREST AND STREAM:—

Michigan, Illinois and Indiana had an interesting rifle contest yesterday at Pleasant Lake, Ind., Michigan being represented by a team from the Jackson Rifle Club, Illinois by a team from the Chicago Rifle Club, and Indiana by a team from the Indiana Amateur Rifle Association of Fort Wayne. The weather was raw and decidedly unpleasant, with a perfect gale blowing down the lake, across which the shooting took place. Col. C. A. Gallinger, of Fort Wayne, was executive officer. The match was to have been shot at 200 and 500 yards, but a 200-yard range could not be conveniently had, and the 200-yard shooting occurred at 275 yards, two sighting and five scoring shots, off hand. The weather moderated somewhat before the 500-yard match began, which was shot in any position under rules of N. R. A., two sighting and five scoring shots. The following is the score:—

JACKSON TEAM.					
200 yds.		500 yds.		200 yds. 500 yds.	
G. H. Wolcott.....	19	15	J. Harrington.....	9	10
T. J. Conely, captain.....	9	10	Geo. Blair.....	17	17
J. A. Parkinson.....	16	9	A. S. Fifield.....	20	12
CHICAGO TEAM.					
200 yds.		500 yds.		200 yds. 500 yds.	
Dr. T. D. Williams.....	16	8	Hon. J. B. Bradwell.....	16	7
Geo. Benttenmiller.....	17	2	Geo. Willard.....	12	7
Col. R. S. Thompson.....	14	17	S. B. Sexton.....	9	15

At this stage of the 500-yard match it became so dark that we could not see to shoot, and the sport for the day closed, as it was not possible for the Chicago and Jackson teams to remain and finish the match this morning. By consent the match entire was declared off, and it was agreed to shoot it over again at Jackson, Mich., on the 10th of November, shooting only at 500 yards, seven scoring and two sighting shots. The match was and will be for the championship of the States represented and for a handsome silver ice pitcher set, given by Mr. V. E. Simmons, of Pleasant Lake, who entertained all of us in fine style. We had a good day's sport, and shall have more of it in the future.

Yours truly,

J. C. B.

SHORT vs. LONG RANGE RIFLES.

PHILADELPHIA, Nov. 6, 1875.

EDITOR FOREST AND STREAM:—

I was interested in comparing in your paper of Nov. 4th the description of the requisites of a hunting rifle with the views of the writer of the amusing article on the country gunsmith and his rifle immediately following. It reminds me of the old story of the quarrel of the knights over the silver and golden shield. The Creedmoor man looks with perfect contempt at the country rifle because it could not hit the target at 500 yards. On the other hand, the rural practitioner, knowing that with his rifle he can knock the head off of a squirrel with no more deliberate aim than I can kill a quail with my shot gun, and about as surely, despises the elevating sights, wind gauges, levels, and other paraphernalia, whose use he does not comprehend.

The truth is, that each rifle is good in its place and not good out of it. The "Express" tries very ingeniously to reconcile the antagonistic conditions of long and short range, but not with perfect success. I must say a good word for my Winchester. I can put up a six-inch ring, and with my open sights unchanged, can go backward from 40 to 100 yards, firing from the shoulder, and hit it nearly every time. This may look like coarse shooting beside some of the fine targets published by you, but it answers my purpose. If my first ball does not stop a deer I can throw five more into the same spot before he can get away. If it were a grizzly instead of a deer I think I should like heavier projectiles.

T. C. C.

THE MAUSER GUN.—The following description of this gun, the weapon used by the Prussian soldier, may be of interest. Mr. Latham, of England, considered the best authority on military arms, thinks the Mauser not as good as the Martini, and writes as follows in regard to the Prussian arm:—

"The Mauser resembles in appearance both the Prussian needle gun and the Chassepot. It is a self-cocking arm, having four motions—opened, loaded, closed, and fired. The opening is effected by raising the handle of the breech bolt to a vertical position and then drawing it back. This compresses the spiral mainspring and cocks the arm, and the novelty of the action consists in the way this is ef-

In reply to "Check Cord" on the subject of chilled shot, allow me to inform him that the fine results achieved at the late *Field* gun trial with my choke bore guns are not entirely due to the advantages of chilled shot, although I own my guns are bored for that particular shot. I refer him to an article in the London *Field*, February 27th, 1875, signed "Engineer," St. Louis. He will find that one of my choke bore guns made an average pattern of 240 $\frac{1}{2}$, and penetrated thirty-four sheets with soft shot, taking the average of forty-eight shots in both still and windy weather. This gun was shot against a Parker and a Duggall, beating both by a good average in pattern and penetration. In the gun trial of 1866 they took the average of the deepest shot only. In the last trial—1875—they took the three deepest shots, which makes a difference of more than six sheets. The wear and tear trial was intended to prove the endurance of the new system only, not as a test for pattern and penetration; in fact, they were not the same guns as those shot in the trial proper. Our winning gun made a pattern of 214, and penetrated with three shots thirty-four sheets, which is equal to forty with one shot. The shooting eclipsed all private trials that are boasted of by different makers as being personally conducted by the editor of the *Field*. We recommend "Check Cord" and his friends to use the hardest shot they can obtain in America. They will find it perform better in any gun bored upon the old or new plan.

W. W. GREENE.

SPORTING IN DAKOTAH.

FARGO, D. T., Oct. 22, 1875.

EDITOR FOREST AND STREAM:—

Mounted on a spirited American horse with a trusty needle gun in hand, it is exciting and exhilarating sport chasing the buffalo over these northern plains. Hunting the black bear from the numerous groves of timber skirting the streams in this vicinity, and occasionally an elk, a black tailed deer or antelope, is also practicable, and frequently followed, but all these require time, perseverance, and endurance, while few are able to afford the cost necessary to equip a party for the successful pursuit of any of this game. The pursuit of game birds and water fowl, however, affords sport invigorating, useful, and enjoyable, and the country in this vicinity abounds in both and in great variety; is vast in extent, pleasantly varied by woodland and prairie, fresh water lakes, and clear sparkling brooks.

Parties from St. Paul, Chicago, Detroit, Philadelphia, Boston, and Toledo, Ohio, have visited us this season for the purpose of shooting game birds upon our beautiful prairies, finding game plenty and pleasant entertainment at Headquarters Hotel, Messrs. Hubbard and Tyler being deservedly popular with the dog and gun fraternity. Pinnated grouse are quite numerous this season, but not as plentiful as last. The prairies burned over unusually late, and many of their eggs were destroyed. J. R. Creston, of London, England, reports the largest number as the result of one day's shoot, having bagged forty-eight brace of grouse, four brace of duck, and a fifteen-pound brant. Ruffed grouse are found along the Red River, usually in the scrub oak and iron wood thickets. We killed three by moonlight last week from tree tops; they appeared to be budding, but it is unusual for them to resort to the tree tops for food at this season. There is not sufficient heavy timber or of the right kind for the wild turkey. I have never seen one in the Red River Valley, and I am sure they do not abound here. Neither have I ever seen a single specimen of the quail. The quail does not like to nest in the timber or on the open prairie, but prefers hedge rows or a dilapidated Virginia rail fence, overgrown with grape vine and bitter sweet; they are working north rapidly, however, and are now found on the line of the St. Paul and Northern Pacific Railroad in Minnesota, where a few years ago they had never been seen. The snipe, woodcock, golden plover, curlew, and gray or upland plover abound in great numbers. The curlew we consider excellent eating, although seldom shot, and hardly considered a game bird. The canvas back duck is not as numerous with us as we have seen it in other localities, especially on Miami Bay, but the mallard is, and with others, I consider the mallard fully equal to the canvas back. Blue and green winged teal, widgeons, red heads, etc., are arriving in large flocks from the far northern lands of British America, and several varieties of duck with which I am in nowise familiar; neither have I ever seen them in any of the waters over which I have shot. I think Gid Fayette, who used to have a name for every bird that flew over Miami Bay, would be at a loss to name some of my specimens. The Canada goose, brant, several varieties of Mexican geese, swan, and pelican abound in great numbers, the heaviest weight so far being a Canada goose killed by Mr. M. Beatty, conductor on the Northern Pacific, that weighed 28½ pounds.

The best shooting season for all kinds of game is about the 1st of October. Grouse can be shot from the 15th of August. At this season game of all kinds is wild, and if chickens are flushed they are apt to sail away for miles before taking cover, but for the keen sportsman there is yet fine sport. These bright October days are very enjoyable on these level prairies, and the nights are not too cold for camping out.

G. J. KEENEY.

NOTES FROM THE NORTHWEST.

BRainerd, Minn., Oct. 29, 1875.

EDITOR FOREST AND STREAM:—

The close season for deer expired on the 1st of the month, and at once the many hunters in and around town, amateur and professional alike, commenced operations with varying success. The neophyte, got up in good style in garments of the right cut and color, with new breech loading rifle full of cartridges, started out, head up and "blood in his eye," only to return at nightfall—some of them were back at dinner time—tired, dirty, muddy, and with long stories of how many deer he ran, how his "foot slipped just as he was ready to shoot," how his gun missed fire, and a thousand and one other excuses, while the old and wary still-hunter, who maybe has "grassed" two or three deer the same day, on the same ground, sits silently by, with a half smile on his face, "taking it all in," and thinking of where he will go to-morrow. Through the lovely days of the Indian Summer just past, the hunters were out every day, but the woods were dry and noisy, the deer kept hid, and the sportsmen were not very successful; but about a week ago a couple of inches of dry, light snow fell, and by daylight in the morning hardly an abled-bodied man nor a gun that would go off could be found in town, and for the three or four days that the snow lasted everybody killed deer, some of the best hunters three or four. Deer are very plenty all along the Northern Pacific Railroad, and at this writing in splendid order. C.

THE MEGANTIC DISTRICT.

October 22d, 1875.

EDITOR FOREST AND STREAM:—

Ruffed grouse (Canada or spruce partridges) and rabbits are very numerous this Fall, and here is a fair sprinkling of ducks on the larger rivers and lakes. Undoubtedly plenty of woodcock could be found if they were looked for, as they are found in the older settled townships west of here. There were a large number of deer killed here during the deep snows last Spring, which makes them scarcer than formerly, though they are to be found in considerable quantities in the wilderness along the still waters of the Salmon River, and eastward towards and about the Megantic and Spider lakes. The more noble game—moose and caribou—are also to be found throughout the same section. A friend of mine, who is a crack shot, had three fair shots one forenoon at as many different moose near Spider Lake, and missed them all. He found on examining his rifle that by accident or otherwise the sights had been moved, which caused him to shoot wild. Of fur-bearing animals, bear, fox, mink, marten, and muskrat are quite plenty. Otter and fisher are also plentiful in some localities, while a few beaver are still to be found about the Salmon and Arnold rivers. Experienced sportsmen would have no trouble in making good bags of game anywhere in this district. Those fond of deer hunting I would recommend to make their headquarters at either Mallory's Hotel, Eaton Corners, and get "Sunbury" for guide, or go to French's House, Scotston, and take Archie McDonald as guide. The close season for deer does not begin until February 1st, but the month of November is the best time to hunt them, as the rapids are not frozen up, and they take to the water at once if chased by hounds. I would caution parties visiting here against paying the guides exorbitant prices—one dollar a day and found is the regular price; and the same sum per day is the charge for board at the hotels east of Sherbrooke. Bring your dogs, but do not bring liquors with you from New York, for you can procure them at one third the cost in Sherbrooke and save all trouble and expense with the Customs department. STANSTRAED.

SUMMER WOODCOCK SHOOTING.

LOUISVILLE, Ky., October 25th, 1875.

EDITOR FOREST AND STREAM:—

The writers of most communications on Summer woodcock shooting appear to ignore a point which an experience of nearly forty years in field sports has led me to think the most important of any in its bearing upon this interesting question.

It is hardly to be doubted that, as stated by "Mac" on page 150 of your current volume, in an average season, even in the most southerly parts of our country, the young birds are fairly fledged by the 4th of July—large enough to take care of themselves should the parent bird be slain, and "worth a shot and a gridiron," though not to be compared in either point of view with the plump, strong, white-fronted Autumn bird. I

can attest that in Minnesota, in four years out of five, young woodcock are well enough grown by the first week in July. But it seems equally undeniable that migratory birds desert regions where they are persecuted (even as adults) on their breeding grounds. The North and South Meadows, above and below Hartford, Conn., are a perfect natural paradise for cocks, and about thirty-five years ago a fair bag could be made there, though even then their numbers were rapidly decreasing. Summer shooting has been the rule during most of these years, as before. What report can our Connecticut brethren make to-day of that unsurpassed cover?

The custom of Summer shooting has prevailed in Illinois and Wisconsin. Where now are the cock which, within my recollection, literally swarmed along the marshy streams on the western shore of Lake Michigan? Will some of your Chicago and Milwaukee correspondents tell us if the birds are at all crowded in those bottoms?

Near St. Paul, Minn., four years since, a bag of twenty-three couple of woodcock was considered an extraordinary day's work for three guns, of which the writer carried one. Some six years before forty birds before breakfast to one muzzle loader was thought nothing very wonderful.

Every Summer shooter knows that if he go to a cover where there are say fifty cock, and bag them all, his sport there is at an end for the Summer. But go in the Autumn, after the southern migration has begun, kill if you can every bird in a swamp, and in a day or two you may duplicate your bag on the same ground, the flight birds continually replacing their predecessors until frost seals the mud.

To prolong close time for woodcock, however, until October 20th, as is done in some States, seems an absurd extension. In the New England States this cuts off a large part of the migrating period, and in the north-west would entirely abolish cock shooting. Is there any objection to September 1st as the beginning of the season for woodcock, at least in the northern tier of States? KEG.

ANOTHER GUN WANTED.

BRainerd, Minn., Oct. 29, 1875.

EDITOR FOREST AND STREAM:—

Why does not some one of the large gun factories, instead of catering directly to the wishes of those who want a rifle solely for shooting at a target at great distances, pay more attention to the wants of the hunter and frontiersman, and get up a repeating gun, one that will shoot a long cartridge of 46, or better still, 50; that will carry in the magazine eight or nine cartridges, shoot accurately for 300 yards, and weigh, loaded, ten to twelve pounds? The preference all through the Northwest and along the frontier is for a repeating gun, and the improved Winchester "has the call" so far, but the bullet is too small, and there is not powder enough in the shell. A deer or any large animal has to be shot just in the right place or they will not be secured, whereas if the gun carried a 46 or 50, with plenty of powder, the game would either be killed in its tracks or be recovered without the long "stern chase" inevitable in most all cases when shot with a small ball. A great many letters have been received by the writer asking for information regarding the much advertised Ward-Burton rifle, to which we were obliged to say that beyond the information contained in the circular we knew nothing, and could get no reply to letters addressed to Mr. Burton in New York.* If the guns are what the circulars claim for them, then they certainly are the coming gun, both for the hunter and target shot. We have lately received a W. & C. Scott No. 10, 32 inch, pistol grip choke bore breech loader, which "is all its name implies," and we must here take the opportunity to "cast our pebble on the cairn" of testimony in favor of choke bored guns, and we do so more confidently as the gun has been tested, and well tested, too, in the field shooting at a paper target. The gun put in 239 pellets of shot, No. 6 (243 only being in the charge,) at 30, 40, 50 and 60 yards and over, with four and five drachms of powder and 1 to 1½ oz. shot. In the field the gun has killed stone dead, grouse flying at 92 yards, and at 50 and 60 yards, if held right, it will kill every time. At duck shooting it is perfection. When loaded with 1½ ounces of shot and five drachms of powder the gun is so heavy and so much weight in the breech that the recoil, even with this heavy charge, is not at all unpleasant. It is stated that a choke bore shoots too close, does not scatter enough. To this objection we say, load with one lightwad over the powder; let your bird get well under way, and it will be bagged, provided always the gun is held on the bird when discharged. To those who state that its close shooting powers tears the game, rendering it unfit for use, we can only say we have never yet seen one do it, unless the bird was shot at when within a few yards of the muzzle. Keep cool when the bird rises, let it get off a reasonable distance, and there will be no fault found with a choke bore. One has to hold closer with a choke bore than with one that throws shot all over, but this fact is going to make better shots of poor ones; they will be obliged to be steady, careful, and cool in the field or their game bags will not "bulge out" much at the close of a day's shooting. T. P. C.

[*We have before stated, on Mr. Burton's authority, that as soon as his gun is ready for the market, due notice will be given.—ED.]

Rational Pastimes.

BASE BALL—THE PROFESSIONAL ARENA.

—The season of 1875, as far as the professionals are concerned, has ended, and the honors of the campaign, in every respect, have been borne off by the Boston Club, whose record is one unparalleled in the annals of professional playing both as regards the skill displayed and the honesty which have characterized their career.

For the fourth season in succession the "Reds" of Boston have won the championship pennant, and they will have the right to fly it during the whole of the Centennial season of 1876. The record of the Boston Red Stockings for 1875, in won and lost games—not including forfeited games—is as follows:

	Mutual.	Hartford.	Athletic.	Chicago.	St. Louis.	Philadelphia.	Atlantic.	New Haven.	Centennial.	Washington.	Western.	Red Stocking.	Total.
Games won.....	10	9	8	8	7	6	6	5	5	5	1	1	71
Games lost.....	0	1	2	2	2	0	0	1	0	0	0	0	8
Games played.....	10	10	12	0	9	7	6	5	5	5	1	1	82

The team which achieved such a noteworthy triumph included White, c.; Spalding, p.; McVey, 1st b.; Barnes, 2d b.; Schafer, 3d b.; Geo. Wright, s. s.; Leonard, l. f.; O'Rourke, c. f.; Manning, r. f. and change pitcher, assisted by Beals. Second on the list comes the Athletic Club of Philadelphia, with the best record known in their history. Their record of games won and lost, exclusive of forfeited games, is as follows:—

	Philadelphia.	Chicago.	New Haven.	Atlantic.	St. Louis.	Mutual.	Washington.	Hartford.	Boston.	Centennial.	Red Stocking.	Western.	Total.
Games won.....	8	7	7	6	6	5	3	2	2	0	0	0	53
Games lost.....	2	1	0	0	1	3	0	4	8	1	0	0	20
Games played.....	10	8	7	7	7	9	5	7	10	8	0	0	73

They were not as well managed as they might have been,

or they would have been nearer the goal than they were.

Third in the race is the Hartford, though they actually won more games than the Athletics, still they count third on the list in the games, from which the pennant record is made up. Their full score is as follows:—

	Atlantic.	Mutual.	New Haven.	Chicago.	St. Louis.	Athletic.	Philadelphia.	Washington.	Red Stocking.	Boston.	Centennial.	West.	Total.
Games won.....	10	8	8	6	5	4	4	4	3	1	1	0	54
Games lost.....	0	2	1	4	5	4	2	0	0	0	0	0	27
Games played.....	10	12	9	11	10	9	6	4	3	10	1	0	85

—The full championship record on the basis of which table the pennant will be awarded is as follows:—

	Boston.	Athletic.	Hartford.	St. Louis.	Philadelphia.	Chicago.	Mutual.	Games Won.
Boston.....	10	8	9	7	6	8	10	48
Athletic.....	3	3	6	2	8	7	6	33
Hartford.....	1	4	5	4	6	8	8	28
St. Louis.....	0	1	5	5	5	8	8	26
Philadelphia.....	0	2	4	4	3	7	3	20
Chicago.....	0	2	4	3	3	3	7	18
Mutual.....	0	2	2	0	5	3	3	13
Games Lost.....	7	19	27	28	31	36	37	185

—Below will be found a full and complete table of the "Chicago" games of the season:—

	Hartford.	Boston.	Chicago.	Athletic.	St. Louis.	Philadelphia.	Mutual.	Red Stocking.	Washington.	Centennial.	Atlantic.	New Haven.	Western.	Total.
Hartford.....	3	0	0	0	2	1	2	1	0	3	3	0	0	13
Boston.....	1	2	0	0	0	0	0	0	1	1	1	0	0	7
Chicago.....	1	1	0	0	1	2	0	0	0	0	0	0	0	7
Athletic.....	0	0	1	0	0	0	0	0	1	2	0	0	0	6
St. Louis.....	0	0	1	0	1	0	0	0	0	1	0	0	0	5
Philadelphia.....	0	0	2	0	1	0	0	0	0	1	0	0	0	5
Mutual.....	0	0	0	0	0	0	0	0	0	1	1	0	0	3
Red Stockings.....	0	0	0	0	0	0	0	0	0	0	0	0	0	2
Washington.....	0	0	0	0	0	0	0	0	0	0	0	0	0	1
Centennial.....	0	0	0	0	0	0	0	0	0	0	0	0	0	0
Atlantic.....	0	0	0	0	0	0	0	0	0	0	0	0	0	0
New Haven.....	0	0	0	0	0	0	0	0	0	0	0	0	0	0
Western.....	0	0	0	0	0	0	0	0	0	0	0	0	0	0
Total.....	5	1	5	2	3	3	6	4	5	1	8	8	1	52

—The best averages of first-base hits made up from the number of games played in—and not as they should be, from the number of times at the bat—is as follows for 1875:

Name and club.	Games.	Base Hits.	Average.
Barnes, Boston.....	78	140	1.79
Force, Athletic.....	77	122	1.58
Pike, St. Louis.....	67	102	1.52
Meyerle, Philadelphia.....	65	92	1.39
Burdock, Hartford.....	74	102	1.38
Hines, Chicago.....	66	91	1.38
Holdsworth, Mutual.....	70	91	1.30
Boyd, Atlantic.....	35	42	1.20
Luff, New Haven.....	36	43	1.19

BASE BALL NOTES.

About 2,000 people witnessed an interesting contest at Prospect Park on Nov. 6 between nine of the old Nassau and Amity Clubs, the former including Barnes, Cassidy, Brown, Daly, Doescher, Palmer, Connolly, Bunce, and West. This nine beat the Amity side, with Roche to catch Rule to pitch, by 11 to 3.

—The Cincinnati Club closed play for the season on Nov. 1, when they defeated a picked nine by 13 to 7.

—On Nov. 6th the Boston base ball nine played against ten of the stockholders of the association, giving them the advantage of five outs to an inning, and pitching and throwing left-handed, and batting with one hand. Yet with these odds the Bostons were victorious by a score of 25 to 23 in a full game of nine innings. A dinner in the evening closed the season of the club.

—On Nov. 3d, at Easton, Pa., the Actives played the old Eastons. The latter played Devlin in place of Haug, whose hands were disabled. The game was very finely contested, darkness preventing the playing of a tenth inning. Score: Easton, 7; Active, 7.

—St. John, N. B., was the scene of an unparalleled game for that section on Oct. 20th, as the score below shows, the contestants being nines of the Atlantic and Muffin Clubs of St. John, the eleven inning score being as follows: Muffin, 3; Atlantic, 2.

THE BILLIARD TOURNAMENT.—A billiard tournament will open in Tammany Hall on Monday evening next, in which Messrs. Maurice Daly, Cyrille Dion, A. P. Rudolphe, Joseph Dion, S. F. Slosson, William Sexton, and Albert Garnier will take part. Mr. Garnier has charge of the arrangements. On the opening night Mr. Sexton, a player comparatively a stranger, will make his first public appearance. Mr. Slosson will be accompanied by a party of professional and amateur players from St. Louis and other Western cities. Maurice Daly, the present champion, and Cyrille Dion, will play a match game of 600 points for \$500 a side and the championship, at the close of the tournament, on the 28d inst.

THE HAZARD POWDER CO., MANUFACTURERS OF GUNPOWDER.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 3 (coarse). In 1 lb. canisters and 6 1/2 lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6 1/2 and 12 1/2 lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting. It ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25 12 1/2 and 6 1/2 lbs. and cans of 5 lbs. FFG is also packed in 1 and 1/2 lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER.
GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office.

88 Wall Street, New York.

FOR EVERY SMOKER.

PIPE PICK
AN INDISPENSABLE ARTICLE FOR THE PIPE. Pick, Spoon, and Press combined. Can be carried in the pocket. Has long been used in Europe, and now manufactured in this country for the first time. Sent post-paid on receipt of 50 cents. Address

WALKER & WELCH, 212 Main street, Buffalo, N. Y. Nov 11 3m

Our Readers

are heartily advised to send ten cents for a specimen copy of the

Illustrated Household Magazine,

—Now in its 17th Volume—

The Best Periodical Ever Published for the Family Circle.

Profusely Illustrated—Replete with Choice Reading and Useful Information.

An Attractive Monthly for Young and Old!

—
Examine the brilliant list of Grand Prizes! (The first is one elegant Rosewood Piano, retail price \$500.) The publishers now offer these prizes for subscriptions, in addition to the commission, which is thirty cents for every subscriber. For terms in full, see announcement in the Magazine, headed "Grand Prizes Now Offered to Workers."
It will pay you well to act upon our advice.

Subscription, ONLY one dollar a year!!
Postage 10 cents extra.

Parents send at once for a copy of this excellent, chaste and sparkling publication—examine it carefully; and, OUR word for it, YOU WILL at once become subscribers for the sake of your little ones, as well as because you will find its columns most attractive for your own reading.

The conductors of this magazine have spared neither pains nor money in order to make it what it is to-day—an instructive and entertaining desideratum for every household. Its pages are devoted to popular literature, science, art, education, and the development and maintenance of the moral influence of home attractions. Its characteristic feature is comprehensiveness. The manuscripts now on hand, from noted pens, and others especially engaged, embrace an unusually attractive list of Sketches of Travel, absorbingly interesting Serials, Tales, Poems, Popular Essays, Literary Criticisms, etc., etc. In the EDITOR'S STUDY, important and Pressing Questions of the Day, will be treated with fearless, uncompromising independence, and unswerving loyalty and devotion to Truth, Justice and Right.

A list of brilliant attractions of 1876 will appear in the December Number. New subscribers who send in their subscriptions for 1876, before Dec. 15, will receive FREE the November and December numbers—both being filled with rich literary matter.

FOR FALL SHOOTING ADDRESS J. W. Kinsey, Barnegat Post Office, N. J. To insure good gunners, write one week in advance. Oct14

For Florida.

PHILADELPHIA AND SOUTHERN Mail Steamship Company's line to Savannah, Ga., sailing every Saturday, from Pier 23, below Pine street, Delaware River, at 12 o'clock noon, making close connections through to all points South. The line is composed of the steamships JUNIATA and WYOMING. The Wyoming does not carry passengers. The Juniata is a favorite ship with the traveling public, having passenger accommodations of the most superb character. She has recently been refitted and elegantly furnished with everything requisite to the comfort and convenience of passengers.

Families en route for FLORIDA, Georgia, Alabama, and even as far as New Orleans, will find the Savannah route the most desirable for comfort, as well as the most economical. Through trains of the Central Railroad of Georgia, and Atlantic and Gulf Railroad, Florida, leave Savannah every morning and evening. The Florida steamers leave Savannah three days in the week for all points on the coast.

For through passenger tickets and bills of lading to all points in Florida, Georgia, Alabama and Tennessee, apply to WM. L. JAMES, General Agent, 416 South Delaware avenue, Philadelphia.

TO YACHTSMEN VISITING FLORIDA.

SARASOTA, Manatee county.

TO SPORTSMEN VISITING FLORIDA this Winter I will furnish a schooner yacht of eleven tons, that will accommodate about a dozen persons. I will let them have her and two men to run her, and a small boat, for eight dollars a day. I will meet them at Cedar Keys or Key West, whichever is most suitable to them; only let me know when to meet them. WM. S. BENNET, Capt. schooner Carv M. Nov11t

Orange Sporting Powder.

ORANGE LIGHTNING POWDER, The strongest and cleanest Powder made. Nos. 1 to 7, packed only in sealed 1 lb. canisters. The coarser sizes especially are recommended to owners of fine breech-loading guns, giving great penetration with very slight recoil.

ORANGE DUCKING POWDER, For water fowl. Very strong and clean. Nos. 1 to 5. Packed in metal kegs of 64 lbs. each, and in canisters of 1 and 5 lbs.

AUDUBON POWDER, Very quick. For woodcock and quail Nos. 1 to 4. Packed in metal kegs of 12½ lbs. and 64 lbs., and in pound canisters.

ORANGE RIFLE POWDER, The best for rifles and for all ordinary purposes. Sizes F.G., F.F.G., F.F.F.G., the last being the finest and most used. Packed in wood and metal kegs of 25 lbs., 12½ lbs., and 64 lbs., and in canisters of 1 lb. and ½ pound.

All of the above give high velocities and less residuum than any other brands made.

LAFLIN & RAND POWDER CO., 21 Park Row, N. Y. (OPPOSITE ASTOR HOUSE.)

DITTMAR POWDER

MANUFACTURING CO.

MY NEW IMPROVED POWDER can now be loaded from an ordinary powder flask; grains hard. Use it now like Black Powder. No fear of overloading. Burns slow now. No fouling of the gun. Little or no smoke. Little or no recoil. Not very loud report. Less heating of the barrel in rapid firing. Good penetration and good pattern. Safe to keep, as it does not explode if set on fire, except well confined. Shells furnished loaded with powder only, if desired. None genuine without my signature on the can. CARL DITTMAR, NEPONSET, MASS.

BRANCH OFFICE, 29 Maiden Lane, NEW YORK CITY.

MANUFACTORY, PIONEER WORKS, Birmingham, England

H. C. Squires, No. 1, Courtlandt St. New York.

THE GREAT London Gun Trial, 1875.

W. W. GREENER begs to inform his numerous clients in the United States that he has been very successful in the above trial, having secured the first prize, a silver cup, value 40 guineas—class 2 for 12 bores; also winner in class 1 for 8 and 10 bores, and class 4 for 20 bores. He has won in all the classes for improved boring, which is upon a different plan to any other maker, and is far superior in the three most essential points, viz., PATTERN, PENETRATION, and REGULARITY OF SHOOTING.

Mr. HENRY C. SQUIRES, of No. 1 Courtlandt St., New York, is now importing my DOUBLE CLOSE SHOOTING GUNS to order, an invoice of which will be shipped to him on the 1st July, and can be examined about the 15th. All special orders given to Mr. Squires will be carefully filled. A full report of the GREAT TRIAL, showing the marked superiority of my guns over guns made by Dougal, Pape, Tolley, and others, will shortly be published, and can be had on application at No. 1 Courtlandt St.

W. W. GREENER,

Champion Gun Maker,

St. Mary's Works, Birmingham, England.

HENRY C. SQUIRES, of No. 1 Courtlandt street, has just received an invoice of these close-shooting guns, and from him any information in reference to the results of the Great Trial can be obtained on application

Breech Loaders. W. & C. SCOTT & SONS.

Winners of the "Turf, Field and Farm" Gun Trials.

(See issue October 3d, 1873.)

In which competition the committees have awarded our guns, First and Second for POINTS OF MERIT OF ACTION, MATERIALS, PROPORTION, AND SHOOTING QUALITIES combined, in all the four classes.

THE PREMIER GUN.

W. & C. SCOTT & SON call attention to their very FINEST weapon, combining all their recent improvements, marked on the rib between their name and London address the brand—"THE PREMIER QUALITY."

Medium and fine guns bear full name and address, and plain guns full name and "London" only.

Each gun is numbered and the actions are stamped with name and trade mark.

W. & C. SCOTT & SON, Sole makers of the Patent Top Lever, solid, Double Locking Bolt Breech Loader, bearing the full name of the firm. W. & C. SCOTT & SON caution sportsmen against imitations of their patent and name. Guns bearing the name abbreviated, or with different initials, are not genuine. TRIAL OF SCOTT & GREENER'S NEW SYSTEM OF BORING, BY THE EDITOR OF "THE FIELD," LONDON.

(See The Field, January 30th, 1875.)

"From a comparison of the two tables it will be seen that with Walker's shot, Messrs. Scott & Sons showed a marked superiority over Mr. Greener's, both in average and in the highest score made. Indeed, with the left barrel, in his third shot, Mr. Scott got a selected group pattern of 239 and a penetration of 37, equalling the highest pattern made by Mr. Greener, and exceeding the penetration of that particular shot by eight sheets."

London Office:

10 Great Castle St., Regent Circus, near Langham Hotel.

Chief address:

Manufactory Premier Gun Works,

Lancaster Street, Birmingham.

WHOLESALE.

Oct1-6m

J. D. DOUGALL'S EXPRESS SHOT GUNS.

(Title registered.) SHOWN by trials at Wimbledon by Editor of the Field to possess the GREATEST PENETRATION and therefore LONGEST RANGE—thus Circle, 30 inches; 300 pellets; average, 191; penetration, 37. The Editor's trial of Greener guns with 34 pellets of same shot and same charge of powder, gave 180, and penetration 30, although there were 40 more pellets in each charge. Should any controversy arise as to the durability of these new systems, we herewith warn all beforehand that our system is our own invention (though founded on the American idea) and is DURABLE, a fact remarked on by the Field, that the guns tried had been in use during last season, and references permitted to the owners. Send for Illustrated Circulars to

59 St. James's Street London.

W. W. GREENER'S

DOUBLE CLOSE-SHOOTING GUNS. Winner of the Silver Cup, value 40 guineas, at the Great London Field Trial 1875, beating 33 competitors with 68 guns, also winning in all the other classes for the Improved System of Boring. These guns will kill from 80 to 100 yards, loaded with large shot, and will shoot well with small shot with a less powder charge than guns bored upon the old system. For report of the Gun Trial apply to Messrs. McLaren, Williams & Co., Agents, St. Louis, U. S. A. Address W. W. GREENER, St. Mary's Works, Birmingham, England.

WM. S. KIMBALL & CO.,
PEERLESS TOBACCO WORKS, Rochester, N. Y.

VIENNA, Austria, Nov. 30, 1873.

Messrs. Wm. S. Kimball & Co.:
Sirs—A friend of mine sent me, with a transport of Indian skulls, two pounds "Vanity Fair," which I declare to be the best tobacco I ever smoked. We have very good tobacco in Vienna—Turkish and Hungarian—but Vanity Fair is the King of all, by its aromatic flavor and the right sort of strength. My friend in New York got an appointment in California; by that reason I apply immediately to you, begging you to send me, for the enclosed ten dollars, a supply of Vanity Fair, and send with the next steamer to Germany. If there is a German firm that sells your excellent Vanity Fair, I beg you to enclose me the address. Your respectful servant,
Dr. JOSEPH HYRTL,
Prof. of Anatomy in the University of Vienna.

It is like your first love—fresh, genial and rapturous. Like that, it fills up all the craving of your soul.

From C. A. WORDEN, Lieut. 7th Inf'y, Fort Ellis, M.T.
I assure you that I never smoked better tobacco than your Vanity Fair.

The Goss Revolving Cartridge Holder

CARRIES PAPER OR METALLIC SHELLS, either end up, revolves on centre slides, weighs but 1 1/4 pounds, and is only 1 1/4 inches wide. Holders flare at top so as to quickly receive the shells, and, being elastic, securely clasp the same. For ease of action and rapid shooting it excels anything of the kind invented.

PRICE, C. O. D., \$6.50.

In ordering, give the size of shells and a loose measurement outside of vest.

1y22-1y N. S. GOSS. Neosho Falls, Kan.

Some Fishes and Fishing.

THERE are no more zealous fishermen than sailors, and whose devotion is so ill rewarded. I have yet to see that sailor who considers himself as fully and satisfactorily equipped for a voyage without an assortment of fish hooks in his "donkey" (*anglice*, chest,) mostly of the formidable size, and the largest gauged with wire. His joy is complete if he can add to these a spinning spoon, which he calls a "squad," or one of those nondescript images one often sees displayed in the window of shops devoted to the sale of fishing gear, and which cause in the mind of the observer emotions of unmitigated wonder at the sublime imbecility of the fish which could possibly mistake it for the image of any living creature. He takes exceeding care of these treasures, stows them away in the inmost recesses of his chest, packed in grease or browned flour, that no speck of rust may mar their beautiful blue gloss, takes them out on Sunday mornings to see if, in spite of his precautions, the insidious sea air may not have penetrated to them, and having carefully inspected each one he spreads them in the sun, and gazing upon them and smoking his pipe the while, the heart of him is exceeding proud. He cannot help feeling, and to the observing eye showing, a sense of superiority to the shellback devoid of fish hooks and destitute of squids. But he shows this in a negative way, by a manner which seems to say that he could be proud of these treasures, but that he is saved from this by good breeding and a high sense of the beauty of humility when evinced in the demeanor of fortune's favorite. And, after all, he never catches any fish. Not that he don't try to. He fishes you all possible—I had nearly added, and impossible—occasions. I recollect that on my first voyage one of my shipmates was the proud possessor of one of the before-mentioned images (if that can properly be called an image which represents nothing but itself,) which was supposed to be an accurate counterfeit of a flying-fish, and to be, therefore, singularly well adapted to the beguilement and destruction of dolphins, bonita, and all other voracious fish which prey upon those persecuted little creatures. If any dolphin was ever capable of detecting any likeness to flying-fish (or anything else) in this effort of genius, his power of perceiving resemblance must have been such as the English language is impotent to describe, and to approach it, believing it to be alive, would exceed the courage of most creatures, marine or terrestrial. My own opinion is that it would put a first-class scare on an average right whale. But in this fetich Harry (the owner) believed with an ardor and constancy that time could not cool or failure make. It is my belief that between Boston and Hong Kong Harry was perched on the head-gear about three hundred miles, and dragged his flying-fish (?) through two thousand hours of salt water—and never a bite. Once he came into the fore-castle with a gleam of joy in his eye and told me how "one bonita come mighty close and looked as if he might bite." That was the sole reward of his exertions.

Upon all other subjects Harry was as good natured a little fellow as ever knotted a rope yarn. You might borrow, use, abuse anything else he had; you might criticise himself with any reasonable degree of severity; you might ensure his seamanship, asperse his moral character, or doubt his assertion that he owned a farm in Connecticut this last, however, must be classed "extra hazardous," and still entertain a reasonable hope of escaping any worse consequences than a broadside of salt water blessings; but at one reflection on that flying-fish, "one look of scorn, one word of insult," and you would assuredly get your head punched, if Harry's utmost exertions could afford you that trifling accommodation. With the grains or the harpoon a dolphin or porpoise is occasionally captured, and flying-fish are sometimes taken in considerable numbers by suspending a lantern in the rigging just above the rail. Aiming in their flight at the light, they clear the nearest rail, but bring up, head on, against the farther one. The velocity of their flight must be considerable, for the collision almost invariably kills them, shattering the head, in-

deed, often as far back as the eyes. The dolphin is most frequently captured with the "grains," an instrument not unlike Neptune's trident, but having as high as nine prongs, arranged in two rows at right angles to each other. These numerous points afford at once a better chance of striking the narrow back of the dolphin, and a surer hold when struck, than the single point of the harpoon. The dolphin is a wonder of speed and proportion. In front his head presents a cutting edge to the water not much thicker than an ordinary paper knife. From this the thickness of the fish increases by a very gradual convex swell until it reaches its maximum—about five or six inches—about the same distance behind the gills, from whence it diminishes in a still finer line to the deeply-indented tail. The entire length is about five feet.

You generally notice a dolphin first during a light breeze. Your attention is attracted by a rather small fish which is playing around the vessel. The perfect grace, the utter absence of effort in his evolutions charm the eye. So far as you can see he moves without any muscular exertion whatever, simply his volition seems to carry him whither he will. The breeze is freshening, but the swifter motion of the vessel does not in the least incommode him; with the same ease he is still ahead, abeam, on either bow; still the breeze strengthens, the clipper has about as much as she wants to carry whole sail. The mate glances a wary eye at the royals and orders, "Everything clear to let go and clew up royals; stand by flying-jib halliards and down-haul." The ship is making thirteen, fourteen, fifteen knots. You have kept your eye on the dolphin. What at first looked like a fish became at first a dark spot, then a streak, as the speed increased; but fish, spot, or streak he is still ahead, alongside, or astern, just as suits him, and as easily as ever. You begin to feel as if you would like to beat him or make him work a little for his victory, anyhow. Just then he ranges alongside, not two fathoms off, and for four or five minutes keeps his nose in line with the main channels. You think he is getting enough; that though he has the go you have got the stay. Just as you arrive at this comforting conclusion something—a rope's end dropped overboard, another head above the rail, nothing but his own sweet will, perhaps—starts him again. The fish is gone. For an instant you see a dull streak in the water extending toward the bows. Now that is gone, too. Dolphin, Esq., has taken leave, has passed you as if you had been at anchor. Yes, and would have done had you been making thirty knots instead of fifteen. Sometimes, however, he receives an invitation to stop too pressing to admit of any "regrets." In one of those intervals when he is maintaining his position alongside, the grains comes hissing through the air, piercing his marbled back and scoring his silvery sides, and in a few seconds from the time when he was so gracefully and joyously sporting in the blue water he is gasping out his life in the lee scuppers, while his cruel captors stand admiring the beauty of the tints developed by his death agony.

"Last scene of all," the cook's galley, where he fills the fore-castle pans and cabin plates with his white but rather coarse and insipid flesh, affording a grateful variety (in the fore-castle, at least,) to the monotonous round of beef and biscuit, lobscouse and duff. A word of warning here. Beware of dolphin taken on soundings; the flesh of such is often poisonous. A piece of silver placed in the kettle with it while cooking is said to furnish an infallible test, turning black if the fish is bad, but retaining its natural color if it is harmless.

The porpoise, less elegant in form and speedy in its motions than the dolphin, is nevertheless very amusing to watch in its gambols. While its propensity for playing just in advance of the cutwater and directly under the head-gear gives a much better opportunity of striking the porpoise, its size and strength render the capture a much more exciting affair than is that of the dolphin. The porpoise is always taken with the harpoon; the feeble grains could not withstand for an instant the frantic efforts of the powerful and frightened animal. Even with the harpoon it is necessary to run the line in sharply directly the iron is fast, as if the opportunity is given him to get a good surge

or two on it he will either tear the iron out, or worse yet, part the line and make off with the harpoon. The flesh of the porpoise is extremely dark, and not very palatable, but the liver is a *bonne bouche* not to be despised even ashore.

I was once on board the same craft with a native of Manila, who, having accumulated in the whale fishery a sum sufficient to render him a "bloated aristocrat" among his primitive people (*i. e.*, about \$1,500,) was returning to his native country with the laudable design of spending the remainder of his days amid the scenes of his boyhood as a gentleman of elegant leisure. He had paid his passage and "grubbed" at the second table in the cabin, and was penetrated with a sense of the dignity which all these advantages, present and prospective, conferred upon him. He was in the habit of promenading the decks with a demonstrative air of having nothing to do inexpressibly aggravating to the men, by whom, under ordinary circumstances, he would have been decidedly snubbed and put down, and this abnormal state of affairs produced rather a coolness between Rogers (the Manilaman) and the "gentlemen rope haulers" who received a consideration for their presence on board, inasmuch that at times remarks vituperative of "blubber hunters" in general, and of "Kanaka blubber hunters" in particular, were made in his hearing in a manner which, to a sensitive mind, might have hinted at a personal application. Luckily his was not a sensitive mind, and no more serious complications arose. But there were times when Rogers forgot his dignity and the hands their aversion for Kanakas and blubber hunters, and these seasons of truce were whenever a school of porpoises made its appearance. Rogers was a matchless harpooner. Never did a truer eye measure the distance for a throw, or a surer hand send the iron on its murderous errand. No sooner was the first puff heard or the first glimpse caught of a gray back darting through the water than he was over the bows and down on the back ropes, steadying himself by a breast-line attached to the martingale, the iron in his hand, and his keen eyes following every motion of the agile creatures. Everybody on deck but the man at the wheel rushes forward. Some man the line attached to the harpoon, while one or two old hands stand by the cathead ready to pass a running bow-line over the prey as soon as may be after he is struck. Look out now; here they come; they will either cross the bows, or better yet, pause there to play their usual gambols. One or two of the leaders dart past like lightning. Rogers' eyes flame, but his arm does not move. "Why the — don't he throw?" mutters one impatient youngster. Even as he speaks the main body comes up, and turning nearly at right angles to its former course, they commence to leap and dive just in advance of the rushing prow. There comes a big fellow toward the surface right in front of the dolphin striker. The brown arm rises higher, descends, and the iron flies straight as a rifle ball to the centre of his back. The wounded animal leaps a dozen feet clear of the water. "Haul in," roars Rogers, and in comes the line despite the frantic plunges of the prey. "Quick, there, with the bow-line, the iron's drawing; over his head with it. Ah! there it jams. We've got him hard and fast. That night we have porpoise liver for supper, and nobody says "Kanaka" or "blubber hunter" for three watches or more. A porpoise is about as large game as can well be taken with the iron from a vessel in motion. On this same ship and passage there was an attempt made to go a little better than a porpoise, which ended rather disastrously.

The most Irish Irishman I ever met was Barney, who, to use his own words, "Favored the port watch wid" his "powerful assistance and instructive conversation." Barney was the genius of blundering incarnate. If you could imagine any possible way of making a hopeless mull of any given job you might be sure Barney would take that way—if he didn't take some worse one—and if you couldn't imagine any way, in nine cases out of ten he could, and did. Withal as good a fellow as ever lived; brave as a lion—was once popularly supposed to be—and as open-handed and kind-hearted as a genuine Irishman always is. Barney was a lake sailor, and this was his first passage on salt water. The exploits of Rogers with the iron had greatly

excited him, and filled his breast with an ardent desire to emulate, perhaps surpass, the Manilaman's prowess. The opportunity at length arrived. One day porpoises appeared and Rodgers did not. It was, moreover, Barney's watch below, and he could therefore do as he liked. Being very busy about some special job, none of the watch on deck paid much attention to his motions except myself, who happened to be on the forecable when Barney came rushing up, iron in hand. Lying on the forecable was a coil of entirely new and very strong line. Grabbing one end of this Barney pulled off a turn or two and pitched it to me, requesting me to "make it good fast somewhere," and capsizing the coil made the other end fast to the harpoon. I obeyed the direction to make it "good fast" very effectually by catching a turn or two around the forward capstan and hitching the end. Meantime our Irish Triton had tumbled over the bows and down on to the back ropes with all speed, where, finding Rogers' breast line attached to the dolphin striker, he passed it over his own chest, managing in so doing to get three or four turns in it, which, as will be seen, proved a lucky thing for him in the end. Hardly had the amateur harpooner got fairly in position when his game made off to windward at a great rate. The cause of their alarm soon became apparent in the shape of a school of "blackfish," which in a few minutes passed under the bows. These fish are twenty-five feet and upward in length, very thick, and powerful in proportion to their size. Blackfish is the sailor's name for them, but they are, I believe, a small species of whale. Whatever they may be, there they were under the Curlew's bows, and there was Barney on the back ropes, iron in hand, and burning with the desire to "work to windward of Ould Rogers intirely." Here was his chance, and as the leader passed beneath him with his broad back just below the surface, Barney hurled the iron with all the force of his brawny arm, sending it in up to the socket, and accompanying the blow with a yell that would have electrified all Donnybrook Fair. Whether the yell or the blow scared the quarry most may be a question, but as to the aggregate effect there can be no question whatever; it started him to windward at a rate which would have made a lightning express train turn pale with envy, and passed Harry Bassett on the homestretch as easily as that gallant steed would outstrip a mud turtle.

The first mate was walking the weather side of the poop deck with that peculiar dignity which marks a first mate, which is *sui generis* and unattainable by any other created being. Suddenly the weather leaches of the royals fluttered, then the head sails flapped. "Keep her off," he yelled to the man at the wheel. "Hard up. Are you trying to lay her aback?" "Hanged if I know what's the matter with her," growled the injured mariner as he whirled the wheel around. "I believe something has got hold of her forward," he added, as the craft took another wild shear right against the helm. In a dozen bounds the mate gained the forecable, where he found "something" had "got hold of her" sure enough. Barney's fish, to wit. As soon almost as the harpoon line began to run out it fouled with the back rope on which Barney stood, the seizing parted, and he would probably have ended his mortal career there and then had it not been for all the turns he had got in the breast line, which rendered it too tight to slip over his arms easily, but held him jammed against the dolphin striker long enough for him to clutch some of the gear above his head. And there he hung, unable to climb up. The line held him; he was unable to clear himself from the line, for he needed both hands to retain his hold. Finding his run to windward did not clear him of the terrible shaft in his vitals, the quarry tried a rush in the opposite direction, and just as the mate reached the forecable the harpoon line came in contact with the remaining back rope, carrying it away, and eliciting another yell from poor Barney. A glance showed the officer the situation of affairs, and convinced him that this "cutting out work" had better be stopped. "Out the line," he yelled, but Barney had all the line he could attend to twisted around him, and the mate had no knife. I had seen nearly the whole performance, having been attracted by Barney's first war-whoop. The whole thing had passed so quickly, and I had been so convulsed with laughter as to be perfectly unable to do anything, but at the mate's order I drew my sheath knife and made a slash at the taut line, and away went the blackfish with our iron in his back and about forty fathoms of line skipping after him, like a remarkably attenuated specimen of the sea serpent.

Poor Barney! He was pretty well used to being laughed at, but this last exploit so much exceeded all his former feats that every man girded at him afresh, and it was many a long day before he heard the last of his "ironing that blackfish." Well, his blunders and his jokes are over now. The blue waves roll above his bleaching bones—

"His body's resting under hatches,
His soul has gone aloft."

HARDY LEE.

SHOOTING IN THE SOUTH.

IT is to me a matter of surprise that the Sea or Port Royal Islands, lying just off South Carolina, are not in greater repute among the sportsmen that go South, either for their health or to indulge in their favorite pastime. Two most delightful Winters have I to record, spent there in collecting and preserving specimens of birds, hunting deer, and fishing. The climate of these islands in Winter and Spring cannot be too highly recommended. The atmosphere tempered by the sea breezes is through these seasons warm and comfortable, and does not possess the debilitating effects of some other localities, being bracing and appetizing.

The study of character afforded by the negroes, decidedly the most primitive in manners and speech of the Southern blacks, is extremely interesting. The food is good, and the entire change of scene afforded is most beneficial to the health seeker. Added to these advantages is the ease of reaching any given point by water, and the facilities for shooting water birds. For the sportsman, here is game of every description in haunts wild enough to make its pursuit romantic; sea, beach, marsh, pond and thick woods. Here flock the birds from the North to winter in endless profusion; curlew, plover, duck, godwit, peep, yellowlegs, snipe, etc., and in the Spring come from the farther South, herons, nonpareils, gannets, pelicans, etc.; then there are also many birds that are to be found in all seasons—mocking birds, wild turkeys, cranes, partridges (quail), etc. Deer hunting I am convinced is here unexcelled. Wild hogs used to be found, but are now scarce.

I recall with great pleasure, weighed with regret at the

slaughter caused, a trip to a little spot in St. Helena Sound, called Egg Bank. This isolated island at high tide is not much more than two acres in extent, but at low tide is made much larger by the uncovering of the sandy shoals around it. At dusk, flock to it countless numbers of sea birds, that have been feeding in the marshes among the larger islands during the day, for nightly shelter. In the breeding season the females deposit their eggs to hatch with the aid of the warm sand. I have been told that in "old times" (before the war) the negroes often used to secrete themselves on the island before sunset, and after the arrival of the birds, which settled on the beach, sally forth on the instant, with sticks, killing by simply knocking their victims over. I can believe this, for the confusion produced by such numbers of birds is so great that they are easily approached even now, after so much experience with guns.

We, my brother of the gun and myself, selected for our excursion a beautiful day in April, at the full of the moon. The distance from our house, on Ladies Island, to Egg Bank, was about twenty miles. The journey was performed entirely by water. We had finished a luxurious game dinner and were enjoying a sociable pipe when a little darkey popped his head in at the door and said, "De boat, Massa." This was the signal for us to pack our traps and step onto the wharf, projecting into the creek, directly behind our house, an old southern mansion with broad piazzas, large, high studded rooms, and chimneys built out-side, formerly occupied by the plantation overseer, an important personage in those times. Our boat notwithstanding its antiquated appearance, (an old naval gig, I think) was of a comely shape, and our oarsmen, four lusty blacks, fairly made it hum through the water. The captain of our crew was a negro by the name of Sergeant Parker. He had been in the army I believe, was a kind, obliging fellow who understood his place thoroughly. What servants these colored men are. The art of serving is with them innate. The scenery was enchanting under the mellow rays of the sun which flooded broad marshes, covered with bright green reeds, and the woods bordering them with golden and purple lights. The calm creek, its bosom unbroken, except by the row boat as it surged along under the strokes of our Charons, reflected the soft blue sky and a few snowy-white clouds. Flocks of wild birds flew by, at which we occasionally popped, and in the upper air soared majestically an eagle. The tide, which here runs strong, being against us, we were obliged to hug the shore to get into a favoring eddy there. We took our seats astern and listened to the songs of our boatmen, sung to the time of their oars. These songs were all religious, (I never recollect hearing but one of an opposite character during my stay among the negroes), introducing solos and choruses with appropriate parts. The effect was beautiful, for the ear of these people for music is truly wonderful. They are certainly a much more musical race than are their white brethren. I have heard boys and girls under twelve, who never saw a note of music, sing alto and other parts without the least discord. Passing an island on our way, where some negro cabins stood in an orange grove near the water, the oarsmen sang a song addressing their friends on shore by name, for instance:—

"Oh! Wait Brudder William,
Wait a little while,
Den we'll sing de new song."

It was very pleasant to see matronly dames and comely younger women, dressed in red neat calico and showily turbaned, come to the water's edge and exchange compliments, and to see the men wave their hats and say "how-d'ye." The sun had not yet set when our boat's keel grazed the beach of Egg Bank, and out we sprang. Sergeant begged us to leave all arduous duties to him, and began to make a camp. Observing a man near by standing knee-deep in the water, darting a harpoon here and there vigorously, I strode up and accosted him; found he was on a "shoot," like ourselves, and that he was harpooning sting-rays. The sting-ray is a fish in shape like a skate, and derives its name from the barbed, horn-like sting under its tail, which if provoked it doubles up and endeavors to dart into the aggressor. The wound is sometimes very dangerous, as the serrated edge of the "sting" tears the flesh terribly when extracted. These fish had come into shoal water in myriads to spawn. I have never seen them eaten, although the negroes are said to like them. The spearing was a simple operation, and the rays being small, about a foot in length and about the same breadth, not very exciting. The twilight drawing rapidly on we loaded our guns and held a council of war to decide upon the best place of capturing the game. Our plan of action was as follows:—In the centre of the island for about the space of an acre was a place like the ring of a circus, hollowed out in the centre and enclosed by great banks of sand thrown up by storms. These banks were covered with a long growth of grass. As they afforded perfect concealment we determined to hide ourselves behind them in the hollow space, and awaiting the arrival of the birds, fire into them simultaneously. This plan gave all a shot, including he of the harpoon, with whom we joined forces. I could not again consent to such an expedient, as it involves too much slaughter. The sun had set and the moon was just peeping above the eastern horizon when we secrete ourselves. Not a word did we speak. I sat watching the gulls and terns flying gracefully overhead, now and then dipping with a screech into the water in pursuit of food, and looking at the picturesque but lonely landscape, over which the moon shed her soft light. Not a living thing but birds was in sight, and but one house that peeked in the distance from among thick foliage. In front lay the open sea as far as eye could reach, its waves breaking furiously on the point of Johnson's Island, both to the right and on several reefs, in a long white line. To the left were beautiful islands scattered about; Morgan's, and the others, with picturesque palmettos dotted along their sandy margins. No vessel was in sight, but the spars of a "square-rigger" loading with phosphate in Bull River, peeped over the trees far away. Not only was this pause romantic, but exciting. Flock after flock of birds, curlew, plover, peep, &c., flew swiftly up as it grew darker, wheeling suspiciously around for a minute before alighting on the beach near our stand. It seemed as if the air was full of them, and as if the incoming flood tide drove them more and more into a bunch; it seemed impossible for them to settle without alighting upon each other. My neighbor nudged me. "Are you ready to fire?" he said in a whisper. "Yes." "All ready." All were. Fourteen barrels were aimed at the helpless creatures on the beach. "One, two, three—fire," said our chosen spokesman. A blaze of light followed his words, and we leaped through the dense smoke

from our hiding place. The scene was one I never can forget. The screams of thousands of the unwounded birds that came between the moon, like a great cloud, filled the air; the dead lay in piles upon the beach, while helpless sufferers with broken wings and legs vainly endeavored to escape. My first care was to put these out of pain. I chased a marble godwit with broken wing for many rods to see it look forgivingly with its beautiful eyes as I twisted its neck. May I always kill my bird dead. We endeavored to dispatch all the wounded, but frequently, while strolling in the dark we came across a poor sufferer crouching down on the sands. Those who had escaped, flew wildly around the island, notwithstanding that we picked out the larger from among them. Frequently a cloud would obscure the moon and the more romantic of us catching faint glimpses of the flocks close to where we stood, then not seeing them at all, but hearing their fatal screams, felt as if on an enchanted island peopled by winged spirits that we had disturbed in their peaceful resting places. We secured two barrels of game. An interesting sight were the birds that composed it, to the greedy taxidermist, as they were laid out, side by side upon the beach, that he might select specimens therefrom. We agreed to desist from any more slaughter, and leaving the birds in possession of the sands, now bared by the ebb-tide, sat around the blazing camp fire. The negroes were grouped around their own fire at a respectful distance eating their store of provisions contained in one iron kettle, consisting of hominy with the addition of a few birds. We, of the white, or "plain" skins, as our dusky friends are pleased to call us, made an ample meal of a more luxurious character, and chatted merrily till late hours. The next day beheld us returning under sail blown by a favoring breeze. We cannot sufficiently praise Sergeant Parker and his men for the able manner in which they administered to our comfort, the modest fellows keeping only a few birds, and charging us nothing for the trip. As for shooting on Egg Bank, the only sportsmanlike way is to scare up your birds and pick them off magnanimously upon the wing.

Brookline, Mass.

"THE GREAT LONE LAND."

MESSRS. J. G. BAKER & CO. have a trading post on Old Man's River, situated 260 miles northwest from Fort Benton, Montana, and near Fort McLeod, the headquarters of the mounted police of the Northwest Territory (British Possessions,) of which several descriptive letters have appeared in this journal from a member of the force. Messrs. Adams, Stevenson & Co., of Toronto, Canada, have published a volume descriptive of this territory, under the title of "The Great Lone Land," which gives fullest information of the most interesting character. Now, FOREST AND STREAM has several subscribers in this far-off locality, one of whom, Mr. A. B. Keeler, formerly a resident of Brooklyn, has sent us occasional letters from the Benton and Belknap Agencies, where he has been employed for some years. Only recently he removed to Fort McLeod, and in a letter dated August 28th, and but lately at hand, he writes to this paper:—

"The Rocky Mountains loom up grandly about fifty miles from here, and the Porcupine Hills smile down on us twelve miles distant. This portion of the country, and for a distance of 300 miles north, has been made famous by Butler in his "Great Lone Land" and "Wild North Land," also by Lord Milton in a work whose title I have forgotten. The latter gentleman spent several years in traveling about here, and I am informed that Lady Milton, a dusky maiden, still resides at Fort Edmonton, 300 miles north of us. From all that I can learn, the history of this almost unknown country reads like a romance. The streams here about are running with fresh mountain water all the year round, and nearer the mountains the festive trout disport himself with none to molest or make afraid. In the mountains the wild grizzly, cinnamon, and black bear cavort around in the wildest manner; there is game within thirty miles of here till you can't rest. This region is far preferable for a temporary sojourn to the Milk River country where I have been. Here we have finer prairie views and finer mountain views. All the rivers join the South Saskatchewan; from thence they flow into Hudson's Bay. We can take a boat from this point and reach Hudson's Bay by making two or three portages. As soon as I acquaint myself more fully with the country I will give the FOREST AND STREAM a letter as interesting as I can make it.

You have written of some one seeing me at Fort Belknap; it must have been J. H. Batty. He was out with the Boundary Survey last year. I inclose with this a draft of a mountain trout which I caught in Old Man's River thirty miles from here, a few days since. It is no trick to catch them in these mountain streams. They snap at bait at once. All a fisherman need do is to sit on the bank and haul them in. There was a large pike caught about 100 yards from the fort to-day. It measured thirty-nine inches in length, and weighed 14½ pounds. I send a draft of it. The prettiest fish caught in the mountains is called the salmon trout by people out here. It is spotted like our Eastern brook trout, and the flesh is of a rich salmon color. They grow quite large, so I am told. We caught several small ones. I am going to Chief Mountain in a few days for a little fishing and hunting. Elk are plenty out here, and the fishing in St. Mary's River, they say, "can't be beat." On my return I will send you a letter."

THE VALUE OF MINNESOTA CROPS.—The State of Minnesota produced this last year, after all deductions are made for losses in consequence of the wet harvest, not less than 28,000,000 bushels of wheat, 15,000,000 bushels of oats, 12,000,000 bushels of corn, with considerable amounts of barley, potatoes, hay, beans, pork, beef, mutton, butter, cheese, etc., in addition to these more prominent staples. After deducting the quantity reserved for seed, 25,000,000 bushels remain for export and home consumption, or about 22,000,000 bushels for export alone. Allowing for damage to quality, her farmers will realize from their wheat crop not less than \$20,000,000, while it is safe to estimate the cash proceeds of all other farm products, which are not consumed in feeding working animals, at not less than \$10,000,000. Here are \$30,000,000 scattered, or to be scattered, within the ten months from September 1st, among the farmers of Minnesota as the avails of a single crop, or more than \$50 for every man, woman, and child in the State.

Fish Culture.

PORTABLE APPARATUS FOR TRANSPORTING SPAWN.

ROCHESTER, November 10th, 1875.

EDITOR FOREST AND STREAM:—

I send you a description of a spawn-carrying box, and when it was invented. In July, 1872, my brother, M. A. Green, constructed a box for the purpose of carrying fish spawn. In the Fall of 1873 we carried salmon trout spawn from Cape Vincent, and whitefish spawn from Detroit, Mich., to the New York State Hatching House at Caledonia, and have continued to do so every season up to the present time, and I have the same boxes now that were made in the year 1872. In 1864 I experimented with spawn by packing them in moss in tin and wooden boxes, and on sand and gravel and cloth, and have experimented every year since more or less. I recommend, if there is no attendant, to pack the spawn in tin boxes, the same as I have for the last eleven years. But if there is an attendant, I recommend the box my brother got up in 1872. This box is a plain one, and can be made of any size. The size we have been using for the last four years is about 12x16 inches. It has a door on one side, the full length of the box, which is kept closed by two hooks, at the top and bottom, and has a handle on top to make it more convenient for carrying. It is fitted and filled with trays made of seven-eighths stuff. The trays are covered on one side with cotton flannel, stretched tightly. The top tray has a cover on a hinge; the frame, made of pine, is also covered with cotton flannel. When the spawn is to be shipped, the trays are all taken out. A tray is then taken and sunk in a pan or tub of water, and filled nearly even full by taking the eggs from the place where kept with a dipper or fine net. When placed on the trays they are settled by gently shaking the tray while in the water. It is then placed in the box. Each tray is filled in a like manner until the box has its full complement. When the box is unpacked the trays are taken out, one at a time, and by tipping them up slantingly under the water, and with a gentle motion, the eggs will roll off into the trough. SETH GREEN.

PROGRESS OF FISH CULTURE IN CALIFORNIA.

SAN FRANCISCO, October 24th, 1875.

EDITOR FOREST AND STREAM:—

It is a very great pity that we have so many seals, or sea lions, so near the entrance to San Francisco Bay—the Golden Gate—which devour such immense quantities of fish of all kinds, and among them, of course, the young salmon, or grilse, which are now so numerous, thanks to our Fish Commissioners and our Acclimatizing Society, and which about this time and next month enter the bay, bound chiefly for the Sacramento River, and part of which will next year be heading for the San Joaquin and the Sacramento, owing to the public spirit and liberality of Governor Stanford and Charles Crocker, of the Central Pacific Railroad, who, at their own expense, have lately placed in the Sacramento and San Joaquin rivers, as well as in Kern River, to the southward, from the Government hatchery on the McCloud River, one million and a half of young salmon. All the professional and amateur fishermen ardently desire that our legislature would enact some law to remedy this great consumption of fish from the seals, even if it involved their destruction near our famous Cliff House and Roads, for what is the value of seals, which are merely to gratify sight-seers, compared with our fisheries and the public angling, recreation, and sport on the bay and up our great rivers. At any rate, should our representative at Sacramento, our capital, decline to interfere in the matter, our fisheries and amusement will be greatly diminished, and that seriously, for the seals are multiplying fast, and there will be a great contest between them and the precious inhabitants of the waters. It is estimated that, in consequence of the law now existing for the preservation of the seals, they consume at least one half of the salmon provided by the judicious pecuniary expenditure of the State. We trust that the next report of the Fish Commissioners will advise the repeal of the law in favor of the seals; but I believe this has been oftentimes suggested, and no favorable response has taken place.

A quarter of a million of young salmon have been planted in the Truckee River, flowing into Lake Tahoe, and they are flourishing finely. In the mountains near the coast, and even for some distance in the interior, in the rivers and streams there are plenty of brook trout, but in Tulare and Kern lakes the water seems to be, so far as tested, rather too warm for them; and it may be so, too, for salmon, but the experiment with them is about to be again made. It was either from this cause, or from alkali, that one lot of fish was lost lately. Probably these Southern California lakes and rivers, away from the coast, would be more suited for the valuable and large German carp.

A few young salmon, with some old ones, have been taken in our bay by bait fishing and on the lines of the professional smelt fishers, but the great bulk of them will not, it is likely, be found there till December or January. One fish of seventeen pounds weight was taken on a smelt line, which was very long, and provided with a succession of hooks and wooden floats. The fish had a very long line, and its weight in the water, with the heavy floats to contend with, consequently he wore himself out completely before the fisherman got hold of the line. The fisherman said that at first he thought he had got hold of one of the large sturgeons that are so common in these waters.

In about a year and a half, it is hoped, we shall be experiencing the good effects of the Stanford and Crocker supply of young fish, in addition to the Fish Commissioner's lot, which will gambol and feed around the bay before they ascend the large rivers to spawn. E. J. HOOPER.

FISH CULTURE IN AMERICA.—In the few words that follow, Mr. A. S. Collins, of the State Hatch House at Caledonia, N. Y., summarizes in the most admirable manner the condition of fish culture in this country. We clip the article from *London Land and Water*. As a specimen of literary conciseness it is hard to excel, and we are most happy to extend to Mr. Collins this compliment. Many who have read much about fish culture will wonder, after reading this, that there was so much of the subject that they had not heard. We copy:—

"Perhaps your readers may be interested in some notes about fish culture in the United States. At first the only progress was made by private individuals in a small way, but within the last few years appropriations have been made from the Government funds for the purposes of fish culture. Commissioners are now appointed from seventeen States, with more or less money at their disposal, for stocking and improving the waters. Besides this, so many of our streams run through different States that, through necessity, a United States Fish Commissioner was appointed for general operations. The appropriations range from two thousand to fifteen thousand dollars (currency) for the States, and about fifty thousand dollars for the General Government. In a few of the States the thing is a mere farce, the salaries of the commissioners nearly consuming the appropriation. But in most of the States the commissioners serve without pay, and by definite and well-conducted operations are increasing the food supply. The greatest wonder in connection with a business of such recent growth is the number of private establishments, which not only exist, but make fish raising a profitable business. There are two or three which are nearly as well-known in

England as in the United States, about twenty-five more well-known here, and two or three hundred engaged in fish culture in some shape. The fish raised are chiefly the brook trout, salmon, salmon trout, and whitefish. Grayling and goldfish are also raised to a limited extent. The returns, however, do not come from the sale of fish for market; and the success of the business depends just now upon the fact that our country is full of natural trout streams that have been fished out or run out, and there is a great demand for eggs and young fish for restocking. So long as this demand lasts (and it is likely to be permanent) the nursery business will be more profitable than raising fish for the table. Thus far all the experiments have been made by persons with little means. Many of the investigations have been patient and thorough, yet the need of a Government establishment for the pursuit and study of fish culture is urgently felt. For instance, I have now in my ponds five species of the *Salmonidae*, raised from the egg and of fit age for spawning. I would like to cross these and watch the result, but have been deterred thus far by the inevitable expenses. What we need most in our country just now is a fish for warm waters, *i. e.*, for ponds, lakes, and streams whose waters are too warm and sluggish for trout. We have several good fish, but none satisfactory in all respects."

SPAWNING SALMON.

WITH the close of the present month and the opening of next commences the spawning season of the salmon. With the exception of the Tweed, where angling will be carried on for a month or so longer, our rivers generally are supposed to have passed into the annual close season, during which period it is illegal to kill salmon by any means whatever; or even, indeed, disturb them on the spawning beds, to which at this time of the year they are pushing up, and on which in due course their eggs will be deposited and hatched. During this season measures are taken by local fishery boards and others interested in the fisheries of the different rivers to protect the parent fish as much as possible from poachers and enemies of every kind, at all times dangerous, but particularly so when they make their way up stream into small tributaries and shallow streams. Unfortunately, however, the means at command to carry out the effectual protection of the spawning fish during the Winter months is totally inadequate for securing them immunity from slaughter. In the few favored districts where sufficient funds are forthcoming, and where conservators and proprietors are active, the salmon are, indeed, fairly protected; but on many rivers, where little money is subscribed, and where combined action on the part of the persons interested is wanting, the poachers have it almost their own way. Fish are indiscriminately slaughtered, openly sold in the neighboring towns, or surreptitiously exported to the Continent, where they find a remunerative and ready sale. Bad as the state of things is at present, previous to the Salmon Act of 1861, the appointment of fishery inspectors, and the formation of fishery boards, matters were in a far worse condition; and were it not for the restrictions which have been placed on poaching since that year, and the assistance given by the Fisheries Acts for ensuring some protection for the breeding fish, it is very probable that the produce of our fisheries generally, instead of increasing immensely in value, as they have since 1861, would have fallen off as rapidly. On the grounds, therefore, that with only a partial protection of the spawning beds our fisheries have increased some fourfold or more, we urge that it is of the utmost importance that every exertion be made to promote and extend as strict and thorough an observance of the close season for salmon as possible. At present there appears to us particular reasons for insisting upon this. The annual yield of salmon taken generally throughout our rivers within the last few years has not unfortunately shown the advance which marked the improvement of previous years. In several important districts the falling off has been considerable, a circumstance which appears to us to be altogether due to "over fishing." Our rivers have not yet been sufficiently resuscitated to allow of too much fishing below by nets, more especially when the limit of spawning grounds above us is, as at present, of so prescribed an area and so inadequately supplied with stock or breeding fish. These remarks on the importance of ensuring a due observance of the annual close season for salmon have been suggested, not so much from the fact of that season having just commenced, as from two questions in relation to our salmon fisheries which have lately cropped up—one in reference to the disappointment felt at the wretchedly poor yield of this year's salmon, and the other the announcement that one of our most important rivers, the Wye, was likely to be left almost totally unprotected this Winter on account of disputes between the upper and lower proprietors. Owing to these circumstances it appears of importance to take steps to arrest a decline in the salmon fisheries, which heretofore have advanced satisfactorily, but which unfortunately are showing signs of mismanagement and retrogression.—*Pall Mall Gazette*, London, Oct. 26th.

BREEDING OF GOLD FISH.—We have had numerous enquiries as to the breeding of gold fish. The following extract from *Hardwicke's Science Gossip*, will be found of interest as containing much valuable information regarding the culture of these beautiful specimens of the carp family:—

"To breed gold fish in any numbers your pond ought not to be less than eight feet wide and two and a half feet deep, with a smaller tank two feet deep near the centre, for the fish to go in when the pond is cleaned out. The following plants should be placed in the pond: three of *Valisneria spiralis*, two of the water-soldier (*Stratiotes*), two of the water-lily, and three plants of the *Anacharis*, which is the best plant I have discovered for a pond that will cause gold fish to breed in it. The fish will always find food where the *anacharis* grows, and will eat it, hide in, and spawn on it. I lent a gentleman a self-air-acting can some five years ago to bring home two dozen gold fish from Paris. I was to have half of the fish for the use of the can. Two dozen were put in the can at Paris; only nine fish arrived safe; I would not take any of the fish from him, as he was making a new pond, and I was fitting up a fresh water and salt water aquarium for him. I placed two of the smallest of the gold fish in the fresh water aquarium; the remaining seven gold fish I placed in the new pond. The fish lived all right, but did not spawn in the pond. The gentleman came to me some eighteen months

after, saying that he could not get the fish to spawn. I asked him if he had placed any plants in the pond, and he said he had not; whereupon I told him he could not expect to get the fish to spawn if no plants were in the pond. I asked him to allow me to place six plants in the pond, and was allowed to do so, and placed the following six plants: one *Valisneria spiralis*, one water-soldier, two water-lilies, two *Anacharis*, all in plant pots surrounded with rockery to keep them steady. Some time after I visited the pond, and found the plants growing most beautifully, particularly the *Anacharis*. I did not see the pond again for some months, when the gentleman sent for me, and we visited the pond together. I found the pond full of young gold fish. There were thousands of them. We got a dip-net and thinned them out for a minute; the gentleman did not like to destroy them in that way, so another large pond was built, and the fish thrown into it. Thousands of fish have been given away from these ponds. The *Anacharis* plants, when grown too large, should be taken out twice a year. When the plant has grown too long, nip off some of the young sprouts and place them in some fresh earth in pots to replace the old plants, which may be thrown away. This plant grows very fast. I would not recommend it for a very large pond or sheet of water, as it will soon choke it up, unless swans are kept there. These birds feed on it, and thrive well. I think our aquarium tanks are too small for the spawn of gold fish to come to anything. I kept a large tank for twelve years, and never got any gold fish from their spawn, after trying all sorts of ways. To keep the gold fish healthy in the aquarium you must only give them a small fly or a small red worm. If you can get enough plants of *Valisneria*, do not place in any others. Above all things do not give the fish biscuit, bread, or meat, as it will cause a disease in the fish. The fish like a little gravel at the bottom. They take it in their mouth occasionally; it does them good, and cleans the mouth of the fish.

Natural History.

[This Department is now under the charge of a competent Naturalist, endorsed by the Smithsonian Institution, and will henceforth be made a special feature of this paper. All communications, notes, queries, remarks, and reasonable observations will receive careful attention.]

THE DESERTION OF PENEKES.

THE abandonment of the School of Natural History at Penekese Island, which will be remembered as the last public work of the immortal Louis Agassiz long after its details have been forgotten, will be regretted by every reader; for no school, large or small, ever took such a deep hold upon the interest of the whole nation. A brief sketch of this unique enterprise may be interesting.

In 1872 Prof. N. S. Shaler, of Harvard College, proposed to Prof. Agassiz the establishment of a station at Nantucket, where, during the Summer months, a limited number of persons might have an opportunity to study animal life in the most practical, experimental way, and learn chiefly how to observe, while at the same time they might receive the benefit of lectures on special subjects from special students. Prof. Agassiz seized upon the idea and elaborated it. But the money was wanting. At this juncture, in the Spring of 1873, Mr. John Anderson, a merchant in New York City, offered Prof. Agassiz the gift of Penekese, a small island at the mouth of Buzzard's Bay, Massachusetts, and \$50,000 in cash if he would found this proposed school there. Prof. Agassiz—for by this time Prof. Shaler had gone to England for the benefit of his health—gratefully accepted the gift, buildings were put up as early as the weather permitted, and on July 9th Professors and students and friends gathered there, and the Anderson School of Natural History was organized.

Among the Faculty were Profs. Burt Wilder, Waterhouse Hawkins, A. Guyot, A. S. Packard, E. Bicknell, Count L. F. de Pourtales, Dr. T. M. Brewer, and Mr. Reuyter. The students numbered about fifty, all teachers of normal or high grade schools in various parts of the country, except three or four from Prof. Agassiz's museum in Cambridge.

Prof. Agassiz lectured frequently on subjects connected with geology, and especially upon the general features of the glacial theory. Prof. Wilder gave a fine course of instruction on anatomy, illustrating by dissections, and constantly aided students in the use of the knife. Prof. Bicknell showed how to use the microscope, and Prof. Packard described the natural history of invertebrate animals, while Count Pourtales took out dredging parties every fine day in the yacht which Mr. C. W. Galloupe had put at the disposal of the school. But between times, from daylight to dark, the little tables in the long laboratory were fully occupied with an industrious company seeking knowledge at the fountain-head, working with knife and tweezers, microscope and pencil among the bones and tissues of various animals, comparing and contrasting, sketching and noting down. And the hardest worker of them all was the great Professor himself, who found new materials for investigation every day.

The following Winter Professor Agassiz died, but his last thought was for the school, and he enjoined its continuance upon his son, Mr. Alexander Agassiz. In July of 1874, therefore, many of the old students gathered again, and the school started a second time with every appearance of success, but at the end of a hard-working session it was found that no promise of opening it a third season could be made, and that was really the end of it, although the affair was not formally wound up until a short time ago. The trouble was a want of money to render the school self-supporting. Very few of those who sought its advantages had wealth, and while the original fund of the generous giver of the island was insufficient to fully endow the school, the needed sum in this depressed season was not forthcoming. It is unfortunate for both Mr. Agassiz and

Mr. Anderson that such an end has come to the undertaking, but neither is to blame, and both alike attribute the result to the sad loss of the great naturalist, which ended the hopes both entertained regarding the establishment of what was to be a national school.

But, as the *Tribune* has well said, "Though the dormitories are torn down and the aquariums are sold, and the sea-gulls have again taken possession of Penekese, the work that was done there has not been thrown away. The impulse that was there given to the study of natural history by the method of direct investigation has produced already a marked effect throughout the country. * * * No portion of Mr. Anderson's liberality or of the gratuitous labors of men eminent in science expended on that now desolate island are lost. Measured only by present results, that which they have done for science and for the youth of America is worthy even of the high hopes which Prof. Agassiz indulged."

SEA ISLAND SHEEP.—A curious race of sheep exists on a small island in Englishmen's Bay, on the coast of Maine. The island is about two miles square, is open on the east to the full ocean, and about half of it is heavily wooded. The sheep are mixed breed, showing traces of the merino, Southdown, and long woolled breeds. They are nearly as wild as deer, and before the great storm of October, 1869, blew down so many trees, they had paths where they always ran, so that it was not difficult to drive them into a carrol when they were wanted for shearing, but now it is next to impossible to get them at all. Consequently the bucks and ewes are always together, and the latter begin lambing in March and get through by May 1. The early lambs are harder than the late ones, and stand the winter better. Few of the sheep, apparently, die from disease, and many seem to live out their full allotted time. If not caught every year they usually wear their fleeces until sheared, so that three fleeces are sometimes found, one on top of another.

In winter they are divided into flocks of from fifteen to twenty-five, and live near a place where they can get to the shore for sea-weed and into the woods for shelter. Their principal living in winter is some of the varieties of sea-weed, principally dulse. They also eat the branches of nearly all the trees that grow on the island. They like fir better than spruce, are very fond of mountain ash, eating branches as large as your finger, and also the bark elder and raspberry; also the moss from the old stumps and logs. In the spring, when the tide runs out very low, they go out on the rocks as far as they can get, and sometimes the tide will come up all round them. When this is the case they will not wade through water a few inches in depth, but will stick to the ledge till the tide takes them off. By that time their fleeces are so full of water and heavy that, although they can swim ashore, they cannot get out readily, but crawl out a little way, and then wait for the water to drain off, and crawl a little farther. If there is any sea going it washes them back again, and they drown.

—Mr. R. M. Stivers' eldest son found a live woodcock last Monday in the area of his house in East Thirty-first street, and had him in a small cage feeding him on mocking bird food. This bird no doubt struck a telegraph wire, which crippled him so that he was unable to fly. We understand that he died Monday night. Mr. S. will have him set up. We have before this noticed instances of woodcock having been caught alive in this city and Boston, and of the attempt to rear them by hand. It seems evident, however, that these birds will not thrive in confinement. As the flight of woodcock is comparatively low, and generally made by night, it is not singular that the birds frequently strike the innumerable obstructions that traverse and fill our aerial world above the chimney pots.

—It is almost impossible to raise any apples in New Zealand and neighboring islands on account of the plant lice (*Aphides*), which ruin the fruit in the bud. The Auckland Acclimatization Society are concerting measures for the introduction of the various species of *Coccinellæ* (lady bugs, etc.) which prey upon the plant lice, and thus put a stop to their ravages.

HUMBLE BEES FOR NEW ZEALAND.—Mr. Frank Buckland has just succeeded in getting a colony of humble bees started to New Zealand, where none exist, and where they are urgently needed to fertilize the clover, there being no insect native to that island having a sufficiently long proboscis to penetrate the clover flowers. Mr. Buckland, for a long time after he decided upon the experiment of their transportation, was unable to procure any live bees, but at last got a colony, which were sent to him in a box about eighteen inches square with one division. They were well and lively. The nest—earth and all—had been sent just as it was dug, and the young bees were hatching out daily. In just this condition the bees were intrusted to a Mr. Hall who was going out to New Zealand, and who promised to care for them. In order to feed them during the voyage thirty pounds of honey were packed up, which will be fed to the bees in little bird cage tins through holes in the box. They will also require water to drink. If any more nests of live bees can be obtained another exportation will be made.

—John McDonald, keeper of the lower lighthouse in Newark Bay, picked up three woodcock and four small birds last Sunday morning which had flown against the light and killed themselves. He says it is no unusual thing to find dead birds lying on the roof of the house next to the light in the Fall, and in several instances he has found duck. Last March there were three geese killed at this light.

THE CARE OF CANARY BIRDS.—Says a writer on canaries:—"In this way I answer the question of 'how I had such luck with birds.' Simply by allowing the birds to attend to their own affairs, and by letting them understand that their master would never harm them. Also by accustoming them to plenty of light and air and company, rather than, as recommended in books, keeping the cage in a dark room for fear of frightening the birds. Make just half the fuss directed in bird books over the matter, and you will have double the success in raising birds. Never give them sugar, but all the red pepper they will eat; it is the best thing for them. And if your bird feels hoarse at any time put a piece of fat salt pork in the cage, and see how the little fellow will enjoy it, and listen for the result. Give him flaxseed once in a while, and if he appears dumpy occasionally give him a diet of bread and water, with red pepper sprinkled in. Open the cage door and give your pets the freedom of the room. Soon they will come at your call, and fly to meet you whenever your voice is heard. I had one who came regularly to my desk as I sat writing each day, and disputed, with fluttering wings and open beak, my humble right to the inkstand. And when I reasoned him out of his mistaken notion he would perch himself on my penholder (no very comfortable proceeding for me), and watch me gravely as I wrote. I have many a time, also, discovered him in the act of eating off the corners of my paper, even to the title of my article. Another thought nothing of trotting about on my head and shoulders, and even hopped under my throat to nestle against my chin. He would take his bath as I held the cup in my hand, and coolly dry himself on my head. Another would fly up or down stairs whenever I called him, and many a time when I have been out he has welcomed my return by flying down the stairs and singing at the top of his voice all the while, until at last, perched on my shoulder, he would accompany me to my room."

It is said that if left a day and a night without food, canaries will make an attempt upon each other's life, and those that are killed will be eaten by the survivors. The professional gentleman above referred to had a dozen birds in a cage, and while out of town on business five of them were killed in this way, after the water and food were all used up. Rape and canary seed is the standard food for canaries.

During the present "corner" in canary seed, the economical will give their pets a mixture of rape and millet seed. A half peck of rape costs seventy-five cents, and an equal quantity of millet thirty-one; this is nearly equal to mixed canary seed, and costs a small fraction over thirteen cents a quart. A half peck of canary seed, costing \$1.25, may be added, making a mixed food equal to what retails for forty cents, and which will cost less than twenty cents a quart.

THE CAPTURE OF HYENAS.—The following mode of tying hyenas in their dens, as practiced in Afghanistan, is given by Arthur Connolly in his "Overland Journey," in the words of an Afghan chief, the Shikaree Syud Daoud:—"When you have tracked the beast to his den you take a rope with two slip-knots upon it in your right hand, and with your left holding a felt cloak before you, you go boldly but quietly in. The animal does not know the nature of the danger, and therefore retires to the back of his den, but you may always tell where his head is by the glare of his eyes. You keep moving on gradually toward him on your knees, and when you are within distance, throw the cloak over his head, close with him, and take care he does not free himself. The beast is so frightened that he cowers back, and though he may bite the felt, he cannot turn his neck round to hurt you, so you quietly feel for his fore legs, slip the knots over them, and then, with one strong pull, draw them tight up to the back of his neck, and tie them there. The beast is now your own, and you can do what you like with him. We generally take those we catch home to the kral, and hunt them on the plain with bridles in their mouths, that our dogs may be taught not to fear the brutes when they meet them wild."

Hyenas are also taken alive by the Arabs by a very similar method, except that a wooden gag is used instead of a felt cloak. The similarity in the mode of capture in two such distant countries as Algeria and Afghanistan, and by two races so different, is remarkable. From the fact that the Afghans consider that the feat requires great presence of mind, and an instance being given of a man having died of a bite received in a clumsy attempt; we may infer that the Afghan hyena is more powerful or more ferocious than his African congener.

—Sir R. Christison, in a communication to the Royal Society of Great Britain, has given the results of a chemical analysis of clean salmon (*i. e.*, those in good condition), and of the same species where exhausted or "foul." A mean of several trials gave, for clean salmon, oil, 18.53 per cent.; nitrogenous matter, 19.70 per cent.; saline matter, 0.88 per cent.; water, 60.89 per cent.: for the foul salmon, oil, 1.25 per cent.; nitrogenous matter, 17.07 per cent.; saline matter, 0.88 per cent.; water, 80.80 per cent.

—The red corpuscles of the blood of the salmon family are the largest in size of those of any of the bony fishes, and consequently are the best for novices in microscopy who desire to study the blood of fishes to begin on. Those of *Salmo fontinalis* have a mean length of 1-1455 of an inch.

—At Geelong, Australia, the remains of an immense kangaroo, of a species now extinct, were found recently at a depth of fifteen feet. A shaft was sunk forty-three feet, but no bones were found at a greater depth.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, }
NEW YORK, NOV. 17th, 1875. }

Animals received at Central Park Menagerie for the week ending November 13th, 1875:—

One Bald Eagle, *Haliaeetus cencoecephalus*. Presented by Mr. Abel Whitlock.

One Mocking Bird, *Mimus polyglotus*. Presented by Dr. Stephen Kelly.

Two gray Squirrels, *Sciurus Carolinensis*. Presented by Master Francis P. Magoun.

Three Axis Deer, *Axis maculata*. Hab. India.

Three Tigers, *Felis tigris*, one year old. Bred in the Antwerp Gardens; raised on a dog.

Two Nylghans, *Portia picta*. Hab. India. Bred in the Acclimatization Garden, Bois du Boulogne, Paris. W. A. CONKLIN, Director.

Woodland, Farm and Garden.

IMPROVED FLOWERS.

The *Germantown Telegraph* thus discourses on the results of the propagation of new varieties of favorite old plants by our florists:—

When we were boys and girls our gardens teemed with cabbage roses, with hundred leaved roses, white damask and provence roses, and roses with the York and Lancaster stripes. It was "a joy forever" to walk through the garden then. Most of us can smell the fragrance of those rose-bedecked gardens yet; and then the rose leaves were gathered and preserved, and even, materially speaking, the rose odor was ever with us.

But the modern florist came and laughed at us. Those old fashioned things were of no account. We should have the double roses, China, tea, and barbon roses—roses that bloomed all the time. We took his advice, and now what we have for roses are as much like real roses as coffee is like beans. Many, indeed, who have gardens hardly know what a real rose is. It is fortunate that old Tom Moore lived in the last generation, or our sympathetic young ladies would not be able to quote, with a sigh,

"You may break, you may scatter the vase as you will,
The odor of roses will cling to it still,

for our roses would never have suggested anything of that kind.

Not only has the genuine good old rose been improved to death, but it is so with other fine old flowers. Every good garden had gay hollyhocks, but the improver got hold of them. They figured for awhile at exhibitions as double dahlias, but they are now gone, single and double alike. Nobody sees scarcely a hollyhock nowadays, nor sweet williams, polyanthus, daisies, carnations, pinks, pansies, and so on. Where are they all now? We have pansies, it is true, but we have to get them from the florists every Spring. The good old hardy pansy, which came into use so late as our own generation, has been improved so much that it will hardly grow at all any more. A good set of verbenas is among the rarest sights in the gardens of the present day, yet scarcely a dozen years ago we depended so much on them that it was not unusual for one florist to ask another, "Wonder what they did for garden towers before they had verbenas?"

At this season of the year we miss particularly the good old chrysanthemums, of which we have two kinds—a large blushing white and a golden yellow. It was no trouble to grow them. They were set out in the flower borders, and came up as regularly every year as an ox-eye daisy. October was quite gay with the garden chrysanthemums. But the improvers introduced a new set with small flowers—pompones and matricarias—getting the flowers reduced down to the smallest possible size, and the plants to mere dwarfs, that we grew ashamed of our old friends and took to the new, and now we have none.

Improvement is all very well, but we may keep on pointing our peg till we whittle it all away.

WINTERING BEES.—A correspondent of the *Practical Farmer*, referring to the care of bees in winter, says "the winter of 1869 was disastrous to bees in this State, many losing their entire stock. My bees were sheltered in a cave built in the side of a dry hill; all came out in good order, while other apiarians in this section lost nearly all. There is nothing on the farm that seems to give life to all around as a well cared for stock of bees. The question is often asked, 'What makes your bees so smart and make such lots of honey?' We don't get honey from our bees.' If the bees are allowed to nearly all die through the winter it will take nearly all summer to recuperate, and then be weak. The plan I take is to keep my bees strong in numbers, remove the honey board, put straw matting over the comb frames, see that they are well ventilated at the bottom, place them in winter quarters before hard freezing, let them remain quiet until it becomes warm and pleasant in spring, and not get them out too early. The longest time or latest period of bees being kept in cave was till the 4th of July. They were then taken out, and have done finely. This goes to show that bees will live a long time if kept quiet and still in a dark place. I consider noise or occasional light disastrous to bees in winter quarters. They will eat double the honey and bee bread, and dirty up every part of the hive. I doubt whether bees can be wintered successfully where there is a great amount of noise. Build a place for your bees; it is money well laid out.

NEW FOOD FOR HORSES AND SHEEP.—A favorite and rather new kind of mash for horses is coming into use, composed of two quarts of oats, one of bran, and half a pint of flaxseed. The oats are first placed in the stable bucket, over which is placed the linseed; add boiling water, then the bran, covering the mixture with an old rug and allowing it to thus rest for five hours; then stir the mass up. The bran absorbs while retaining the vapor, and the linseed binds the oats and bran together. A greater quantity of flaxseed would make the preparation too oily and less relished. One feed per day is sufficient. It is easily digestible, and is specially adapted to young animals, adding to their volume rather than to their height—giving substance to the frame. Prof. Sanson reminds us not to overlook the food in the nourishment question in connection with the amelioration of live stock. He considers oats, as so generally given to sheep, as objectionable and approaching the unprofitable. Rams generally receive one pound of oats daily, ewes half that quantity. Oats, forming an exciting food, are especially suited for rams, but for hastening the development of young sheep they only build up the bones, not the flesh.

—With suitable preparation and management, not only does a healthy horse suffer no distress from trotting a moderate distance at the top of his speed, but enjoys it as highly as his driver. The match trotter is peculiarly gifted with powers of locomotion, and his wonderful mechanism can only be appreciated when in full operation. To most persons a closely contested trot is a beautiful and attractive spectacle, and experience proves that nothing affords a more delightful or harmless amusement for the people provided the superintendence and associations are of the proper kind.

The Kennel.

FEEDING DOGS.—We have found that but few sportsmen give proper attention to the feeding of their dogs. It is altogether wrong to give them food just before they are taken to the field. Food given them at such times is absolutely worse than nothing. Many dogs thus fed throw up the food soon after they commence to work, and then again, it detracts from their powers of scent for several hours.

The evening before the shoot, and then again in the evening after the day's work is done, is the proper time to feed, and then they should be *bountifully* fed with good strong, wholesome food; and nothing is better than well boiled scraps of meat with Indian meal, and even this food is improved if baked after being boiled. A dog working day after day should be fed at night as much food as he will gorge, and then placed in comfortable quarters, not by the fire, but where he will not suffer from the cold. Some years ago, while camping out in Illinois with Messrs. Samuel and Chas. Sunderland and the late Robert Gamble, we shot full three weeks over three setters—Bruce, Cone, and Dash—killing to our four guns about one hundred head of game per day, mostly "chickens" (pinnated grouse,) with some ducks and plover. When we made our camp at night upon drawing the birds we selected the livers, gizzards and hearts, threw them into a camp kettle, boiled them to ribbons; then stirred into the mess a large quantity of Indian meal, which was again boiled thoroughly, and with this food we fed our dogs just as much as they could gorge, and placed them in comfortable beds made of prairie grass under our "prairie schooner," and then in the morning they would get out, empty themselves, and go to work, and at the end of our three weeks' shooting trip they were in perfect condition for hard work.

THE COMING CHICAGO SHOW.—The Bench Show of Dogs to be held in connection with the National Poultry Association in January next promises to be one of the largest ever yet brought to an issue in this country. The list of special premiums already contributed foots up very largely, and it is estimated that their total value will be not less than \$10,000. A novel feature of this exhibition will be that the exhibitors will have the privilege of choosing two out of the three judges in each class, the Executive Committee appointing the third. Mr. Luther Adams, of Boston, gives a special prize for best English setter as a stock dog, to be shown with not less than two of his get. Western sportsmen do the same for native setters. Special premiums will also be given for pointers and spaniels. The express companies have agreed to return all stock coming to Chicago through their hands free of charge, or, in other words, to carry articles at one-half fare. The following railroads have agreed to bring and return dogs free of charge, and to return owners and attendants over the lines by which they came for one-fifth fare: Vermont Central, Grand Trunk Railway of Canada, Erie Railway, New York to Buffalo, Michigan Central, Pittsburg, Fort Wayne and Chicago, Illinois Central and branches, Chicago, Alton and St. Louis, Chicago, Rock Island and Pacific, Chicago, Burlington and Quincy, Chicago and Northwestern and all its branches, and the Chicago, Milwaukee and St. Paul. It will be observed that by the arrangement with the Michigan Central, Grand Trunk, and Vermont Central the association has secured reduced rates to Boston, and by the arrangement with the Michigan Central and Erie reduced rates have been secured to New York *via* Buffalo.

DEATH OF BISMARCK.—It is but a few weeks since we printed a letter from that ardent sportsman, Mr. David Brooks, of Philadelphia, descriptive of his recent shooting trip on the prairies, and his eulogistic account of the admirable working of his celebrated setter, Bismarck, was readily understood and appreciated by all who know of the excellent qualities of that paragon of dogs. It is with pain that we now record the death of poor "Biz," and the ignominious manner of his taking off, ignominiously smothered to death in a crowded and illy ventilated express car, will excite the indignation and the sympathy of every sportsman. Although no amount of pecuniary damages will bring poor "Biz" to life again or compensate his owner for his loss, we trust that Mr. Brooks will spare no effort in fixing the blame of this outrage where it belongs. In this instance it probably does not rest with the baggage master, as intimated by our correspondent, but with the express messenger, who is supposed to have accompanied his car, and who in common humanity should have prevented the occurrence:—

PHILADELPHIA, Pa., November 11th, 1875.

EDITOR FOREST AND STREAM:—

The sportsmen of the United States will be pained to hear of the death of Mr. David Brooks' celebrated setter, Bismarck. Poor Biz! with a very promising young bitch, was shipped from State Centre, Iowa, by Adams Express, both boxed securely. On the arrival of the dogs at Philadelphia they were found smothered in the box, and entirely covered with turkeys and chickens, many of which were also suffocated. The car was insufferably hot, and without ventilation, illustrating the gross carelessness of many baggage masters having live stock in charge. Mr. Brooks certainly has the sympathy of the sporting community.

HOMO.

THE LATE MEMPHIS FIELD TRIALS.—We are in receipt of the following letter relating to the service of plate presented by this paper at the late meeting of the Tennessee State Sportsmen's Association. We have designed publishing an engraving of the plate, which comprised pitcher, salver, and goblets, but through an omission the service

was not photographed as we had requested. We can inform the possessor that the dogs are all portraits, and comprise some of the best representatives of both setters and pointers now in this country:—

MEMPHIS, Tenn., November 10th, 1875.

FOREST AND STREAM PUBLISHING COMPANY:—

On behalf of the Tennessee State Sportsmen's Association we desire to gratefully acknowledge your munificent gift of plate, awarded to the champion field dog of America. The elegance of design, usefulness of the set, as well as the laudable objects promoted, entitle you to very many thanks. May your friends remain legion.

W. A. WHEATLEY,
Secretary and Treasurer.

P. H. BRYSON,
President.

We are in receipt of a photograph of the splendid kennel of Mr. Theo. Morford, of Newton, N. J., comprising seven orange and white setters with black points, and one thoroughbred Irish setter. The picture was taken after the dogs were ordered to "charge," and all are in good position. Such a picture is of much interest to all sportsmen, who know how difficult it is to get eight dogs in position, and to hold them there long enough to be photographed. It is an evidence of the wonderful skill with which Mr. M. controls his dogs.

COCKER SPANIELS.—Mr. Robert Walker, of Franklin, Delaware county, N. Y., has forwarded us photographs of his fine cocker spaniels, Which and Nellie, both being, as far as can be judged from a photograph, very handsome dogs. Mr. Walker advertises a litter of puppies by these dogs, and guarantees a pure pedigree.

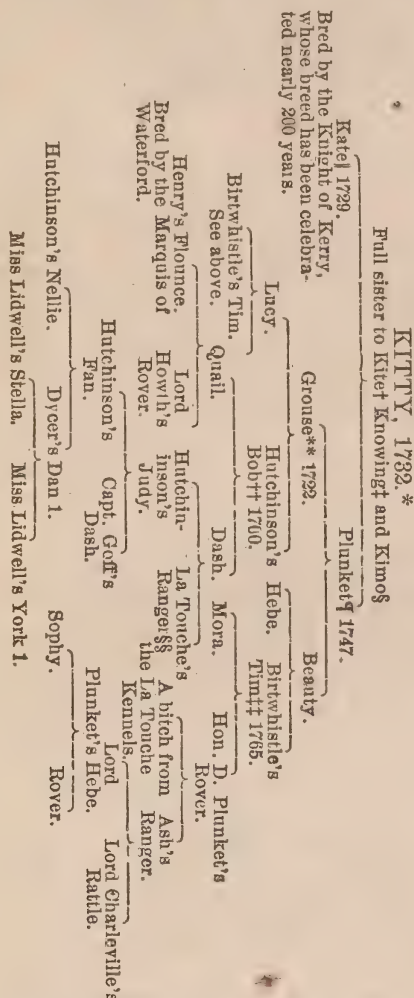

ENGLISH DOGS FOR SALE.—Mr. T. B. Bowers, of The Bars, Chester, England, sends us a long list of dogs he has for sale. The list can be seen at our office, but we hardly feel warranted in publishing it except in the form of an advertisement. There should be a limit to good nature in these matters, and we do not feel warranted in gratuitously advertising dogs, even if the bluest blood of Britain runs in their veins.

—Mr. Theo. Morford, of Newton, N. J., has sold his fine orange and white setter, Trump, for the handsome price of \$200. Trump is by the famous Joe, now the property of Mr. Shipman, of Brooklyn, out of Northrup's Dell.

IRISH SETTER, KITTY.

Born in 1872. Imported in 1874 from R. Ll. Purcell Llewellyn, Ashby de-la-Zouch, England, by W. Jarvis, of Claremont, N. H. Now owned by F. H. Bierbower, of Maysville, Ky.

*The number refers to the English Kennel Club Stud Book.

*2d prize, North Wales Dog Show, 1873.
†2d prize, Crystal Palace, 1873, 2d prize, Birmingham, 1873; and 1st prize for setters in braces with Sampson, at Lincolnshire Field Trials, in 1874, beating the celebrated Ranger and Lucy.
†1st prize, Caledonian Gamekeeper's Dog Show, Glasgow, 1874; 2d prize, Crystal Palace, 1874; 2d prize, Birmingham, 1874; 1st prize, Crystal Palace, 1875.
§1st prize, North Wales Dog Show, 1873.
‡2d prize, Birmingham, 1873.
¶Dog Shows—1st prize, Boston, 1870; 2d prize, Crystal Palace, 1870; 1st prize, North Wales, 1872; and champion cup for the best setter in the show; champion cup, North Wales, 1873. Field Trials—Shrewsbury, 1870, 2d prize; Shrewsbury stakes; Vaynol, 1870, 1st prize for setters; Vaynol, 1871, 1st prize in the Bodfel stakes; Southampton, 1871, divided 2d prize with Countess in the Hampshire stakes; Vaynol, 1872, 2d prize with his son Marvel in the Bodfel stakes.
**2d prize, Birmingham, 1869; breeder, Hon. D. Plunket.
††2d prize, Islington, 1863; 1st prize, Islington, 1864; 1st prize, Cremorne, 1864; champion cup, Birmingham, 1864.
‡‡1st prize, Birmingham, 1862; 1st prize, Islington, 1863; breeder, Hon. D. Plunket.
§§This dog was sold at Dyer's at auction, for £73 10s.

All sportsmen interested in the breeding of the red Irish setter, so rare in this country in purity, will be pleased to learn that we have it in all its perfection on this side of the Atlantic.

LAVERACKS IN AMERICA.

MR. LAVERACK'S REPLY.

BROUGHALL COTTAGE, WHITCHURCH, SHROPSHIRE, England, October 8th, 1875.

EDITOR FOREST AND STREAM:—

On my return from my shooting quarters—Tarbetness in Tain, Ross-shire, Scotland—I read in your columns an article signed G. T. Teasdale Buckell, who acts in the capacity of trainer, breaker, and salesman for Mr. Llewellyn. But for the reasons hereinafter given I should treat this writer's article as I shall treat everything emanating from that source—with the same silent indifference with which his similar attacks have been regarded by me in England.

In this communication, dated August 28th, 1875, it is stated that Fairy, when the property of Mr. Llewellyn, won, etc. I here most positively state that Fairy *never was out and out the bona fide property* of Mr. Llewellyn, and I still retain letters of the latter to prove this assertion. He was repeatedly told, both personally and in writing, that I would not sell for any money either Fairy, or her brother, Pedigree, which dogs, when youngsters, I loaned to him conditionally. In one of his letters he asks if Fairy might be called his, for trials, in reality mine for breeding purposes. He did exhibit her at a Welch show where, I believe, she took first prize, and also at Birmingham, where she took second. This was done without consulting me, and I wrote him that he had no right to exhibit her.

Of Pride of the Border, Buckell sneeringly says: "In this country he never won a prize, though often exhibited." It is true Pride was exhibited twice—never more; and everyone knows the prejudice here against liver color. But I have seen as good and as handsome livers as any, and if a dog has a good formation, working properties, and pedigree, I should never object to color. As a stud dog he is invaluable; his stock in England are inferior to none. Blue Prince, his son, is a wonderful worker, both on grouse and partridge. Mr. Dainty Hollin's Silk, the most powerful setter I know, is a daughter of Pride's, and his Tory is a son, both out of Dickens' Belle. Peter, referred to in B.'s article, is also by Pride. Gentlemen who have shot over him in Scotland—Messrs. Arkcoll, Maidstone, Kent; Ellis, the Court Lodge, Yalding, Kent; Robins, 53 Nile street, Sunderland; Dickens, owner of Belle (dam of Peter); and Murray, at Port Mahonack, Tarbetness, and my keeper, Sunderland—can all testify to Pride's merits in the field. These gentlemen's testimony is certainly of far more weight than a man's in Buckell's position, and the motives which cause him to traduce an animal of which he knows nothing, except his success in America, are too transparent to deceive. Envy and jealousy can go no further.

I reluctantly notice the silly charge that the most successful Laveracks of late years were not bred by me, for so weak an invention of the adversary is almost beneath contempt. That I have not always chosen to exhibit, is certainly my own business; and that dogs of my pure blood have been successful, by whomsoever exhibited, one would suppose is equally to the credit of the Laverack blood. Last year, of my three entries at Crystal Palace, Old Dash took champion prize, Blue Prince took second, to Hemming's Rock 1st, (of my own blood, though bred by Mr. Pilkington), and Cora a third prize. My Old Dash was, as is well known, the sire of Pilkington's Dash, whose dam, Lill, was a Laverack. I bred both the sire (Pride) and the dam (Belle) of Mr. Dickens' Peter, whose winnings my detractor would distort into triumphs over me! Was there ever such a lamentable or more futile exhibition of ridiculous malice? Can it be that this pitiable rage comes alone from envy of Pride's and Fairy's successes in America? or has it other causes connected with the history of one or both of those dogs, than which I herein state there are no better or purer bred in my possession, nor in any kennel in England?

And now for the cream of Buckell's impudence. He gives as a reason against breeding Laveracks that "it is nearly impossible to breed them, owing to their excessive weakness when young." A more slanderous and gross assertion was never penned! No breed are stronger in constitution, better feeders, or more healthy. He may not know how to mate, or breed, or rear them. But, then, how has he the assurance to sell and send to America dogs said to be pure Laveracks, whose progeny, if his charges (or confessions) are true, are worthless and cannot be reared? Is not this peculiar? Can it be honest? I will now give my reasons for writing this lengthy letter. They are:

To correct misstatements made to annoy at so great a distance an old sportsman, who prudently, as the record shows, preferred to claim and recover his own.

To expose an unworthy attempt to detract from the merits of Mr. Raymond's dog.

To defend the character of my breed of setters against a wholly uncalled for and unprovoked attack, made by way of a distant country; and To place the plain facts before the American public, satisfied that their verdict will do me justice.

Please distinctly understand that I have no dogs for sale, and nothing herein is set forth intended to eulogize any I may have. What I have written is written in self-defense against injustice.

In conclusion, I take this opportunity to state I have no feelings but of pleasure and gratification at any gentlemen here or in America breeding dogs equal or superior to mine from the pure stock, which originally came from me, or any crosses the result of admixture of blood. As for me, I shall keep the Laverack blood pure as long as I live.

Sincerely yours,

E. LAVERACK.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

Striped Bass, *Roccus lineatus*. Weakfish, *Cynoscion regalis*.
SOUTHERN WATERS.
Pompano, *Trachinotus carolinus*. Grouper, *Epinephelus nigratus*.
Drum (two species.) Family *Sciaenidae*. Trout (black bass,) *Centropomus niger*.
Kingfish, *Menticistrus nebulosus*. Striped Bass or Rockfish, *Roccus lineatus*.
Sea Bass, *Sciaenops ocellatus*.
Sheepshead, *Archosargus probatocephalus*. Tailorfish, *Pomatomus saltatrix*.
Black bass, *Micropterus salmoides*.
Snapper, *Lutjanus caxus*. *M. nigricans*.

[Under the head of "Game and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

FISH IN MARKET.—The supply during the week has been fair, although we note a falling off in variety. The smacks have followed the bluefish south, and below Norfolk they are taking fine large fish weighing from eight to twelve pounds in abundance; price 12½ cents per pound. Some fine hauls of stripped bass have been taken on the Long Island coast during the week, one man taking 1,000 pounds at one haul; they retail for 20 to 25 cents. Green smelts from Maine are very abundant, and have sold as low as 15 cents, although the larger fish bring 20 cents per pound; salmon, frozen, are worth 50 cents; mackerel, one catch coming from Newport, bring 25 cents each; white perch, 18 cents per pound; Spanish mackerel, frozen, 50 cents; tom-cods, 10 cents; halibut, 20 cents; haddock, 16 cents; codfish, 10 cents; blackfish, 10 cents; flounders, 10

cents; eels, 18 cents; sheephead, frozen, 25 cents; whitefish, 18 cents; pickerel, 15 cents; salmon trout, 18 cents; hard shell crabs, \$5. per 100; scollops, \$1. per gallon; lobsters, (Boston), 10 cents per pound; green turtle, from Key West, 20 cents; terrapin, from Savannah, \$12. per dozen.

BLUEFISH OFF THE CAPES.—On the 29th ult., says the *Lewes, Delaware, Light*, the bluefish were again chasing and devouring the moss bunters, and thousands in their efforts to escape the ravages of the bluefish ran high and dry on the beach. Near the little light-house on the cape where the high tides overflow into the valley, several thousand bushels sought refuge, but were even followed over the flats by their formidable enemies, and many of the latter were caught on the flat sands, where the water was but a few inches deep. After the tide fell off, these fish were left to die, and many of them were hauled off into the country by the farmers, who use them as a fertilizer. It is somewhat singular that these fish should make their appearance here in the manner stated—just at this season this year and last—while nothing like it was ever seen or heard of before, at least along the coast.

—The anglers of the Susquehanna have given up bass fishing for the season. A plenty of small fry are observed in the river. During this season a few fish weighing three and a half to four pounds have been taken.

—Some of the Bridgehampton fishermen have had extraordinary luck recently. One night last week Lawrence Jennings caught, with a seine, at the inlet to Mecox Bay, between 400 and 500 dozen eels. During the week he caught about 900 dozen. Luther Burnett caught in the ocean, opposite the same inlet, on the morning of November 2nd, 4,000 pounds of striped bass.

—New London black fishermen report brilliant catches; that is, of blackfish.

—A cuttle fish or octopus, measuring eighteen inches across and three feet in length was caught at St. Augustine, a few days since.

—Skill in angling is by no means confined to the male sex. For instance, Lady Dufferin, wife of the Governor-General of Canada, is one of the most successful and expert salmon anglers known. We recall to mind another lady, the wife of a prominent lawyer in Washington city, who keeps always on hand a fishing suit, even to the boots. Wherever she goes, in the season, she carries with her rods, lines, &c.; manufactures her own artificial flies, and will talk "fish" from morning till night; she has most entertaining reminiscences to relate of her exploits in the Adirondacks and the interior of Pennsylvania. She is a niece of Daniel Webster, and has all the enthusiastic delight in fishing, possessed by her illustrious relative. Did our angling friends ever read Curtis' Life of Webster? He, Webster, had been selected to deliver the oration on the occasion of the laying of the corner stone of the Bunker Hill Monument. Just previous to its delivery he had gone on a fishing excursion to the coast of New Hampshire. By a single throw of his line he caught two immense fish at the same instant. Just at the time he was conning over his oration, and addressing the fish he exclaimed: "venerable men (the Revolutionary soldiers presumed to be present) you have come down to us from a past generation."

THE OREGON SALMON FISHERIES.—Some idea of the magnitude of the fisheries on the Columbia River can be obtained from the fact that during the past season of three months 350,000 cases of canned salmon, each containing forty-eight pounds were prepared for market, the aggregate value of which is nearly \$2,000,000. The men employed in catching the fish received from twenty to twenty-five cents each salmon, some of them last season earning during the season \$1,500. About 10,000 were caught, for which over \$200,000 were paid. A considerable number of salmon are also prepared in other ways for the market—salted, smoked and dried—probably one-third as many more. The salmon fisheries were first established on the Columbia in 1851, and are increasing every year. The oil of the fish is utilized at some of the fisheries, and sold for railroad and other purposes. The profit to the packers last season amounted to \$1 per case, one establishment putting up 40,000 cases.

COMPARATIVE SIZE OF TROUT IN EUROPE AND AMERICA.—The river, or yellow trout of Europe, *Salmo fario*, seems to vary in size in different waters. Larger specimens are taken in the Thames than elsewhere; those of five and six pounds appear to be common; eight or ten pound fish are occasionally reported in the sporting papers, and that trout weighing as much as fifteen or eighteen pounds have been killed in that river, is a well established fact. These large trout are in England usually killed with a minnow upon trolling tackle. In other English rivers the trout seldom go over seven pounds, and in Scotland, to judge from the reports of fisheries in the "*Field*," they will probably not average more than three or four ounces. Of course large fish are sometimes taken. Stoddart, in "*The Angler's Companion*," mentions one taken in the Don, 1853, which weighed eleven pounds; in the Tweed, 1850, seven pounds; in the Till, 1849, seven and a half pounds; Teviot, 1848, six and a half pounds. The Leet, tributary of the Tweed, Stoddart says, has the largest trout that he is acquainted with, and in 1841 he took there with the fly, twenty-six trout that weighed twenty-nine pounds; in 1846, forty-one trout, twelve of which weighed a pound each, and one of three pounds. Professor Wilson (a great angler) killed in Rutherford water, with minnow, eighteen trout, of one and half pounds each, and as many of one pound, but these trout are evidently considered by the writer as being of extraordinary size.

It is probable that the size of fish is diminishing in England, as in the United States, and from the same causes, the constantly increasing number of anglers, and the increasing demand, which encourages poaching and fishing out of season. The largest trout taken in the Thames in 1875, weighed ten pounds—others of nine, eight, seven, six and five, are reported. The whole number taken in this river for the season being fifty-seven fish, a large proportion of them under four pounds.

It was asserted by H. W. Herbert, the first writer who treated at length of our game fishes, that the American brook trout, *Salmo fontinalis*, was much smaller than the European species, but Herbert was familiar only with the well fished streams of New York and New England. Since his day, the Rangely Lakes and Moosehead waters have been opened to the angler, where, according to Wm. C. Prime, trout of seven, eight, ten and even eleven pounds have been taken; Lake Superior, in the South shore streams, of which trout of four to six pounds are taken every year; on the north shore of this lake they are found still larger; in the Nepigon, a day's catch of sixty trout has averaged three pounds; five, six and seven pounders are common, and *FOREST AND STREAM* reports a true speckled trout of seventeen pounds weight killed in these waters, a size fully equal to the largest Thames trout. About 1847, a brook trout was taken at the Sault Ste. Marie, by an Indian, which weighed eight pounds. It was brought to Major Kingsbury, commanding at the Fort, from whom the writer had the statement.

In the lakes and streams of the Rocky Mountains, very large trout have been taken. In the head waters of the Platte and in Lake Tahoe up to ten and twelve pounds, as we have been informed, but it is possible that these were a different species from *S. fontinalis*; perhaps *S. Lewisii*.

There is a river in Canada called the Nouvelle, which flows into the Bay of Canada, where the trout appear to be all large. The writer, in 1871, killed there one evening with the fly, a string of trout, fifteen in number, which weighed thirty-seven and a half pounds, none of them less than two pounds.

A late Boston paper reports the capture of a brook trout in the Adirondack waters last Summer which weighed over seven pounds. Such a fish as this was not supposed to exist in those much vexed waters, except, perhaps in the Rev. Mr. Murray's romances. Perhaps the big trout there, as in the Thames, are so thoroughly educated as to be proof against the wiles of common anglers, and only succumb to the most skillful, under peculiar conditions, which seldom occur.

THE FISHERIES.—There have been 69 arrivals of the fleet the past week as follows: 20 from Georges, 25 from the Banks, 9 from the Bay, and 15 from off shore. The receipts are 160,000 pounds Georges codfish; 20,000 pounds Georges halibut; 1,160,000 pounds Bank codfish; 1,500 barrels Bay mackerel and 2,000 barrels of shore mackerel. The mackerel fleet are hauling up, the business being about over for the season. The Newfoundland herring business will now engage attention. Some thirty-five of the staunchest vessels in the fleet will engage therein and be ready to start about the last of the month in season to supply the early Georges fleet with bait.—*Cape Ann Advertiser*, Nov. 5th.

—The following is a list of bass caught by Thomas Wians, at Newport, during the season of 1875:

—A Florida correspondent of the *Atlanta, Ga., Herald*, in the course of an interesting communication regarding Florida fisheries, says:—"The best fishermen in Florida are the pelicans and ospreys. A pelican consumes about a peck of fish a day. They flock about the straits and inlets by thousands. Supposing there are 2,000,000 pelicans in Florida—and there are certainly more than that—they would eat 500,000 bushels of fish each day, or 182,500,000 bushels per year. The millions upon millions of white and blue cranes, herons, curlews, gulls, fishhawks, kingfishers, and other water fowl, devour thousands of bushels of fish every twenty-four hours. An experienced cracker estimated that 700,000 bushels of fish a day are required to feed the birds of Florida alone. This would make 225,500,000 bushels each year. Add to this the billions of fish swallowed by sharks, bass and others, and the sum total will reach nearly 2,000,000,000 bushels, destroyed by feathered and finny fishermen on the peninsula in twelve months. At first glance these figures appear enormous, but let any man make his own estimate, and carefully figure it up, and he will find them under, instead of over."

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

YACHTING IN ENGLAND.—Much confusion has been caused in England, and no little annoyance to yacht owners, by the different regulations regarding measurement existing with various clubs, and which has led during the past season to unpleasant results; in one case, at least, the dispute being carried into court. The number of yacht clubs with and without the prefix of "royal" in the empire is enormous, and it is the custom among owners of racing cutters to cruise from one port to another during the regatta season and enter their vessels for the various cups. To obviate the difficulty arising from a variety of racing rules, an association has been formed to be known as the Yacht Racing Association, with the object of putting yacht racing in somewhat the same position as horse racing, by forming an association which should elect a committee whose operations would be similar in nature to those of the committee of the Jockey Club. The duties of this committee will consist in deciding disputed points, in codifying existing yacht racing rules and to make such alterations and modifications as they may deem desirable, and to classify yachts for racing. The association now numbers over one hundred members, including the owners of all the best known racing yachts. The advantages of this new arrangement are that a universal system of measurement and rules will be adopted, and by which all yacht matches will be governed. The penalty for sailing in any regatta where these regulations are not in force is to be expulsion, and the question arises, What will English yachts do when they come to this country? Probably their sailing under our rules will be overlooked. It is anticipated that every yacht race sailed in British waters during 1876 will be governed by the new rules, and perfect harmony be the result of the new departure.

A BOOK FOR YOUNG YACHTSMEN.—There is nothing in the literary line which would better fill a long needed want than some intelligible book on the construction, rigging, and sailing of yachts and small boats. There are several English works on the subject—such, for instance, as "*Vanderdecken's Yacht Sailor*"—but the methods of building and rigging are so different to those pertaining to this country that the book is valueless to our young yachtsmen. We are in constant receipt of inquiries on this subject, and will hail with pleasure the appearance of some handy little volume which will describe in plain language the whole mode of building, rigging, sail-making, and navigation.

ROWING IN ENGLAND.—A rowing match for £200 a side and the championship of the Thames occurred on that river on the 15th inst. The contestants were Joseph H. Sadler, of London, the present holder of the championship, and R. W. Boyd, of Gateshead, Durham. The course was the usual one, from Putney to Mortlake, a distance of about four miles and a quarter. The race was won by Sadler. Considerable importance was attached in aquatic circles to the race and the surroundings, as, whether defeated or victorious, Sadler had announced that he would never go into training again. Sadler, the winner, is thirty-six years of age, stands five feet ten inches in height, and weighs 160 pounds. He rowed in this country in 1870. He has defeated all comers for the championship of England since 1870. Boyd is twenty years of age, stands five feet nine inches high, and scaled, when he stepped into his boat, 158 pounds. Boyd recently beat Sadler in a mile race for £200 on the Tyne, after an obstinate struggle, by three-quarters of a length in 6 minutes 10½ seconds. With his partner, Henry Lumsden, he also won the pair-oared championship of England.

The Colleges.

YALE—In the last game of base ball in the series for the championship between the Juniors and Sophomores, the former were victorious by a score of 8 to 13.

The crew which is to represent the college in the regatta of 1876 has been chosen, and have commenced gymnasium work in earnest. Three of the men pulled in last year's regatta, and two were in the Freshmen crew of 1874.

In the foot ball match with Rutgers, on last Saturday week, Rutgers won the first goal after a struggle lasting one hour and twenty-eight minutes. Yale won the four following goals and the game.

HARVARD.—A rifle club, composed of undergraduates, will be formed this Winter, and target practice will be begun early in the Spring. A range has been secured not far from the Square, and all obstacles to the formation of the club are now removed.

The candidates for the University crew are at present being coached in pair oars by Mr. Loring, '69. The men run four miles three evenings in the week, but the captain expects them soon to begin to run to Fresh Pond, around the pond, and back to the Square, a distance of six miles. A boat with stationary seats is being prepared for the crew, and the captain intends to keep them on the river until the ice closes the channel, which will probably not occur before Christmas.

A very spirited game of football was played on Saturday at New Haven with a picked fifteen of Yale, in which Harvard was victorious, making four goals and four touchdowns, Yale making neither goal or touch-down.

PRINCETON.—The foot ball twenty of Columbia played the University twenty on the 12th. The result was a victory for Princeton by a score of 6 goals to 2. Columbia won the first and fourth goals. The playing of Lyman, Weeks, Price, Webb, and Train, of Columbia, was especially good. On the Princeton side those who distinguished themselves were Denny, Cowart, Whittlesey, Mann, Woods, Scott, Ridgeley, and Parmley, the renowned "Princeton giant" of last Summer. Our twenty will probably play in New York next Saturday against Columbia, though definite arrangements have not yet been made. LOUNGER.

AMHERST.—The "Aggies" devoted two afternoons to athletics recently. The best figures were those for the mile run, which was won in 5:18, and the standing high jump of 4½ feet.

UNIVERSITY OF PENNSYLVANIA.—The Athletic Association of this college held its semi-annual contests on the grounds of the North Philadelphia Base Ball Club, at Oak Lane Station, on the 6th inst. The entries and winners for the various events were as follows:—

First. One hundred yards dash—Fourteen entries, won by H. L. Geyelin, '77. Time, 10½ sec.

Second. Standing jump—Three entries, won by H. L. Willoughby. Distance, 9 ft. 6 in.

Third. Throwing the hammer, weight 9 pounds—Four entries, won by H. L. Willoughby, '77. Distance, 77 ft. 8½ in.

Fourth. Three-mile walk—Five entries, won by Ernest Law, '77. Time, 27 min. 33 sec.

Fifth. Running high jump—Three entries, won by Jas. Bond, '77. Height, 4 ft. 6 in.

Sixth. Throwing base ball—Five entries, won by H. W. Andrews, '76. Distance, 345 ft. 4 in.

Seventh. Running long jump—Three entries, won by H. L. Willoughby, '77. Distance, 17 ft. 10 in.

Eighth. Hurdle race—Three entries, won by A. W. Bidle, medical department. Time, 15½ sec.

Ninth. Running hop, step and jump—Two entries, won by H. L. Willoughby. Distance, 37 ft.

Tenth. One mile running race—Four entries, won by Addinell Hewson, Jr., '76. Time, 5 min. 42 sec.

Geyelin's time in the 100 yards dash was half a second less than that made at Saratoga in the inter-collegiate contests of July last. The following gentlemen were the judges:—C. P. Blight, '76; G. P. Philler, '77; J. C. Patterson, '78; L. H. Walsh, '79. Timekeepers, W. H. Patterson, '76, and L. H. W. Walsh, '79.

Rational Pastimes.

BASE BALL NOTES.—The amateurs took advantage of the fine weather on Saturday last to play a match at Prospect Park, at which over a thousand people were gratified spectators, the fielding, as a general thing, being first class. The contestants were leading amateurs of Brooklyn, who played under the title of the "old Nassaus and Anatees," the former winning in a full nine innings game by 8 to 2. On Saturday the Nassau team will play the Chelseas, and a good game is expected, provided the weather is favorable.

The Lowell club have been declared amateur champions of Massachusetts, and the Olympics, of Paterson, have also been awarded the champion flag of New Jersey.

The professional clubs are requested to send in their championship tables to Mr. Bulkley, of the Hartford club, so as to enable the committee to award the pennant.

At the Professional Convention, in March next, only one club will be allowed to enter for the pennant from each city.

THE BILLIARD TOURNAMENT.—On last Monday Tammany Hall was largely attended by a very respectable assemblage of ladies and gentlemen, the occasion being the opening night of the second grand tournament at the French three ball game. The contestants include those noted experts—Daly, Garnier, the Dion brothers, Rudolph, Slosson, and a "colt" named Sexton, who is a new candidate for billiard fame. The prizes amount to \$3,500, of which \$3,000 were given for the purpose by Mr. Lorrillard, and \$500 by Delaney, the billiard manufacturer, Garnier having the tourney in charge. Games will be played afternoon and evening until the 23d instant. The first contestants to enter the lists were the Dion brothers, and after an ordinarily played game Cyrille defeated his brother Joseph by a score of 300 to 235, Cyrille's average being ten, and his best run 43; Joe's best run was forty-eight. The next competitors were Daly and Rudolph, and, though the game was close up to the seventeenth inning, in the nineteenth Daly virtually won by a splendid run of 124, he finally coming in victor by 300 to 125, it being the worst defeat Rudolph has sustained in a billiard tournament. On Tuesday Sexton and Slosson entered the lists, but our paper went to press before any result was arrived at. The arrangements of the tournament are excellent, and some very fine play is likely to mark the contests.

BICYCLING.—We published recently an account of a long ride on a bicycle, or velocipede, made by a gentleman in Ohio, and which was unquestionably the best on record in this country. This pastime, which appears to have been but short lived with us, has taken firm hold across the water, and apparently ranks next to boating among athletic sports. Since we noticed the event alluded to, Mr. J. Keene, in a match at the Lillie Bridge grounds, near London, has covered ten miles in the unprecedented time of thirty-three minutes, thirty-five seconds and a half. Some time since Lieutenant Zubowitz, of the Austrian army, rode his mare Ceradoc from Vienna to Paris, a distance of 650 miles, in fourteen days, which was considered—very unjustly, we think—a remarkable feat. A few weeks since one Mr. Laumaille rode a bicycle over the same ground, only reversing the route, in twelve days and four hours, over horrible roads, rough and knee deep in places with mud. Not to be outdone, Mr. Stanton, the English long

distance champion, commenced a fortnight since to cover the same distance, but in seven days. On the first day he rode, including stoppages, 100 miles and 1,200 yards between 6:20 A. M. and 5 P. M., and in three days (since which time we have no report) he had covered, between nearly the same hours, 296 miles. This riding, however, was being done on a prepared path, not on the road. The feat, if accomplished, will certainly be a remarkable instance of endurance.

ANNOUNCEMENTS.

Miss Bessie Turner, so famous as the piquant witness in the Beecher-Tilton trial, has written a book entitled "A Woman in the Case," which Carleton & Co. will publish this week, with a portrait of the author, photographed by Bierstadt.

Julie P. Smith's new novel, "Courtship and Farming," is in the press of Carleton & Co. The other books by this author, including "Widow Goldsmith's Daughter," etc., have sold to the extent of nearly 40,000 copies.

"Betsey and I are Out" had such marvelous success that the author is now printing an illustrated book for young people entitled "Little Folks Letters." Carleton & Co. will publish it.

WEST INDIA PICKLES is the spicy title given by W. P. Talboys to a humorous book, in the press of Carleton & Co., being the diary of a yacht cruise last Winter among the West India Islands.

Mrs. Marie Darlington Deslonde, a well-known New Orleans society belle, is about to publish, with Carleton & Co., a novel, entitled "The Miller of Silcot Mill."

PETERSON'S DETECTOR. This excellent publication, of incalculable advantage to every one in business, is even more perfect at the present time than it has been in the past, and insures all against taking counterfeit money. Price only \$1.50 a year. Send for a sample copy, free.

As there is a great furore now about Old Coins, we would advise all to get a copy of "Peterson's Coin Book," containing perfect fac simile impressions of the coins of the world. It will be sent by mail, postage paid, on receipt of \$1. By T. B. Peterson & Bros., Philadelphia, Pa.

Answers To Correspondents.

No Notice Taken of Anonymous Communications.

W. M. F., Newport.—See Wingate's Manual, or the rules of the Amateur Rifle Club.

HENRY YINGLING, Hanover.—You had better write to Livingston Stone, Charlestown, N. H., for information about your black bass pond.

LYMAN, Boston.—For full information about Currituck, address either Andrew Powell, 31 Park Row, New York, or George H. Wild, Red Bank, New Jersey.

CARTER.—Will you kindly inform me which work is the best, or a good one, on the birds of North America, both game and song? Ans. Baird, Brewer and Ridgway.

S., Poughkeepsie.—Is not the snaring of pheasants in violation of law? Ans. Yes; in this State. In Massachusetts and Connecticut one can snare on his own premises at certain seasons.

J. N. R.—Where can I obtain the oarlocks, such as are used on the Adirondack or Long Lake boats; they are cast, I believe? Ans. Of Peck & Snyder, No. 126 Nassau street, this city.

H. E., Hartford, Conn.—We do not know of any arm yet filling the requirements you ask for. We have urged makers to manufacture them, but heretofore without success. It could, however, be readily made for you.

J. W., New York.—You do not state the distances at which the shooting was made. Conlin's targets are the exact reductions of the Creedmoor ones, and their size is calculated according to proportionate distances.

P. H. R., New York.—Please inform me in your next issue to whom I have to apply in regard to the next Bench Show in Brooklyn? I have a dachshund which I would like to exhibit. Ans. Mr. Thomas Smith, Stony Brook, L. I.

CONSTANT READER.—You will confer a favor by informing me where there is shooting of any kind within a distance of twenty miles of New York? Ans. We will leave it to any of our readers if this "Constant Reader" is what he represents himself to be.

MOREWET, Bridgeport.—Can you inform me if the Cape Ann oilcloth suits are made to measure, and where they can be ordered, and oblige? Ans. Address L. Ennis, Nos. 116 and 117 South street, this city; or Bennett & Marr, Gloucester, Mass.

L. W. F., Middletown.—Could satisfactory results be obtained by breaking a pup on partridge in locations where quail are not abundant? Ans. Yes; a dog well broken on ruffed grouse (partridges) would surely be a good quail dog.

H. F., New York.—A 22 calibre rifle should shoot exceedingly close at the range you mention. Weight of projectile and proportionate charge of powder at the distance you state give almost a straight trajectory, theoretically. Consult the scores made at Conlin's gallery.

E. B. C., Beverly, Mass.—1. Would you prefer an English gun costing \$180, to an American gun costing the same? 2. Is the 10 bore better for general shooting than 12 bore? Ans. It would depend upon who made the gun and the style of it. 2. We prefer 12 gauge for upland shooting.

QUID MELIUS, New York.—1. Would you advise me to buy a \$100 English gun, in preference to a \$75 American gun? 2. Would a \$100 American gun be as good as a \$100 English gun. Ans. 1. Yes. 2. You could probably buy a second-hand English gun for that price which would suit you better.

OREGON INQUIRERS.—Correspondents inquiring about the hunting and fishing of Oregon, and the class of animals indigenous to the region, are referred to the long series of exhaustive papers on the zoology of that country, which appeared in our editions of 1874, over the "pen" name of "Mortimer Kerry."

J. E., New Bedford.—Will you give me the address of some parties that are owners of the best fox hounds in the country—dogs that have the best nose, most endurance and good speed? I want the very best that can be got—dogs that will follow a fox, but not hares and rabbits. Ans. Address Peter Knox, Newton, Sussex county, N. J.

J. L. S., Hamorton, Pa.—Can you recommend to me a reliable and good party in New York city to whom I could ship canvas back and other ducks from Norfolk this Winter? I think of going near there to remain through the duck season, and want to learn of a party from whom I can get regular returns. Ans. Messrs. E. & A. Robbins, Fulton Market, this city.

A. H., New York.—Where, near New York, can I find good duck shooting for the 25th? Is Babylon, L. I., a good place? Are there any boats to hire, and is there any hotel or farm house where a party of four or five could stop all night? Ans. Babylon is a fair place, and you will find every convenience there; or go on a little further to Sayville. Go to Ike Bedell's and inquire for Capt. Ed. Danes.

H. H. R., Rockford, Ill.—I wish to know if the water that is carried through cast iron pipes, if it is continually changing, would do to use for a trout pond? We have the Holly Water Works here, and if the water can be used I wish to start a pond, as I have a good location for

one. Who can give me the necessary information and fry for this? Ans. Address T. B. Ferguson, 192 North Charles street, Baltimore, or Thompson & Tagg, New Hope, Bucks county, Pa.

SECRETARY LUZERNE CO. SPORTSMEN'S CLUB, Wilkesbarre, Pa.—Will you inform us where we can buy live quail (bob whites), also live pinnated grouse (prairie chickens)? We desire to stock certain portions of our county with these birds, and do not know where we can procure them. Ans. From Kaiser & Co., 10 Ohio street, Sedalia, Mo.; have both quail and pinnated grouse. Live birds can often be bought of Whiteley & Morris, Washington Market, between Barclay and Vesey streets, this city. Price about \$4 per dozen.

G. H., W., Cornwall, Ont.—What will it cost to have the choke bore barrels made for my gun such as you mention? My barrels are too thin to bore over; also, do you think a pair of 10 gauge barrels could be fitted to it, the gauge being now No. 12? An ordinary quality of barrels would suit me well enough, so long as they would stand 3½ drachms of strong rifle powder. I think the decarbonized steel would do as well as any. Ans. A good pair of choke bored barrels of 12 gauge can be fitted to your stock for \$25, with which you could use 3½ or 4 drachms of the best powder.

GERRY, New York.—Will you please inform me where I can go duck shooting on Thanksgiving, some place within twenty-five or thirty miles of this city, so that I could leave on a late train the evening before; where to stop, the name of some gunner I might write to to meet me who would furnish boat, decoys, etc. What is about the usual price paid to a gunner for the day? Ans. Write to W. E. Lane, Good Ground, L. I., or Capt. Ed. Dane, Sayville, L. I. Both have decoys, etc.; charge for same and batteries from \$5 to \$6 per day. We know of no place nearer.

S., New Haven, Ct.—Please inform me what locality in the South to go to for the best duck shooting—canvas back and other ducks. I should want to find some place where the shooting ground is not all leased or bought up, and where I could shoot in a sportsmanlike manner and not be molested. What should you consider a fair average of a day's sport in the locality you may name? Ans. If you do not desire to visit Florida, we should decidedly recommend Port Royal, S. C., or Newbern, N. C. Every accommodation can be had at either place, with ducks and other wild fowl in superabundance.

NEOPHYTE, Brooklyn.—Will you be kind enough to inform me where, on the line of the Pennsylvania Railroad, between New York and Philadelphia, would be the best place to drop off for a day's shooting? Some civilized settlement where one could engage a liberal-minded, modest-priced, intelligent and well-posted guide with a good dog preferred? Ans. You could find but little shooting on the line of the road you mention. But on the Camden and Amboy route, at Old Bridge, or Spottswood, if you could find a good guide with a good dog, you could get some good shooting, but we are not acquainted with such a person.

N. J. S., London, Ont.—I have a very handsome and lively setter dog over a year old; he has a fine nose and great endurance, but is unbroken; I have no time myself to attend to him, as I only get an occasional day's shooting. I ask, through the medium of your paper, if there are any dog breakers in this section of Canada? I have inquired all around, but can find none. What is the usual fee for breaking a dog? Woodcock, snipe and partridge are the principal game in this immediate district. Ans. We are not acquainted with any breaker in Canada, but could have your setter broken by a breaker in New Jersey. The cost of breaking depends upon the length of time required to perfect him.

INQUIRER, Grand Central Depot, New York.—You must elevate the sight beyond 60 yards. A ball begins to fall the moment it leaves the barrel. If you put in too large a charge of powder your ball is liable to tumble (go end over end). If you should lengthen the chamber for 70 grains, increase the ball in proportion. We would not advise, however, your having the rifle rechambered, unless you want to fire over 200 yards. We think we know your gun, and with the charges you have, most accurate shooting has been done at Creedmoor. If you will feel your way patiently with your rifle there is no doubt but that in time you will secure that accuracy.

NIMROD, Boston.—The following is the result of testing the W. W. Greener choke bore gun at 40 yards, at 30 inch target, with 4 drachms of powder and 1½ oz. No. 6 shot: Left barrel—234 pellets within the circle; right barrel—223 pellets within the circle. I find the best loading for my gun to be 4 or 5 drachms of powder and 1½ oz. shot, with the pink-edged wads on the powder, and one over the shot for long range and concentration. For scattering the shot, I make use of 3 drachms of powder and 1 to 1½ oz. shot, one pink-edged wad over the powder and the same over the shot. I have made a very good target at 60 yards, but have not the record at hand.

TALL HENRY, Thomaston, Conn.—Can I stop a man from snaring upon land which does not belong to him, but upon which he has the owner's permission to snare? I have a Tooley gun, bored on the old system, which, at 40 yards, puts 175 No. 6 shot and 200 No. 7 into a 30-inch circle. I have shot partridges with it at 75 and 80 yards; but with a concentrator I can kill them at 100 yards. How is that? Ans. We are inclined to think you can. The Connecticut game law is very explicit as to giving permission only to land owners to snare only upon their own ground. At all events it would be a good test case, and perhaps lead to measures that would stop snaring altogether. 2d. You should be well satisfied with your gun; no choke bore could equal it—but those paces must have been very short for a tall man.

SUB, Chicago.—Please inform me as to the greatest number of consecutive bullseyes made at 500 yards? Ans. Some one in Scotland—Mr. Ross, we think—is said to have made 18 bullseyes at 500 yards; but we have looked over the records time and again, and have not yet found it. We think Col. J. A. Shaffer, of your Chicago Rifle Club, has done the best shooting at 500 yards we have yet seen recorded. We publish the Colonel's score to-day—22 bullseyes out of 23 shots, 114 in a possible 115. There is getting to be a rule, as in racing, that scores, though credited, do not have full weight, unless recorded in a positive match. Mr. Farwell made, on October 23d, at Creedmoor, 20 consecutive bullseyes at 800 yards; 5 of them on the match, the other 17 not scored on the match.

CRACK SHOT, Philadelphia.—1. Is the Ballard rifle that Wm. Read & Sons, of Boston, advertise to sell for \$18, finished as well as a Wesson, and how do they compare in shooting qualities? 2. Can a skeleton stock be obtained that will fit a Colt revolver, and if so, can they be taken off and put on at will? Where can they be had, and what would be the cost? 3. What is the price of a muzzle loading rifle, such as are used by backwoodsmen? Can Belmont oil be obtained in Philadelphia, and will it prevent fire-arms rusting in damp climates? Ans. 1. The Ballard rifle sold by Wm. Read & Sons is an excellent gun for the price; but the Wesson rifle is a higher finished gun. Both are good shooting rifles. 2. Any of the gunmakers advertising in our columns can have a skeleton stock fitted to your revolver, the cost of which would be about \$5. 3. About \$30. 4. Yes; from John Krider, Second and Walnut streets, Philadelphia.

C. A. S., Shakopee, Minn.—Will you please explain to me the meaning of such figures as appear below, in an account of rifle shooting at Croton Falls, taken from 3 ten shot strings 220 yards. 1st, G. W. F., 1 and 1-16 inch, 871. 2d, 14 31, etc.. My idea of string measurement is, measuring from centre to centre, and the above figures are all Greek to me. Again, is not an average of two inches on a five or ten shot string, 100 yards, off-hand, open sight, first-class shooting? To what association should I write to get rules, etc., containing a description of such measurements as reported above, or by which such shoots are governed? Ans. The American backwoodsman, in measuring a string of shots, would use a string, measuring the distance from the center of mark to the center of shot. Thus in diagram 0—1—2—3, 0 is the bullseye. If the ball struck at 1, it would measure 1; if the second shot hit at 3, the whole measure of the two shots would be 1 plus 3, or 4. Records of string shots have been rarely preserved. We think that of two inches to the shot to be excellent. Could not give you any books to refer to.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH-CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[POST OFFICE BOX 2832.]
127 SOUTH THIRD STREET, PHILADELPHIA.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, NOVEMBER 18, 1875.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible. CHARLES HALLOCK, Editor.

WILLIAM C. HARRIS, Business Manager.

THE INTERCOLONIAL RAILWAY.—The recent completion of the Intercolonial Railway of Canada from Moncton, New Brunswick, to Campbellton, gives easy access by an all rail route from Boston to one of the finest hunting and fishing regions of America. Campbellton is situated on famous Restigouche River, about twenty miles above its mouth, where it empties into the Bay Chaleur—the latter being the reservoir of all the splendid salmon rivers of New Brunswick and the southern slope of the Gaspé Peninsula. The Restigouche district is in great part a wilderness, abounding in fur bearing animals, ruffed grouse, and large game like the caribou and moose. No doubt the facilities thus afforded by the Intercolonial will induce an increased number of sportsmen to go thither in coming years, especially when the salmon and trout are taking the fly. Campbellton is also within eighteen miles of the Matapedia, a splendid salmon river, along whose bed the railroad is to run when completed next year, following its course for twenty-five miles, and then continuing on to connect with the present northwestern terminus at St. Flavie. St. Flavie is eighty-five miles east of Rivière du Loup; from that point to Quebec the route is familiar to the tourist. This railroad is claimed to be the best built in America, and cost about \$42,000 per mile. The rails are all of steel, and all bridges of iron. The two branches of the Miramichi and the Restigouche are crossed by seventeen spans of 200 feet each.

WEATHER-WISE.—The Elmira Advertiser claims that frogs are going down into nine feet of water this Fall, and are lining their nests with cotton batting. It says you can look for a Winter which will bend shade trees double and freeze the life out of hitching posts. We don't believe it. The hornets are building their nests close to the ground, and the bluefish have just doubled Cape May. If that don't indicate a mild Winter we don't know what does.

—The third annual festival of the Staten Island Shooting Association takes place at Phenixville on the 25th inst., Thanksgiving Day. A correspondent says: "We shall do away with greased pigs and sack and wheelbarrow racing, and confine ourselves strictly to rifle and pigeon shooting." Frank Johnson, of Bond street, New York, has presented us with a Parlor Health Lift, to be given as a prize in rifle shooting."

FOX AND STAG HUNTING.

A NOTICE has been going the rounds of the papers to the effect that a club was about being formed in this city for the purpose of fox hunting on Long Island or in New Jersey. Aside from the Southern States, where packs of hounds have been for many years used for hunting the fox, the sport in this vicinity has been confined to an occasional run with a scrub pack, the unfortunate fox more frequently meeting his fate at the hands of some farmer armed with a gun than at the teeth of the hounds. Or a "bagman" or half tamed fox has been turned loose to fall an easy prey after a short run. It is a question whether our country, at least this portion of it, affords proper facilities for the prosecution of fox hunting. Admitting the presence of foxes, the gathering together of a suitable pack of dogs, and the still more difficult question of discovering horsemen capable of following them, the greatest stumbling block would be in finding a line of country suitable for riding across without unpleasant contact with owners of the soil. The relations between landlord and tenant are so different in England from anything which obtains with us, the sympathies of the rural population are so strongly with their betters in the prosecution of the national sport, that what would otherwise be looked upon as a serious grievance is easily condoned by a mild application of the hunt funds. Fancy a party of horsemen and pack of hounds riding over a Jersey farmer's land, trampling in his Winter wheat and breaking down his fences; hounds, horses and riders would be in limbo in as short time as it would take to get out a warrant.

Some idea of the magnitude of the sport as carried out in England may be obtained from the fact that there are one hundred and thirty-six packs of foxhounds in England and Wales alone, besides those of Scotland and Ireland. If we average the dogs at thirty couples for each pack—the Pytchley and the Quorn have sixty-four and fifty-five respectively—we find over eight thousand dogs used for fox hunting, which number of course does not include all the young or not entered hounds. Besides these there are ninety-four packs of harriers and innumerable beagles used for hunting hares. The studs for mounting the masters, huntsmen and whippers-in require about as many horses as there are hounds. The number of packs of hounds this year exceeds that of any previous season, and the increase of late years is remarkable. It is a startling fact to consider that on every hunting day of the season, at least twenty thousand men, mounted for the most part on valuable horses, will take part in the chase in Great Britain. This wonderful out-turn is the actual growth of but a century and a half, but in reality is the outcome of the peculiar social system of the country, the law of entail and a large standing army. Officers of every branch of the British service are hunting men, and their skill in the saddle is proverbial.

It is the prosecution of this and kindred manly and athletic sports that has given to England her sturdy, healthful sons; has given them the backbone to stand tropic heats and arctic winters, and has been the main cause, and one in all time recognized by her statesmen, which has enabled her, with only a little island as a *point d'appui*, to extend her arms and her civilization over a large portion of the globe. It is gratifying to know that we are on the same highway, and if this fox hunting scheme should be the nucleus of a larger interest in and expansion of athletic pastimes in this country, it will be a matter for national rejoicing. Gibbon says that the decline of Rome's greatness as a nation commenced from the day when her sons abandoned the sports of the field for the more sensational and vicarious pleasures of the circus and its games.

Apropos of the new fox hunting club, a correspondent writes us suggesting paper hunting as a substitute for the fox until proficiency in the saddle is attained, an idea well worthy of notice. His letter is as follows:—

NEW YORK, November 15th, 1875.

EDITOR FOREST AND STREAM:—

From your late issue I learn a fox hunt is to take place at an early day, after the most approved English fashion. I fear, Mr. Editor, it will prove a hunt without hunters; for I doubt if it is possible to muster a score of respectable cross country riders at a meet near New York. Our young bloods are more accustomed to a gentle canter down Fifth avenue or through the park on a quiet hack, than scurrying across fields, leaping ditches, fences and the like; besides very few horses here are trained for such work, even if riders could be found. I would lead our inexperienced youth by an easier method at first, to acquire the necessary amount of stamina and dash to become a follower of hounds.

In Quebec there is a club called the Stadacona Hunt, which follows—not the hounds—but paper droppings. The day being appointed, a man is sent out some time in advance of the meet to lay the trail and secure the consent of the farmers through whose land it passes; taking care to avoid too trying places, he follows a circuitous route of some miles in extent. The finish is a large pad of paper, which does duty as a brush, and the first to arrive at it is declared the best man of the day, and carries home with him the paper as trophy of his victory. All then return to town, and a good time follows. There is sufficient excitement in the above for the novice, until he could take a five-barred fence without a tremor; and then, and not until then, bring out the hounds. We must creep before we walk, is peculiarly appropriate to fox hunting in this case.

Very truly yours,

G. M. FAIRCHILD.

We have been rather surprised that paper hunting, on foot, has never been taken up by our colleges. It is a sport productive of much amusement, and no healthier exercise could be found.

In addition to fox hunting, we have had a narrow escape from having a stag hunt. The sporting community of Staten Island had a treat in store of this nature, having received a fine deer from Virginia. Unfortunately it died, but they are endeavoring to procure another. The following letter explains the circumstances:—

PORT RICHMOND, November 11th, 1875.

EDITOR FOREST AND STREAM:—

We have just met with a misfortune in the death of a three year old buck, which was presented to the association by my old friend, Captain

Samuel Greenwood, of the schooner Anthony Kelly, belonging to the well known oyster dealers, Van Name Bros. He was captured in the James River by Captain G. and two of his men after an exciting chase and considerable trouble. It appears that in coming down the river, one of the men sang out to the man at the wheel to keep her off, that there was a buck ahead, when Captain G. ran forward and discovered a deer making for the lee shore. He immediately put the helm up, launched the yawl, and away they went, overtaking him just before he reached the shore. Had he swam to the windward he could not have been overtaken, as it was blowing a gale at the time. They rolled the fellow in the boat, and in getting him on his back one of their sweeps was lost overboard, and as they saw no way of reaching the schooner that night against a strong current, they made for a sloop that was at anchor some distance below, and after securing their boat, and while tying their prize, their oar drifted by them and was secured, when they pulled back for the schooner, which had dropped anchor. They put him in the hold, and thought they had properly secured him, but the second day he got loose, and one of the men, who has had considerable experience with these fellows, got down in the hold to secure him, when he made a rush for him and had the Captain not come to his assistance with a ladder, would no doubt have killed him. In the tussle he injured himself, but this was not known until after his death, when he was opened, and they found that an abscess had formed in the upper part of his bowels. It is a great disappointment to us, as we had anticipated giving Staten Island one of the greatest days it has seen for years. We had made arrangements to have Mr. Joseph Donohue's dogs take part in it, and were about coming up to see you, to have you try and get the subscription pack from Long Island. Mr. Tranter, an old sportsman from the "other side," had not been able to sleep thinking what a time was in store for us, and he never left the buck a minute from the time he first showed symptoms of distress until his death. He thought he could save him, but it was all in vain, and the poor fellow died licking his hand. We have written to that prince of sportsmen, Captain Peter Van Name, of Gloucester, Va., to see if he cannot get us another, but I fear there is little hope. We shall, however, have a couple of bag foxes to let go this Winter, and trust you will be on hand this time. Mr. Robert B. Minturn carried off the brush last year, and if he gets it this year from Mr. Stokes he has got to get up lively, as Mr. S. seems determined to be the first in at the death.

MORTIMER.

FLORIDA EXPLORATION.

OKEEHOCHEE SWAMP, is to be explored the coming Winter by an expedition fitted out at the expense of the Atlanta (Ga.) Constitution. No doubt much important information will be elicited. We are glad to find others able and disposed to follow the example set by the FOREST AND STREAM. What Government accomplishes in this respect with its ample resources the individual can do in his humble way. The smallest iota of geographical knowledge contributed to the general fund of information has its value; it may be inappreciable, and yet most important in its relation to the future of the country. FOREST AND STREAM, from the earliest date of its publication, has signalized itself by its efforts in this direction. Anticosti, Newfoundland, the northern shore of Lake Superior, the great Northwest, including both the United States and British territory, have in turn been the subjects of voluminous articles relating to their geography, climatology, and natural history. This Winter we propose to continue our researches in Florida, under the joint labors of "Al Fresco" and "Fred. Beverly," both of whom are now busily fitting out. They will ascend the St. John River, descend the Kissimee, crossing Lake Okechobee; then ascend the Fish Eating Creek, cross the prairie to Fort Thompson, and thence follow the Caloosahatchie down to the Gulf of Mexico. On five occasions parties have attempted to force their way out of the Lake to the Caloosahatchie, and have failed. As Dr. Kenworthy, we believe, is the only one acquainted with the route, we feel sure that the programme will be fully filled up.

Meanwhile, our readers will be content in the perusal of our new book entitled "CAMP LIFE IN FLORIDA," which includes all the results of the two expeditions sent out by the editors of this journal at considerable expense, boats having been constructed at the North for special service on the coast and in the interior and transported to the South. This volume contains, as advertised, full information concerning the game and fish of the Southern Peninsula, routes of interior and coastwise travel, the agricultural resources of the country, and sites for settlement, hints for camping out, resorts for game, hotels, and such other information as will be of great benefit to visitors seeking Florida for health, pleasure, exploration, or permanent settlement.

The publication of "CAMP LIFE IN FLORIDA" is now promised by the binder on Monday next, November 22d. Orders have already been received for nearly the entire edition printed, and we feel mortified at the unavoidable delay in delivering the book. We shall immediately follow our first edition by one much larger.

"THE DEAR OLD WOODS."—Last week we received, through Dr. J. R. Romeyn, of Keeseville, N. Y., a package of stereoscopic views of Adirondack scenery, from the artist, Mr. G. W. Baldwin, of Keeseville. There are some two dozen of these views in all, giving the most interesting points on the Upper Saranac and St. Regis Lakes. They are beyond question the most perfectly-executed specimens of photographic art that have emanated from the recesses of the old North Woods, and any one familiar with the scenes which they delineate, and desirous of reviving the experiences through which he has passed, will find a most gratifying reward in the possession of the series which Mr. Baldwin has so satisfactorily secured. One moonlight scene on Saranac is simply superb. Paul Smith's, Martin's, Bartlett's, Ampersand Mountain, and other familiar points are reproduced with vivid effect.

—Capt. T. Benton Reed, U. S. A., now engaged in the Revenue service among the mountains of the Blue Ridge, always wears a Holabird water-proof suit when on semi-official duty. He says he would not be without one. "So say we all of us." Holabird, the Valparaiso manufacturer, has his hands full filling orders for these garments.

AMERICAN AMMUNITION.

WE mentioned recently, in an appeal to American manufacturers to give us home made ammunition of a quality at least equal to the imported and high priced article, an instance of a friend with whom we were shooting, and who used American paper shells, having a large percentage of misfires. Our remark called forth a reply (which we published last week) from a number of sportsmen, residents of Jacksonville, Illinois, who stated that they had never known a misfire while using paper shells of the Bridgeport make. As we anticipated at the time, the other side of the question is now making itself heard. We print below communications on the subject from two prominent sportsmen, and are informed that their experience is that of many others. We wish our readers to understand that we agitate this subject solely in their interests, and with the hope that in so doing we may stir up our manufacturers to a sense of the fact that we are paying large prices for imported articles which we have a right to expect could be produced of equally good quality at home:—

NEW YORK, November 15th, 1875.

EDITOR FOREST AND STREAM:—

In regard to the quality of the Bridgeport brown paper shell, as compared with the Ely brown paper shell, allow me to state that within two years I have bought three hundred of the former, and so many of them missed fire (at least twelve to fifteen out of one hundred) that I gave my last fifty shells away. Since that time I have used the cheap brown Ely shell, and not more than two or three out of every hundred have missed fire. I find throughout the country where I shoot that nearly every one has had the same experience with the Bridgeport shell. Another serious fault that I found with them was that in extracting the cartridge, after firing, the head was very liable to come off, leaving the cartridge in the gun, and causing delay and vexation. I have shot this Fall every day for three weeks, using nothing but the Ely shell, and not one cartridge has been left in the gun by the extractor pulling off the head. I trust that next week some of the gentlemen of Hampden county, Mass., will give you further information in regard to the matter. W. S. WEBB, M.D.

JANESVILLE, Wisconsin, November 12th, 1875.

EDITOR FOREST AND STREAM:—

I have never used the Bridgeport cartridges, but I heard some very tall swearing done by a friend of mine this Fall, who showed me eight shells which he said had missed fire out of one box of a hundred. That was enough for him, and for me also. A. M. VALENTINE.

FLORIDA.—The tide of travel is already setting strongly toward the "Land of Flowers," and the St. Augustine Press of November 6th says that all the boats and trains arriving in Jacksonville from the North are crowded with passengers. The St. John River boats have commenced their Winter trips, and several of the fashionable hotels are already open for guests. The Magnolia Hotel, at St. Augustine, opened on the 10th of November, and all will be ready by December 1st. A great many additions of value are being made to the facilities for transportation. The steamer Pastime, of New Haven, and the Stamford, of Boston, the latter capable of accommodating 1,900 persons, are to go to Florida. The latter will run either on the St. John or ply between Jacksonville and St. Augustine. The steamer Mayflower is to ply three times a week between St. Augustine and Matanzas beach. The fishing at Matanzas is now excellent. The run of mullet along shore has commenced. The other day a fishing party captured a porpoise at the mouth of the St. Sebastian River and brought it to town. The Indians who are captives in Fort Marion called it "buffalo in the water." They tasted it and declared it "no good." Shark fishing is also in order at the head of the wharf, and several have been caught. The St. Augustine Press says:—

"The wild ducks are becoming again troublesome at the light house. At night, during their flight, they are blinded by the light, and fly recklessly against the iron net work surrounding the glass windows and reflectors, which were put up for their protection. It appears that the net work fails to break the force of the ducks sufficiently, and they have been doing much damage in the way of breaking the glass windows, which are one-fourth of an inch thick. One morning recently nine ducks were picked up about the light house."

The same paper gives the names of a hunting party of ten who had just started to the Twelve Mile Swamp for venison, taking seventeen dogs. Altogether the season opens most auspiciously, and the number of visitors, it is believed, will be unprecedented.

The survey for the proposed extension of the Bangor and Piscataquis Railroad from Abbot to Moosehead Lake is completed. The distance is twenty-two and a half miles. The route is through Monson, Blanchard and Shirley into Greenville, the station being at West Cove. It is expected by the officials that operations will commence this Winter.

TO OUR GERMAN AND SWISS FRIENDS.—We would call particular attention to the various prizes and the methods of shooting which will be adopted by the German and Swiss rifle clubs at the coming Bunderfest, to be held at the Centennial. The information imparted by our correspondent, L, which will be found in our number of to-day, is of the most valuable character. The FOREST AND STREAM will endeavor, when the time comes, to publish the fullest reports of these most interesting matches.

—We hope our wealthy friends will not overlook the present unusual opportunity, referred to in an advertisement of a "Ducking Craft for Sale," of securing one of the best appointed yachts in the country. The purchase of this vessel carries with it all the shooting privileges of the Susquehanna River, in the vicinity of Havre de Grace, a point widely known for the splendid sport it affords among the canvas backs. Last year the first six days' shooting afforded 800 ducks. On Nov. 1st of the current year the return was 161 ducks. The shooting on the Havre de Grace Flats is now very fine. Full particulars can be obtained at this office.

GAME PROTECTION.

The following letter is in reply to one published in this column in our issue of November 4th. As to the merits of the case, we are of the opinion that Mr. Wild was wrong in shooting quail before the expiration of the close season. Permission from an owner of land does not justify the killing of game upon it; the owner himself does not possess that privilege out of season. Mr. Wild has done so much in the cause of protection that his intentions can hardly be questioned, but the example remains in full force. There are so many who will say, "If So-and-So does it, why should not I?" that leading sportsmen in every community should be the first to set the example of strict observance of the statutes. We willingly acquit Mr. Wild of any wrong intent, and publish his explanation with pleasure:—

RED BANK, N. J., November 8th, 1875.

EDITOR FOREST AND STREAM:—

Seeing in your paper an article under the head of "Game Protection," written by "Check Cord" of Shrewsbury, which reflects upon me, though not directly, I consider it my duty to answer. Thursday, October 28th, I started from my home for a few days' shoot among the woodcock, with my friend Tom Taylor, of Col's Neck. I was met in the village of Shrewsbury by "Check Cord," who inquired my destination and what I was going to do with Ace, my setter, that was with me at the time. I told him I was about purchasing Taylor's Duke, and Ace was going to change hands; also that before concluding to part with Ace, I took him to see if he would retrieve; and that I had shot over his points two quail. He rejoiced in saying that he would immediately give me a rattle in the sporting papers. This I paid no attention to, nor would I, until I saw by this last issue of your valuable paper that he has carried out his (to him) piece of great satisfaction in seeing his *nom de plume* in print. The two quail killed were found on the land of Nathaniel Roberts, Esq., of Leonardville, N. J., a very intimate friend of mine, who has given me permission to shoot on his lands. I would not have thought anything of killing twenty birds, if I had wanted to; but my object was gained in the killing of the two quail. And when I did so I immediately returned home. What has "Check Cord" ever done for the protection of game? Can anybody answer this question? If so, let them speak through the columns of FOREST AND STREAM. Writing up articles and casting reflections upon enthusiastic sportsmen is very easy; but let him with his heart and finances do something for game protection, as I have done. Let him get a copy of the New York Citizen, published a few years ago by Robert Roosevelt, Esq., and he may find how I worked. Who ordered and paid for and distributed some 1,500 notices to game dealers in the city of New York? These notices were worded for me by Robert Roosevelt, Esq., of New York, who was instrumental in bringing to grief some game dealers in the city of New York? Who wrote and worked for the destruction of all big guns found in use on Havre de Grace flats (Chesapeake Bay)? Who wrote the articles and worked for the protection of wild fowl at Havre de Grace flats? Who wrote the article for the Governor of Maryland (then Bowie's) consideration? Echo need not answer who. I will answer it myself—the undersigned. Messrs. Editors, if "Check Cord" had in his composition a fifty-thousandth part of the love for field sports that I have, he would himself have done the same thing, knowing well that he would not have violated any game law. If a land owner has not the right to do as he sees fit with any game on his lands, the law must be altered. Come, "Check Cord," be a man; shoulder a gun—we presume you have one—go forth these fine mornings in search of the woodcock; they have not all left us. A tramp, if only for one hour, will make you feel like another man. Go out; look upon nature—human nature included. Don't kill any game before the law is up, even if you get permission to do so. Give us some sporting news from your section of the country. We will have pigeon shooting again, brother "Check Cord," and I think you will join us, as we never saw you shoot a gun at pigeons, or anything else. I know some of the boys at the village will be more than pleased to see you aim the destructive tube. I shall be pleased to have you at my shooting shore on the Bird River, Md., as I know you are in for the protection of game, and I am satisfied that they will be very safe when you are in the blind.

Yours,

G. H. WILD.

PORT RICHMOND, L. I., November 12th, 1875.

EDITOR FOREST AND STREAM:—

I trust you will use your influence this Winter in having a law passed to stop the shooting of quail, except during the months of November and December. I had some birds brought to me yesterday, and among them was one that the dog had caught, being too small to fly. A week or so ago two of our members were out and the dog came on a point, and they walked in, when up went two quail, and both were killed. They noticed the dog pointing just at their feet, and on looking down saw several young birds about as large as a sparrow. Of course this may have been a late brood, but it only goes to show that October is at least one month too early to shoot them. I will guarantee to show any one young quail to-day (Nov. 12th) that can hardly fly, and no doubt the old birds have been killed off, and these poor little things compelled to take care of themselves. Law, or no law, I for one shall decline shooting these fellows until the first of November. MORTIMER.

ILLEGAL FISHING IN ONEIDA LAKE.—The waters of Oneida Lake, it is said, are being illegally netted of the fish with which it was stocked a short time since at the expense of the State. A policeman of Rochester who was recently visiting at Fort Brewster says that the netting is carried on to such an extent that he saw a number of fish cars filled with fish taken in this manner. The Rochester Express publishes the name of seventeen persons engaged in this illegal fishing, one of whom is a game constable. The lake is now being stocked with salmon trout, and operations might as well be suspended if men are to be allowed to take the fish out with nets as fast as they are put in.

—The Auburn Advertiser directs the attention of the Auburn Sportsmen's Club to the fact that poachers are out every night on Owasco Lake spearing trout, as many as a dozen of these vampires plying their business of a single night. In November these fish swarm along in shallow water near the shore to deposit their spawn, and are pounced upon by the law breakers and pot-hunters.

—The quail season in Pennsylvania as authorized by the State law opened on the 1st inst., but according to the Easton Free Press the pot hunter's season had been open for a month, and the law-abiding sportsmen found only broken covies thinned out to one-third or one-half. The general report is that quail in that vicinity are yet scarce; that is, that they have not recovered to one-fifth of their numbers a few years ago, and that if they were let alone this year, with a favoring Winter, they would be as abundant as ever next season.

—The Pennsylvania State Association for Protecting Game and Fish meets at Harrisburg to-day. We are promised a report of the proceedings.

The Rifle.

CREEDMOOR.—TURF, FIELD AND FARM CHALLENGE BADGE.—On Saturday last, the 13th, this interesting contest was renewed. The weather was beautiful, and a great many marksmen were on the ground. The match was called promptly on time, and by 3 o'clock was under way. There were sixty-three entries, and we are pleased to state that the National Guard were fully represented, the prize, indeed, having been carried off by Mr. John Beattie, of Company D, Twelfth Regiment. Conditions—Any breech loader within the rules; distance, 200 yards; shots, ten. Prize to be won three times before becoming the property of the winner. We append the best scores:—

Name.	Score.	Name.	Score.
John Beattie.....	42	Colonel J. Rueger.....	38
W. S. Elmendorf.....	42	J. L. Farley.....	38
T. Duke.....	41	P. C. Noone.....	38
W. C. Clark.....	40	G. W. Smith.....	38
J. I. C. Clark.....	40	J. Buckbee.....	38
T. R. Murphy.....	40	B. G. Doughty.....	38
George Crouch.....	39	S. G. Perry.....	37
J. L. Price.....	39	Colonel D. E. Austen.....	37
J. M. Crane.....	39	W. B. Farwell.....	37
A. Dutch.....	39	J. Le Bontillier.....	37
W. S. Collins.....	35		

It must be borne in mind that the 43 out of a possible 50 was made by Mr. Beattie with a military rifle and open sights. As this is possibly the last match for the Turf, Field and Farm Badge for the season, the winner will have the chance of sporting the handsome trophy during the Winter. This match, due to our worthy contemporary, has been signally useful in founding the most necessary school of off-hand shooting.

—Last week the annual rifle match of the Washington Grey Cavalry Rifle Club took place. The weather was execrable, the wind blowing a reefing gale at times. The shooting, however, was fairly good. Conditions—Remington military carbines; distances, 100 and 300 yards; seven shots at each range. The five prizes were awarded as follows:—

Name.	100 Yards.	300 Yards.	Total.	Prize.
Sergeant H. B. Kelsey.....	29	25	54	First prize.
Lieutenant A. T. Decker.....	27	19	47	Second prize.
Sergeant J. T. McHugh.....	29	19	48	Third prize.
Private J. Rozell.....	24	18	42	Fourth prize.
Sergeant C. A. Fuller.....	29	11	40	Fifth prize.

In the Consolation Match Private S. M. Megie, Jr., won the first prize with a total of 48. The second prize was awarded to Corporal M. Timmum, who made 39.

—The Hepburn trophy, it should be remembered, will be shot for for the first time on Saturday, November 27th. The badge is an exceedingly elegant one, octagon in shape, supported by rifles, and of solid gold. The conditions allow all members of the National Rifle Association to compete for the trophy, exclusive of the two international teams of 1874 and 1875; distances, 800, 900 and 1,000 yards; fifteen shots at each range; without sighting shots or previous practice on the day of the match; weapon, any breech loading rifle, to be loaded only at the breech; entrance fee, \$1.

—The following important resolution was offered by Col. Gildersleeve, or Judge Gildersleeve (in either a military or judicial function this gentleman will be found equally competent,) and adopted by the Executive Committee of the N. R. A.: "That all special matches hereafter to take place at Creedmoor shall be shot at such time and at such distances as conform to the rules of the range governing the practice thereof." The positive enforcement of this rule will very much facilitate business at Creedmoor.

CONLIN'S SHOOTING GALLERY.—The second contest for the Turf, Field and Farm Cups was held on Thursday, November 11th:—Conditions: Ten shots, off hand, 110 feet, 200 yards miniature target reduced in proportion for distance, Wimbledon rules. Prizes, first cup, best score; second cup, to best score nearest 35; third cup, to best score nearest 25:—

Name.	Score.	Name.	Score.
T. C. Noone, 1st badge.....	46	Geo. W. Hamilton.....	34
F. W. Pape.....	43	Fred Kessler.....	34
M. P. Lennon.....	43	H. Fisher.....	36
Thos. Lloyd.....	43	Joseph Woodward.....	36
Chas. A. Cheever.....	42	H. C. Bydenburgh, (2d badge).....	35
Robert Faber.....	41	M. W. Doan.....	35
George Schultz.....	41	A. Marsh.....	34
Robert Miles.....	40	C. E. Bydenburgh.....	34
J. B. Bydenburgh.....	39	T. C. Banks.....	33
Wm. Moser, Jr.....	39	J. S. Wright.....	33
J. J. C. Clark.....	39	R. Offley.....	32
L. C. Bruce.....	39	W. H. Park.....	30
Thomas Bixbee.....	37	J. O. Wright.....	31
L. V. Sone.....	37	F. H. Lord.....	27
Frank Hyde.....	37	W. H. Richards, (3d badge).....	25
M. G. Duff.....	36	R. F. Sculley.....	16
Wilson MacDonald.....	36		

—At a late meeting of the Board of the N. R. A., Gen. Shaler presiding, measures were taken to further the meeting of riflemen from all nations at the coming Centennial anniversary to be held at Philadelphia, and to inaugurate a series of rifle matches to take place during the Summer and Fall of 1876. In pursuance with the following resolution, "that the Executive Committee be requested to confer with the Centennial Commission and ascertain to what extent said Commission will co-operate in carrying out such a programme as this association may adopt for the occasion referred to," the Executive Committee and Board of Directors left yesterday to hold a conference with Gen. Hawley and the Centennial Commissioners on the location of a range and other preliminaries of the international match next year.

—We are led to believe that a new rifle gallery having quite an extent of range will shortly be opened on Broadway, near the City Hall, and that there is a movement on hand to establish an off-hand club, with over 125 feet of range for the exclusive use of its members.

THE NEVADA BADGE—Beyond the cavil of a doubt Company A, Forty-eighth Regiment, of the Twenty-fourth Brigade, represented by a team of forty-six men, have won, and won not only the badge gallantly, but in a most preponderating kind of way. It is a triumph, indeed, and we most heartily congratulate the Oswego soldiers. In the analysis of the score there is much to comment upon. The distances being 200 and 500 yards, and the shots five at each range, a natural excellence of shooting at the shorter range is evident; of course there are exceptional cases where the 500 yard shooting by individuals is better. But the match was won by the good marksmanship at 200 yards. Corporal Fingerhut made at 200 yards 23, at 500, 22; total 45. There are two several 41s and 40s, and 39s and 38s. An average of over 27.75 to each one of the team, with the little practice the Oswego men have had, shows what sound material they are made of. Regiments composed of individuals drawn from towns and cities in the interior of the State, where the men are more used to arms than are our city men, will and must develop skill. As our excellent contemporary, the *Army and Navy Journal* has it, to win the Nevada Badge "demands a full company of bona fide members, a real military entity, not a paper skeleton. It demands that every man shall shoot; not a mere picked team. It demands not only the smallest number necessary to constitute a company, but every man has to be there." The Oswego team was a perfect company, having been represented by its officers, musicians, and privates.

Consolidated Report of Rifle Practice by Co. A, Forty-eighth Regiment, Twenty-fourth Brigade, Sixth Division, N. G. S. N. Y., at Oswego, on October 28th, 1875.

Total	1,275						

Totals of the other teams:—Company I, Seventh Infantry, 866; Company H, Seventh Infantry, 830. In neither of the scores made by these teams higher than 41 was reached, and then only once by a member of Company H. The lesson given our own city is an excellent one, and we hope they will profit by it. It must be understood that military shooting is the foundation on which Creedmoor must stand. Let us be well grounded in our prose generally, before we try the poetry of rifle practice. The second match for the Nevada Badge is set down for October 28th, 1876. We shall see then what improvement has been made. Look out for certain military marksmen about that time who hail from San Francisco.

—The Rochester *Union*, referring to the shooting of the Oswego company for the Nevada Badge, says: "The secret of their success lies in the fact that their rank and file are made up of men more intelligent than the average of soldiers, and that for two years they have been practicing on their range in Oswego. This is so conveniently situated that in summer one may shoulder his musket after tea, go to the range, fire a few rounds, and return again before dark."

AMERICAN RIFLE ASSOCIATION.—This association presents an attractive programme for Thanksgiving Day, Thursday, November 25th. Hours of shooting, 10:30 A. M. to 1 P. M., and 1:30 to 4 P. M. 1. Subscription Match. Distance 300 yards; any rifle; trigger pull, three pounds; position, off-hand; entrance fee \$1; half of entrance money for benefit of association; balance divided between three highest scores. 2. All-comers' Match. Conditions—Distance, 300 yards; any rifle; trigger pull, three pounds; position, off-hand; entrance \$1. Prizes five in number, ranging from \$35 in value to \$5. 3. De Peyster Badge Match (presented by Gen. J. Watts De Peyster, value \$300.) Third competition. First winner, Capt. C. F. Robbins, Seventh Regiment, N. G. S. N. Y.; second winner, Lieut. J. A. Gee, Eighth Regiment, N. Y. S. N. Y. Distance 300 yards; open to any bona fide member of the National Guard; military rifles only; position, off-hand; trigger pull, six pounds; seven scoring shots, two sighting shots; contestants must shoot in uniform (sec. 7, article 16 of Rules and Regulations.) This must be adhered to in this match. Entrance fee \$2. Badge must be won three times by one person before property passes. 4. Old Time Turkey Shoot. Distance 100 yards; weapon, any; ammunition furnished by the association; entrance fee, 15 cents per shot. 5. Team match between Company G, Seventy-first Regiment, and Company B, Twenty-seventh Regiment. Officer of the Day, Capt. Joseph H. Porter. The Seventy-first Regiment Band will be in attendance. Three more targets are being erected by the Range Committee. Entries can be made on the grounds on the day of the match. Trains leave Grand Central Depot, New York, New Haven and Hartford Railroad for Pelhamville at 9:5 and 10:05 A. M., 12 M. and 2:20 P. M.; return at 12:30, 2:25, 5:15, 6:5 and 8 P. M. Stages will run from depot to range on arrival of trains. Fare to those purchasing excursion tickets, 75 cents. Return railroad ticket entitles holder to range and

back in stages without extra charge. The challenges received from the Scottish-American Rifle Club and the Yonkers Rifle Association have been accepted, and the team will be selected next Saturday by the Executive Committee.

MORSEMERE.—This range seems to be in full blast, and matches are of every-day occurrence. Challenges have been sent to the Mount Vernon, the Irvington, and Scottish-American Rifle Clubs. On Friday next, the 19th inst., the first association rifle match will take place on this range between the Hudson River Rifle Association, of Poughkeepsie, and the Yonkers Rifle Association. The team selected to represent the association is as follows:—Douglas Smyth, Frederic Shonnard, L. M. Ballard, A. H. Jocelyn, G. L. Morse, H. L. Garrison, Henry Quinn, and W. F. Underhill. But should the team consist of only six members two of these will be withdrawn and held in reserve.

BOSTON.—The rifle organization in Boston seems to be fast approaching perfection. Last week a meeting of prominent gentlemen and citizens was held at No. 55 Broomfield street, Dr. Hazeltine presiding, and Mr. A. C. Sawyer officiating as Secretary. Messrs. W. H. Jackson, C. E. Sanborn, and E. W. Messenger were appointed to select the proper locality for a range. Neponset will probably be the place chosen. All the leading journals in Boston favor the rifle movement.

—The Rochester *Union* says: "In Syracuse the Rifle Association of the Sixth Division are making progress with their range. It is situated in De Witt, three miles from Syracuse, on the New York Central Railroad, east of the city. Trains carry passengers to within forty rods of the 1,000 yards firing point—fare six cents. The selection of the range and preparation of the same is in most judicious hands. The committees of this association are elected, and the election for Chairman of the Range Committee fell upon Major R. Griffin, Jr., an accomplished civil engineer. Before beginning work on the range a map was made, and specifications to the smallest details. There will be an embankment 240 feet long and 20 feet high, surrounded by a crib 10 feet high, with a fence for the whole range, which is 100 yards wide and 1,000 yards long. The ground has been thoroughly grubbed and cleaned from trees, and graded in the uneven spots, and the markers' trench completed and ready for the targets. Surely the path of the Syracuse shootist has fallen in pleasant places. The opening meeting will take place next Spring."

PRIZE SHOOTING IN NEW JERSEY ON THANKSGIVING DAY.—The New Jersey Scheutzen Corps, Capt. W. F. Schuman, will have a prize shooting at Scheutzen Park, Union Hill, N. J., on Thanksgiving Day, to which they invite all rifle-men and lovers of the sport. The targets are open to all comers. On the "Target of Honor," ring target, are poultry prizes, etc., worth \$150; tickets for three shots, \$1; number of tickets unlimited, but each shooter can get only one prize. On the target "Union," ring target, are twenty prizes, valued at \$150, to be divided as follows:—First prize, \$25; last prize, \$2; tickets for three shots cost \$2; number of tickets unlimited, but each shooter can win but one prize. On the Man Target are "ten perpendicular lines," also twenty prizes of the value of \$150; first, \$25; last, \$2; tickets for five shots cost \$2; number of tickets unlimited; rule same as above. Bullseye targets—The visual or false centre on this target is 12 inches, the bullseye 4 inches in diameter; fifteen shots for \$1; number of shots unlimited. After deducting all the expenses the receipts will be equally divided among the bullseye shots. Pool shooting, premiums, for the most bullseyes, \$5; second, \$3; third, \$1. Shooting commences at 9 o'clock A. M., and ceases at 4:50 P. M. Intermission between 12 and 1 o'clock.

—The Plainfield (N. J.) Rifle Association will have a contest with the Pioneer Rifle Club, at Plainfield, on Thanksgiving Day. The associations will be represented by teams of six, and the prizes offered are a handsome rifle to the successful team, and a gold medal to the maker of the highest individual score. The Plainfield Rifle Association comprises among its members Capt. Edward Feckner, of Company K, Twelfth Regiment; Capt. Wing Burton, Inspector of Rifle Practice, Twenty-third Regiment, and several members of the same company.

CHICAGO.—The following are the scores made by the Chicago Rifle Club at their late practice at the rifle range at South Park, November 6th. Distance 500 yards, ten shot:—

Name.	Score.	Name.	Score.
S. B. Sexton	48	S. W. Burnham	41
R. S. Thompson	45	A. G. Alford	40
A. H. Simonton	44	S. E. Bliss	38
George Willard	42	H. W. S. Cleveland	36
J. A. Shaffer	42	H. G. Howe	31

Forty-eight out of a possible 50 is very fine shooting.

THE INTER-STATE MATCH AT JACKSON, MICH.—The inter-State match which was commenced at Pleasant Lake, Ind., on the 27th of October, and was left unfinished on account of darkness, was again shot at Jackson, Mich., November 10th, as per agreement, resulting in a victory for the Jackson team of 22 points over the Chicago team, and 11 points over the Fort Wayne team. The teams were the same as before except in the Chicago team, where Mr. Adams took the place of J. B. Bradwell, and on the Fort Wayne team, Mr. Rundel taking the place of Z. Hopkins. Mr. R. was on the original team, but had been unable to attend the first match. Major H. Fulton was present and chosen referee by the teams. The weather was very disagreeable in the forenoon, raining part of the time, but clearing up about noon it was quite pleasant. The match passed off very smoothly, and the greatest harmony pre-

vailed among the shooters. The day ended up with a meeting of the teams in the parlors of the Hibbard House, at which Major Fulton was chosen Chairman. Presentations of prizes were then in order. Col. Thompson presented the Jackson team with the prize they had won—a silver ice pitcher—and made a few appropriate remarks, after which a fine gold headed cane, valued at \$25, was presented to Col. Thompson, as he had made the highest individual score, 35 out of a possible 35; a fine silk muffler, also won by him at 800 yards. Gen. A. F. Devereaux also received a fine silk muffler for the second highest score at 500 yards. The following are the scores. Distance 500 yards, out of a possible 35:—

CHICAGO TEAM.			
Name.	Score.	Name.	Score.
S. B. Sexton	27	T. D. Williams	21
George Willard	32	George E. Adams	23
George Bittenmueller	19	A. S. Thompson	35
Total	159		
FORT WAYNE TEAM.			
J. C. Beeks	28	T. P. Cordery	21
W. W. Stinnett	30	C. Rundel	22
D. D. Weisel	29	A. F. Devereaux	33
Total	170		
JACKSON TEAM.			
G. H. Wolcott	32	J. H. Harrington	32
J. A. Parkinson	32	T. J. Conely	31
C. H. Blair	22	A. Fifield	32
Total	181		

After the team match the Coltrin & Purdy cane match was shot for. Distance 500 yards, with three shots. This was won by Col. Thompson, of the Chicago Rifle Club. The following are the scores:—

Name.	Score.	Name.	Score.
Colonel R. S. Thompson	14	Z. Hopkins	11
S. B. Sexton	14	A. Fifield	10
C. H. Wolcott	18	W. W. Stinnett	7
R. J. Haire	13	Captain Bogardus	11
C. Rundel	13		

Col. Thompson and S. S. Sexton then shot off the tie, which resulted as follows: Col. Thompson, 5; Sexton, 3. A defective cartridge cost Mr. Sexton one miss.

—The following scores were made by the Jackson Rifle Club of Jackson, Mich., at their practice on the 9th inst. Distance 500 yards; out of a possible 35:—

Name.	Score.	Name.	Score.
J. A. Parkinson	34	T. J. Conely	33
George Blair	34	A. S. Fifield	33
J. H. Harrington	35		
Total	169		

DES MOINES.—Still they come, more and more rifle associations. The tens of thousands of riflemen who made Stuttgart their rendezvous this year will be insignificant as to size when we come to have all our riflemen one of these fine days in some grand convention. The following are the officers of the Capital City Rifle Association of Des Moines, Iowa:—President, Gen. N. B. Baker; Vice President, Gen. R. V. Ankenny; Secretary, Col. John C. Parish; Treasurer, Major M. T. V. Bowman; Executive Committee, Col. C. J. Clark, Polk city; Mr. O. D. Morris, Stuart; Capt. M. T. Russell, Mitchellville; Col. F. Olmstead, Des Moines; Major F. S. Sabin, Des Moines.

CALIFORNIA.—The annual prize meeting of the California Rifle Association passed off in a highly creditable and satisfactory manner. The Summer Guard, Company E, First Regiment Infantry, carried off most of the prizes individually, besides taking second place in the military team shooting. The Remington Creedmoor rifle was won by David Watson, of that company, who also carried off the Kellogg Cup, besides which five other members of the company captured prizes. Mr. Sheldon J. Kellogg, formerly a member of Company A, Twenty-third Regiment, Brooklyn, won a gold medal of the first class, value \$40, presented by the association. The prizes were distributed on October 29th, and additional *eclat* was given to the proceedings of the C. R. A. by a grand promenade concert and other jollifications.

CANADA.—On the 29th of October the Northumberland County Rifle Association had their meeting. The first match was open to all members of the association; ranges, 400, 500 and 600 yards; five rounds each; Wimbledon targets. We give the leading scores:—

No.	Name.	Points.	No.	Name.	Points.
1	James Ferguson	53	4	Andrew Day	49
2	James Pallen	53	5	Huga McDonald	47
3	John McRae	50	6	Herbert Pallen	46

The second match was open only to members of the association who had never won an association prize previous to the present meeting. The ranges were 400 and 500 yards, five rounds at each. The winners, with their scores and prizes, were as follows:—

Name.	Points.	Prize.	Name.	Points.	Prize.
Donald Cameron	30	\$5 00	W. N. Bain	24	\$4 00
Peter McAdam	27	4 50	David Paterson	20	3 50

The annual match for the Challenge Cup presented by Hon. Peter Mitchell to No. 7 Battery of Artillery took place at the Chatham Range. The scores of the competitors were as follows:—

Name.	Points.	Name.	Points.
M. J. O'Keefe	46	David Paterson	42
James Pallen	46	H. Pallen	36
J. W. Frazer	46	P. McAdam	32

Mr. O'Keefe is consequently the possessor of the cup for this year.

FOREIGN NOTES.—Mr. John Rigby has written a letter to the editor of the *Volunteer Service Gazette* in regard to the defeat of the Canadians in their late match at Creedmoor. He says: "No safe conclusion can be drawn as to the quality of the shooting at Creedmoor in relation to the weather on the day of the match. The comparison of rifles is equally unsafe." He further states that the rifles used by the Provincials of his make were old, and that the Remingtons and Sharps were new. This we freely grant Mr. Rigby. His concluding sentence is: "On the other hand,

—If those of our readers who don't believe there is good duck shooting now on Long Island had seen the bunch of scaups brought into our office on Tuesday last, they would surely be convinced of the fact. These fine fowl were sent to us by Geo. B. Eaton, Esq., of the Sportsman's Emporium, 102 Nassau street, and were a sample of eighty-eight

killed by him in the course of two days' shooting at "Bill Lane's," Good Ground, Long Island. We heartily thank the good giver for this donation; if he doubts our sincerity he should see us at dinner time!

—A correspondent states that a few days ago at Meacham Lake, N. Y., he killed a loon from a boat with his 12 bore Scott gun at a distance of 15 rods. Charge 3 drachms Orange powder, and 1½ oz. No. 4 shot with a few pellets of No. 2. The loon was hit in five places. It is an unusual feat to kill a loon with shot.

NEW HAMPSHIRE—*Madison, November 16th, 1875.*—First snow storm of the season, clearing off with five inches on a level. Weather mild, and very favorable for hunting. Bears are quite plenty this Fall, ranging the lower lands more than usual, probably owing to the superiority of nut ton and acorns over other bear provender. One has made his rendezvous on Staycey Mountain, four miles below Madi-on depot, and has regaled himself on the carcasses of thirty-one sheep, taken in the course of the Fall. Joshua N. Piper, the noted bear and deer hunter, and son, with the undersigned, taking advantage of the recent snowfall, went for him, but failed to capture him. He had doubtless got into Winter quarters before the snow fell. Members of the craft who would like to find good sport will find Mr. Piper on hand for a brush. The route is from Boston to West Ossipee, via Eastern, Great Falls and Conway road; five hours ride; stage conveyance from West Ossipee to Chocorn in about one hour and a half; time enough left the same day to go out and knock over a brace of partridges just back of the house. CHARLES COON.

WISCONSIN—*Montello, November 15th, 1875.*—The season's shooting is fast drawing to a close in our northern districts. Grouse shooting is practically over. Mallards are far from plenty, but a fair amount of canvas backs. Myriads of scaup ducks (i. e., blue or broad bills, in local vernacular) suffice to make the sport quite fine. The latter species have two regular flights daily—one at daylight from Puckaway Lake, six miles eastward of this village to Buffalo Lake, one hundred rods west of this place, where they remain until the shades of evening are approaching, when they fly with the same regularity back to Puckaway. In these flights the ducks pass directly over the village and afford sport to numerous gunners for about half an hour each evening. Deer are reported plenty in Northern Wisconsin, and bears more numerous than for years previous, giving promise of sport at the first fall of snow. FRED.

PENNSYLVANIA—*Harrisburg, November 15th, 1875.*—The shooting season has been fully inaugurated in this section of Pennsylvania. Quail, or partridge, as our people insist upon calling them, have been tolerably plenty this season, but are so no longer, as many have fallen victims to the aim of our practiced Nimrods. Recently a colored man named Wilson Hopkins, in the employ of Harry McCormick, one of our most respected and wealthy iron manufacturers, left for a week's shooting in Adams county, south of Gettysburg. He returned at the end of a week, having in his possession 246 birds, several woodcock, and a brace or two of ruffed grouse. The colored amateur sport insists that he shot the game, assisted by his brother, but report says he used greenback gun wads to some extent. Woodcock are remarkably scarce in this locality. My friend, Mr. C. A. Roumfort, who owns several fine pointers, was out the other afternoon in the favorite resort of the "timber tootle," Wetzel's Swamp, where years before it was not unusual for Mr. R. to bag from ten to a dozen woodcock, but he only "raised" one and five jack snipe during the afternoon. A few wild turkeys have been brought in from the mountains, but the birds are far from being fat. PINCKNEY.

CANADA.—*Cornwall, Nov. 6.*—Duck shooting on the St. Lawrence is said to be excellent in this neighborhood. Two gentlemen of Ogdensburg killed 150 ducks and three geese a few days since. Snipe and plover are also abundant.

PIGEON MATCHES.

—Arrangements have been completed for a pigeon match for \$6,000 between Mr. B. DeForrest, of this city, and Mr. A. V. Grubb, of Philadelphia. The conditions of the match are for each to shoot at 100 single birds, thirty-five yards rise, 100 yards boundary, with one and a half ounce of shot, from five traps placed five yards apart, English rules, for \$3,000 a side. The match is to take place at the Pimlico Track, Baltimore, on the 30th. Mr. Grubb is a gentleman amateur of Philadelphia, and figured in several handicaps last July and August at Newport, R. I. Mr. B. DeForrest is a noted shot, and has participated in several matches. He is a member of the Long Island Gun Club, and well known in Wall street. The gentlemen are quite evenly matched.

PORTSMOUTH, N. H., November 9th, 1875.

EDITOR FOREST AND STREAM:—

A pigeon match was shot to-day for the Eldridge champion medal, between Mr. C. Stimpson, the present champion, and Charles A. Loud, of this city. The match was at fifteen birds each, under the Eldridge metal rules. The shooting was considered good on both sides, as will be seen by the score:—

Loud1	1	1	1	0	1	1	1	0	1	1	1	0	1	—12
Stimpson1	1	0	0	0	1	1	1	1	1	1	1	1	1	—12

Each man killing 12 birds making a tie; there being no birds on hand, it was decided to shoot off on Friday, November 12th, which resulted in a victory for Mr. Loud, he killing all three birds to Stimpson's two. Mr. Stimpson is one of the best shots in the State, and has proven himself so by winning the medal and retaining it four successive times.

QUAIL.

TITUSVILLE, Pa., November 9th, 1875.

EDITOR FOREST AND STREAM:—

The Titusville Association and Sportsmen's Club shot a prize pigeon match yesterday, and as the score was not up to the standard I will not send it to you. The prize was presented by C. W. Isham, Esq., and consisted of a silver cup fifteen inches in height, the bowl five inches in diameter, lined with gold, and surmounted by a bas relief of frosted work finely engraved. The shooting was not good, to the surprise of every one, owing probably to the weight of the cup resting upon their shoulders, together with the large pool improvised on the occasion. This, you know, is apt to unnerve the young experimentalist at the trap, and will account in a great measure for the low scores.

In a contest with the Erie Club, at Erie, on the 8th of October, they did far better, making 78 out of 100, which is not bad. Mr. Henry Harley, well known in New York, won the prize. This club is not regularly organized, but is in a fair way to be so. They begin to be awake to the true interest of sportsmen in the protection of game and fish, through the teachings and admonition of your valuable paper, which is highly appreciated here, as everywhere else. B.

[All very well, and we hail with pleasure the formation

of every new sportsman's club, but how is the protection of game to be assisted by trap shooting? On the contrary, we fear that the ostensible objects of association are forgotten in the momentary excitement of the match, and protection relegated to that "sweet by and by," to join other good intentions in assisting to form the pavement of a spot prepared, we trust, for poachers and law-breakers.—Ed.]

SHOOTING ON CAPE COD.

BOSTON, Mass., October 28th, 1875.

EDITOR FOREST AND STREAM:—

My fingers burn with indignation, for if I can trust my eyes, your New Hampshire correspondent, "Quail," boasts in his letter of October 17th of having killed thirty-five quail at Eastham, on Thursday, September 30th and Friday, October 1st. Now, as our Massachusetts law makes a close season for quail until October 15th, will the gentleman please "rise and explain" how it happened that he, an "outside barbarian," came to be in my native State shooting his patronymics out of season, and in direct violation of the laws of the State. As Artemus Ward says, "This is too much."

I sincerely hope that if "Quail" is ever guilty of the like again that his discretion will bear a more reasonable proportion to his wickedness, and at least restrain him from a parade of his crime, by publishing it in the leading sporting journal of the country, before the eyes of more scrupulous sportsmen who regard the laws. As it is, he is convicted on his own testimony, and stands indebted to the Old Bay State for thirty-five quail at \$25 apiece—*Oh! jam satis.*

The fatuity of allowing quail to be killed, even as early as October 15th, is finely illustrated this season hereabouts, in the fact that about fifty per cent. of the birds compare favorably in size with a good plump English sparrow. I hear the poulterers give 12½ cents apiece for them, so that a very able-bodied man might possibly earn in a day the astounding sum of one dollar and twenty-five cents! if he was active and persevering.

UNDER GRIP.

[We sympathize with our correspondent in his indignation. If there is one thing worse than a violation of the law in one's own State, it is going into a neighbor's and slaughtering his birds.—Ed.]

SPORT IN LOUISIANA.

BATON ROUGE, La., October 28th, 1875.

EDITOR FOREST AND STREAM:—

The line of railroad (Baton Rouge, Grosse Tete and Opelousas) of which I was secretary, runs from the Mississippi River, in the parish of West Baton Rouge, to Livonia, in the parish of Point Coupee, twenty-eight miles, and from thence is graded twelve miles to the Atchafalaya River. The country is level, and where not reclaimed, is swamp and dense cane-brake, abounding in deer, bear, wild turkey, etc. It is subject to overflow from the Mississippi, in case of breaks in the levees. Bayous Grosse Tete, Foxdoche, and smaller streams run through the country, and at low water afford good fishing for trout, perch, white cat, etc. The trains run twice a week now from Allen Station, about a mile above the town of Baton Rouge, and make connection with a steam ferryboat to the town. The accommodations on the line of the railroad are poor, there being little or no travel beyond the actual settlers. The country on this side (east) of the Mississippi is high and rolling; the streams, of which the principal are the Amite and Comite Rivers, are clear and afford excellent sport fishing for trout, various kinds of perch, white cat, etc. The woods abound in squirrels, wild turkeys, rabbits, and deer; the fields with quail, doves, larks, etc., and in Winter, snipe, ducks, woodcock, robins, wild pigeons, etc. Transportation is abundant and very cheap. Parties who go with the intention of camping generally send the conveyances back, to return for them at a specified time. A carryall with seats for fifteen persons, four horses and driver can be had for \$12 per day. Board, \$1.50 to \$2 per day; by the month, \$30 and \$35. Very respectfully, GEO. HENDERSON.

MAKING GAME OF A SPORTSMAN.—During the recent political canvas in this State, a gentleman well known in literary and scientific circles was nominated for State Senator. He had never figured as a politician, and therefore bore an unblemished character. Indeed, he might be considered "an Israelite in whom there was no guile." So invulnerable to ordinary slings and shafts of the enemy was his armor, that the opposition essayed to damage his chances of election by twitting upon the fact he was a sportsman. Just as if a thoroughbred sportsman ever could be a successful politician! Whereupon, a fellow sportsman and friend of the persecuted and non-combative candidate took up the cudgel in his defence in this wise, through one of the local papers:—

"The joke-makers have been trying to excite prejudice against our nominee for Senator on the ground that he takes his recreation by following field sports. Well, it is fortunate that they can say nothing worse about the gentleman, and indeed it is not a very serious offense to take a day's shooting once in a while. A certain George Washington was an ardent sportsman, and I believe he made a respectable figure in other capacities. One Daniel Webster loved to bag the wild ducks and snipe around Marshfield. He even bred famous breeds of setters, but he was none the less able to crush to powder the sophistries of Hayne. But there may be some who regard familiarity with firearms as an evidence of unspeakable turpitude. To such, I would say that although Mr. T. can handle a gun with skill, he never gets cocked; he is opposed to overloading the people with taxes; he has snap in him, he is a man of action; he would lock up thieves; he does not break off with his friends because they are not rich; his private character is not checkered; he is not the butt of his associates; he is a man the people can 'take stock in; he would not muzzle the press; he can safely be put on guard; he is not a political tumbler; the mainspring of his life is not personal gain; he is not a bore, but a man of calibre, and I'll engage will be a good official; he would not rifle the savings of the poor or the State treasury. Can —'s barrel organ say as much for him, or dare they deny that he is a mere 'flash in the pan,' a blank cartridge, a squib; who opened fire on worthy public officers to make them 'shell out,' but did not have the courage to push home his charges. Let them, if they can, prove that — is not what Jefferson called Aaron Burr, viz: 'A crooked gun, whose aim you can not be sure of,' and then we shall hold him in a little less contempt."

But all would not do. Although T. run far ahead of his ticket, he was caught in the reflux of the "tidal wave," and his political hopes rendered for the time "demnition moist."

CHOKE BORES.

AS anything relating to the merits of the new system of boring guns must be of interest to our readers, we copy the following from the *Illustrated Sporting and Dramatic News*. The system alluded to in the first paragraph, was what was known here as the "Roper." Other American makers claim to have bored guns on the present, so called new plan, many years since. The competition for the cup to be presented by our English contemporary to the gun making the "best pattern" for general shooting, would afford our makers an excellent opportunity for trying their guns against those made across the water:—

"In previous numbers we pointed out that the original of the 'choke bore' system in America only intended the part of the barrel that was 'choked' to screw on the barrels of guns of the ordinary length when used for shooting wild fowl at long ranges. For other sport the guns were used with the barrels in their normal state, and without the 'choke part,' which was a piece of barrel six inches in length. Our contemporary, the *Field*, says Mr. Pape, of Newcastle, invented this—the choke bore system. We challenge our contemporary or Mr. Pape to prove his claim to it. About eighteen months before the *Field* gun trial, Mr. Dougal, gunmaker, of St. James street, told us that he was trying to develop a system of boring—American—which would revolutionise the boring of the present day. This was the 'choke bore' system. Mr. Dougal was the first gun maker—in London, at any rate—who to our knowledge knew anything about the matter. Shortly before the *Field* gun trial we happened to be at Nunhead shooting grounds seeing a 'choke bored' gun shot by another maker. Having finished the shooting, we strolled over to another target, where some one was shooting with double barreled guns; the 'pattern,' shot after shot, averaged from 190 to over 200 pellets on a 20-inch circle at forty yards. We found upon inquiry that this was Mr. Dougal's son trying guns. We afterwards found that these guns were bored on what is known as the 'modified' choke bore system. Mr. Dougal, like a sensible man, had found out where the 'choke bore,' pure and simple, was a failure—i. e., 'balled' or 'clubbed' the shot on the target, and he developed the system into the 'modified' choke bore. And the natural conclusion we come to is, that he had been at work upon it since he had mentioned to us eighteen months before that 'he was developing a new system of boring.' Not one word did anyone hear during this period about Mr. Pape or Mr. Greener being acquainted with 'choke boring,' or 'modified choke boring.' It will be seen, too, upon reference to the back numbers of the *Field*, that that paper was as ignorant of the existence of any such system, as it usually is about improvements in gunnery. So much for the *Field*, Mr. Greener (so called inventor of the system), and Mr. Pape (also credited with its invention). The pure choke bore was never intended for general shooting. It is almost useless in the hands of a man accustomed to use a 'wide-patterned' gun on the old system.

The following letter, which has appeared in a recent issue of the *Field*, best explains the situation, *pro* and *con*, as regards choke bored guns:—

BALGREGGAN, Stranraer, Oct. 4th, 1875.

SIR—Again in this last week's *Field* there is no account from the public of the performance of their choke bores on game. Allow me to state my opinion of the merits of the choke bore as a gun for ordinary shooting. I, in common with many of your subscribers, had a pair of No. 12 choke bore barrels fitted on to the stock of an ordinary gun. On taking the choke barrels out shooting the increase in weight was at once felt. My barrels by Lang weigh 1 lb. more than ordinary barrels. Then the new choke barrels are longer, and the 1 lb. not being distributed over the barrels, but mainly at the muzzle, makes the gun top heavy—a fatal stumbling block to brilliant shooting. I do not find in the field that extra killing power at long ranges that one expected. I find my choke barrels cause me to miss many snap and crammed shots—many shots at snipe. I should be very sorry to see the ordinary game shot come into my turnips, with a choke bore. I know how it would be—one shot at fifteen yards, and the next at eighty. For grouse when wild I should consider the new boring as a most decided improvement, or for any powerful, steady-flying bird, as ducks or black game. To show how little my humble self cares for the new toy, I am asking one third of the price I gave for the choke barrels. SCRUTATOR.

Writers in the *Sporting Gazette* and *Land and Water* echo the opinions expressed by "Scrutator." So that the ignorance of the *Field* newspaper as to the failure of the pure "choke bore" system in America, seven years ago, has led that paper to recommend it to the British public, and a too credulous British public have thrown their money away over "choke bores." Next year we shall offer a handsome and valuable silver plate (similar to the one hundred guinea cup given by this paper to be competed for by the Irish and American riflemen at Dublin) which will become the property of any gunmaker possessing a gun able to make the "best pattern" for general shooting. Gunmakers also may be assured that the *Illustrated Sporting and Dramatic News* will not ask the competitors to put their hands in their pockets to defray the expense of making the targets."

THE GROWTH OF AMERICAN CHEESE PRODUCTION.—A writer in *Harper's Magazine* gives some very interesting and curious facts in relation to the astonishing growth of American cheese production. In 1850 the aggregate value of the butter and cheese exported from this country amounted to only \$334,000. About this time a farmer in Oneida county, New York, named Jesse Williams, originated the cheese factory system, and his success was so great that farmers in other sections of the State began to follow his example. The system has developed so rapidly that there are now 500 cheese factories in New York alone, and in the entire country about ten times that number. As a result, the exports of cheese in 1861 amounted to \$3,324,631, and continued to increase until in 1874 they reached \$12,000,000, and for 1875 the figures will be larger still. In 1874 the exports of cheese from the port of New York amounted to 96,834,691 pounds, and Canada in the same year exported 20,000,000 pounds. The principal cheese-producing States are New York, Ohio, Vermont, Illinois, and Massachusetts. Cheese is a very nutritious article of food, and the best substitute for meat. The scarcity of meat in Europe and other European countries has led the laboring classes to adopt cheese as a substitute, and to this fact is largely due the increased demand for the product of our American cheese factories.

THE HAZARD POWDER CO., MANUFACTURERS OF GUNPOWDER.

Hazard's "Electric" Powder.

Nos. 1 (fine) to 5 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of 1 lb. only.

Hazard's "American Sporting."

Nos. 1 (fine) to 5 (coarse). In 1 lb. canisters and 6½ lb. kegs. A fine grain, quick and clean, for upland and prairie shooting. Well adapted to short guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6½ and 12½ lb. kegs. Burns slowly and very clean, shooting remarkably close, and with great penetration. For field, forest and water shooting. It ranks any other brand, and it is equally serviceable for muzzle or breech loader.

Hazard's "Kentucky Rifle."

FFFG, FFG, and "Sea Shooting" FG, in kegs of 25, 12½, and 6½ lbs. and cans of 5 lbs. FFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard Rifle powder of the country.

SUPERIOR MINING AND BLASTING POWDER. GOVERNMENT CANNON AND MUSKET POWDER; ALSO SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's agents in every prominent city, or wholesale at our office.

88 Wall Street, New York.

JUST OUT!!

Camp Life in Florida.

By CHARLES HALLOCK,

AUTHOR OF THE FISHING TOURIST.

This is a most seasonable book for Sportsmen, Tourists, Invalids, and Settlers, and has been long needed by Winter tourists to Florida and persons seeking settlement there. It gives a full classification of the game and fish of the Southern Peninsula, routes of interior and coastwise travel, the agricultural resources of the country, and sites for settlement, hints for camping out, resorts for game, hotels, and such other information as will be of great benefit to visitors seeking Florida for health, pleasure, exploration, or permanent settlement.

348 pp., 12mo. Price, \$1 50.

Published by Forest and Stream Publishing Co.,

No. 17 CHATHAM STREET, NEW YORK,

And for sale by all booksellers. Sent by mail, postage prepaid, on receipt of price at office of publication.

THE AMERICAN NEWS COMPANY, AGENTS.

SMOKE VANITY FAIR.

It is shaved from the best Natural Leaf, for Meerschaum and Cigarettes. Does not make the tongue sore. Liberal sample on receipt of 20 cents. Highest award, Vienna, 1873. Send for circular.

WM. S. KIMBALL & CO.,
PEERLESS TOBACCO WORKS, Rochester, N. Y.

Does not make the Tongue Sore.

SMOKE VANITY FAIR.—There must be some magical properties in it, akin to the wonderful Eastern plant that made captive those who inhaled it.

For Meerschaums.

A trusty friend, in weariness or trouble; a solid resource in Winter and rough weather, is a sweet pipe with Vanity Fair. Best dealers have it.

For Cigarettes.

There are times and places tolerant only of the cigarette; tenderly white and sweetly fragrant. Vanity Fair is the correct thing for Cigarettes.

For Sportsmen.

Smoking is an elevated mental and psychological pleasure, when one uses that splendid article, Vanity Fair. Best dealers have it.

Vanity Fair will be your constant companion by day and night; in merriment and in distress.

Vanity Fair is a genuine natural product, nothing about it artificial except the cutting.

TARGETS.

Mail Steamship Company's line to Savannah,
Ga., sailing every Saturday, from Pier 22, below Pine
street, Delaware River, at 12 o'clock noon, making
close connections through to all points South. The
line is composed of the steamships JUNIATA and WY-
OMING. The Wyoming does not carry passengers.
The Juniata is a favorite ship with the traveling pub-
lic, having passenger accommodations of the most
superb character. She has recently been refitted and
elegantly furnished with everything requisite to the
comfort and convenience of passengers.

Families en route for FLORIDA, Georgia, Alabama,
and even as far as New Orleans, will find the Savan-
nah route the most desirable for comfort, as well as
the most economical. Through trains of the Central
Railroad of Georgia, and Atlantic and Gulf Railroad,
Florida, leave Savannah every morning and evening.
The Florida steamers leave Savannah three days in the
week for all points on the coast.

For through passenger tickets and bills of lading to
all points in Florida, Georgia, Alabama and Tennes-
see, apply to WM. L. JAMES, General Agent, 416
South Delaware avenue, Philadelphia.

TO YACHTSMEN VISITING FLORIDA.

SARASOTA, Manatee county.

TO SPORTSMEN VISITING FLORIDA.

This Winter I will furnish a schooner yacht of
eleven tons, that will accommodate about a dozen
persons. I will let them have her and two men to
run her, and a small boat, for eight dollars a day. I
will meet them at Cedar Keys or Key West, which-
ever is most suitable to them; only let me know
when to meet them.
WM. S. BENNETT,
Capt. schooner Cary M.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER,
The strongest and cleanest Powder made. Nos. 1
to 7, packed only in sealed 1 lb. canisters. The coarser
sizes especially are recommended to owners of fine
breech-loading guns, giving great penetration with
very slight recoil.

ORANGE DUCKING POWDER,
For water fowl. Very strong and clean. Nos. 1 to
5. Packed in metal kegs of 6½ lbs. each, and in canis-
ters of 1 and 5 lbs.

AUDUBON POWDER,
Very quick. For woodcock and quail Nos. 1 to 4.
Packed in metal kegs of 12½ lbs. and 6½ lbs., and in
pound canisters.

ORANGE RIFLE POWDER,
The best for rifles and for all ordinary purposes.
Sizes F.g, FF.g, FFF.g, the last being the finest and
most used. Packed in wood and metal kegs of 25
lbs., 12½ lbs., and 6½ lbs., and in canisters of 1 lb. and
½ pound.

All of the above give high velocities and less resid-
uum than any other brands made.

21 Park Row, N. Y.
(OPPOSITE ASTOR HOUSE.)

DITTMAR POWDER
MANUFACTURING CO.

MY NEW IMPROVED POWDER
can now be loaded from an ordinary powder
flask; grains hard. Use it now like Black Powder.
No fear of overloading. Burns slow now. No foul-
ing of the gun. Little or no smoke. Little or no re-
coil. Not very loud report. Less heating of the bar-
rel in rapid firing. Good penetration and good pat-
tern. Safe to keep, as it does not explode if set on
fire, except well confined. Shells furnished loaded
with powder only, if desired. None genuine without
my signature on the can. CARL DITTMAR,
NEPONSET, MASS.

H. C. Squires, No. 1, Courtlandt St.
New York.

THE GREAT
London Gun Trial,
1875.

W. W. GREENER begs to inform his numerous
clients in the United States that he has been very suc-
cessful in the above trial, having secured the first
prize, a silver cup, value 40 guineas—class 2 for 12
bores; also winner in class 1 for 8 and 10 bores, and
class 4 for 20 bores. He has won in all the classes for
improved boring, which is upon a different plan to any
other maker, and is far superior in the three most es-
sential points, viz., PATTERN, PENETRATION,
and REGULARITY OF SHOOTING.

Mr. HENRY C. SQUIRES, of No. 1 Courtlandt St.,
New York, is now importing my "DOUBLE CLOSE-
SHOOTING GUNS" to order, an invoice of which
will be shipped to him on the 1st July, and can be ex-
amined about the 15th. All special orders given to
Mr. Squires will be carefully filled. A full report of
the GREAT TRIAL, showing the marked superiority
of my guns over guns made by Dongal, Pape,
Tolley, and others, will shortly be published, and can
be had on application at No. 1 Courtlandt St.

W. W. GREENER,

Champion Gun Maker,

St. Mary's Works, Birmingham, England.

HENRY C. SQUIRES, of No. 1 Courtlandt street,
has just received an invoice of these close-shooting
guns, and from him any information in reference to
the results of the Great Trial can be obtained on ap-
plication.

Breech Loaders.
W. & C. SCOTT & SONS.

Winners of the "Turf, Field
and Farm" Gun Trials.

(See issue October 3d, 1873.)

In which competition the committees have awarded
our guns, First and Second for POINTS OF MERIT
OF ACTION, MATERIALS, PROPORTION, and
SHOOTING QUALITIES combined, in all the four
classes.

THE PREMIER GUN.

W. & C. SCOTT & SON call attention to their
very FINEST weapon, combining all their recent im-
provements, marked on the rib between their name
and London address the brand—"THE PREMIER
QUALITY."

Medium and fine guns bear full name and address,
and plain guns full name and "London" only.

Each gun is numbered and the actions are stamped
with name and trade mark.

W. & C. SCOTT & SON, Sole makers of the
Patent Top Lever, solid, Double Locking Bolt Breech
Loader, bearing the full name of the firm. W. & C.
SCOTT & SON caution sportsmen against imitations
of their patent and name. Guns bearing the name
abbreviated, or with different initials, are not genuine.

TRIAL OF SCOTT & GREENER'S NEW SYSTEM
OF BORING, BY THE EDITOR OF
"THE FIELD," LONDON.

(See The Field, January 30th, 1875.)

"From a comparison of the two tables it will be
seen that with Walker's shot, Messrs. Scott's guns
showed a marked superiority over Mr. Greener's,
both in average and in the highest score made. In-
deed, with the left barrel, in his third shot, Mr. Scott
got a selected good pattern of 239 and a penetration
of 37, equalling the highest pattern made by Mr.
Greener, and exceeding the penetration of that par-
ticular shot by eight sheets."

London Office:

10 Great Castle St., Regent Circus, near Lang-
ham Hotel.

Chief address:

Manufactory Premier Gun Works,
Lancaster Street, Birmingham.

WHOLESALE.

Oct1-6m

J. D. DOUGALL'S

EXPRESS SHOT GUNS.

(Title registered.)

SHOWN by trials at Wimbledon by Editor
of the Field to possess the GREATEST PENE-
TRATION and therefore LONGEST RANGE—thus:
Circle, 30 inches; 300 pellets; average, 191; penetra-
tion, 37. The Editor's trial of Greener guns with 340
pellets of same shot and same charge of powder, gave
180, and penetration 30, although there were 40 more pel-
lets in each charge. Should any controversy arise as
to the durability of these new systems, we herewith
warn all beforehand that our system is our own inven-
tion (though founded on the American idea) and is DU-
RABLE, a fact remarked on by the Field, that the
guns tried had been in use during last season, and re-
ferences permitted to the owners. Send for Illustrated
Circulars to

59 St. James's Street London.

W. W. GREENER'S

DOUBLE CLOSE-SHOOTING
GUNS. Winner of the Silver Cup,
value 40 guineas, at the Great Lon-
don Field Trial 1875, beating 33 com-
petitors with 68 guns, also winning
in all the other classes for the Im-
proved System of Boring. These
guns will kill from 80 to 100 yards,
loaded with large shot, and will
shoot well with small shot with a
less powder charge than guns bored
upon the old system. For report of
the Gun Trial apply to Messrs. Mc-
Laran, Williams & Co., Agents, St.
Louis, U. S. A. Address
W. W. GREENER,
St. Mary's Works, Birmingham, England.

It will pay you well to act upon our advice.

Subscription, ONLY one dollar a year!!

Postage 10 cents extra.

Parents

send at once for a copy of this excellent, chaste and sparkling publication—examine it carefully; and, OUR word for it, YOU WILL at once become subscribers for the sake of your little ones, as well as because you will find its columns most attractive for your own reading.

The conductors of this magazine have spared neither pains nor money in order to make it what it is to-day—an instructive and entertaining desideratum for every household. Its pages are devoted to popular literature, science, art, education, and the development and maintenance of the moral influence of home attractions. Its characteristic feature is comprehensiveness. The manuscripts now on hand, from noted pens, and others especially engaged, embrace an unusually attractive list of Sketches of Travel, absorbingly interesting Serials, Tales, Poems, Popular Essays, Literary Criticisms, etc., etc. In the EDITOR'S STUDY, important and Pressing Questions of the Day, will be treated with fearlessness, uncompromising independence, and unswerving loyalty and devotion to Truth, Justice and Right.

A list of brilliant attractions of 1876 will appear in the December Number. New subscribers who send in their subscriptions for 1876, before Dec. 15, will receive FREE the November and December numbers—both being filled with rich literary matter.

for the following celebrated makers:
W. & C. SCOTT & SONS (winners at the International Gun Trial of 1873); J. P. CLABROUGH & BRO.; P. WEBLEY & SONS, and WESTLEY RICHARDS.

HOLABIRD'S SHOOTING SUITS,
DIXON'S & HAWKESLEY'S SHOOTING TACKLE.
STURTEVANT BRASS SHOT SHELLS.
BUSSEY'S PATENT GYRO PIGEON AND TRAP
WITH CASE AND 100 BIRDS.

Black's Patent Cartridge Vest.
This Vest affords the best arrangement yet invented for carrying cartridges. The weight is so evenly distributed that it is scarcely felt. Cartridges can be carried with the heads down in this vest, which is of great importance when brass shells are used, as when carrying them with the head up the weight of the shot often forces the wad forward, when bad shooting is the result. In ordering send measurement around the chest.
PRICE \$7.50.

AGENTS FOR THE
Union Metallic Cartridge Company's Ammunition,
WARRANTED THE BEST IN THE MARKET.

A FOX HUNT—THE MEET.

For Forest and Stream.

THE NOTTOWAY REGION.

WERE I asked to describe the wildest and most desolate section of this State, I would unhesitatingly name this part of Virginia, which lies on the Nottoway River, commencing at Stony Creek Station, on the Weldon Railroad, and continuing to Southampton county. These two counties—Sussex and Southampton—beat anything in the way of desolation and solitude that I ever saw. The celebrated slashes of Hanover is a dreary place; so is the famous Wilderness, where the surging lines of blue and gray crimsoned the thin soil with their blood. The Wilderness! What a scene does that word conjure up, and many a veteran, as his eye rests on these words, will in imagination recall that dark, forbidden place, that ground of horror, where, when the order to advance was given, the officers had to charge at the head of their men, not with drawn swords, but with a compass, for not a rod in advance could they see. Yet this region was not always so. Before the war Sussex was a wealthy county; there were many large landholders, who, owning many slaves, raised large crops of cotton, and lived in baronial state, kept open house, lived generously, rode fearlessly, and gave liberally. They were then the keenest, and probably the most accomplished, sportsmen in the world. With horses of the finest strain, dogs of the best breed, and a large pack of hounds, the Virginia gentleman lived an easy and genial life. Much of their time was spent in sporting, and they would take extraordinary pains to protect and multiply the game, and during the sporting season their hospitable doors were thrown wide open and throngs of city huntsmen would assemble to participate in the slaughter of the game. As I sit by the fire and listen to the tales told of the glorious deer drives, the exciting fox chase, and the rollicking coon hunts in those happy *ante bellum* days, I am tempted to wish that, unlike Ponce de Leon, I could find the waters of age, and sitting before a hickory fire, like an old gentleman I wot of, live in the past, dream of other days, and take no thought of the ills of the present.

This place I am writing from, "Tower Hill," used to be a famous rendezvous once for the gentleman sportsmen far and wide. Many a noted statesman and naval officer used to bring their dogs and guns and have rare sport in the vast cotton patches and wheat stubble fields, and the woods and clearings resounded with the loud report of the double-barrel, the sharp crack of the rifle, and the stirring blast from the master of the hounds. Alas! all that is changed now! The once well-tilled cotton and wheat fields have grown up again in their primeval wilds; the hospitable mansion, once the picture of comfort, has now gone to wreck and ruin; the shutters hang by one hinge, and the clap-boards drop off; the stables, once full of garnered grain, now stand with open door, the abode of bats, and the well-kept grounds are grown up in broom sedge. The negro quarters, where I remember when a boy seeing the groups of contented slaves basking in the sunshine or dancing by the sound of the banjo on moonlight nights, are falling down, and the roof tree gone, and it only needs an old superannuated Uncle Ned to sing in feeble tones the song—

"Old times come again no more,"

to make the scene complete.

This is the picture of every large estate in this section of Virginia without a single exception. Of course in such a thinly settled and rarely hunted country there must be much game. Well, I assert from actual observation, that there is more game in this section of Virginia than anywhere in the Middle States. There are, it is true, many negroes who squat on land and till their small patch of corn and cotton, and all of these have guns, generally an old army musket, and they have pretty nearly thinned out all the turkeys, rabbits, and squirrels, but they do not have a pack of hounds—they cannot afford to keep them—so they cannot drive, and the deer are safe from their hunting. Neither do they possess pointers, and the partridges roam at will undisturbed by the report of a single gun. Speaking of this reminds me to write that there is not a single pointer in Sussex county, and the birds are in profusion. I took a two hours' hunt yesterday after breakfast in the fields surrounding Tower Hill, and within an area of about one mile found eight large covies. To sportsmen with good dogs, a breech loader, and moderate skill it would be difficult to enumerate the amount of birds that could be killed. I well remember the first partridge hunt I ever took; it was just after the war, and the birds were as tame as barnyard fowls. I had to make my own shot, for I was too poor then to buy any, and my powder I extracted from the last supply of cartridges that the Confederate Government ever issued. I had a double barrel, which had been hid beneath the floor during the war, and I rode ten miles to borrow a pointer, who was the only one left in the region, and he could in truth cry out in his dog language with a melancholy howl—

"I am the last of my race,
Friends and kindred have I none."
